Subsidy Payments

EXTENSION OF REMARKS

OF

HON. HARLAN BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 7 (legislative day of Monday, May 24), 1943

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement made by Hon. Albert S. Goss, manager of the National Grange, before the Senate Committee on Agriculture and Forestry on the fallacy of paying subsidies.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, we desire to address our remarks to the announced program of rolling back prices on certain food products to September levels, and the employment of subsidies to make the program work. We are opposed to any such program because it will fail in its purpose for reasons which we will discuss. We shall first point out why price ceilings fail, why any attempt to bolster up an unsound system with subsidies defeats it purpose, then outline a program for holding inflation in check which will work, and finally point out some of the dangers in the roll-back, and the responsibilities of Congress with reference to the whole program as we see it.

While the question before your committee deals primarily with price control and inflation, it cannot be divorced from the problem of food. Food is fast becoming the world's greatest problem. We have heard a lot of fine-sounding speeches about America being the larder for the democracies and a lot of irresponsible promises have been made that we stood ready to feed the world. It is about time that we get down to facts with reference to our food problem.

For 20 years the United States has not fed itself. Every year we have imported more food than we have exported. Our population has increased 25 percent while our food production has remained practically stationary. If we are going to feed the world, or even a very small part of it, we have got to produce more or consume less. Actually we will probably have to do a good bit of both, but the policies we have been pursuing are leading in exactly the opposite direction. Had we deliberately set out to create a food problem, we could scarcely have done more than has been done in pursuing our policies on labor, machinery, and price ceilings. After months of effort we have succeeded in getting part of the labor problem corrected, but only when it is in large measure too late. The machinery and supply situation is being greatly improved, but the price-ceiling policy is getting no better. Typical of the attitude of those responsible for it was the comment of one of the men in charge of establishing ceilings when he said the Office of Price Administration was not interested in the supply, their job was to hold down price. We believe that the first consideration should be given to the food supply. It is possible to do this and to avoid inflation at the same time if we have the moral and political courage to do what must be done.

INFLATION CAUSES

Before we consider methods for the control of inflation, it would be well to consider the causes which bring it about. There are two chief causes of inflation. First is the pressure of surplus income upon an inadequate supply of consumer goods. Second is the loss of faith in the Government's ability to meet its obligations, or to pay its debts in dollars having the same value as the dollar we borrowed.

It is estimated that the total of individual income for 1943 will be approximately $140,000,000,000. Possibly sixteen billion of this will go for taxes, leaving one hundred and twenty-four billion of spending power. At present values the available consumers goods will amount to approximately eighty two billions. This leaves an inflationary gap of forty-two billions. There are numerous estimates as to how much of this will go into savings varying from fifteen to twenty-five billion dollars. This leaves an income in excess of consumer goods of from seventeen to twenty-seven billions all seeking an outlet.

There are two distinct schools of thought with reference to the control of inflation. One school favors establishing price ceilings, enforced by fines and penalties. The other advocates making use of economic forces by increasing production of goods and controlling purchasing power.

Those following the first school of thought, propose to erect a price ceiling dam against this excess income, and thereby shut off the spending outlet. They reason that our economy was in fairly good balance on some given date, and they would freeze everything at that spot. They would thereby prevent any price rises in order to prevent inflation. This is fallacious reasoning, as all history has adequately demonstrated, for never have price ceilings prevented inflation over an extended period in the history of the world, although they have been tried hundreds of times.

The chief reason is that price ceilings ignore production costs and shut off the supply of goods. In wartime, there are many items of cost which arise from war dislocation that cannot be controlled by any price ceiling method. On the farm we send our experienced young men to war and replace them with young boys and old men. We can control the wages by wage ceilings, but the substituted do only half as much work and our labor cost is doubled. There are hundreds of uncontrollable war dislocation costs which force up the costs of consumer goods. When these costs bump into the ceilings, prduction is strangled, and the inflationary gap is increased.

Judge John D. Miller, long a student of attempts at price ceilings, has put it very well when he said:

"We hold it to be self-evident that an effective ceiling on the price of any commodity will in due time restrict the production of that commodity to the quantity that can be produced at that price."

Various methods have been tried to prevent prices from rising. Of course if wages, services, and everything else is strictly controlled, the rise will be slower than where part of the economy are left uncontrolled, but such universal control leads to complete regimentation and even then it has always eventually blown up, not only because of the terrific cost and the unwieldiness of the bureaucracy which was necessary for enforcement, but finally because the production of food was strangled. The experiments in Rome about 300 A. D. and in France following the revolution are classical examples. In the case of Rome the historians tell us that local autonomy disappeared and was replaced by a huge bureaucracy before the crash came. In the case of France the attempt "converted a scarcity into a famine."

We are well on our way toward making these same blunders. In fact, we have already made a lot of them. By bungling price-control methods we have already created a lot of unnecessary food shortages and driven many items into black markets, where the consumer is trimmed up right, and we are rapidly creating a bureaucracy which is constantly finding it necessary to seek more power and regiment more activities to offset the effects of blunders previously made. At first we attempted to control almost everything except labor which was specifically omitted. Everyone knew it couldn't work, but we tried it. Later, an effort was made to include labor, but the issue has been deliberately evaded. While

price ceilings have driven a steadily increasing volume of consumer goods into black markets, and production of many lines has been strangled. It is now proposed to roll back prices—not wages—and hold the line. You are asked to bolster up this whole unsound program by the use of subsidies, to prevent strangling production.

SUBSIDIES

We are opposed to the use of subsidies for such purposes because they will not work, for reasons which I will discuss.

First, however, we want to point out two or three more fallacies in the price-control system as we have tried to operate it. There are 10,000 hamlets and cross-roads in America, each with its own individual production and marketing characteristics. We go into the mountains of Montana, where costs are high, and we find miners and stockmen paying more for their food. The law of supply and demand has adjusted prices to costs. We go into the mountains of the Carolinas, where costs are low, and we find the people are paying low prices for their food. The law of supply and demand has again adjusted prices to costs. Both places are equally distant from the railroad. Under the Office of Price Administration they are forced into a common mold. It is an extreme example, but to a greater or less degree it is typical of what is attempted all over America. The production may not be large in an individual high-cost area, but in the aggregate it is enormous, and this production is largely curtailed or destroyed by rigid price ceilings. No system of subsidies can be devised to meet the tens of thousands of conditions which prevail, and the daily changes which are occurring by reason of dislocation costs.

We have pointed out the enormous inflationary gap we now face. These are not static figures. They will get progressively worse. Assuming that we could dam a $15,000,000,000 flood, we must not forget that it is accumulating; that it will be twenty billions by summer, twenty-five billions by fall, and forty or fifty billions a year from now. Holding it back by price ceilings and subsidies is a complete impossibility.

We should also mention that we have adopted a policy of adjusting wages to meet living costs. Actually, wages have gone up approximately three and one-half times as fast as living costs. These conditions are mentioned merely to point out the complete unworkability of a price-ceiling system which Congress is now asked to bolster up by vast sums taken out of the Federal Treasury.

Now, to enumerate some of the reasons why we oppose subsidies and believe safeguards should be provided against their use:

1. They are inflationary and will defeat the purpose sought to be accomplished.

(a) Subsidies are paid from Federal funds, which must be borrowed. About 80 percent is borrowed from banks and directly increases the surplus income to the extent of such borrowing, thus increasing the inflationary gap. Economic law meets the situation naturally. Rising prices encourage production and discourage consumption. Subsidies upset this normal process and encourage consumption. To the extent that they are not dependable and frequently do not get back to the producer, they fail to encourage production.

(b) Nothing will cause a greater loss of confidence in the financial soundness of our Government than to follow a policy of unwillingness to pay our bills as we go, as far as we can. In the days of our greatest national income, if America refused to pay its food bill, but passes it on to future generations, it is clear that we are deliberately pursuing a policy that leads straight to bankruptcy. Every thinking person knows that such a policy long continued must result in a financial crash.

2. Subsidies in lieu of fair prices will lead to post-war chaos. The goal of the present policy is to maintain a rigid price ceiling with the use of subsidies to meet the ever-increasing dislocation costs of production. As the war progresses, dislocation costs will increase; we will find it necessary to increase the subsidies. Thus our price structure will become more unbalanced day by day. If we are to avoid bankruptcy when the war is over, we must balance our budget. When that day comes, subsidies will be the first thing to be cut off. Then one of two things will happen. Either farmers will have to get higher prices to meet their costs, or quit producing.

If we do not have the moral or political courage to pay the cost of our food bill during these days of billions of dollars of excess income and full employment, what chance would there be to raise food prices when men come back from the Army hunting jobs and when income starts down?

The answer is none whatever, and the result will be farm bankruptcy and chaos worse than that following the last war, which was, at least, not complicated by subsidies.

3. Subsidies pass on to future generations costs which this generation should bear. It is almost axiomatic that we cannot fight a world war and raise our standards of living at the same time. But that is exactly what we are trying to do. How many of us are worse off financially than before the war started? For most of us our incomes have gone up far faster than our outgo, and we know very well that somebody has got to pay for the enormous destruction going on. Instead of facing the facts and paying the necessary increased living and operation costs (and you will note I am omitting actual war costs), we are insisting on passing these costs on to future generations, and are trying to live better today than ever. While millions of our young men are risking their lives at $600 a year, and we at home ar enjoying the greatest income in history, we feel that it is thoroughly dishonorable to refuse to pay our food bill and pass some billions of it on to these young men to pay when they come home. What are they going to say about it? If there is anything which would invite repudiation, it is a subsidy program such as the administration is trying to launch.

4. Subsidies lead to the dangerous doctrine of expecting the state to support its people. There was never a time when it was more necessary for the people to support the state than today, but seldom if ever have more people been willing to dodge the responsibility and let the state support them by straining its credit to the danger point.

5. Subsidies lead to political control, and when once used, they are politically almost impossible to get rid of. They are another step toward authoritarian control. The Supreme Court recently expressed it well. An Ohio farmer refused to pay his overproduction fine, arguing that the law had been passed after his wheat crop had been planted, and he was denied the protection of the Constitution which prohibits taking property without due process of law. Pointing out that wheat prices were being maintained by subsidies, the Supreme Court said, "It is hardly lack of due process for the Government to regulate that which it subsidizes." "The Government to regulate that which it subsidizes." No one can quarrel with the reasoning, but it should be a warning to avoid using subsidies unless we want more Government regulation.

Subsidies are a demagogue's paradise. Fine sounding arguments can be made for them because they will bring low costs to the consumer and high returns to the producer. Of course we cannot live on borrowed money long in any such blissful state, but pay day is conveniently forgotten except by some who are bold enough or frank enough to support subsidies as a means of redistributing the wealth of the people.

There are many reasons why subsidies are dangerous and should be avoided, but we will not encroach further on your time to enumerate them. If there were no better way, one might be excused for advocating subsidies, but there is a way which will work.

INFLATION CURE

The only way inflation has ever been cured is to bring supply and demand into balance. Where countries have been too weak to face the issue, and have tried a lot of expedients, to hold the support of the voters, economic law has eventually stepped in and solved the problem by reducing the purchasing power of money until there was little spending power left, and the supply then caught up with the demand. That is inflation. Inflation means making money so cheap it will not buy anything. It can be prevented by three or four constructive steps.

First, encourage the production of needed goods. There never was inflation where there was an abundant supply. Aside from the weather, three major factors control farm production:

(a) An ample supply of labor.
(b) Adequate machinery and supplies.
(c) A compensatory price.

In the consideration of the subject before your committee we are concerned chiefly with price. The price must be sufficient to secure as much production as can be reasonably expected. If it is too low to attain this end, a support price may be necessary. It may be pertinent to point out the difference between a support price and a subsidy.

SUPPORT PRICES

Years ago we found out that unlimited competition often destroyed supply. We prohibited railroads from cutting rates to destructive levels. We set up controls for minimum premiums for insurance companies. In other words, we set floors designed to prevent prices falling below cost in order to protect certain essential services from destruction. This was no subsidy. There was no element of gift in it. It was merely protection against a destructive practice.

When floors are placed under farm prices to prevent them going so low as to destroy production, the same principle is employed. This is a very different practice from paying out cash in order to hold prices down to the consumer. Usually a support price requires little expenditure. Its purpose is to bring prices into a reasonable economic balance or relationship. The very fact that the money is available frequently stabilizes the market at an equitable level. Even when it becomes necessary actually to buy the commodity, the market usually adjusts itself, so that when the commodity is sold, no loss ensues. The purpose of a support price is to aid in bringing about a reasonable price relationship which may have been upset by unusual circumstances or some emergency. A support price does not develop an unbalanced price structure such as would lead to chaotic conditions following a subsidy program.

When a support price is used in connection with a ceiling which holds the normal market down, and thereby makes the support price necessary, or when a support price is used to buy a commodity and sell it for less than the cost, such a support becomes a subsidy and takes on all the dangerous characteristics of a cash subsidy. That is a practice which has been employed by the Commodity Credit Corporation and one which should be prohibited by law. If there are some commodities where such a policy is justified by reason of special or unusual circumstances, Congress should define or determine those circumstances, and not someone who might want to use the subsidy to bolster up an unsound price control experiment, or possibly for political purposes. A support price which is necessary to secure production and which is not used in connection with a ceiling or other device in lieu of a fair price is sound.

ADJUST THE DEMAND TO FIT THE SUPPLY

If, after all reasonable steps have been taken to encourage production, and the supply will still not meet the demand, then the remedy is to adjust the demand to fit the supply. This can be done in two ways.

First. By syphoning off surplus income. Some of the surplus income will be inevitably syphoned off by paying the increased dislocation costs of producing the food and other commodities people demand. Any excess income should be reached through taxation and forced savings. The savings should be such that the money stays saved until the war and the inflationary aftermath are over. Leaky savings merely serve to fool ourselves.

Second. By rationing, so that all may share equitably in the limited supply. Rationing which fails to cut the demand to fit the supply defeats its purpose. It is possible to ration so as to have a surplus and thereby largely control price. Thus economic law takes the place of an intricate system of price ceilings, margins, grades, and differentials, and about 90 percent of the regulatory work of a price control administration could be dispensed with.

USE OF SUBSIDIES

In making use of subsidies we believe the intent and purpose of Congress are being violated. When the first Price Control Act was passed early in 1942, a provision was included permitting the use of subsidies. After it had been in operation some months it became apparent that it was the intent of the Administrator of the Office of Price Administration to use subsidies in lieu of a fair price. Believing this to be a dangerously inflationary practice, the Grange appeared before the Banking and Currency Committee of the Senate when the second Price Control Act was under consideration, and called attention to the danger. We said:

"Subsidies are not mentioned in the President's message. Subsidies are not mentioned in the bill, but all the powers are there for their use if the President so decides. Congress should not pass by such a vital issue without an understanding on it. We believe Congress should set forth the policy of meeting the costs of war dislocations now, by assuring enough flexibility in ceilings to meet these unavoidable costs.

"We recommend that this principle be written into the measure itself by adding the following words after the word 'President' in the second sentence: 'Shall adjust prices where necessary to maintain adequate production goals and'."

We presented a number of reasons why subsidies should be avoided. Congress adopted the principle we suggested when it included the following limiting proviso after setting up the September 15 price level as a base:

"Provided further, That modification shall be made in maximum prices established for any agricultural commodity and for commodities processed or manufactured in whole or substantial part from any agricultural commodity, under regulations to be prescribed by the President, in any case where it appears that modification is necessary to increase the production of such commodity for war purposes, etc."

We felt this was a clear mandate to adjust price ceilings where necessary to obtain production, but various kinds of subsidies have been used in spite of this mandate. We believe Congress should take prompt steps to provide protection against the use of subsidies in lieu of a fair price. To accomplish this, we have a number of recommendations.

RECOMMENDATIONS

1. We have an impossible situation where the Office of Price Administration can slap on a price ceiling which will strangle production, or can let buying power run wild with no adequate rationing system to hold it in check, and the Administrator of the War Food Administration has no authority to adjust the price or influence the distribution. The War Food Administrator should have the complete control of all Governmental functions connected with the production and distribution of food, including the regulation of price ceilings and rationing. If this is not done, at least the War Food Administrator should have the right of veto of any maximum price placed on any agricultural commodity or any commodity processed in whole or substantial part therefrom.

2. No funds should be made available to make loans on, or to purchase, any commodity for the purpose of supporting the price thereon if at the time of purchase any maximum price is maintained on such commodity lower than such support price or if at the time of purchase it is contemplated to resell the commodity at less than the purchase price, except as specifically authorized by Congress as to each individual commodity for which exception is made; provided that in the case of any commodity which is used for more than one purpose, the prices might be so adjusted with respect to the different uses for which such commodity is sold, that the total returns shall not be less than such support prices.

3. Except as normal market conditions justify, no maximum price should be placed on any commodity below the support price so long as the Commodity Credit Corporation holds any such commodity either under loan or through purchase.

4. The law should clearly set forth that it is the intent and purpose of Congress to avoid the use of public funds to prevent agricultural commodity prices from seeking a level necessary to secure adequate production for war purposes.

5. No direct or indirect subsidy shall be paid to any producer, processor, or distributor of any agricultural commodity upon which any maximum price is in effect, except as may be expressly authorized by Congress.

6. You may well ask why we do not recommend the simpler course of prohibiting all subsidies. Occasions may arise when it may be necessary to subsidize production under exceptionally high cost conditions, such, for example, as the high cost copper mines, and we do not think it best to prevent such use, if the cases can be clearly defined and can be properly confined, although we confess we do not know how such farm cases might be defined and segregated without danger of abuse. However, we believe the purpose can be clearly set forth and that Congress should retain very tight control not only of the purse strings from which such subsidies might be paid, but should specifically prohibit any Government corporation from borrowing or furnishing any money for the purpose.

ROLLING BACK PRICES

We have set forth our reasons for opposing price control by the price ceiling method. They, of course, apply to the proposals for rolling back prices. There are some additional vicious features which we wish to point out to your committee:

First, processors and distributors are caught with inventories upon which they must take direct losses. We cannot see how this can be defended. We believe that the Constitution was designed to protect the people from any such action.

Second, the burden of this fantastic attempt to curb inflation is placed on the food industry. Last fall, Congress was requested to provide controls on everything except labor with the promise that wages would be controlled by Executive order, but in one order the basic wage rate was since increased 8⅓ percent, while strikes and upward adjustments have gone on as usual. As we understand it, no attempt is contemplated for rolling back wages, although many believe that excessively high wages and the large increase in wage workers' income are the chief cause for inflation. We do not deplore the high wages and the increased income of wage workers if the increase in usable products resulting from their effort is in proportion to the money paid. However, we cannot lose sight of the fact that this whole unsound price ceiling policy is being carried out in response to the demands of labor leaders who are entirely irresponsible for the Nation's food supply. Nor can we ignore the fact that they are demanding a roll back of some 10 percent in food prices over a period when their income increased more than 15 percent while their cost of living increased about 4 percent. On January 1 our food costs were approximately at the 1929 level, while the manufacturing wage workers' weekly wage was 50 percent higher. Statistically, the roll back of food prices without wage and other adjustments is indefensible.

We feel sure time will result in the abandonment of this new feature, just as it has so many other ill-advised moves, but in the meantime, valuable time is being lost in getting started on sound inflation-control methods and enormous sums are being wasted. For example, we are quite unable to estimate the cost in manpower, in expense, and in subsidy outlay in administering the butter price roll-back of 5 cents per pound, but it would be enormous. The net result would be a saving to the consumer of 65 cents a year in the 13 pounds which he is allowed. Theoretically, the subsidy is justified as a means of keeping the farmer in production, but at the rate his costs have been advancing, we doubt if it will have much effect.

In conclusion, we believe there should be no pussyfooting on this issue. If, after careful study, Congress believes that price ceilings and subsidies are the soundest methods of meeting the inflation danger, it should give all the support at its command to such a program. On the other hand, if Congress believes that other methods are better, it should not allow itself to be forced into supporting what it believes to be an unsound program because some executive department refuses to follow the policies laid down by Congress. Congress owes it to the executive department of Government to set forth its policies so clearly that there can be no doubt as to the intent and purpose. If those policies are not followed due to any lack of clarity, they should be clarified by law. If they are not followed, and Congress tacitly supports the violation of its policies, it is not carrying out the trust the people place in them. We are not charging that any such situation exists. The differences which have arisen may all be due to difference in interpreting the meaning of the law. We feel very sure, though, that the time has come when any doubts as to the meaning should be clarified, that the responsibility is upon Congress, and that when all doubts are resolved, the law should be enforced in accord with the intent and purpose of Congress.

Wartime Subsidies

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 9 (legislative day of Monday, May 24), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article

entitled "Wartime Subsidies," published in the May 22, 1943, issue of Business Week.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Wartime subsidies

[Taken from Business Week, May 22, 1943]

Commodity	Type of subsidy	Supervisory agency	Estimated annual rate of subsidy
Various imports	Absorption of certain payments on war-risk insurance.	War Shipping Administration.	$65,000,000
Sugar	Payments to refiners to cover increased transportation costs and losses resulting from reduction in weight through transshipment.	Defense Supplies Corporation.	30,000,000
Soybean, cottonseed, and peanut oils.	Payment to refineries (½-cent per pound) to absorb rising prices at the farm level.	Commodity Credit Corporation.	17,000,000
Copper, lead, and zinc	Incentive payments to create production in marginal mines. Production beyond established quotas carries a premium of 5 cents per pound for copper and 2¾ cents for lead and zinc.	Metals Reserve Company.	25,100,000
Bituminous coal	Double subsidy consisting of (1) absorption of additional costs on water-borne coal to New England, and (2) direct payments for rail transportation.	War Shipping Administration. Defense Supplies Corporation.	15,000,000 40,000,000
Imported oil-bearing seeds	To keep down pressure on Office of Price Administration ceilings, imported oil-bearing seeds are purchased by the Government and put into trade channels at a loss.	Commodity Credit Corporation.	800,000
Coffee:	Payments, direct or indirect, to cut transportation outlays and absorb higher insurance premiums.	Commodity Credit Corporation. War Shipping Administration.	7,000,000 14,000,000
Henequin	Absorption of higher costs in transportation, insurance, etc.	Defense Supplies Corporation.	5,900,000
Petroleum and petroleum products.	Payments for increased transportation costs, rail hauls, insurance, etc.	----do---- War Shipping Administration.	268,000,000 150,000,000
Imported metals	Absorption of (1) higher shipping costs and (2) increases in foreign sellers' prices.	Metals Reserve Company.	30,000,000
Copper scrap	Absorption of costs in connection with conversion of excess manufacturers' inventories into electrolytic copper.	Copper Recovery Corporation.	(1)
Nicotine sulphate	Payments to manufacturers to compensate for rises in price at the farm level.	Agricultural Marketing Administration.	1,750,000
Alcohol	Absorption by the Government of higher grain and molasses prices freight charges, and war risk insurance.	Commodity Credit Corporation and Defense Supplies Corporation.	(1)
Chilean nitrate	Absorption by the Government of increases in foreign sellers' prices and of increased transportation and insurance costs.	Defense Supplies Corporation.	6,000,000
Cheddar	Payments to processors to enable them to purchase milk for additional cheese production.	Commodity Credit Corporation.	30,900,000
Canning crops	Payments to processors to get bigger supplies of tomatoes, peas, sweet corn, and snap beans from farmers.	----do----	10,000,000

[1] No estimate.

The Principle of Racial Equality

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 9, 1943

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article which sheds considerable light on the historical background of the so-called Chinese Exclusion Acts, and which shows the attitude of our great Chinese allies on this question which is pending before Congress:

THE PRINCIPLE OF RACIAL EQUALITY

The principle of racial equality is one of the fundamental principles upon which the Chinese Republic is founded and to which it is dedicated.

The principle is applicable both in the relations between the various racial groups within China and in the relations between the Chinese and the non-Chinese abroad.

The Chinese Government treats all the racial components—the Hans, the Mohammedans, the Manchus, the Mongols, and the Tibetans—that make up the Chinese citizenry on the basis of complete equality.

The Hans constitute almost 90 percent of the Chinese population. The Mohammedans number about 45,000,000. Although they are a distinct religious group, racially the Mohammedans at present are hardly distinguishable from the Hans. The Manchus, who conquered the Hans in 1644 and had ruled them until 1911, have been assimilated into the race and culture of the conquered. Today they have ceased to be a distinct minority and have become an integral part of the Chinese population. The Mongols and Tibetans—whose total number is less than 3,000,000—are the only minority groups that are separable from the Hans.

The Chinese Government treats all foreign immigrants and residents in China on the same basis as it treats Chinese. Indeed, before the abolition of the extraterritorial system, foreigners in China were accorded certain rights and privileges which were denied to Chinese themselves.

During the last six or seven decades the overseas Chinese have been subject to a series of discriminatory laws and regulations in Latin America, in the United States, and in the British Commonwealth of Nations. While these laws and regulations are matters of internal administration. China naturally hopes that they will be repealed or modified in the near future so that Chinese immigrants and residents in foreign countries may be treated on the same footing as those of other nationalities.

DOWN THE CUBAN WAY

Of all the countries that have passed discriminatory laws against the Chinese, Cuba is the first to abolish them. In the treaty of amity between the Republic of China and the Republic of Cuba—the first treaty between the two countries—concluded on November 12, 1942, it is stipulated in article V that "the nationals of each of the high contracting parties shall be at liberty to enter or leave the territory of the other under the same conditions as the nationals of the other countries."

In the exchange of notes between Dr. T. T. Li, Chinese Minister at Habana, and Dr. Jose Agustin Martinez Viademonte, Cuban Minister of State, it is stated "that the Cuban Government will enact, as soon as possible, the necessary legislation to carry into effect the stipulations of article V, and that, pending the enactment of such legislation, the laws and regulations now governing the matter shall remain in force provisionally, provided that the provisions of such laws and regulations which may be construed as discriminatory against the nationals of the Republic of China shall not be applied to such nationals."

When Gen. Leonard Wood was in control of Cuba, he issued instructions that Chinese were to be excluded. After the Cuban independence in 1902, the Cuban Government passed laws and regulations which specifically excluded the Chinese, but not all non-Caucasians and non-Americans.

Now under the new treaty the Cuban Government has agreed to repeal the discriminatory laws and regulations and to adopt the necessary legislation in order to put Chinese immigrants on the same footing as those of other countries.

The treaty should be hailed as a significant event. It should mark the beginning of the end of a period of racial discrimination, and open a new era of racial equality.

RECENT DEVELOPMENTS

In the new Sino-American and Sino-British treaties, which were concluded on January 11, 1943, the extraterritorial system and the system of concessions and settlements were abolished, but the problem of Chinese immigration and naturalization was not mentioned.

There is now a movement in the United States to repeal the Chinese exclusion laws. Representative MARTIN J. KENNEDY, of New York, introduced a Chinese Citizen Act of 1943, which would grant to the Chinese rights of entry to the United States and rights to citizenship. Representative WARREN G. MAGNUSON, of Seattle, Wash., proposed to amend the Immigration Act of 1924 so as to provide that aliens who are citizens of China shall be admitted into the United States. Another bill was introduced by Representative JOHN LESINSKI, of Michigan, to admit to the United States the Chinese wives of American citizens. Representative VITO MARCANTONIO proposed to amend the Nationality Act of 1940 by inserting the clause: "The right of a person to become a naturalized citizen of the United States shall not be denied or abridged because of race, color, creed, or national origin."

In Canada, Australia, and New Zealand there are statesmen and public leaders who are opposed to the Chinese exclusion laws. But so far no legislation has been contemplated.

There are some 10,000 Chinese seamen on British and Dutch ships. It has been reported that 600 of these, on shore leave in United States ports, have refused to reship. They complain that, while they are asked to face the same risks and perform the same duties as British and Dutch seamen, they are

not treated on the same basis. They receive £5 to £7 less in basic wages than British seamen, and little or no protection against death and permanent or temporary disability.

ATTITUDE OF THE CHINESE GOVERNMENT

Ever since the Tang dynasty (A. D. 618–906) the Chinese have been migrating abroad, first to the South Sea Islands, then to the Western World. Even today the Chinese in the Malay Peninsula and the East Indies proudly call themselves the people of the great Tang.

In the old days the government never showed much interest in the problem of emigration. Neither the Tang nor the Ming dynasty (1368–1643) encouraged Chinese to emigrate. The Ching dynasty (1644–1911) was definitely hostile to those who went abroad. The Ta Ching Lu Li (Ching laws) said: "All government officials, soldiers, and private citizens, who clandestinely proceed to sea to trade, or who remove to foreign islands for the purpose of inhabiting and cultivating the same, shall be punished according to the law against communicating with rebels and enemies, and consequently shall suffer death by being beheaded." Despite this official prohibition, thousands of Chinese did go (or, more accurately, escape) abroad annually in the eighteenth and nineteenth centuries.

It is clear that Chinese emigration is entirely an unofficial matter. The Chinese Government has never organized or subsidized any systematic emigration project, for fundamentally it has never entertained any imperial (political or territorial) ambition. Although China is a large country which faces a number of small countries in the south, although millions of Chinese have migrated into these countries, the Chinese Government has never contemplated acquiring any colony or exercising any political control. Chinese citizens who have ventured abroad have been motivated by the spirit of free enterprise or compelled by economic necessity. They have gone abroad purely for the sake of peaceful trade. They have had absolutely no thought of imperial expansion.

In the eighteenth and nineteenth centuries overseas Chinese were not protected by the Chinese Government. They were left entirely to themselves. According to the Treaty of Tientsin (1858), the persons and property of British subjects in China were assured protection (art. XVIII), but no mention was made of Chinese subjects who were in, or might go to, British dominions. This is not surprising. For theoretically the Chinese Government at that time outlawed all emigrants.

It was not until the Burlingame Treaty of 1868 that the Chinese Government reversed the old nonemigration law. In that treaty the United States and China recognized "the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively from the one country to the other for purposes of curiosity, of trade, or as permanent residents."

The diplomatic protection of Chinese citizens abroad is a comparatively new phenomenon. The first permanent legation was established in London in January 1877, and the minister was accredited to both London and Paris. In October of the same year, a minister was sent to Washington and was accredited both to Washington and Madrid. A month later a minister was sent to Berlin. In the next 2 years China sent ministers to Tokyo and St. Petersburg. From that time on overseas Chinese have gained some amount of diplomatic protection.

The revolution of 1911, which overthrew the monarchy, was largely financed by overseas Chinese. For this reason the Republican Government has adopted the policy of giving adequate protection and education to "those wandering sons abroad."

OVERSEAS CHINESE

Chinese in foreign lands may be divided into three classes: Intellectuals, merchants, and laborers. The latter two classes make up the vast majority of overseas Chinese.

The number of Chinese abroad was estimated in 1935 to be nearly 8,000,000, according to the National Overseas Affairs Commission. Of these about 90 percent are in the neighboring countries in Asia and in the islands of the Pacific and Indian Oceans.

Chinese in Asia

Thailand	2,500,000
Malay Peninsula	1,710,000
Dutch East Indies	1,232,600
Indochina	381,400
Russia (Siberia)	251,500
Burma	193,600
Philippines	110,500
British Borneo	75,000
Formosa	46,700
Korea	41,300
Japan	20,000
India	5,000
Other Pacific and Indian islands	19,000
Total	6,586,600

Chinese in United States of America

United States of America	75,000
Hawaiian Islands	27,000
Total	102,000

Chinese in British Commonwealth

Canada	42,000
Australia	15,000
New Zealand	2,800
South Africa	4,500
England	8,000
Total	72,300

Chinese in Latin America

West Indies	36,400
Mexico	20,000
Central America	9,400
Peru, Venezuela, Chile, Colombia, Argentina, Brazil	13,600
Total	79,400

Chinese in Europe

France	17,000
Holland	8,000
Turkey	7,000
Other countries	6,000
Total	38,000

Overseas Chinese are mostly enterprising merchants and hard-working laborers. They have contributed a great deal to the development of the entire area between the Pacific and the Indian Oceans. In the Dutch East Indies and British Malaya the Chinese have dominated practically every line of retail trade and have been influential especially in the production of tin, rubber, tobacco, sugar, and coconuts. As one writer put it, it has often been the case of a European's holding the cow while the Chinese has milked it. An article on Singapore in Life magazine contained the following suggestive caption "Chinese trade, whites govern, natives labor."

In Thailand nearly all business has been in the hands of the Chinese. Most of the rice mills and saw mills and retail shops have been controlled by them. When one takes a walk along the streets of Bangkok, one will be impressed by the shop signs which are mostly in Chinese characters. It is more like Shanghai than a Siamese city. The Chinese in Indochina, Burma, and the Philippines are mainly merchants.

In the United States and Canada the greater part of the Chinese are engaged in operating restaurants and laundries. Those in Latin America are mostly merchants and farm workers. Those in Australia, New Zealand, and South Africa—many of them descendants of gold miners—are engaged in agriculture and business.

Owing to discriminatory immigration laws and regulations, Chinese in Latin America, the United States, and the British Commonwealth have decreased in number. In south Africa, for instance, there were 55,000 Chinese in 1906, but there are now only 4,500; in Australia there were 42,000 Chinese in 1859, but there are now only 15,000; in the United States there were 107,000 Chinese in 1890, but there are now only 75,000. The Chinese in Mexico numbered 25,000 in 1930, but as a result of a series of anti-Chinese campaigns the number must have been reduced to 20,000.

IMMIGRATION LAWS AND REGULATIONS

Overseas Chinese have suffered a great deal from the immigration laws and regulations adopted by various countries.

The South Seas: Until recently the entry of Chinese into the entire area of the South Seas was free. In fact, this area afforded the only free outlet for China.

In British Malaya an immigration law was adopted, which put immigration on a quota basis. The Chinese quota was 2,500 a month.

Prior to 1934 the immigration law in the Dutch East Indies placed a landing tax of 150 guilders on every immigrant; since then the Dutch Government has introduced a quota system which admits 1,200 Chinese every year.

Chinese migration into Thailand was formerly unrestricted. In 1927 the Thai Government adopted an immigration law, which imposed 5 bahts as a tax of entry. In 1933 a new law was adopted, which increased the tax of entry to 10 bahts, imposed a domicile tax of 100 bahts, prohibited the entry of illiterate Chinese as well as all Chinese women. The object of the law was the gradual exclusion of Chinese from Thailand. In addition to this, the Thai Government levied discriminatory taxes on Chinese commercial enterprises, took over Chinese rice mills under state operation, excluded Chinese from the fishing industry, and curtailed remittances to China.

The immigration law of Indochina is not hard. Although he lacks a passport, a Chinese may land there, provided the head of the Chinese group to which he belongs will serve as guarantor. There is hardly any restriction on Chinese migration into Burma.

The United States: According to the exclusion laws, Chinese laborers are not permitted to enter the United States; Chinese teachers, students, merchants, and travelers are admitted upon presentation of the so-called section-six certificates. All Chinese born in the United States and subject to the jurisdiction thereof are automatically citizens of the United States, but no Chinese born in China may become naturalized citizens of the United States.

The British Dominions: The immigration laws and regulations in Australia and New Zealand are very similar. In 1901 the Australian Federal Government adopted a uniform immigration law. The restrictions on Chinese immigrants included a 50-word dictation test. The Premier had the power to declare at any time a strict ban on the entry of any people into any port. As a result, the entry of Chinese has been practically stopped. In New Zealand the regulations are even severer. The dictation test consisted of 100 words instead of 50. In addition, there was

a poll tax of £100. The New Zealand Government now forbids the entry of all Chinese immigrants.

In Canada there was no restriction on Chinese immigration in the middle of the nineteenth century. In 1886 a landing tax of $50 was levied; in 1901 it was doubled; in 1904 it was increased to $500. This arrangement, however, has long been suspended, for the Canadian Government has since prohibited the entry of all Chinese, except students and merchants and officials who do not become permanent residents.

In South Africa there were 55,000 Chinese laborers who came under the contract-labor system. They were not permitted to stay, but were repatriated at the end of the contract.

Latin America: China and Mexico in 1899 concluded a treaty, whereby the nationals of each country were given entire freedom to go, travel, reside, and engage in commerce in the other country, and protection was guaranteed to their persons, families, and property. But since then there has been an anti-Chinese movement. Between 1931 and 1935 several thousand Chinese were compelled to give up their business and return home penniless.

Practically all the Latin-American republics have adopted Chinese exclusion laws, which were enforced in the case of Mexico by the Ministry of the Interior, in the case of Guatemala, Nicaragua, and Panama by the Ministry of Foreign Affairs, and in the case of Peru, Chile, and Cuba by the Ministry of Finance.

CONCLUSION

The objective of this brief account of the life and status of overseas Chinese is neither to express any resentment nor to demand any action, but to show that up to this time all nations, including the Chinese, have unwisely followed a policy of racial exclusiveness and to consider the possibility that in the future they may all adopt the principle of racial equality.

As time passes, space shrinks. With each passing day the earth is becoming smaller. The age of exclusiveness is ending, if it has not already ended.

Toward the whole problem of migration China's position may be informally stated as follows:

1. After the war China is going to develop the vast areas of uncultivated land in her northeast and northwest, which will amply take care of all the surplus population in the country. The Chinese Government is not likely to encourage emigration, although it cannot prevent those citizens who are dominated by the spirit of free enterprise and adventure from going abroad.

2. Overseas Chinese and foreign immigrants and residents in China should be treated on the basis of complete equality.

3. China expects that the immigration laws in the South Seas countries will be liberalized and that the Chinese in those countries will be accorded proper protection and proportional representation in legislation and administration.

4. China hopes that the immigration policies of the United States, the British Commonwealth, and Latin America will be so modified as to put Chinese immigrants on the same footing as those of other countries. Cuba has pointed the way in the matter. If the United States places Chinese immigration on a quota basis, only 100 Chinese will be admitted every year—too small a number to disrupt in any conceivable way the American economic life. China does not demand free migration. She simply wishes to see that all discriminatory laws on the basis of race, color, creed, or national origin may be abolished, and that thereby an unnecessary source of irritation and disharmony in her relations with the western countries may be eliminated.

Work of the Traffic Department, American Association of Railroads

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 9 (legislative day of Monday, May 24, 1943

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by the traffic department of the American Association of Railroads, showing what they state they have accomplished for the railroads generally for the year 1937. The statement was filed on October 11, 1938.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

From the very nature of the work of the traffic department it is absolutely impossible to submit more than a very rough estimate of the amount of money its activities have saved to the railroads, although in the aggregate we know this represents a very substantial figure. The reasons for this statement are:

The action of a line or group of lines may threaten the rate adjustment over a considerable territory. Our intervention has in many instances resulted in such proposals being either withdrawn or modified in a constructive way that has prevented reductions in other directions. In the first place, it could never be known accurately what the final development might have been, insofar as the extent of territory is concerned that would be affected by such a readjustment; furthermore, before this could be measured accurately in money it would be necessary to have the exact tonnage moving between the affected territories or the affected points, and even if this were ascertainable it would by no means tell the whole story, for the reason that frequently a reduction on one commodity automatically leads to reductions on other commodities which are competitive therewith. We might list a few things that have been accomplished and then submit a rough guess as to the amount of money involved, but we want it distinctly understood that a reliable estimate cannot be supplied.

Some of the matters of large moment where we know substantial savings in revenue have been secured are:

1. Persuading the railroads from establishing intermediate transit at grain markets in Western Trunk Line territory. Had this adjustment gone into effect it might reasonably have led to the breaking down of the grain rate structure through a large portion of the western district and the resulting loss to the railroad industry as compared with the present adjustment, which was prescribed by the Interstate Commerce Commission, would have reached large figures.

2. Persuading the Chicago lines from increasing their absorption at the Union Stock Yards covering services heretofore paid for by the owner of the livestock, which, if established at Chicago, would have been extended to all markets in western territory and in connection with which it was estimated would have increased the railroads' expenses in handling this business in the western district by at least a million dollars per annum.

3. Persuading the Southwestern lines to change their proportional rates on grain to Memphis, the effect of which would have been to reduce by 40 cents per ton revenues on all grain moving from C. F. A. territory and Western territory into the Southeast and which furthermore placed the Southeastern lines in a better position to defend their adjustment under the investigation which the Interstate Commerce Commission had instituted in docket 17000, part 7A. Here again this represents a large sum of money but it cannot be accurately estimated as no tonnage figures are available.

4. Persuading the Southwestern and the Western Trunk lines to increase their rates and minimum weights on furniture to avoid a reduction in the rates and minimum weights on furniture originating in eastern and southern territories.

5. The Southern and Southwestern lines undertook to reduce their rates on paper and pulpboard into the Northern markets. This would have probably resulted in a reduction in the rates on the entire paper group and paper board group from the North. This controversy was finally adjusted by increasing by 10 percent the level of rates which had been proposed by the Southern and Southwestern carriers.

6. Largely through cooperative efforts of this department the rates on imported vegetable oils from Gulf and South Atlantic ports have been increased from 3 to 6 cents per 100 pounds, making it unnecessary for what otherwise wolud have required a reduction from North Atlantic ports.

There has also been worked out but is not yet effective a substantial increase in the rates on domestic vegetable oils as a result of conferences arranged by this department.

7. Largely through cooperative efforts of this department the effective date of the Ex parte 123 advances were set forward at least 15 days earlier than was anticipated.

8. Restoration of relationships and differentials which were disturbed by the increase in Ex parte 123 by increases rather than reductions.

9. Securing an increase in the rates on rice. This resulted through cooperation between the common carrier barge lines operating on the inland waterways and the competing rail lines largely brought about by the efforts of this department.

10. Securing an advance in the cotton rates in both southwestern and southeastern territories.

11. Saved a lot of reductions in the rates on soda products and created an understanding as between the producing lines in the eastern and southwestern territories that will produce cooperative handling of this rate adjustment and not lead to action by one group that will adversely affect the other.

12. We were instrumental in progressing revision of the estimated weights on fruits and vegetables, in connection with which the carriers will be in position to collect freight charges on the weight handled rather than on the considerably lower basis under the previous estimated weights.

13. Persuading the Comptroller General to change his rulings to the effect that land grant deductions should be made in reduced rates on animal food products in the drought relief territory.

14. We were successful in persuading the southern lines not to make a reduction in their citrus fruit rates which if made would have caused a similar reduction in rates from producing points in Texas and California and which saved well over a million dollars per annum.

Also assisted in forestalling a demand on the part of Florida and Texas shippers for an emergency reduction in rates on grapefruit which would have represented a large loss in revenue.

15. Have been instrumental in having a policy adopted by the individual railroads not to make joint rates with trucking companies, the result of which has saved a considerable sum of money to the railroad industry.

16. Induced the southwestern lines to refrain from establishing transit arrangements on cotton, the effect of which would have required similar action in the Southeast and which would have cost the railroads considerable money.

17. Persuaded the eastern lines to refrain from rescinding their wharfage charges on coal, which if done would have required similar action on the part of the southern lines and would have represented a considerable loss in revenue.

18. Have induced individual lines and groups of lines to comply with orders of the Interstate Commerce Commission constructively where it appeared action might have been taken which would have resulted in substantially less revenue than otherwise would have been received.

19. Activities of this department in assisting in avoiding suspension of increased rates by the Interstate Commerce Commission and in obtaining modification of other orders or requirements of the Commission that might have resulted in reductions in rates or in other unnecessary expense.

20. Activities of this department in the direction of simple and economical publication of freight tariffs.

21. Have participated in conferences with shipper groups and obtained, as a result thereof, higher rates with the retention of traffic than the shippers were originally demanding.

These represent only the high points and, expressed in a money equivalent with no substantial figures possible to furnish in support thereof, it is the judgment of this department that we have saved to the railroads, at a conservative estimate, in the 4 years that this department has been in existence, not less than $12,000,000, or an average of not less than $3,000,000 per annum.

Victory on the Home Front

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 9 (legislative day of Monday, May 24), 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I delivered before the Central Retail Feed Association, Inc., at the Schroeder Hotel, Milwaukee, Wis., June 7, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, 2 years ago, almost to the very day, I was privileged to speak to this same group on the subject, The Nation's Job.

Our theme then was that the Nation's job was defense in its broadest aspects, not only a military defense but an economic defense, a social defense, and an individual defense. It meant not only the steel armor plate of mechanized defense but also the building of bomb-proof barriers of mental and spiritual defense.

Since that day in June of 1941, much water has gone over the dam. Today we look back on Pearl Harbor, Bataan, Corregidor, the capture of Attu and Kiska by the Japanese, and our subsequent return to that area.

We can look back on the successful campaign in Africa by our troops, the Battle of the Solomons, the rescue of Australia, the sinking of over 3,000,000 tons of Japanese shipping, the German submarine warfare, the tremendous Russian offensive, the bombing of Germany and her subject nations.

Today there are more than 6,000,000 men already in our armed forces. Five million more men will be inducted. Our home economy is more and more geared to the war effort. We have a two-ocean, yes, even a three-ocean navy. We are shifting from the defensive to the offensive, and we now have 135,000,000 people engaged in the war effort.

Last month, for the first time since the United States entered the war, the balance in the Battle of the Atlantic was in favor of the Allies, and at the very time when huge shipping capacity was vitally needed for rushing invasion troops, supplies, and ammunition to Europe.

The Mediterranean convoy route was cleared by the Tunisian victory. According to Allied estimates, probably 2,000,000 tons of shipping were released for other purposes.

According to the experts, one division of troops would require 150,000 tons of shipping. That means that the Allies almost over night acquired sufficient shipping to move better than 200,000 troops across the Atlantic.

We don't know how many trips such a fleet could make, although some observers have estimated that it could be one a month.

It has been stated in Washington that the April sinkings by enemy submarines were less than half those of March. This improvement was continuing during May. If the rate of sinkings can be held at that low level, the production of our shipyards ought to pile up a surplus of capacity over our losses.

We have a large volume of United States escort vessels now going into service and that has been a tremendous help. It may be that we are utilizing some new secret weapon in connection with the submarine. We certainly have a better aircraft cover for our forces, although we know that increasing numbers of U-boats will prowl along the convoy lanes with the specific objective of halting any possibility of building up a second front force. We can also expect that we will suffer many casualties in the Atlantic fight.

We definitely had air superiority in northern Tunisia. We had a great many patrolling hawks in the skies. At one time we were supposed to have had a five to one advantage. We have had constant airdrome patrols in the air. Yes, the Tunisian campaign tipped the battle of the Atlantic our way and our forces in the Near East and the Far East brought further encouraging reports.

Our military leadership has the confidence of the people, and that is as it should be. Moreover, they have justified that confidence and that also is as it should be.

It cannot be denied, however, that the people do not have that same degree of confidence in our policies and our strategy on the domestic front.

We hear no criticism of the war strategy or the war leadership, and that is as it should be. We do, however, hear criticism of our domestic policies and the principal reason is because we have not evidenced the same degree of sincerity or success which have been evidenced on the military front.

We haven't matched our military effort on the domestic front. We haven't matched it either in strategy or in courage.

Victories on the war front aren't enough. We must also have victories on the domestic front over every single force which impedes our war effort.

If something happens to our production curves in war plants and we eliminate the factors which caused the delays, that is a victory on the home front. If we are blithely spiraling toward inflation and we succeed in arresting that spiral, we have won a major victory on the home front. If there is confusion, duplication, overlapping, and delay in the administration of our domestic war effort, and we eliminate that chaos, then we have won a victory on the home front.

If our food supplies are dwindling as a result of poor governmental planning, and we correct that planning, then we have won a major victory on the home front.

That is why today, my friends, I should like to discuss the subject of victories on the home front. Let me illustrate what I mean.

If we had an army which fought for 15 months without organizing its companies into any kind of permanent organization and without establishing any clearly defined pattern of authority for its generals and its colonels and its captains, it would be a very poor army and it would suffer major reverses under fire.

That, my friends, is what has happened in Washington. In March of this year, some 15 months after Pearl Harbor, we were still creating new agencies, we were still issuing new directives, we were still creating overlapping spheres of authority.

One of these spheres concerns your industry. That was the creation of the new Administration of Food Production and Distribution within the Department of Agriculture under the leadership of Chester C. Davis.

Now, the official reason for Mr. Davis' appointment was that the Secretary of Agriculture, who was Food Administrator, was too busy with a great deal of departmental routine to do the job as Food Administrator.

Now, that was frankly a deceptive smokescreen. As a matter of fact, Wickard lost the job because he never succeeded in getting on top of the critical problem of food supply—and it wasn't his fault either. He didn't have the authority. In any job of food production the three principal elements are:

1. Labor—and these were controlled by War Manpower Commissioner McNutt and Selective Service Director Hershey.

2. The second factor which is vital to any kind of food production is the matter of prices, and Mr. Wickard had no authority here either, because Economic Stabilization Director Byrnes and Price Administrator Brown shared that authority.

3. The third factor was, of course, the factor of machinery and this was something which came within the scope of War Production Board Director Nelson.

At any rate, Wickard never got on top of the critical problem of food supply. He had no authority and, consequently, the job wasn't done. Consequently, it was left chaotic, confused, and disorganized 15 months after the Nation went to war.

Before this talk is finished, I will point out a general moral on this subject, but let me linger for a moment on the problem of the farmer.

This year 10,000,000 or more acres will be returned to production of major crops, due to the lifting of Agricultural Adjustment Administration restrictions. Those figures come from the Department of Agriculture itself.

That will mean that for the first time since we began killing little pigs, American agriculture returned to an economy of abundance instead of scarcity.

The second year of our participation in global warfare brought with it the grim stark realization that we had to feed armies, allies, and even conquered nations.

Finally, at long last, we have abandoned the hybrid, tattered and torn remnant of a doctrine of scarcity which has always been at variance with every fundamental and basic tradition of American life.

Yes, we have finally placed 10,000,000 acres back into production. That won't mean that there will be an abundance of foodstuffs for civilians, but at least it highlights a fundamental change which has been long overdue—the shift from the economy of scarcity to the economy of abundant production. At least it has brought home the fundamental point that if farmers are to be paid anything by Government, they should be paid not for curtailing production, but for increasing production.

That is a very basic change and it finds its counterpart in every phase of our war economy.

I don't know what the post-war plans for our farm life may be. I read recently where the chief agricultural economist of the Bureau of Agricultural Economics advanced a plan to cut the post-war world population to 80 percent of its present level. I don't know whether that means that our planners contemplate a vast machine-laden and industrialized America with a Latin-American food granary or not, but I do know that if that report is correct, it means a rigid program of post-war governmental control for the farmer. I do know that it would mean a blueprint for an organized agricultural market probably with fixed prices, and I might say in passing that this kind of a long range agricultural shackling is contrary to a basic objective for which this war is being fought.

Let us return now to the general subject of victory on the home front, and let me interject at this point that I don't want to be accused of being partisan, nor do I want to say that all of our shortcomings on the domestic front have resulted from one party, nor have all of the sound proposals emanated from one party. The issue of our domestic policies is infinitely greater than any narrow spirit of partisanship.

To begin with, this Congress was born in a spirit of independence. It was born in the belief that it was time for Congress to stop taking orders. It was born in the belief that it was time for Congress—men of every party—to do the job which must be done. It was time for Congress to reassert its constitutional authority and its obligation as the elected representatives of the people. Moreover it was time for Congress to quit stalling on important legislative issues. It was time, and high time, for Congress to approximate in some degree the courage manifested by our men on the fighting fronts.

For almost a decade, legislation lived and died on Capitol Hill in accordance with the mandate of the administration policy.

In the first 3 months of the Seventy-eighth Congress, this Congress broke all records in the intensity and the scope of the investigations it undertook. Now, investigations are a two-edged sword. Sometimes they create more havoc than benefits.

Nevertheless, in the first 3 months of the Seventy-eighth Congress, the Congress demonstrated that it intended to regain the functions which it had yielded to the Chief Executive in an earlier heyday.

The Congress refused to accept the ready-made post-war plans of the National Resources Planning Board.

I am not going to comment on that Board or its plans at this point, but I do wish to point out that subsequently the Senate established its own special committee to study and to make recommendations on post-war economic planning in an effort to assume some leadership and to make some constructive contribution on this vital problem.

It was a Senate committee that took the leadership in recommending the abolition of the Civilian Conservation Corps and the Works Project Administration, and they were eliminated.

Under Senate leadership, about $1,313,000,000 were saved in Government expenditures. There has been a growing spirit of financial scrutiny in Congress and several of the committees are beginning to serve as public watch dogs in the war agencies.

Congress in the past decade found itself shorn of much of its legislative authority. Some of the agencies which have been created are writing laws of the land through regulations, without any specific reference to the intent of Congress.

The Budget Bureau has been placed under the White House, and Congress is unable to go beyond this Executive agency. On this point, by the way, I believe that Congress must carefully reappraise the work of the Budget Bureau and must strongly reassert its initiative in effecting economy reforms. Perhaps the somewhat neglected Office of the Comptroller General should be studied with a view to reinvesting that office with some of the authority which has been shifted from it to the Budget Bureau.

Now, with all this seething spirit of independence, Congress has before it a picture of a dreary procession of governmental reorganization before Pearl Harbor—from the National Defense Advisory Commission, to the Office of Production Management, to the Supply Priorities and Allocations Board, to the War Production Board, in the production field; and from the National Labor Relations Board to the National Defense Mediation Board, to the War Labor Board, in labor relations; and from the Office of Price Administration and Civilian Supply to the Office of Price Administration, and from Henderson to Brown in the field of rationing and price control.

The Federal Government is the nerve center of the whole war effort, but there is still much chaos. There has been a five-man kitchen cabinet which had no legal foundation. There were reverses and more reverses. There were reorganizations and more reorganizations in War Production Board, and then Nelson turned over almost his entire authority in war production to the Executive Vice Chairman, Charles Wilson, and now James Byrnes is appointed Director of the Office of War Mobilization.

Now at long last, it is time for us to settle our domestic program into a somewhat permanent pattern.

There can no longer be any shilly-shallying with respect to domestic questions of tremendous importance. We got good news from Africa and it is time that we got good news from Washington. Perhaps the appointment of James Byrnes as Director of the Office of War Mobilization is that good news.

We can no longer tolerate indecision and procrastination.

The War Production Board is an example. Mr. Nelson has almost been shelved. The new executive vice chairman, Mr. Wilson, is reported as being in conflict with the Army-Navy procurement authorities, and while that question has been partially straightened out, it hasn't been entirely settled. The Manpower Commission is another illustration. From the Manpower Commission there has poured a deluge of conflicting, bewildering orders and proclamations, but there still is no clearly defined over-all policy, unless out of the appointment of Judge Byrnes we get that result.

We still do not have a clearly defined food-production policy.

Now, I have never felt that the ultimate character of our war Government should be determined by a series of foot races between the Chief Executive and Congress. I do feel that we must decide whether the impelling force behind administrative decisions shall be a legal statute or an Executive order.

I feel, however, that the first necessity for the Nation today is to create a War Cabinet—a genuine War Cabinet rather than a kitchen cabinet working in the back room. The kitchen cabinet performs a useful function, but it certainly isn't the answer to the problems of a war government. This group has done some excellent work. It has made some excellent recommendations, but it has no authority, it has no official status, it has no responsibility. The Chief Executive's authority cannot be delegated to an unofficial group.

It could be delegated to a certain degree to a genuine war cabinet, where each member would have a clear authority to make decisions—and to enforce them—in one specific field. A war cabinet would not eliminate all of the conflicts, but it would provide a mechanism for eliminating a great many of them.

I don't mean that the President's power should be undermined any more than congressional power should be undermined. As a matter of fact, I believe that whatever authority is necessary for the Chief Executive to successfully run this war should be given to him.

We must, however, eliminate delays and conflicts in authority and clashes of personality which hamper the war effort. The Baruch committee said that about the rubber situation. The Maloney committee said that about the fuel oil and gasoline program.

It is true of a great many programs on the domestic front. It was certainly true of the food program.

When there are muddles in government, when the Secretary of War and the Manpower Commissioner disagree publicly about the necessity for drafting labor, that is obviously a temptation to Congress to step in.

In some cases it is necessary for Congress to interfere but in other cases it would not be necessary if there were a war cabinet.

We had a great deal of war muddling in 1917 and 1918, and eventually President Wilson had to create a war cabinet. That provided a mechanism for an intelligent division of responsibility, where the Chief Executive could umpire the fights.

It is possible that such a war cabinet would mean a less costly victory on the battle fronts, and it is possible that it might mean a great many victories on the domestic front.

It looks now as if Washington has caught up with this idea of a war cabinet. At least I hope that is what is meant by putting Justice Byrnes at the head of the new Office of War Mobilization. Byrnes' job is analogous to that of Deputy President. He will have in his cabinet Secretary Stimson, Secretary Knox, Mr. Nelson, Mr. Hopkins, and the new Director of Economic Stabilization, Judge Fred Vinson. As you know, the work which has resulted in so much confusion, has been done by czars with no cabinet roles. It is physically impossible for the President to supervise the ramified agencies which have been brought into existence. He should never have expected to be able to act as the clearing house for all the ideas and the problems of all the departments and bureaus. The appointment of Byrnes means it will be his function to iron out the outstanding jurisdictional disputes between the czars.

Last March the so-called Truman committee pointed out three basic weaknesses of administration as a cause for the confusion, delays, and shortcomings in the war program. The committee listed them as:

1. Inadequate over-all planning within Government agencies at the beginning of various programs and delay in determining basic policies necessary to carry out such programs effectively.

2. Conflicting authority over responsibility for various delays in various phases of the war program, resulting in further delays and "buck passing."

3. The hesitancy of government to adopt unpopular and unpleasant policies long after the facts clearly indicated that such policies were necessary.

Let me make it clear that I am not in favor of another purely advisory group but that I am urging the adoption of a genuine war

cabinet where every member has a well-defined authority.

1. I believe that the creation of a war cabinet would be a definite victory on the home front.

2. I believe that the adoption of an intelligent fiscal and taxing policy would be a decisive victory on the home front.

I believe that in order to achieve such an integrated program, particularly in the field of the Budget, we need to correct one fundamental omission in our thinking. We need to correlate for Budget and planning purposes, particularly in the post-war period, revenue raising and Federal spending. We need a better correlation between appropriation and revenue committees in each House of Congress, and then we need a better overall collaboration in this field between the two Houses themselves. In other words, our congressional machinery for dealing with budgets is hopelessly inadequate. Congress is attempting to do its budgetary planning in the most expensive era in history with the same old-fashioned machinery established years ago. If the Executive assumes increasing control over all budgetary operations, it is only a natural consequence of this shortcoming within Congress itself.

The announcement of a decisive, clearly defined labor policy, the announcement of a clearly defined framework for a manpower policy, the announcement of a definite, clearly defined food production program—each of these would be a victory on the home front.

The announcement of a clearly outlined program for our so-called psychological warfare would be very helpful for our morale. The announcement of either a definite correlation or a definite separation between our censorship and propaganda policies, would be helpful.

The announcement of a definite policy with reference to our Federal personnel would be a satisfaction, and in this connection I might add that congressional initiative has already resulted in a reduction of more than 41,000 civilian employees in all departments. If, instead of adding more and more agencies—if, instead of pyramiding more and more bureaus—we were to utilize existing bureaus, it would be a very heartening assurance to our people.

In the post-war period, particularly, it would be very interesting to find out what will happen to the 60 agencies of Government which today operate as corporate entities, paying no interest or taxes on the use of public funds, and which, in many cases, are virtually free from the normal audit and budgetary controls.

An announcement today of the sharp restriction of these Government corporations which operate in direct competition with private enterprise would be a tremendous morale booster.

What I feel is most fundamental, however, is the necessity both during the war and in the post-war period for the adoption of a mechanism which will insure that there will be a working collaboration between the Executive and the Congress. It is axiomatic that the soldiers won the last war and the statesmen and the people lost the peace. That must never happen again. There is little disagreement today on the necessity for some kind of international collaboration for a better world, but unfortunately there has been too little discussion on the simple mechanism which must precede any such collaboration.

Before we can talk of international collaboration, we must make certain that there is domestic collaboration.

Under our Constitution, there are two peace-making authorities and before we can talk of world peace we must make certain that there is peace between our own two peace-making authorities.

Before we can talk about any resolutions relating to the post-war peace problem, we must adopt a simple mechanism for collaboration between the Executive and the Congress with reference to their joint peace action.

If tomorrow we were to have assurance from both the Congress and the Executive that a liaison committee on the problems of the peace would be established to function during every stage of the conduct of the peace, that would be a tremendous victory on the home front, because it would mean that the chances for the adoption of a workable peace would be infinitely increased.

It would be assurance to our boys on every fighting front in the world that their fight would not be in vain—that they would not return home to face the spectacle of Congress and the Executive battling over the terms and the provisions of a peace. It would mean that the representatives of the people would have a voice in the inception stages of a treaty, and it would mean that the comprises would be worked out beforehand.

It would mean that the treaty would not the wrapped up in cellophane and a big blue ribbon and then delivered to Congress by the State Department wouthout any thinking on the part of the people's representatives ever having been incorporated in the treaty.

The presentation of a treaty as a fait accompli by the State Department invites sharp scrutiny by the Senate of an unfamiliar treaty with which it is not conversant. Participation by the Senate in the inception steps of the treaty—not in a spirit of antagonism, but in a spirit of working cooperation—would mean that the treaty which would have to face a Senate vote for approval would have an infinitely better chance of surviving as a hope not only for the United States but for the world.

In this connection, let me say in conclusion that Congress would lose a vital battle on the home front if it does not successfully protect us from economic disaster after the war.

All of our energy today is concentrated on winning the war and that is as it should be. We will win that war, and we must also win a just and a righteous peace. We must also win an economic battle for America—a post-war battle. That is necessary not only for the survival of the United States, but in order to insure that there can be an equitable economic basis for international peace.

Russia's Electric Power Resources

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 8, 1943

Mr. RANKIN. Mr. Speaker, some time ago I called the attention of the House to the fact that we are now in a power economy; that electric power, the supply of electricity, will have more to do with the lives of our people and the future of this country and of the world, than will the supply of silver and gold.

Recently I also took up the question of the development of electric power in Japan and showed that if it had not been for our public power program in this country Japan would today be ahead of the United States, or even with the United States, in the production and use of electric power.

I now desire to discuss the development of electric power in Russia, particularly water power; and at a later date I hope to take up the question of electric power production in other countries, including other European countries, as well as South America.

POWER DEVELOPMENT IN RUSSIA

The question is frequently asked why such a reversal of Russian form and performance, compared to the last war. The answer lies in Russian industrial development along lines of complete electrification, as we know it from our own experience. The story of this change is enlightening

I am picturing this development only from a practical standpoint, disassociated from their political theories. We need to know, for our own well-being, what each country has and how it can use it. We must look realistically at the world around us. An electrified Russia is a vital world force and it is here to stay. Her resource structure is built on American lines, and is easier for us to understand and measure than is the Nazi structure.

Russia has realized the importance of complete electrification. The keystone of her national economy rests on this concept. The outstanding reason for her remarkable war performance was an early realization of the possibilities of electrolytic and electrothermal production processes, as well as the possibilities of automatic electrical equipment, and electric industrial production technique, with the associated increase in production per employee.

Russian leaders saw that the force of electrification would give them a single yardstick by which they could gage their national economy. Their concept of capitalism, unfortunately, was given to them by the German and associated proprietors who controlled and operated Russian industry during the days of the Czar, which drove them temporarily, at least, to the other extreme—communism.

RUSSIAN INDUSTRY UP TO 1917

Practically all of the Russian industry prior to 1917 was foreign owned, with German interests predominating. Ninety-six percent of the entire Russian electrical business was owned and operated by German and affiliated foreign interests. The operation was on a very low and backward level, and by standards as we know them, extremely crude. A reexamination of all controlling factors lead to the conclusion that the Russian people were "sold down the river" by profiteering foreign proprietors.

Between 1900 and 1914 only 14,000 kilowatts of new-production capacity was installed annually in Russia, which is just a little more than the amount now used each year in my congressional district.

The costs per kilowatt and per kilowatt-hour were sky high and the reliability of performance at the bottom of the scale. For example, one electric station was erected in St. Petersburg with boilers so built as to use

Cardiff—English—coal, and the boiler pressure was around the low level of 100 pounds. Fuel supplies at hand were ignored. Another station was built in Moscow equally as antique that could burn only long-haul oil from foreign or Caucasus sources. During this time the Donetz Basin was Russia's principal industrial center. Its mines and mills were primitive. There were hundreds of small mechanical plants, all operating at low efficiencies. The entire electric power for this vast resource region consisted of only 70 kilos—43 miles—of light power lines. The Russian steam boiler inspection records show 21,500 registered boilers. Only 18 percent were water-tube boilers, and the remaining 82 percent were frail pots, sold only to make large sales profits.

Decentralization of industry had been carried to the extreme. St. Petersburg, for example, secured its entire power supply from 105 different generating stations with an aggregate capacity of 193,000 kilowatts and with different operating voltages. Efficiency standards were almost as crude as the Chinese treadmills, and there was no technique. The Government did not know its resources, and the published surveys on quantities were ridiculous.

In 1913 the total Russian electric installed capacity was only 1,100,000 kilowatts and the output 1,900,000,000 kilowatt-hours, which is less than the amount now used in the State of Washington, Alabama, or Tennessee. Its productive capacity in that year was only about one-twentieth of ours and one-tenth that of Germany. In 1913 only 37 percent of the national power output was used in industry. The average efficiency of the largest generating stations was only 10.7 percent. The Russian electrical manufacturing business was practically nil. Machinery was largely imported with a few foreign workshops, run on a concession basis, handling the small amount of nonimportations. These few descriptions give a picture of the Russian industrial situation at the beginning of the last war.

PLANNED ELECTRIFICATION

In October 1918, the Russian Academy of Science commenced studies on which the new government could plan industrial reorganization, stressing electrification.

In February 1920, the Goelro was founded, which was purely a technical body composed of about 200 of the nation's outstanding scientists. The fundamental work of this commission which has since been known as the Goelro plan, was completed in December 1920, and submitted to the Eighth All Russian Congress of Soviets, and approved. This plan covered the reconstruction of Russia along electric lines, with a high order of technique. In 1921 Stalin referred to the Goelro plan as the best base on which to build a new industrial structure to save an economically backward Russia.

THE GOELRO PLAN

This plan called for an entire reconstruction of industry, based entirely on electrification. It might be said at this point, that the backward conditions made reconstruction easily possible. Its objective was to increase production 180 to 200 percent of the pre-war level, which was to be accomplished in a minimum of 10 years and a maximum of 15 years. This plan had two parts known as A and B. Part A provided for the restoration and reconstruction of pre-war facilities and the development of electrical transmission and distribution networks.

Part B called for 1,500,000 kilowatts of new generating stations and the creation of 30 electrical regions.

The approved basic plan called for the concentration of large regional electric power in supergenerating stations. Power was to be transmitted out of these stations over the entire region through high-voltage networks to industries and other consumers.

These central stations were to be so located as to best serve the raw materials of each region, subject only to the requirements that the backward industrial situation of the entire country be corrected as early as possible, and that local power and fuel sources be used exclusively, to avoid overloading the national rail systems. The power sources to be used were water power, local bituminous coals, oil, oil shales, peat, and anthracite waste culm. When the industries had been rebuilt it was then planned to interconnect the regions by high-voltage transmission ties so that each region could render assistance to other regions, when needed.

Basically, the Russian plan was entirely different from the German concept of decentralizing industry into a number of component parts. The development of this new Russian plan was a natural move, as the Russian leaders knew from bitter experiences what German decentralization and mechanical drives had done to their country's industry from 1914 to 1917. Furthermore, they were thoroughly acquainted with the great productive capacity of the United States and the reasons therefor. Active work was started on the Goelro plan, as soon as internal conditions permitted, but rehabilitation of pre-war facilities largely occupied their attention until 1925, which is the first year in which it is possible to measure results from published statistics.

GOELRO CONSTRUCTION

The original plan called for 28 generating stations west of the Urals and 2 east of that range. The final amendments to this plan increased the total stations west of the Urals to 56 and east of the Urals to 4. The Soviets developed all the waterpower possible under the major requirement of local resource use. The completed plants west of the mountains comprise 10 hydros, 22 coal burners, 10 peat burners, 5 mixed-fuel plants, 1 oil-shale plant, and 8 fuel-oil burners. East of the Urals the plants completed under the Goelro plan comprise 1 hydro and 3 coal-burning stations. These were all superstations. In 1928 it was evident that these 60 stations and their adjacent industrial "combines" would be completed within the minimum period of 10 years or by 1930. Stalin therefore proposed the first 5-year plan, and on the completion of this plan offered the second 5-year plan.

FIRST AND SECOND 5-YEAR PLANS

These plans were a continuation and expansion of the Goelro plan. The first 5-year plan was approved by the Congress of Soviets in 1929. It provided for constructing and enlarging 42 regional electric-generating stations and establishing industrial "combines" in connection with these power outlets. Under this set-up the generating installations in Russia would be increased 3,200,000 kilowatts.

Just prior to proposing the first 5-year plan Stalin employed an American engineer, the late Col. Hugh Cooper, as a consultant. Colonel Cooper and his organization had built the Muscle Shoals and Keokuk Dams, in this country. Stalin secured the services of Colonel Cooper and his organization, after canvassing the international field, and rejecting German offers of assistance. Colonel Cooper had a substantial part in engineering the large Dnieperstroy Dam, which was initially equipped with American water wheels and generators. Dnieperstroy was built along the lines of the Muscle Shoals plant. From the Dnieperstroy experience Russia created electrical manufacturing plants that could satisfactorily build power-plant equipment along advanced American lines. The last four Dnieperstroy units were built in Russia. This Dnieperstroy Dam was blown up by the Russians to keep it from falling into German hands; but it will undoubtedly be rebuilt when the war is over.

The second 5-year plan was a broadening program which included electrometallurgical and chemical industries, and had as its object expanding industrial productions ninefold. It also initially proposed to electrify railroads and to introduce electrical processes into agriculture. In the larger cities this plan included the coordinated operation of steam-electric and steam-heat plants. This second 5-year plan included full transmission-line interconnections between all stations in a region and between regions, and the enlargement of the Donets-Dnieper industrial area into the largest industrial electrical set-up in the world, with an annual consumption of 9,000,000,000 kilowatt-hours. The development of manufactured gas from peat and oil shales was also a part of this plan. The full expansion of hydro power was also included. The total new generating stations totaled 79, all of which were superplants. The details of these stations have all been listed in the published documents brought with the Russian representatives of the Third World Power Conference, held in Washington in 1936. I will list the over-all capacities resulting from this and other plans when I measure the results of these various plans.

MEASURING RESOURCES

Because of commercial propaganda, and military reasons, any data put out by any nation on resources should be used with caution until the control fac-

tors have been checked. Information is available in this country, from thoroughly reliable, neutral, and unbiased sources to check any statement on resources. The control statements I have used have been checked. My feeling is that the best approach is to deal in comparative conclusions rather than presenting a mass of so-called absolute statistics.

The Russians, when they attended the Third World Power Conference here in Washington in 1936, submitted a large amount of technical information, which has been published and is available for reference. This has also been largely consolidated in a book printed in England but published in Moscow, entitled, "Electrical Power Development in U. S. S. R."

RUSSIAN RESOURCES

From the standpoint of potential resources Russia is outstandingly rich and ranks up amongst the three highest nations in the long list of principal industrial materials. It has large quantities of all the possible sources of power.

Russia's 1938 population was 180,-200,000. About 5,000,000 Russians are war casualties and about, 60,000,000 have been taken into captivity by the Germans.

Russia covers one-eleventh of the world's land area. She has one-sixth of the world's coal, one-third of the world's oil, and slightly under one-third of the world's undeveloped water power. Her forest area is one-fifth of the total on the globe, and her lower-quality fuel resources are nearly one-half of the world's total. Her natural-gas reserves equal ours. Her proportional endowment of power sources exceeds her land and population percentages. I will discuss water power separately.

One of the richest coal fields on this globe is the Kuznetsk field in Siberia, which has very deep seams of high-quality coal. The second largest field is in the Donets Basin. Large deposits occur in Siberia, north of the Mongolian and Manchukuo frontiers, all the way from the Urals to Vladivostok. Large secondary coal deposits occur in the Moscow region.

The rich oil and gas areas are found around the Caspian Sea and between the Volga and Emba Rivers as far north as the fifty-second latitude circle. Oil is also found in a narrow strip east of the Urals, extending from the Ural River to the Arctic Circle and also north of Afghanistan. Little oil has been charted in Siberia except on the Sakhalin Island, north of Japan. The peat fields are found in the Moscow and Gorki areas and in White Russia. The oil shales are found in the noncoal areas around Leningrad and in the middle and lower Volga territories. Russia affords an outstanding example of how nature distributes her power resources. Where there is a shortage of one type there is usually found a sufficiency of another. Russia's mining resources have not been completely surveyed. The country has many years' supply of manganese, iron, copper, asbestos, zinc, lead, and the precious metals. The greater part of the world supply of platinum will come from Russia.

RUSSIAN WATER POWER

Russian rainfall is extremely variable, varying from 14 inches to 25 inches, near the Baltic Sea. Russia has the largest rivers in Europe, but this is the result of large basins rather than the average rainfall. European Russia has 14,000,-000 potential horsepower at minimum flows and 50,000,000 horsepower available 50 percent of the time. The developed European Russian water power totals about 2,000,000 horsepower. This water power is not evenly distributed and is only found on the lower Dnieper and Volga, in Caucasia, Azov, Trans-Caucasia, Leningrad, Gorki, and Arkangel territories.

Central European Russia and the Moscow area have little developed water power, hence the use of coal, oil, and the lesser fuels for steam generation. The outstanding hydro stations are:

First. Dnieperstroy, which was completed in 1932, has a total capacity of 756,000 horsepower under a head of 116 feet. It has nine large generating units. At the time of its completion it was the largest single power station in the world. It is about the size of Bonneville but is smaller than Boulder or Grand Coulee.

Second. Svir—two stations—of 90,000 and 195,000 horsepower. These serve Leningrad and have heads of 35 and 45 feet.

Third. Chirchik, 230,000 horsepower with a head of 220 feet.

Fourth. Perm—Urals—425,000 horsepower with a head of 52 feet.

Fifth. Rykynsk—Volga—275,000 horsepower with a head of 53 feet.

In addition, 29 other super hydro plants were built between 1930 and 1940 with capacities somewhat lower than the five I have given.

Two large water power installations were being projected for the Volga just before the war at Kuibyshev and Kamyshin, which will be larger than Grand Coulee. Plans were partially completed when Russia was attacked. In addition, there are 10 smaller projects on this river. These Volga projects will total 9,000,000 horsepower with an output of 32,000,000,-000 kilowatt hours per year. Thus the Volga, when developed, will exceed the combined T. V. A., Boulder, Bonneville, and Grand Coulee installations.

Estimates have also been made for the Yenisei project (Siberia) of 16,000,000 horsepower and the Angara project—Asia—of 14,500,000 horsepower. In addition, nine other projects have been planned ranging in size from 2,000,000 to 12,000,000 horsepower each. Asiatic Russia has 64,000,000 potential water horsepower at minimum river flows with 325,-000,000 horsepower at flows occurring 50 percent of the time. At the present time there is only 140,000 hydro horsepower developed in Asiatic Russia, but millions of horsepower have been surveyed and plans drawn for future installations.

Time and space limits a fuller description of Russian water power possibilities. They are enormous. Think of these possibilities under conditions of cheap available construction and manufacturing materials, a large reservoir of manpower, and advancing technique.

THE DNIEPER PROJECT

The super Dnieper project covered navigation, irrigation, and power. The Dnieperstroy Dam, already completed, is at the lower end of the middle river development and is the center of the ultimate project. The third 5-year plan contemplated four additional main river hydro plants, one to be located on the lower stretches of the river, one to be above the Dnieperstroy station, and two stations located on the middle river between Dnieperstroy and Kiev. In addition, large storage dams with two generating stations were projected in the upper reaches in order to regulate the total flow of the river.

The proposed middle and lower river stations were projected in the area of the southern Russian power system, which fed into the Donets region on the east, the Dnieper region in the center, and the Krivoi Rog mining section to the west, and the Odessa-Crimean area in the south. These stations were planned to increase the output of the existing stations to over 8,500,000,000 kilowatt-hours per year to serve a maximum system peak load of 5,000,000 kilowatts by the end of the proposed third plan.

These stations were planned to be connected by a series of transmission lines with 100,000-kilowatt capacity each. The lower Dnieper area has a deficiency of fuels but will be tied into the coal-burning plants of the Donets region. River transportation will also occupy large part in the complete Dnieper development. On the completion of the dams I have cited Russia will have a completed waterway, connecting the Black Sea with Leningrad and the Donets Basin with the western mining regions.

In addition to these 2 purposes, this super project will irrigate about 4,500,-000 acres in the lower Donets Basin and about 2,000,000 acres in north Crimea, and will drain the bogs of the Ukraine and White Russia, an area of 11,000,000 acres. These irrigated and reclaimed lands were to be put to work developing cotton and wheat in addition to orchards, vineyards, and industrial crops. This proposed project exemplifies the coordination of Russian planning in all directions. The large industrial centers utilizing this power are located at Zaporozhe, Stalingrad, Krivoi Rog, and the Odessa-Crimean area.

GROWTH OF RUSSIAN ELECTRIFICATION

When we compare the growth from 1925 to 1939 of Russian electrification with other countries, we find some very surprising figures. Their rate of growth far exceeds the rate of any other European country.

The generated kilowatt-hour output during the first 5-year plan tripled in 5 years, going from 8,300,000 to 25,900,000 kilowatt-hours. It took Germany 13½ years to acquire such a growth rate, and Great Britain 15.4 years. In other words, the speed of development in Russia was nearly three times the German

rate and over three times the British rate. The greatest German kilowatt-hour increase per year from published statistics was 3,900,000. Russia has exceeded this figure every year since 1933. In 1935 it was over 5,000,000,000.

The best information we have indicates that the Russian yearly increase had amounted to over 10,000,000,000 kilowatt-hours in 1939. This last rate was five times the British rate, two and a half times the German rate, and seven times the French rate. The rate growth was accelerating in geometrical progression, as new industries were brought into production. With such increase rates the gap between a backward Russia and the most advanced European country was being rapidly closed.

With projects scheduled in the third 5-year plan—but stopped by German aggression—the gap would have been closed before the completion of a third plan. The projected Volga and super Dnieper hydro projects alone will add about 60,000,000,000 annual kilowatt-hours to the Russian systems, or about one-third of our late total. The future projected hydro projects on the Angara and Yenisei, in Asia, will add nearly 100,000,000,000 kilowatt-hours annually, or about half of our own maximum projected wartime output.

Another marked Russian development characteristic is the hours use per year of each kilowatt installed. In 1933 the hours use per year was 2,950 hours. In 1935 it was 3,800 and the estimated 1939 figure was 4,100, or double the German 1936 utilization factor.

In 1914 the Russian output was 1,900,000,000 of kilowatt hours. In 1925 it was 2,900,000,000; in 1935 the figure had risen to about 26,000,000,000. The scheduled projects in the third plan would have normally brought this growth measure to 41,000,000,000 by 1939.

The Russian installed capacity was 1,000,000 kilowatts in 1913, 1,390,000 in 1925, 6,900,000 in 1935, and about 10,000,000 in 1939. From 1929 to 1936 the installed plant capacity in the United States and Germany was stationary, while the Russian capacity increased over fourfold. The Soviets were vastly increasing their tempo, while we remained on dead center during the depression years. This shows that resources are more powerful than gold.

During the second 5-year plan Russia was also electrifying its main trunk railroads. By 1936 about 1,800 kilometers—1,120 miles—of main lines were electrified like our Washington-New York service.

What does all of this mean? Simply the fact that Russia has acquired the "know how" of electrically converting raw resources into finished products at an exceptionally high rate, and under high utilization factors. The "know how" is bound to assure Russia a high place in post-war production.

CONCLUSION

I have today presented a picture of an accelerated development for the utilization and processing of a vast storehouse of raw materials. I have presented this information as I feel that our own well-being must rest on a realistic appraisal of world conditions.

The lesson to be derived is the need for appropriate adjustment of our own program so that foreign commercial interests cannot, by cartels or like manipulations, secure a monopoly over our own controls. We must also recognize the gross errors of that school of economists who have overrated the value of gold and money as applied to world domination. What I have presented, and will later present, should show that the use of labor, manpower, and the industrial and agricultural materials, when processed by low cost electric energy, will control the future international balance, rather than gold or money.

Financial considerations at home need to be considered under our system to promote efficiency and increase morale, but in maintaining our world position we must recognize what surrounds us.

We need more realism, and less propaganda.

Remember we are in the dawn of an electric age.

Address by Hon. Alexander Wiley, of Wisconsin, Before Solid Fuel Institute of Milwaukee, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a talk I delivered on June 7 before the Solid Fuel Institute of Milwaukee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE GREAT NEED OF MANKIND—COOPERATION

The hope of mankind lies in learning cooperation. This calls for getting rid of those forces which would nullify our efforts to learn the art of living and working together. Man's inhumanity to man, man's jealousy, misunderstanding, and bigotry are utter stupidity. Yet they have persevered down through the ages. Why? Because man has not learned to cooperate with man as he should. Let us humans stop being Kilkenny cats.

A mighty awakening, however, is going on. We are beginning to see the practicality of the commandment of Jesus, "Thou shalt love thy neighbor as thyself."

An incident comes to my mind from out of the last war. It was stated that a priest serving a battalion or a regiment of our doughboys in France was the kind of a minister whom all the boys learned to love and respect. He was constantly with them, advising, helping, teaching, encouraging—the incarnation of cooperation.

When the battle was on in the trenches, he was with them. When boys were dying, he was administering the Last Sacrament. When the wounded needed care, he gave that care. He was one of them. He was a great soldier of the Republic. He never hesitated to go into places of danger.

But one night as he was out in no man's land to succor the needy, he "got his." They carried him back and as he was passing on, they heard him mutter "Co-operari."

The incident was related of Goethe, the great philosopher, that when he died his last words were "more light," and the friend who stood by knew that he was not speaking of more candlelight. Rather he was—as he was traversing the vestibule between this life and the next—seeing the great need of mankind, and he was giving the great directive in his expression, "more light."

It is said that great souls can look both ways as they pass through the vestibule, and he saw that the great need of mankind was more light, more cooperation, more brotherhood, and so he said "more light."

So it was with this priest—the great friend of our boys in the last war. He looked back upon struggling humanity and he saw the need for cooperation, and his last words were in the Latin, "co-operari."

We are beginning to learn that mere phrases won't do the job. There must be conviction and action. There are millions of souls who are praying that the light may break through, and that we will be able to see the way which will lead toward that full cooperation which will mean peace nationally and peace internationally.

In the present war situation, cooperation for war between the United Nations is imperatively necessary if we expect to vanquish our enemy. We realize that we should allow nothing to interfere with our efforts—nothing, I say.

Nations with as different ideologies as Russia and the United States are learning the way to cooperation. If we learn through the hard course in war to work together, we should certainly apply in peace the lesson learned in war so that when we face the problems of peace we will unite our effort for peace and the solution of the post-war problems.

Now, the purpose of cooperation in this war is to preserve our freedoms and make sure that our spiritual progress shall continue. Every thinking person recognizes that cooperation is a basic rule for advancing civilization. It is fundamental in the family, in labor and management, in communities, and in world groups.

In Washington we are beginning to realize that the tremendous task that is going to face America in the post-war world requires above everything else that the spirit of cooperation be born and made real in the hearts of men. We will have not only to rebuild a world but enlarge the opportunities of mankind to produce and enjoy new wealth. However, we will never be able to produce wealth in things to the extent that this country will require unless we create the jobs, and we will never be able to create the jobs unless we have the energy and the vision and the cooperation necessary. Learn to cooperate is a call that comes to labor and management, to Government officials, to cities and States and to the Nation. We must enter boldly into a program of action.

We haven't the time to complain about the inadequacy of the planning in the past; but let us learn from our mistakes. The time for doing things is now. We know that our labor supply has grown tremendously because the women during the war are learning how to look after the jobs the men looked after before. Women are becoming industrial workers and find a job and satisfaction in looking after that job.

When the war is over many of these women will want to remain on these jobs. They are creators of wealth and are doing the job as well as men. So we will have a tremendous force of skilled labor that will want to go to work. Therefore, now is the time to build and plan for the peace—a healthy, economic peace, a cooperative peace.

This calls for unity of effort now between the best brains in Government and the best brains in industry and in civilian life.

In other words, we should have a backlog of projects that will be utilized to absorb this tremendous force of labor when the war is over.

Civilization depends upon action, the right action of sane-thinking men, resulting in the creation of jobs, of new wealth, healthy communities where industry and enterprise and virtue dwell. If we get into action now with the spirit of cooperation, the groundwork of a greater world will be laid, and our boys who are fighting our battles will know they will have a chance when they come back, in the dawn of a greater tomorrow—a chance to have a part in rebuilding a world. There will be jobs and opportunities awaiting them.

A father went to visit his son at college, and on his way out to the school, about 11:30 in the morning, he stepped into a drugstore to get a root beer, and he found his son there having a coke. He said, "Son, what are you doing around here at this time of the day?" And his son said, "Oh, dad, I'm just resting up, waiting for those professors to catch up with me."

I am hoping that the powers that be in Washington will catch up with a few of these ideas which we have been talking about. What do I mean? Washington should learn to cooperate. How?

(a) Get men in places of authority who have had the necessary experience to handle the job; not simply theory—practical men, men with common sense. There are more now of that sort than there were when I first came to Washington, but we can use more of the right sort.

(b) Get men in Government who believe in loosening the controls that Government now has through its bureaus and administrators; men who still have faith that the people themselves know what is best for them; men who want to get rid of government by Executive orders and decrees, especially when this war is over. Bureaucracy must be treated as a fungus growth. "Them's my sentiments."

(c) Public servants and all of us must learn that private enterprise, instead of public enterprise, must be fostered, not in order that the particular individuals may benefit but that the public welfare may be subserved. This idea, in my opinion, is important to society, important to the individual, and important to organized labor. If in the post-war period legitimate businesses which have been built up through the industry of Americans have been forced to the wall, the Government will do the employing and the employees will be the creatures of government—all of us had better think this matter through now.

I bring this matter to the fore at this time because government already has some $16,000,000,000 invested in industries of this country—money that the Government got from the people. Now, in wartime, government necessarily, in the interest of security of the nation, reaches out its strong hand and writes the ticket—writes the ticket for management and for labor. If this condition were to continue in peacetime, it would destroy the profit system, individual enterprise, and small business.

We Americans are creatures who have learned through the years to create and build. We want a chance to better our conditions as freemen and not as the tools of a government. But there are those political doctors who want great government corporations to run the show after the war is over.

I tell you frankly, "I'm agin' it."

As I said on the floor of the Senate a few days ago, I expect to see a new economic "creature" come into being, but if I have anything to say about that creature, it will not be one with special privileges. Let that creature in which the Government has money and in which private individuals have money and in which the Government has representation and private individuals have representation—let that creature stand on its own feet and meet every condition and overhead that every private institution has to meet. Let it be subject to taxes and the same regulation and supervision that any private institution in the same class has.

It looks now as if Washington has caught up with an idea that I have been mentioning for a long time, and that is a war cabinet. At least I hope that is what is meant by putting Justice Byrnes at the head of the new Office of War Mobilization. I sincerely hope that this is not simply another bureaucratic creature. The demand for a war cabinet has existed for a long time. President Wilson saw the need of it. I have urged it in my talks in the Senate and in public addresses since before December 1941.

Byrnes' job is analogous to that of deputy President. He will have in his cabinet Secretary Stimson, Secretary Knox, Mr. Nelson, Mr. Hopkins, and the new Director of Economic Stabilization, Judge Fred Vinson. At long last the President has bowed to this storm of demand for a functioning war cabinet.

As you know, the work which has resulted in so much confusion has been done by czars with no cabinet roles. It is physically impossible for the President to supervise the ramified agencies which have been brought into existence. He is our Commander in Chief. He should have done long ago this job which has now been done. He should never have expected to be able to be the clearing house for all the ideas and the problems of all the departments and bureaus.

Probably when he appointed Mr. Byrnes in the first place as Director of Economic Stabilization, the President thought that Byrnes could clear the decks. But it didn't work that way because these czars wanted to clear through the President.

The appointment of Byrnes now as the head of the Office of War Mobilization makes him virtually Assistant President. It will be his function to iron out the outstanding jurisdictional disputes between the czars. We wish Judge Byrnes success in bringing order back into this situation.

I have introduced a resolution that would create a joint committee of the House and Senate to study the whole social security problem, having in mind meeting the impact of the post-war period. It is a vast problem and should not be treated in segments. So far no heed has been paid to my resolution. No provision for such a committee has been made.

We have constantly called to mind that one of the great facts that has come out of this war effort is that American industry and enterprise, which includes labor, have done a great job. They have demonstrated the vitality of the old deal. They were given the opportunity to save America, and they have done it. Once more industry and thrift, courage and invention, initiative and teamwork are recognized. This omens well for the future.

The attack for almost 10 years by demagogues and political quacks on men who build and create must not occur again. We will need the vitality of all of us to survive the post-war impacts.

We want cooperation now and after victory between the treaty-making arms of government—the Executive and the Congress. Let us remember no man or group is as great as our country. Its interest comes first.

I introduced a resolution to create a liaison committee between the Executive and the Senate. Just recently the Washington Post, commenting on this subject, said:

"Why, then, has the Senate Foreign Relations Committee been so dilatory in reporting out the Wiley resolution calling for a foreign relations advisory council to act as a liaison between the Executive and legislative officials who share the duty of planning for a lasting peace? * * * The only sound basis on which international cooperation in the post-war world can be laid is cooperation within our own Government in working out the objectives for which the United States will be prepared to stand. Negligible progress in that direction has been made, even though the White House and Capitol are but 2 miles apart."

The Post article illustrating the lack of cooperation stated further:

"Ten months before Pearl Harbor Senator WILEY introduced another resolution asking the Secretary of State to report in executive session of the Senate Foreign Relations Committee on the threat of war in the Far East, and our preparations to meet it. At that time the State Department knew that war in the Pacific was rapidly approaching. But the resolution was pigeonholed. The committee did not get the information sought. No adequate preparations to meet an attack were made. The United States was humiliated at Pearl Harbor and a great sacrifice of human life will be necessary to regain what we have lost in the Far East. No one can say with assurance how the situation would have been changed if the information in the hands of the State Department had been conveyed to key Members of Congress. This much, however, is certain: the withholding of such information makes it impossible for the representatives of the people to act intelligently in the face of a global crisis. The Senate cannot act too quickly to bridge this dangerous gap between executive and legislative action while the problems of the forthcoming peace are still in the discussion stage."

I spoke on Memorial Day at the Battleground National Cemetery in the city of Washington. It was here that Lincoln stood in 1864 when Washington was in jeopardy. On this occasion I mention the words of Lincoln where he said, "Come back to the truths that are in the Declaration of Independence * * * heed those sacred principles."

I have applied the need of cooperation to the home front. I have illustrated where cooperation would work miracles now, and where, if there had been cooperation, much loss and suffering might have been made unnecessary.

In the post-war period, when the United Nations will have won this war, our big problem will be to find how to put cooperation into effect. Our job will be to find the way so that the world will not again turn to war. Just how will we be able to safeguard this much-contracted globe from another holocaust like the present?

After the last World War, after we had defeated Germany, the nations failed to learn how to cooperate. Our job now is to find that way. Was it the result of a lack of understanding or cooperation?

We do not know how constructive and effective our support and influence and participation might have proved if we had gone into the League of Nations. We do know that because there was not that necessary cooperation to put a stop to the scourge of war, that war came again.

Therefore, we must try—now that the world looks to us for leadership—we must try and not fail to ascertain the way which leads to international cooperation and collaboration. This is the job of all of us. The average citizen must think this problem through. He must not be confused.

I believe that all of us have a sincere conviction on this subject of cooperation and I have faith that when the war is over, America will find that way—the way of international cooperation.

When this Nation consisted of less than 3,000,000 people our fathers dedicated their lives and property and their sacred

honor to carry through to victory. They were freemen in that day though they were colonists. Today the subjects of Hitler are not free. Their lives and property and their conscience are taken over by him. Therefore, we can do no less than our forefathers when they pledged their lives and fortunes and their sacred honor to the cause of freedom.

We must win the war and overthrow the power of the enemy. But that is not all. We must make sure that when the victory is won that we will be worthy to write the peace. With peace will come added responsibility—the responsibility to rebuild bleeding, suffering humanity and make a repetition of war impossible. We are dedicated to fulfill this task. May the God of our fathers guide the leaders of this Nation so that the wisdom of the Most High may be ours today and America's for all time to come.

Strategy of the United Nations

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Clifford B. Ward, on the subject of the strategy of the United Nations. The article was published in the Fort Wayne (Ind.) News-Sentinel.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD EVENING

(By Clifford B. Ward)

A good guess is that Winston Churchill came to this country principally for the purpose of slowing up any sentiment in this country for devoting major attention to our war with Japan until our war with Germany has been won. Only a few weeks ago, General MacArthur sent members of his staff to Washington, purportedly to ask more assistance in the Pacific area. There followed considerable agitation from others, including Senator CHANDLER, that we recognize our war with Japan for what it is, namely, a very dangerous thing, Congress itself was demanding action against the Japs. Then came Mr. Churchill to soothe the agitation by declaring that England would help us lick Japan after Germany had been licked.

The argument is now being advanced that anyone who urges aid to MacArthur is an isolationist, which is a peculiar line of reasoning. No one is for letting down either England or Russia, but if it has to be a choice between letting our own men down and letting the men of England and Russia down, I think most Americans would favor saving our own. I can be much more nonchalant about 40,000 Russians being captured by the Germans that I can be about 40,000 Americans languishing in the torture camps of Japan.

Japan, it must not be forgotten, has already won its war. It has defeated this country and England everywhere that it wished to defeat them. It outlined a course of conquest for an area in the Pacific and it has successfully put over that course of conquest. Uncle Sam and John Bull have been knocked flat on the floor. We are certain that we can come back and drive the Japs out of the area which it has already conquered, but we can't lie on the floor forever and then stage a come-back. The Japs are already solidifying their gains. They are entrenching themselves and strengthening their life lines. We have had plenty of trouble in driving them off one single island, yet we must drive them off many islands before we can again hold our heads up.

Senator CHANDLER is certainly not an isolationist, nor is he a Roosevelt hater. He and the President have been in perfect agreement about this country's foreign policy. But Senator CHANDLER seems to feel, as do most Americans, that before we make Europe safe, we had better overlook no bets to make this country safe. Some of the folks are poohpoohing the fears of people on the west coast that the Japs may invade this country. Why shouldn't the west coast be jittery, and why shouldn't we be just as sensitive to the fact that California is as much a part of this country as is New England?

Winston Churchill is not a villain because he comes to this country and attempts to sell a program of action which will safeguard England first. If I were an Englishman, I would certainly try to remove the danger from my own doorstep before I joined in a program to eliminate a danger miles off, but I am not an Englishman. Somebody in this country should be fighting for our men in the Pacific as Churchill is fighting for his own men.

If Germany is defeated tomorrow, we are still several years away from any possible defeat of Japan. Our real work will just then begin. In all likelihood, England will cooperate as Churchill promises she will, but there is going to be a difference of opinion about what the objective is. Churchill intimated in his speech that England is going back to reclaim all that was hers when Japan started on the move. Our purpose is not likely to be that, but rather to defeat Japan and reestablish a better deal for everyone in the Pacific area. We have something bigger at stake than merely reestablishment of the British imperialistic set-up. If England thinks we are not too concerned over reestablishing her Empire in the Pacific, maybe the cooperation will not be as enthusiastic as Churchill promises.

Germany must be defeated in this war, but so must Japan or our rather fat goose is going to be badly cooked.

The Battle of Washington

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Battle of Washington," by Jay Franklin, which was published in the June issue of the Railroad Trainman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BATTLE OF WASHINGTON

(By Jay Franklin)

About the best way to get a look at the raging "Battle of Washington" is to appraise it through the broad trends, away and above the pressures and critics.

Winston Churchill's speech is a question in point. He was the only man in the world who could say what he did say and have it carry the proper weight. The President of the United States could have said the very same words but, because at this moment in our national history we are bogged down in domestic issues and manufactured distrust, everything connected with Washington is viewed with a partisan political eye.

Churchill came into Congress sure of himself. At his finger tips he has the world situation catalogued. His manner and tone reflected confidence—not alone in the future but in the deeds and accomplishments of the past.

In every discreet manner possible he pleaded for understanding of the tremendous job which has been the role of the United Nations. He laid it on the line for his friend, President Roosevelt, in a way which could bring about no bitter denunciations from the most partisan. He told the Congress and the Nation as closely as he could of our joint efforts and he expressed the future hope, by which man must live, that the United Nations could accomplish as much or more in the days of peace as they have and will do in the days of war. He left some lines that will gain in importance in this Nation as we face a presidential year and the climax of the war effort.

They were:

"Lots of people can make good plans for winning the war if they have not got to carry them out. I dare say if I had not been in a responsible position I should have made a lot of excellent plans, and very likely should have brought them in one way or another to the notice of the executive authorities. But it is not possible to have full, open arguments about these matters. That is an additional hardship to those in charge—that such questions cannot be argued out and debated in public, except with enormous reticence, and even then there is great danger that the watching and listening enemy may derive some profit from what they hear."

An offside remark by Churchill, while touring around Washington with the President and Mrs. Roosevelt, also has some bearing on the battle of Washington and it points to the reason why such a speech by Churchill to Congress increases in importance. Churchill on one trip to a camp inquired about antiaircraft protection. He said that wherever he went it was provided. But then he said he was never over 15 minutes away from the enemy anywhere around London.

Chances are good that if the Capital of the United States was within such range many of the local fights would lessen in importance.

Take the matter of labor legislation. The United States Senate, after several years, became somewhat frightened over the possibility of a coal strike and gave the Connally bill an O. K. It went to the House where, for the same number of years in which the Senate has refused to act, the Representatives have passed and repassed restrictive labor bills. Immediately there was a rush among the rural legislators to rewrite the bill and get in their pet solutions to a real problem. The bills are now in committee and the show-down now is up to the House of Representatives.

For, bear in mind, the House has also used their legislative powers, knowing full well that the Senate would not concur, by passing labor legislation to appease some of the folks at home. Yet they knew that to tamper too much with the people of the Nation who are doing the actual work in the manufacturing, hauling, and shipping of the materials of war was dangerous.

A simple fact is that the problems in labor relations as well as much of the whole balancing program of the last 10 years are not things someone thought up just to garner votes on election day. The problems are real

and pressing. The effect of inflation upon the frozen wages of the Nation is indeed something different from the effects upon frozen capital. The farmers of the Nation are beginning to realize that there is something to the argument that from 30 to 90 percent of the price the consumer pays for his foods is eaten upon in distribution and handling charges—after they leave the farm. Eventually all of the people of the Nation will come to realize that we cannot afford a processors' paradise here at the expense of all the rest of us.

The "battles of Washington" which we must forego soon are those raging around taxes; the others which are meant to restrict some groups and aid others; for they are, in fact, purely domestic, economic campaigns carried on for the past 50 and more years. In time of war they are simply intensified, as are all other human problems.

A major condition in Washington at this time, and the one most overlooked, is that actually we have a national government in operation. It cannot function with the dictatorial ruthlessness of other nations. No one, including the President, has the power to behead or shoot. We operate within the framework of a democracy at war. Persuasion, fair play, patriotism, loyalty, and common sense are the weapons upon which the war managers must depend.

But the facts are that everyone is in Washington. The symbolic bankers are here. The industrialists have the run of the War Production Board. The Office of Price Administration actually consists of some politicians, representatives of the food industries, professors, economists, and consumers. The War Manpower Commission consists of the same comparative line-ups. The War Labor Board and its many panels are composed of employee representatives, employer representatives, and representatives of the public. On this Board it is important to note that the public representatives usually side with the labor representatives—because, after all, the employees make up the greater part of the public.

The frictions, fights, confusions, and condemnations are, or should be, an accepted part of American life. The struggle goes on every day of peace so it follows that it cannot be entirely—under a democracy—eliminated in days of war.

Underneath the surface, the abused executive officials of Government are working day and night. That they have been effective and that things are being well managed is obvious to any thinking man. Winston Churchill reviewed the problems. He cited the successes. He said at another point in his speech:

"All this gives the lie to the Nazi and Fascist taunts that parliamentary democracies are incapable of waging effective war. Presently we will furnish them with further examples."

For any of us to say at this time that worry was not expressed in this Nation about our ability to wage a total war without almost total restraints would now be foolish. All the barnstorming isolationists pointed to the alleged destruction of all freedom the minute we went to war. That the President must also have worried about it is plain reasoning because he had the fall of France staring at him and the, at times, doubtful ability of England to withstand the onslaught.

But, somehow, we have weathered the storm. We are strong, feared, and going on the offensive—from one end of the Pacific Ocean to the other; from Africa to China; in the Atlantic and wherever else an enemy installs a gun or guides a ship or flies a plane.

The enemy knows this full well. Churchill recited it. Army and Navy experts know it.

What in the hell is the matter with some of the rest of us?

Editorial Tribute to Josephus Daniels From Tacoma (Wash.) News-Tribune

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. BONE. Mr. President, the Tacoma News-Tribune of Tacoma, Wash., recently published an editorial paying a very beautiful tribute to Josephus Daniels, who is back in the editorial harness and is now actively in charge of his own newspaper, the Raleigh (N. C.) News and Observer. Because this is a well-deserved tribute to a great American whose life has been a most valuable contribution to the public, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEWSPAPER SAGE

Josephus Daniels is 81 and is still actively editing the Raleigh (N. C.) News and Observer. His age must make him pretty nearly the sage of sages of the newspaper field. Until very lately, he was rendering active service as American Ambassador to Mexico.

He must look back tolerantly on the days of the First World War. As the Secretary of the Navy, he was a target for impassioned partisans who professed not to believe that a good-natured, slow-speaking southerner was the right type to head a hard-hitting navy. They forgot that southerners are nothing new in the history of the Cabinet post. No less than five Secretaries of the Navy have come from North Carolina, a record beaten only by Massachusetts, which has had seven. And as time went on and our Navy showed itself in good shape, it came to be recognized that Daniels had done an excellent job.

Now he is back at the newspaper work he loves, hitting the heads he thinks need it. He has not yet lost the skill and courage which enabled him to finish off a likely prospect for the Governorship of North Carolina with this brief news item: "J. C. C. was in town yesterday. He came by the Southern Railway and used pass No. 15,469."

Americans generally will wish many more years of usefulness for Josephus.

Railroad Freight Rates

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting speech delivered by Mr. George M. Crowson, assistant to the president of the Illinois Central system, before the Traffic Club of New Orleans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is one respect in which the Illinois Central is different from every other railroad in the United States. That is in the division of its mileage as between the North and the South. Unlike any other major railroad on the continent, the Illinois Central is almost evenly divided by the Ohio River—3,084 miles north and 3,523 miles south. This unique location insures our direct interest in the flow of commerce not only within but also between these two sections of the country. It puts butter on our bread to do everything we can do to increase the amount of business that is carried on and consequently the amount of traffic to be handled in the North, in the South, and in both directions between the North and the South.

It has been suggested that if the Illinois Central had been completed as much as 1 generation earlier to link the North and the South the terrible and tragic War between the States might not have occurred. I do not want to take the time to develop that thought here, but I mention it because I believe it brings out the fact—I am sure you all will recognize it as a fact—that commerce is one of the greatest unifying factors in our national life. Acquaintance and understanding follow our trade routes. The Illinois Central, therefore, by reason of its North-South location and its efforts to stimulate commerce in and between the North and the South, has contributed, and is contributing, to increased understanding and appreciation as between these two great areas whose only division is a river bridged by the railroads and united by their rails and the commerce that follows them.

This unique location of the Illinois Central as a north-and-south railroad, whose interest so obviously lies in fostering the free flow of commerce in and between the North and South, gives me an excuse to touch upon a topic that has recently been a subject of very considerable discussion in the South and elsewhere throughout the country. That topic is the relation of the railroads to the development of the South, particularly its industrial development, and the relation between such development and the services that are provided by the railroads and the charges that are made for those services.

In taking up this topic, I suppose I ought to make it plain that I do not make any claim to being an expert on freight rates. Anything that needs to be said on this subject from the standpoint of a rate expert I shall leave to others. My claim upon your indulgence is that I am interested in this question as a railroad man, I have made some study of it, and I have reached certain conclusions about it which in all modesty but equal earnestness I believe are worth laying before you.

For quite some time now the South has been making very great strides in industrial development. We all know that to be true, for the evidence is all around us. However, I doubt if the rate and extent of Southern industrial development are as fully known and recognized in the South as I believe they ought to be. A recent study made by the Interstate Commerce Commission shows graphically and specifically how great such development has been and how it compares with the development that has occurred elsewhere throughout the country. The study to which I refer is a study of the economic development of the United States by freight-rate territories. I have examined this study carefully, and these are the high lights of it:

First, it shows that the population of the South increased 2,353,700 between 1930 and

1940—an increase of more than 10 percent—while the population of the North increased 5 percent and the population of the entire country increased 7 percent in the same period.

Second, it shows that the value of manufactured products in the South increased $272,313,000 between 1929 and 1939—a gain of 5 percent—while the value of manufactured products in every other rate territory decreased and in the North decreased 23 percent in the same period.

Third, it shows that employment in manufacturing industries in the South increased 5 percent between 1929 and 1939, while employment in manufacturing industries in the North decreased 11 percent in the same period.

In other words, these three yardsticks of population, industrial employment and manufacturing output all show that the South has gained in industrial development over every other part of the United States. Thus this study goes to prove what we all know to be true as a matter of observation—that the development of the South, and particularly its industrial development, has not been held back for any reason. Obviously it must be concluded from such proof that transportation conditions, including both service and rates, which have a bearing upon industrial development are not unfavorable but are favorable as to industrial development of the South.

The same conclusion is supported by the experience of the Illinois Central in its industrial development program. The experience of our railroad in this regard is of particular interest because of the division of its mileage between the North and the South, to which I have referred. In the 5 years 1939–42, inclusive, the Illinois Central had a hand in the location of 552 new industries on its system lines north and south. For obvious reasons, we measure the importance of new industries by the amount of traffic they produce. These 552 new industries established on the Illinois Central in this 5-year period are producing some 320,000 carloads of freight traffic annually. Of these 552 new industries, 185 were located in the North and 367 in the South. The northern industries are producing nearly 80,000, and the southern industries more than 242,000 carloads of freight traffic annually. I submit this comparison as further evidence of the relatively greater strides that are being made in the industrial development of the South, and, of course, with the help of the southern railroads.

You all know what many of these great new southern industries are—chemicals, rayon, and other textiles, pulp and paper, tires, aluminum, fluorescent lamps, tobacco, iron and steel, furniture and other woodworking plants, to name a few of them. All of them are industries which have been attracted to the South by conditions favorable to industrial development—the availability of raw materials and supplies, a good labor situation, lower living costs, favorable tax rates, and friendly laws and public regulations. I omit transportation only to emphasize it by stating it separately. It naturally follows that the railroads have been providing and are providing the service and rates on raw materials and finished products which enable these new industries to compete with industries elsewhere in the markets of the country, including the concentrated markets which are naturally to be found in the more densely populated northern part of the country.

The extent to which southern industrial products reach northern markets is revealed by another study that was recently made by the Interstate Commerce Commission. This was a study of the interterritorial movement of carload freight traffic. I have examined this study also. It gives a very interesting account of the movement of all kinds of freight traffic between each section of the country and every rate section of the country. But here is the story in a nutshell as it relates to this subject: Of all the carload shipments of manufactured goods originated in the North, 8 percent moves into the South, whereas, of all the carload shipments of manufactured goods originated in the South, 31 percent moves into the North. This official finding should dispose of any contention that the products of the South are barred from the concentrated northern markets by rates or any other factor related to transportation.

It occurs to me that some of the disturbing things that have been said about the relation between freight rates and industrial development in the South have been based upon a fundamental misconception of that relation. I believe I can clear up that misconception with one statement which you as traffic men will instantly recognize to be true. That statement is this: Freight rates are the result—and not the cause—of industrial development. Rates in the South, as elsewhere, are made to move traffic; as traffic offers, the rates are made to move it. That is the history of industrial development. The great industrial development that has occurred and is now going on in the South is an indication that such rates here are being made as they are needed.

The Illinois Central has been working for the industrial development of the South over a long period of years. In all that time our railroad has never lost a prospective industry for want of the freight rates needed to gather its raw materials and put its products in their markets on a competitive basis with other industries. I do not have any doubt that every other railroad throughout the South could say the same thing. I have never heard of a single industry that has ever been lost to the South on account of freight rates. I am certain there never will be such a loss so long as there is no interference with the cooperative method by which freight rates have been and are being made.

It has been suggested that this cooperative method of making freight rates, through a meeting of minds of shippers, carriers, and public authorities, be discarded, and that instead there be exact uniformity of freight rates mile-for-mile throughout the country. Uniformity is a pretty theory, but every traffic man knows it would not be pretty practice. The thought is not original with me, but I suggest that uniform freight rates would fit the business of the railroads no better than a uniform size of clothing would fit every man in the United States. Suppose we were to have uniform freight rates, and on the day they go into effect let every man appear in public in a suit of clothes made to fit the so-called average individual. The grotesque sight of men of all shapes and sizes—tall and short, lean and fat—all attired in one size of clothing would illustrate the then state of business, with all its diversities, under uniform freight rates. The South would be the greatest sufferer from uniform mile-for-mile rates because of its greater distances and therefore higher rates on competitive business to the great concentrated markets of the North.

To sum up, the South has been and is making great strides in industrial development. Southern industry is well and increasingly diversified. It is selling a substantial part of its industrial output in northern markets. The South is not dependent upon the North for manufactured products, and its independence in that regard is constantly increasing. Railroad and industry are not antagonists; they are partners. The railroads of the South have had a great deal to do with industrial development in this section—inducing industries to locate here, providing the service that is needed, making rates to move the traffic. The railroads can be depended upon to strive earnestly and unceasingly for the continued industrial development of the South, not for altruistic reasons but because it is in their own interest to do so.

Bituminous Coal Production in West Virginia

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "West Virginia May Set Record in Coal Output," published in today's issue of the Washington Evening Star. West Virginia is the largest producer of bituminous coal. The article shows that it is probable that the output of bituminous coal in West Virginia this year will exceed all records.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA MAY SET RECORD IN COAL OUTPUT

CHARLESTON, W. VA., June 10.—West Virginia, the Nation's largest bituminous coal-producing State, may equal or exceed its record output of 1942 despite current contract difficulties, a report of the State mines department showed.

The chance for a new record, although threatened by recent shut-downs of operations and the present negotiation squabble, was based on a department report covering the first 4 months of the year.

Miners in West Virginia have dug 52,352,032 tons during the January-April period, compared with 50,361,416 tons in the corresponding period of 1942, a year in which 156,752,599 tons were produced for a mark unexcelled in the State's history.

Work stoppages prior to the expiration of the first contract dead line May 1 caused a loss of about 27,900 tons during April, since the production that month amounted to 13,671,421 tons, against 13,699,353 tons a year ago. The April 1943 output, however, was higher than either January or February.

Terming it too early to ascertain just what the final effect of the work stoppages would be on the 1943 total, State Mines Chief Jesse Redyard pointed out that every day lost has had a definite effect.

British Public Opinion on Contributions to the War Effort

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. O'KONSKI. Mr. Speaker, with our vast expenditures and with our good-neighbor policy and with our liberal lend-

lease grants it is interesting to note what credit other countries give our war effort and to what degree our efforts are appreciated. The following article by Helen Essary, writing in the Times-Herald of June 10, 1943, should be read by every American:

DEAR WASHINGTON

(By Helen Essary)

A poll of British public opinion on relative contributions of the nations to the war effort was published recently, and Americans were distinguished by last place.

To be exact about it, 50 percent of the Britons polled thought Russia had done more to win the war than had even their own country; 42 percent put Britain next and that is surprising only that they rated their native land after another. But China came third, with the favorable consideration of 5 percent, and we were down at the bottom, admired by only 3 percent.

Thoughtful Britons who read the result of the British poll also must have been horrified at the answers of the British public. Thoughtful Britons must have seen in these answers a dangerous challenge to the post-war Utopia for which the United Nations are giving the lives of hundreds of thousands of their bravest and best. For it is evident to anybody who understands public opinion that these answers are the result of definite British propaganda.

It may have been necessary a few months ago for Britain to administer mental food to the British public which would boost the British morale at the expense of their allies, particularly their American allies. Recent United Nations successes have made such dosage no longer necessary.

Thoughtful Britons must see that the time has come to change the attitude of the British people and change it at once and sharply. The British public can no longer safely be told that the United States is of poor assistance.

Such a distortion of fact influences the people of Britain against the ally they most need. It enriches the already fertile soil of Anglo-American misunderstanding.

I say again and without expectation of disagreement that such misunderstanding as revealed by the Gallup poll is the result of definite British propaganda. Otherwise the simple people of Britain would have known and appreciated the cooperation they have been getting from the United States.

If the British people have the courage for which the world has long been crediting them, they can stand a few truths about their own part in the war effort. It is also only honorable that British propaganda should tell the people of Britain of the splendid part Canada, Australia, and New Zealand have played in the preservation of the British Isles.

This, I think, is a job for Winston Churchill in person, and to be undertaken at once, with "energy and harmony," to use a phrase of his own.

For the most Britain has fought a defensive warfare. She, like Russia, has had her back to the wall. Both have fought hard. Without minimizing in the least the Battle of Britain—I speak of the bombings by the Germans—in all the bombings 20,000 tons of explosives were dropped on Britain. About the same amount is now being dropped monthly on German cities. As many as 2,000 tons of bombs are dropped on German cities in a single night's raid.

Recently British troops finished proudly in Africa. American troops also were there fighting and dying. The Battle of Dunkerque was a defensive battle. Tobruk fell without glory to Britain. At Narvik, the British retired. Another point not to be overlooked: England continues to keep 4,000,000 troops at home, guarding her own shores. How many of these will be released in the immediate offensive?

It is unfortunate to have to refer to such reality. Doing so may inspire the old name-calling of "Anglophobe." But since, obviously, the British people have been given a distorted story, they must somehow be shown the events of the war in proper perspective.

With the wish to offer something splendid to protest to the world against the destruction of democracy, we offered to our friends the endless resources of lend-lease.

On March 10, 1941, 8 months before Pearl Harbor, lend-lease was set in motion. Undoubtedly, our generosity in thus providing armament may have had a selfish tinge to some minds.

However, it was true that at the moment our own military men were begging for stronger fortifications in the Panama Canal. Yet we ignored the protection of the home front.

And later, we turned away from our own heroes at Bataan. Let them starve to death or be murdered because we believed aid to them would divert supply ships from England's needs.

I notice also that small nations are forgotten in the British war poll. Certainly the Netherlands contributed what she could in the Dutch East Indies. England seems to have overlooked that, just as she overlooked the fact that the first contingent of Canadian troops arrived in England in December 1939, and the sinking of the biggest Italian warship by an Australian crew, and the Royal Air Force flying schools in Canada.

Of course, Russia has fought superbly. But Russia has had a knife at her throat. Her contribution to the war has been herself. The United States has also contributed heroically to the war in Russia. Lend-lease again. And as the weeks go on and the lists of American dead and wounded come in we will feel more deeply our part in the struggle. And much more deeply will we resent a British governmental attitude that tries to keep hidden our share toward producing a sound post-war world.

What is it we are fighting for, anyhow? A continuation of hatred and jealousy, or for that truth and cooperation that sometimes seems to exist only in pretty, vapid speeches?

Britain needs to begin pro-United States propaganda—now. Or a decent peace cannot be made.

Noblesse Oblige

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by H. B. Snyder, editor of Gary Post Tribune, Gary, Ind., June 8, 1943:

"NOBLESSE OBLIGE"

"Don't ignore the racial issue in this war. That is in favor of the Japanese unless we do something to counteract it. Pride of race is a primitive instinct. Right now it makes China look ridiculous to be fighting on the side of the white man. The Japanese are exploiting this factor to the utmost."

These words were spoken in a recent New York interview by the celebrated Chinese scholar and philosopher, Dr. Lin Yutang.

The author of The Importance of Living, is convinced, he said, that one of the most effective ways of keeping China in the war is for the United States to stop discriminating against the Chinese, its hard-fighting, heroic allies.

Unless America attacks this race problem squarely, maintains Dr. Lin, "nobody will have won this war except the Rudyard Kiplings."

Dr. Lin is right. No one can blame the people of Free China if they view the post-war aims of their allies with suspicion so long as we in America keep on our statutes without modification the Exclusion Act of 1924 prohibiting the immigration of orientals and depriving them of the right to become citizens.

The position of General Chiang's government is clear enough. All it wants out of this war is to get out from under the Japanese yoke and to recover its lost territories. It has stated explicitly, time and again, that it wants no land which belongs to other people.

Having taken this stand, it is easy to see how the Chinese have been confused, particularly by some of the utterances of the British Prime Minister, and how they have been sometimes led to wonder whether, indeed, they are fighting for the principles of the Atlantic Charter, or merely to help recover extraterritorial possessions lost by the white man to the little brown men from Nippon.

Happily, it begins to look as though we, through our Representatives in Congress, are about to demonstrate to the Chinese that we are prepared to recognize the past errors of our ways and that we mean to be fair with them in the future.

Three bills are now pending in the House of Representatives the effect of which would be to relax the now ironclad restrictions of the Exclusion Act so far as concerns the Chinese. These measures are aimed especially at restoring the right to citizenship and the establishment of immigration on a quota basis.

In the present circumstances, with virtually every American vowing friendship and admiration for the plucky Chinese, there is little doubt that one of these measures will prevail. Such legislation cannot come too soon, for we have been excluding Chinese specifically ever since 1882. Even now, while ranking Free China as one of our three great war allies on the one hand, we extend the right of entry to only 100 Chinese a year, and withhold even from these the right of ever enjoying the privileges of American citizenship.

In the immediate post-war period it may be that we shall witness a revival of the endemic fear we have harbored for so long of oriental competition tending to undermine the interests of our own workingmen.

But this fear has never had any real basis in fact, for even if 10 times the number of Chinese now permitted to enter the country were to work for 20 cents an hour—and even the humblest Chinese laborer is learning these days to ask much more—the impairment of American labor's welfare would be insignificant.

As pointed out recently in the magazine America, "there still is room in this country, if the Chinese quota were many times what it is now, for hard-working citizens, particularly in our rural areas."

Our Oriental Exclusion Act, as it relates to the Chinese, is quite naturally regarded by them as a slap in the face which they never deserved, and it is only a matter of common justice that it be changed so that the United States will no longer be in the position of having singled out this industrious and heroic people, of all the others in the world, for what amounts to undemocratic discrimination.

Americans have never been unwelcome in China, a fact justifiably given emphasis in recent speeches by General Chiang and his charming wife. If we are the protagonists of democracy and equality we like to claim we are, it is time we began accepting this hospitality on a reciprocal basis.

Commercial Feeding Difficulties

REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. GROSS. Mr. Speaker, farmers are generally complaining because they cannot purchase the necessary concentrates to make up their feed rations. They are being told by the O. P. A. to purchase ready-made feeds. Feed dealers complain that they cannot buy corn, which is the base of most of these commercial feeds. This creates a great deal of confusion and it is going to have a far-reaching effect in our production of food, particularly eggs, meat, and milk.

The same kind of management on the part of O. P. A. is going to greatly restrict our supply of canned goods during this season. The season is getting off to an unfavorable start for a good supply of food and the prospects are that the production of food this season will fall far below that of 1942.

I ask unanimous consent to include in my remarks at this point the recommendations of the canning industry that I believe will be helpful.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania [Mr. GROSS]?

There was no objection.

The matter referred to follows:

CANNING INDUSTRY RECOMMENDATIONS

1. Employment of personnel who are practical and not inexperienced theorists.

2. Abandonment of regional area prices and return to formula prices based on the provision of the law that the processor of farm products shall receive a reasonable profit. Formula prices may result in some hardship cases, and a division should be immediately set up to dispose, with prompt dispatch, of old cases now pending as well as future cases.

3. Elimination of present regulations requiring compulsory Government grades on invoices and return to the use of brands or commercial grades, which years of experience have proven to be the most practical method of promoting consumer good will, quality, and production. Also permit the use of the commercial arbitration system established in all important markets in the last 25 years.

4. Increased costs of the 1943 packs to be reflected in price ceilings.

5. The industry is opposed to subsidies on principle, but if they are employed in connection with price control, said subsidies, together with the ceiling prices, should cover the costs of processing plus a reasonable profit. In every case it should be made clear that the processor acts only as agent for the ultimate beneficiary and is never the recipient of any subsidy.

6. Transfer of complete control over manpower and wages of processing employees to War Food Administration, where responsibility for production now rests.

7. In all cases the experience of the industry should be consulted in advance of promulgation of every regulation as required by law.

Little Red Hen in Modernized Version

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Gould, of the New York Times, which was copied by the Storm Lake Pilot Tribune, of Storm Lake, Iowa, one of the leading newspapers in my district:

LITTLE RED HEN IN MODERNIZED VERSION

"Who will get me a hired hand?" asked Farmer McGregor.

"Not I," said the Employment Service. "We are having trouble locating welders at $140 a week, and precision tool jiggers at $23 a day, and we don't know a soul that can cradle wheat."

"Not I," said the local draft board. "You better find a school kid."

"Not I," said the high-school principal. "This week we're helping the grocer paste ration coupons."

"Not I," said the county agent. "We are busy now teaching women to make plum jam without sugar, syrup, molasses, or plums."

"Not I," said the local defense plant. "We are on a cost-plus basis, and absenteeism costs $10,000 a minute."

"Not I," said the Manpower Commission. "We are working on your problem, but just at present there is a shortage of stenographers."

"Not I," said the War Production Board. "You haven't made the proper application."

"Not I," said the Food Coordinator. "I will issue a directive soon."

"Not I," said the Lend-Lease authority. "We are powerless to act under existing regulations."

"Not I," said the congressional delegation. "Without fear of successful contradiction, we may infer that democracy is at the crossroads, and the flag of freedom must be unfurled from the pinnacle of the globe with blood, sweat and tears until man can again bask in the freedom we fought so valiantly to perpetuate."

"Not I" said the neighbors. "We are working in the shipyards."

So Farmer McGregor with the assistance of his grandmother harvested his wheat. "Now,' said Farmer McGregor, "who will help me eat this wheat?"

"I will," said the county chairman, the dealers, the machinery people, the employment service, the draft board, the county agent, the defense workers, the high school teachers, the Manpower Commission, the War Production Board, the Food Administration, the welders and shipfitters, the Lend-Lease authority, the neighbors, the Army, the Navy, Coast Guard, Marines, airplane spotters, WAACS, WAVES, SPARS, WAAFS, Russians, British, Chinese, South Americans, Hindus, Eskimos, Mrs. Roosevelt, Congress, the Maritime Commission, the United Service Organizations, the National Association of Manufacturers, Secretary Ickes, the American Federation of Labor, the Congress of Industrial Organizations, and everybody else from Sitka to Casablanca, from Istanbul to Vladivostok, from Maine to California, until the hubbub was unanimous."

The Gasoline Problem

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. CURTIS. Mr. Speaker, on several different occasions, I have taken this floor and urged that an increase in the price of crude oil be allowed. This is one of the major factors in relieving the gasoline shortage on the eastern seaboard at the present time. It would bring back into production marginal fields in Pennsylvania and elsewhere. It is something that is needed all over the United States to further the petroleum industry.

I understand that that is being reconsidered today. I hope that this increase in the price will be allowed. It is granted that the gasoline situation on the eastern seaboard must have attention.

However, to take away the gasoline from a small farming population, scattered over a wide area, would not materially benefit the millions and millions of people here on the eastern seaboard. It would not solve their problem.

The great agricultural areas of my district need gasoline for the production of food. There is no pleasure driving when farmers and businessmen are working 12 and 14 hours a day. Practically all of our gasoline consumption is directly connected with the production of foodstuffs and related essential activity.

My territory is not served by a network of busses, streetcars, and other such forms of transportation. A great many of the branch-line railroads have not only been abandoned, but the rails have been taken up.

To further curtail the use of gasoline in Nebraska means to hasten an approaching famine, because it will destroy the production of food, which is the Nation's major war industry.

The price of crude oil should be raised and every possible improvement in the transportation, storage, and distribution of gasoline and oils should be made. This Congress should direct its attention to a greater production of gasoline. That is the answer to this distressing problem.

Recent Practical Aspects of the Laws of War

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper entitled "Recent Practical Aspects of the Laws of War" by Maj. Willard B. Cowles, J. A. G. D., delivered before a meeting of the committee on military and naval law of the American Bar Association on May 26, 1943:

In ancient times sacking, pillage, slaughter, carnage, and devastation generally were rampant in time of war; wounded were left unaided on the battlefield to die; and it was usual for belligerents to incite their people to attack and despoil all enemy subjects, at home as well as abroad, by every means at their disposal. Persons who voluntarily and unconditionally surrendered were often put to death. The slaughter of women and children was frequent. After a time the practice of enslaving prisoners of war became customary. Horace reflected the reason for this in his statement: "When you can sell a prisoner, slay him not." A system of ransoming prisoners of war developed later. The state of the development of this aspect of international law when Grotius wrote is reflected in the following sentence from his work: "So far as the law of nations is concerned, the right of killing such slaves, that is, captives taken in war, is not precluded at any time, although it is restricted now more, now less, by the laws of states." (Book III, ch. IV, sec. x, par. 2.) During the eighteenth century the idea began to develop that wars were primarily interstate relations and that individuals should not be considered as enemies to the same extent as their governments. Yet in the early nineteenth century Napoleon seized and confined all Englishmen in his territories, some of them remaining in prison as long as 11 years.

In the early part of the nineteenth century the treatment of prisoners of war and the lack of care of wounded soldiers on the battlefield were still shockingly inhumane in many respects despite attempts on the part of military men, writers on international law, and others to ameliorate them. The first important steps were taken at the time of our war between the Union and the Confederacy. On April 24, 1863, the United States War Department issued the now-famous General Orders, No. 100, "Instructions for the government of the armies of the United States in the field" and in 1864 the first Red Cross convention went into force.

We have often heard that international law should be codified. The laws of war, which I hardly need say is a part of international law, have, to a large extent, already been codified. A publication of the War Department, a basic field manual entitled "The Rules of Land Warfare," is such a code. It contains 403 numbered paragraphs, most of which state rules of the law of war. Among other things, it contains various rules concerning the conduct of hostilities; rights of prisoners of war and duties of captors in relation to them; penalties for violations of the laws of war, armistices, military occupation, the rights and duties of the Red Cross in the field, etc. There are British, French, and German manuals of the same sort.

This field manual has an interesting history which goes back to the Civil War—indeed, in an historical sense, to the Mexican War. During the Mexican War a young officer, Lt. Henry W. Halleck—a graduate of West Point and a lawyer—was a member of the staff of the Commander of the Pacific Squadron. In that capacity he "was often required to give opinions on questions of international law growing out of the operations" of that war. At that time Halleck started a series of notes and extracts which, by 1861, had grown into his work on international law, published that year. In the meantime he had made the acquaintance of Dr. Francis Lieber, a distinguished scholar, then a professor of international law at Columbia University.

In 1861 President Lincoln, apparently somewhat against his better judgment, was induced to commission Halleck a major general. A year later Halleck had become General in Chief of the United States Army. General Halleck's soldiers called him "old brains." Halleck, the immediate predecessor of General Grant, has subsequently been described as a better international lawyer than a general.

During Halleck's tour of duty as General in Chief several serious problems arose involving the laws of war. The Confederate authorities claimed the legal right to send soldiers in civilian clothes inside the Federal lines, there to lie in wait for, and to strike at, Union detachments; to burn bridges and buildings; and to destroy persons and property. As a corollary, the Confederate Government not only demanded that such individuals be treated as ordinary belligerents and given the rights of prisoners of war when captured, but declared that if such Confederate soldiers were treated as spies or guerrillas they would execute Union prisoners of war in reprisal.

Problems also arose in the Union Army. Pursuant to orders of inadequately trained Federal officers, wanton destruction of property was taking place in the South. Reports of such activities were coming in to Halleck in alarming numbers. In this situation Halleck called on his friend Lieber, who replied to the problem of the southern irregulars with the now classic article on guerrilla parties. In order to instruct the Union officers generally on the rules of land warfare, Halleck then called upon Lieber to state the then existing international laws of war in the form of a comprehensive code. Lieber drew up a code of 157 sections. Because of Halleck's position and interest Lieber's code became far more than a writer's dream. It was officially adopted by the United States Army. The code was issued in 1863 by order of the Secretary of War as General Orders, 100 of that year. The Lieber Code has the distinction of being the first practical codification, not only of the laws of war but of any aspect of international law. It became the basis, and, although much has been added since as a result of experience, is still the basis, of the rules of land warfare as they exist today.

It was Lieber's hope that some such code might be adopted internationally by all of the states of the world. Though Lieber's hope was not realized during his lifetime, the idea was taken up by the unofficial Institute of International Law; his code was discussed officially and at length at the Brussels Conference of 1874, and much of the code was officially adopted on a world-wide basis at the Hague Conferences of 1899 and 1907.

One might spend a whole evening on Lieber himself, but this is not such an occasion. It must suffice to say that Elihu Root, in opening his presidential address before the American Society of International Law in 1913, said: "This year, 1913, is the fiftieth anniversary of a very important event in the history of international law—the adoption and enforcement by the American Government of the code of rules governing the conduct of armies in the field, which is known to the American Army as General Orders No. 100, of 1863." Root closed his address by saying that if the American Society of International Law were about to choose a patron saint, and the roll were to be called, his voice would answer, "Francis Lieber." (1913 Proceedings, American Society of International Law, pp. 8, 21.)

Upon the outbreak of the Spanish-American War Lieber's Instructions were republished and applied by the United States forces in that war. The Hague conferences had the benefit of the experiences of the Franco-Prussian, the Spanish-American, the Boer, and the Russo-Japanese Wars. After the First Hague Conference in 1899, the British Government, in 1904, published a handbook on the Rules of Land Warfare, prepared by Holland, the famous English jurist; and, in 1913, the British Government issued a still more complete code drawn up chiefly by Oppenheim.

Some writers on international law, especially in recent times, have stressed the problems of the international rules of peace much more than those of war. In this country, by contrast with Great Britain, legal scholars in the Army and Navy have done much of the important work on the laws of war. A number of the works on international law in this country, which stress the laws of war, have been written by Army and Navy officers. Halleck's work, which first appeared in 1861, went through three editions and is still exceedingly useful. Halleck also published a student edition in 1866, which was a popular text in that day. Maj. Gen. George B. Davis, the Judge Advocate General of the Army from 1901 to 1911, published his Outlines of International Law in 1887. Maj. Herbert C. Fook published a work on Prisoners of War in 1924. On the naval side, the publications of the Naval War College are familiar. Rear Admiral Charles H. Stockton published a book on the Laws and Usages of War at Sea, also a Manual of International Law for the Use of Naval Officers, in addition to his better-known work, Outlines of International Law. In 1895 the West Publishing Co. printed a handbook on international law written by Capt. Edwin F. Glenn, who was then an acting judge advocate of the United States Army.

I mention Captain Glenn for a particular purpose. After the Second Hague Conference and after the British publications had appeared the United States Army realized that it needed a code which would integrate Lieber's work with the new provisions of the Hague Conventions. Research reveals that in 1913 it was Glenn, then Colonel Glenn, who was assigned the job, at the Army War College, of writing a complete manual on the rules of land warfare. The first United States Army Field Manual on the Rules of Land Warfare appeared the next year, 1914. It was reprinted in 1917, with only two minor changes of form; revised in 1934 in order to incorporate the results of the Geneva Conference of 1929; and republished again in 1940 with a few omissions, changes, and additions made by the secretary of this committee, Col. Archibald King.

In connection with the Geneva Conference, where the present prisoners-of-war convention was adopted, it is of interest to note that Maj. Gen. Allen W. Gullion, now provost marshal general, was an adviser. He is now in charge of the administration of that convention on the part of the United States.

Brig. Gen. George B. Davis, the Judge Advocate General of the Army in 1907, was a military delegate to the Hague Conference of that year.

So much for background material. I now turn to some practical aspects of the laws of war and some legal problems in connection therewith. No particular thread will run through the subjects discussed except that most of them will be related, in one way or another, to the Field Manual on the Rules of Land Warfare.

During the course of the present war, we have heard considerable about the invention and use of new weapons and the employment of new tactics, such as flame throwers, parachutists, ski troopers, panzer divisions, and commandos. There is a tendency on the part of people generally, when new and effective instruments of warfare are first used, to consider the persons using them as operating outside the law This feeling existed as far back as the invention of the crossbow. The same reaction was evidenced at the time of the invention of the musket and the bayonet, and the same feeling is apparent today in the often-heard statement, made by civilians, that they would shoot parachutists while they were coming down. The Germans have expressed a similar attitude toward the commandos, and the Japanese toward enemy forces engaged in aerial bombardment. But commando raids are like, and are as legal as, cavalry raids which were practiced generally in past wars. Aviators dropping bombs on military objectives, on defended places, or during the course of valid reprisals cannot properly be deemed to be acting contrary to the laws of war.

There is no valid basis for refusing quarter to troops using new instruments of warfare. It may be presumed that once we learn of a new method we will adopt it ourselves, unless it is barbarous.

Americans were justifiably shocked by the annouucement that the Japanese had tried and either executed or imprisoned the American aviators who were captured after bombing Japan. As you all know, the Japanese refused to give them the rights of prisoners of war to which they were entitled, on the ground that they had deliberately bombed and strafed nonmilitary objectives and civilians. Probably every American is convinced that these aviators did not deliberately bomb nonmilitary objectives or strafe civilians. An American who returned on the *Gripsholm* is reported as saying that it was true that civilians were killed. He believed, however, that they were killed by Japanese dive bombers shooting while diving toward the earth, attacking American planes. Whether or not this is true, I do not know. But on what we all believe to be the fact, our aviators certainly committed no war crimes and consequently should have been given all the rights of prisoners of war. Giving them the death penalty or imprisonment was a definite violation of the rules of international law.

There has been some criticism in this country with reference to the quantity of food allocated to prisoners of war. The objections are to foods which are rationed or scarce enough soon to be put on the ration list. Article 11 of the Geneva Prisoners of War Convention of 1929, which appears as paragraph 84 of the Field Manual, provides that "the food ration of prisoners of war shall be equal in quantity and quality to that of troops at base camps." In order to comply with this provision the food ration of prisoners of war must be the same, in quantity as well as quality, as the rations of our troops while at base camps. For example, if our troops at base camps are served eggs a certain number of times a week, prisoners of war must also be served a substantially similar amount of eggs. Criticism here against feeding prisoners of war in this country the same type of menu as our troops receive seems to overlook the fact that if we violate this provision of the Geneva Convention reprisals will presumably be taken against our own boys who are prisoners of war in Axis countries. We have already seen, in the manacling case, an example of reprisals against prisoners of war.

This provision of the Geneva Convention—that the food rations of prisoners of war shall be equal in quantity and quality to that of troops at base camps—ought to be changed. Take the Japanese situation, for example: If they feed our men who are prisoners of war in Japan the same type of food as their own troops, the principal item of diet may be rice. The present treaty provision fails to set up a single standard for the quantity and quality of food. It simply requires the captor government to feed their prisoners of war in the same manner as their own troops, whatever they may feed their troops.

Paragraph 104 of the Rules of Land Warfare provides that work done by prisoners of war shall have no direct relation to war operations. One of the current problems is to decide under particular fact situations whether or not proposed work for prisoners of war would have a direct relation to war operations.

It seems not to be generally known that captured officers are paid while in captivity.

We have all heard the stories connected with the popular ballad of the day, Praise the Lord and Pass the Ammunition. A chaplain under the laws of war, if captured, is not held as a prisoner of war but is returned, as soon as convenient, to his own forces. The reason for this is that, although he is a uniformed officer in the forces, he is in a special class of noncombatants, which includes members of the medical and the so-called sanitary corps. Should a chaplain take part in combat activity he would lose this special privilege. Of more importance than his personal situation is the fact that if many chaplains or other such noncombatants should often engage in fighting, the enemy would presumably hear of it and might draw the conclusion that his enemy was ignoring the rules of warfare. Serious reprisals might result.

Ruses are valid so long as they do not involve treachery or perfidy. For instance, if our troops, or Axis troops, should don hats and overcoats of the enemy and march up to a military objective with the purpose of destroying it, carrying the enemy's flag, this would be a valid ruse, provided the enemy's coats, hats, and flag were discarded before going into action.

The situation I am now to describe must be done in somewhat general terms as I am not at liberty to specify the details. After Benedict Arnold turned traitor in the Revolutionary War and became a general in the British Army, he and a force of British troops invaded various cities in this country. Recently one of our large institutions purchased the papers of a British general, prominent in the American Revolution, who had been one of Arnold's superior officers. Among the papers was a large bound folio manuscript volume, the contents of which appeared to be copies of letters between two prominent American figures of that time. Labeled, say, volume No. 10, it was apparently a part of a series. Upon finding the volume among the papers, the archivist of the institution sent a photostatic copy of the binding to the head archivist of the State concerned, who wrote back that he had identical volumes and that volume 10 was missing. He is convinced that the volume was once a part of the archives of his State and now demands its return. Apparently Arnold had taken this volume as a part of the loot acquired during a raid on the city and had subsequently turned it over to one of his superior officers.

The legal title to this volume did not vest in the British Government. It is true that, when a belligerent captures public property of an enemy, title generally passes to the captor state, but exception is made respecting state papers, historical records, public archives, land titles, legal documents, etc. It is interesting to note in connection with this case, which is current today, that article 7 of the Definitive Treaty of Peace concluded with Great Britain, September 3, 1783, provides that His Britannic Majesty shall "order and cause all archives, records, deeds, and papers belonging to any of the said States or their citizens, which in the course of the war may have fallen into the hands of their officers, to be forthwith restored and delivered to the proper States and the persons to whom they belong." Should title to this volume be litigated, it seems clear that the decision will go in favor of the State concerned.

On December 3, 1942, the Judge Advocate General of the Army held that the files of German and Italian consular representatives taken prisoner of war "may be examined and documents copied, provided that the files are left intact and are preserved." (Bulletin of the Judge Advocate General of the Army, vol. I, p. 353.)

A recent radio report from Africa states that an enormous amount of non-Army personal property belonging to particular German and Italian prisoners was captured 2 weeks ago in North Africa. An interesting specific situation on this subject arose during the last war, the facts of which were vouched for to Judge Manley O. Hudson by the person concerned: "In early 1918, a British officer in service with the British Army in France possessed as his own property a leather traveling bag of unusual shape, design, and marking. The bag had been manufactured by the X Co. in London on the order of the officer, and the name of the manufacturer and the initials of the officer were burned on the leather. In the course of military operations in France, the British forces with which the officer served hastily abandoned a position in which they were promptly succeeded by German forces. The bag of the officer was left behind when the British forces moved; presumably it fell into the possession of the German forces. Several years after the conclusion of the war, when the former British officer was a passenger on a boat from New Haven to Dieppe, he saw in a passenger's luggage the bag which he had formerly possessed in France. The bag was so unique that it was identifiable with no possibility of mistake. Upon inquiry, the ex-officer learned that the bag had been brought on board the boat by a German commercial traveler who claimed to have bought it in a second-hand store in Berlin." (26 A. J. I. L. 340.)

Who had title to the bag? The case unfortunately was not litigated. For a long period of time title to any property, public or private, which a belligerent captured on the battlefield passed to the belligerent state. It was the object of legitimate booty. This rule has been in the process of change for the past century. Article 4 of the Hague Regulations of 1907 provided that all the personal belongings of prisoners of war remain their property except "arms, horses, and military papers." But the owner of the bag was not a prisoner of war. Article 14 of the regulations states that it is the function of the inquiry office for prisoners of war "to receive and collect all objects of persona. use, valuables, letters, etc., found on the field of battle." This provision would seem to mean that title to such objects did not pass to the captor, but it does not so provide in terms. In any event, the bag, though found on the battlefield, was not turned in to the inquiry office.

The Hague conferences had apparently tried to settle generally the question of title

to nonmilitary personal property, except arms, horses, and military papers, found on the battlefield, but they left the matter somewhat ambiguous. The British Government interpreted the foregoing articles as providing that title would not pass (Land Warfare, sec. 433). Judge Hudson seems to have interpreted them otherwise. Perhaps the matter was made a bit more definite by article 4 of the 1929 Geneva Convention on the wounded and sick. It provides that belligerents "shall collect and likewise forward (to each other) all objects of personal use found on the field of battle." (Parentheses supplied.) But, even now, the obligation in terms is only on the belligerent government to return such property. The intent that title should not pass seems clearly implicit in all these provisions, but their language is legally deficient.

It would be useful today if a suggestion made by a United States Circuit Court in 1868 had been followed. The suggestion was that "there should exist a tribunal similar to a prize court, to administer the law of nations with reference to property captured on land" (*United States* v. *269½ Bales of Cotton*, Fed. Cas. No. 16,583, 28 Fed. Cas. 302, 309 (Dist. Mo.) p. 310).

Ten days ago an Associated Press dispatch from China stated that the Japanese had broadcast an offer of reward of 10,000 yen (about $2,300) for the capture "dead or alive" of any member of the United States Medium Bombardment Group based in China. This group has carried out some 70 raids against various Japanese bases during the past year. The report may not be true. I will not comment on it other than to say that in paragraph 31 of the Field Manual it is stated that offering a reward for an enemy "dead or alive" is prohibited by international law, and especially by article 23 of the Hague Regulations, to which Japan is a party.

One of the oldest and most important problems in the law of war is the extent to which civilians and irregular troops can participate in war without being war criminals and without being liable to the death penalty upon being captured and convicted by a military tribunal. The problem of the southern guerrillas presented to Halleck and Lieber was not unique. It has been a perennial one for at least the past several hundred years.

For a considerable period of time it has been settled international law that regular troops could not legally be shot when captured. There was a difference of opinion with regard to certain types of irregular troops. There have been many varieties of irregular troops with almost as many names, such as freebooters, partisans, spies, war rebels, militia, armed prowlers, volunteer corps, free corps, guerrillas, levées en masse, and even bushwhackers. The motivation of these groups was sometimes patriotic, sometimes merely to take advantage of the war situation as an excuse to plunder, pillage, and loot. The question as to which types could be shot for violent participation in the war persisted. It was clear that a well-organized militia should not be treated the same as a spy or a guerrilla.

The question was finally settled by a compromise at the Hague Conferences. Article I of the Hague Regulations provides that the laws, rights, and duties of war apply to regular armies, to militia, and to volunteer corps provided that they are commanded by a person responsible for his subordinates; that they wear a fixed distinctive emblem recognizable at a distance; that they carry their arms openly, and conduct their operations in accordance with the laws and usages of war. Article 2 stipulates that if the inhabitants of a nonoccupied territory take up arms as a levée en masse to resist invading troops they also shall have the rights of war even though they do not wear a distinctive emblem and are not commanded by a person responsible for his subordinates, provided, however, that they carry their arms openly and respect the laws of war.

The reason behind these rules is that opposing forces have a right to know against whom they are fighting. They can then act accordingly. If they do not know this clearly, noncombatants generally are likely to be attacked.

Irregulars who do not comply with these requirements and who engage in personal violence against the enemy commit war crimes and are subject to the death penalty (Field Manual 27-10, pars. 357; 348-349; 351-352). Such irregulars include the individual who shoots a parachutist other than in self-defense; private rifle companies; unorganized factory guards; and irregular snipers. It is noteworthy that parachute watchers in Great Britain are members of an organization known as the Local Defense Volunteers of England. Our Home Guards are, or are being, uniformed.

In contrast to Europe, the probabilities are that there will be little guerrilla warfare in the United States. It is not impossible, however, that in the United States today there are loosely organized potential guerrilla bands made up of reputable citizens who may not realize their potential status. After Pearl Harbor, when the Japanese invasion scare was at its height, on the west coast at least one group of citizens there organized itself into an armed group to oppose a Japanese invasion. They called themselves by some such name as the Freeport Rifles. They had no official standing. They were not connected with the Army, the National Guard, or the newer State Guard.

Certain language from a current promotional pamphlet of the National Rifle Association is of interest in this connection: It says "Modern war has no 'front line.' The airplane, mechanized troop carriers, and fifth-column activities have opened all parts of a nation to possible enemy attack. Home guards, auxiliary police, and industrial defense units are just as necessary in this war as field armies. * * * Today it is the plain duty of every American to acquire a working knowledge of the proper handling of firearms" (pp. 1, 3). In this same connection I might note a remarkable little book which has recently become somewhat of a best seller in this country at 50 cents a copy. It is by "Yank" Levy and entitled "Guerrilla Warfare." It was written primarily for Britishers. From among the many interesting passages in this little book, I can take time to quote only the following: "I would impress upon every potential defender of this country, every member of the population who is fitted to take part in guerrilla fighting, every home guard unit, the golden precept: Be prepared. Instead of having hastily to form our fighting bands on the spur of the moment and then to lose time locating favorable spots for headquarters, hiding places, rallying and dispersal points; instead of having to learn the methods of organized guerrilla fighting by painful and arduous rule-of-thumb trial and error, let us start right now" (p. 39). Among other things Levy advises home guards to keep civilian clothes packed in boxes in the ground so that if they are surrounded by the enemy they can exchange their uniforms for their civilian clothes (p. 46). For present purposes perhaps the most interesting thing about the book is the preface to the American edition, written by Lt. Col. Joseph I. Greene, editor of the Infantry Journal. Colonel Greene states that locally formed groups in the United States have been seeking practical detailed information on methods of warfare they can use in their training. These groups and State Guard units, Colonel Greene says, have wanted to know more about the methods used by guerrillas in trained groups in China, Russia, the Philippines and in occupied countries.

He adds that most of what Yank Levy has to say about guerrilla warfare can readily be applied to our own American scene, and concludes his preface by saying: "We of this country who may conceivably become engaged anywhere with the enemy should study and, it may be, apply these ways of war. Not even a seeming remoteness of encounter can stand for a moment as an excuse for unreadiness."

If such groups as these seriously plan to go into action against possible enemy commando raids or otherwise, as a part of their preparedness they should not overlook the provisions of article 1 of the Hague Regulations. The Russian, Yugoslav, and other guerrillas in the occupied countries are literally taking their lives in their hands. They have no rights whatsoever if captured.

An article in the Saturday Evening Post of May 15 about the Civil Air Patrol is erroneously entitled "Flying Guerrillas." The Civil Air Patrol is supervised and controlled by the commanding general of the Army Air Corps. Although the members of the Patrol serve on a voluntary basis, they wear regular army uniforms with special distinctive emblems. Their planes are marked with the Civil Air Patrol insignia which has been officially communicated to all enemy governments. The planes carry exposed bomb racks and the Patrol conducts its operations in accordance with the laws of war. The members are in no sense guerrillas.

Before concluding this recital of somewhat disjointed matters, you may be interested in two points which concern the larger jurisprudence of the laws of war in the relationship of international law to the constitutional law of the United States.

It is an established rule in our constitutional law that when the terms of a treaty and an act of Congress are in irreconcilable conflict the one later in point of time is the controlling law. It is seldom impossible, however, for the courts to reconcile the provisions of treaties and those of acts of Congress, and the courts will go to great lengths to do so. Yet, irreconcilable conflicts do occasionally occur. An example of this would be where an earlier commercial treaty stipulated that a 15 percent ad valorem duty would be collected on a certain item, and a later statute provided for the collection of a 30 percent ad valorem duty on exactly the same item. In this case the courts in this country would be constrained to give effect to the later statute. The treaty violation would have to be adjusted as an international matter.

This principle has illustrations in the matter with which we are now concerned. The Hague Conventions of 1907 antedate the Articles of War enacted by Congress in 1920, but the Geneva Prisoners of War and the Red Cross Conventions of 1929 went into force later than the Articles of War. The following examples are illustrative of some of the questions which may arise as a result of these differences of time. Article of War 2 lists the persons subject to military law. You will not find prisoners of war in that list. However, article 45 of the Geneva Prisoners of War Convention of 1929 (Rules of Land Warfare, par. 118, p. 29) provides that "prisoners of war shall be subject to the laws, regulations, and orders in force in the armies of the detaining power." This treaty provision, being later in point of time, in effect amends Article of War 2. Again, under Article of War 96 conspiracy to escape is punishable at the discretion of general or special courts martial. Article 51 of the Geneva Prisoners of War Convention of 1929 (Field Manual, 27-10, par. 124, p. 31) provides that after an escape by a prisoner of war, his comrades who assisted in the escape may incur only disciplinary punishment on this account. Unless these two provisions can be reconciled the 1929 treaty provision, being adopted later than the Articles of War, must govern the case.

One more instance will suffice to illustrate the point: Article of War 105 provides that when persons subject to United States military law damage property, and when the particular offenders cannot be ascertained but the organization or detachment is known, stoppages in pay to the amount of damages inflicted may be made and assessed in such proportion as may be deemed just, upon the individual members of the organization who are shown to have been present at the time. Article 46 of the Geneva Prisoners of War Convention (Rules of Land Warfare, par. 119, subpar. 4, p. 30) forbids any collective punishment of prisoners of war for individual acts.

One of the most important means of enforcing international law is almost wholly unknown to most persons, indeed to many lawyers. I refer to the medium of the national executive, with assistance of the national legislature. Many of the rules of international law, like the rules of domestic law, are not self-executing. The legislatures of the various states of the world enact laws to effectuate the international rules in their own territories, much as administrative agencies formulate and promulgate regulations to carry statutory enactments into effect. In article I, section 8, of the Constitution of the United States, Congress is empowered to define and punish offenses against the law of nations. Under international law a captured and convicted spy may be put to death. On June 4, 1920, Congress enacted Article of War 82. This implements this rule of international law by giving jurisdiction to general courts martial or military commissions to try alleged spies. The act of Congress also mandatorily states that upon conviction of the offense of spying the person involved shall be put to death. A few other examples of enactments by Congress, with special reference to the rules of land warfare, may be of interest. A typical example of the occasion when a safeguard is given is where an army is retreating and where chaotic conditions may prevail when military control is relinquished. In order to protect such places as Red Cross hospitals, churches, art museums, and other public institutions, a military guard is sometimes left as a safeguard of the place. Other times a notice of safeguard is merely attached to the building. Paragraph 241 of the Rules of Land Warfare states that the violation of a safeguard is a grave offense against the laws of war.

This is the international rule. The international rule does not, however, provide for a penalty, but Article of War 78 provides that "any person subject to military law who, in time of war, forces a safeguard shall suffer death or such other punishment as a court martial may direct." Again, under paragraphs 61 and 329 of the Rules of Land Warfare, the pillage of a town or place, even when taken by assault, is prohibited. This international rule is implemented by Article of War 75 which provides that any officer or soldier who "quits his post or colors to plunder or pillage" shall suffer death or such other punishment as a court martial may direct. To the same effect is paragraph 327 (p. 83) of the Rules of Land Warfare. It provides that all captures and booty belong primarily to the government of the captor. This international rule is effectuated in this country by Articles of War 79–80 which provide to the same effect and add that any person subject to military law who is guilty of wrongfully appropriating such property shall be punished as a court martial may direct.

In connection with most wars it has been asserted that they were illegally started. The laws of war govern chiefly the conduct of war after it is started, not its commencement. The laws of war deal chiefly with the conduct of belligerents inter se during the progress of war and are not concerned primarily with the causes of the war or whether the war was begun legally or illegally. Even if a war is illegally started, the importance of conducting hostilities in a civilized fashion is as important as if the war is started with all due formality. To suggest, as has been suggested, that the rules for the conduct of warfare itself should be abandoned, and that we are justified in resorting to atrocities or barbarism in general because of the illegal commencement of the war, is to miss the fundamental reason for the growth of this body of rules and the purpose they are designed to fulfill.

The settlement of the question of responsibility for the war itself is a problem to be dealt with at the end of the war, not during the conduct of hostilities. The matter may be settled by such means as reparations, loss of territory or colonies, or even loss of sovereignty.

There is also a startling point of view on the part of some lawyers that if the enemy breaks one rule of law, even though it may have been unauthorized, the bars are down and henceforth there need be no further regard for the laws of war on our part. This is not only analogous to the point of view which upholds lynch law rather than a fair trial, but it would thwart the whole basis and the reason for the existence and growth of the rules of land warfare. It should be taken for granted that some of the rules will be broken from time to time. Our forces should and will be on guard against such violations. When they occur the answer is not lawlessness or wanton destruction on our part but proper reprisals, when authorized. Reprisals are not only legal and provided for in the Rules of Land Warfare but they are highly effective. The military experts who are responsible for the continued existence of the rule that even "military necessity" does not permit the overriding of the laws of war are acting, not from pious notions, but from extensive practical experience in the conduct of war.

National Debt

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. MANSFIELD of Texas. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following editorial from the Galveston Daily News of June 6, 1943, on the national debt:

NATIONAL DEBT

Figures fail to make much of an impression on the average citizen any more when it comes to Government finance. People have become so used to the word "billion" that they take it as calmly as once they took "million." When they start thinking about the national debt, however, they soon are going to have to start thinking in terms of trillions, whether figures that fantastic mean anything to them or not. According to official figures, Congress so far has appropriated or has been asked to appropriate a total of $338,500,000,000 for fighting the war, and that, believe it or not, is more than a third of a trillion dollars. Not only is it more than twice all the money the Federal Government had spent in its entire history up to 1940, when the defense program started, but it is more than twice the assessed value of all property, including houses, factories, farms, fields, and personal belongings in all 48 States and the District of Columbia. Assessed values do not, of course, necessarily represent true values, but they give the average citizen some basis for understanding what is meant when one starts talking about prospects of the national debt reaching $300,000,000,000 by the end of the war.

The gross national debt on May 15 last year was $65,000,000,000 and on the same date this year it was $134,600,000,000. The East Texas Chamber of Commerce estimates that Texas people's share of the present national debt, 3½ percent of the total, is $4,700,000,000, which is a little more than the assessed valuation of all Texas property for 1942, $4,600,000,000. By mid-1944, it is estimated that the national debt will have reached $210,000,000,000, and if it should reach $300,000,000,000, Texas' share of the total would be $14,612,969,072 on a per capita basis.

The level which the debt finally reaches, of course, will be determined by the proportion of the war's cost which is collected in the form of taxes. Congress' behavior to date as regards paying for as much of this cost as possible while the war is being fought furnishes no grounds for optimism. And there is not reason to hope that victory will bring an end of heavy Government spending. In this connection the East Texas Chamber of Commerce asks some questions which every citizen should be pondering in view of the present national debt prospects. Here are some of them: Will the Government undertake to make payments to tide demobilized men over the time between demobilization and their employment? After the war is the United States going to attempt to underwrite food, clothing, shelter, police protection, and credit for all our allies, or even the whole world? Are we going to go "whole hog" for social security under the vague blueprint of the recent National Resources Planning Board report? To what degree and when will the Government drop its controls over men and materials in industry after fighting stops? What are we going to do with our national in-debt? Shall we extend it over and over again, or convert it into paper money, or pay it off through inflation, or begin to pay it off, principal and interest, in honest dollars?

We agree that all of these are questions which should be receiving more thought than they are now that we have started talking in terms of trillions of dollars instead of billions.

Capitol Now Open to Servicemen on Sundays

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. RANKIN. Mr. Speaker, several days ago I called attention to the fact that the Capitol was closed on Sundays and urged that it be kept open so that the many hundreds of servicemen in uniform who come to Washington were not denied the privilege of going through the building. I am glad to report to the House that my request has been complied with.

The Capitol is now open on Sundays to all servicemen, and the guides are giving their services free to conduct men in uniform through the Capitol and show them the building every Sunday.

Power To Carry on the War

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Merlo Pusey, from the Washington Post of June 8, 1943:

POWER TO CARRY ON THE WAR

(By Merlo Pusey)

After a year and a half of war Congress has apparently decided to invoke its power to undercut any group that tries to sabotage the war effort to win advantages for itself. That is the meaning of the emphatic vote in the House last week for the Harness-Smith substitute for the Connally bill previously passed by the Senate. Leaving aside the details of the two bills, this move to reassert the power of the Government to carry on the war in spite of John L. Lewis and his ilk is one of the most constructive steps that the present Congress has taken.

There is much confusion over what Congress has done. Some of that confusion probably arises from the fact that the House acted in haste without a printed copy of the bill before it. More important, however, is a widespread misunderstanding as to the chief issue by which both branches of the National Legislature were confronted. The people have been told repeatedly that Congress was considering antistrike legislation. The mere use of those words aroused antagonism among many friends of labor, for the right to strike is properly regarded as the chief weapon that can be employed by labor to win fair compensation from employers.

Now neither the Connally bill nor the House-approved substitute would deny the right to strike in the traditional meaning of that word. It is true that the House bill attempts to put collective bargaining ahead of strikes in disputes within war industries. Probably this part of the bill needs further pruning. But the real "teeth" of both bills come into play only when the authority of the Government itself is threatened.

This is a point of the greatest importance. Congress is attempting primarily to assert the power of the Government to carry on this global war without being stabbed in the back by union leaders who think it is more important to force wages skyward than to supply fuel, munitions, rubber, and other essentials to the men at the fronts.

Congress does not presume to say, even in wartime, that unions shall not strike against their employers. The criminal penalties which both houses have approved for anyone attempting to interfere with the operation of war plants would apply only in cases where the Government has been forced to take over war plants to keep them in operation. In other words, Congress would make it a crime to aid or foment strikes among employees working directly for the Government.

Obviously this restriction does not destroy the right of collective bargaining, for there is no such right as collective bargaining with the Government. No group can rightly say to the Government, "You may continue the war under the terms we have laid down." Nor can any employer or union leader be permitted to deprive the Government of the sinews of war until his terms have been met. That basic principle was recognized as to employers long before Pearl Harbor. Its tardy recognition as to union leaders merely completes the powers that the Government must have to assure our national self-preservation.

Even the administration appears to have belatedly swung around to this view. At any rate, administration leaders in the House marshaled their influence behind the Connally bill at the eleventh hour. For the policy of trying to appease men like John L. Lewis has proved to be a flat failure. It should have been recognized as a dangerous policy from the very beginning. The fate of the Nation cannot safely be left to mere understandings or bargains between the President and private groups, which may turn out, as in the case of the miners' no-strike pledge, to be nothing more than a scrap of paper.

Assuming that a satisfactory compromise between the Senate and House bills can be worked out, the effect of this legislation on the coal strike may be decisive. With either bill on the books, a further revolt against Government authority might leave John L. Lewis looking out between bars. At the same time the basic rights of labor remain protected. Both bills specifically leave the individual worker free to quit his job if he wishes to do so. The right to strike against private employers is left largely to the control of labor itself under the no-strike pledge, and the War Labor Board on which workers and employers alike must rely for a fair adjustment of grievances which cannot be ironed out by collective bargaining is notably strengthened.

The implications of this courageous act on the part of Congress are even more far reaching. Congress has once more asserted its power to protect the national interest against powerful internal pressure. It has said that the Government elected by the people as a whole is supreme and that it must not kowtow to any unscrupulous little dictator who may challenge its authority to carry on the war. If Congress and the administration adhere to this sound principle, our democratic system will be greatly strengthened to withstand the shocks that it must inevitably meet in the last stages of the war as well as in the post-war period.

Department of Agriculture Still in Politics

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. SMITH of Wisconsin. Mr. Speaker, it has been said repeatedly in this House that the production of food is our biggest job. I am wondering, however, if that fact has percolated through to the one Government agency charged with food production; namely, the Department of Agriculture. On March 10 I charged that the Department of Agriculture is more concerned in saving the A. A. A., and F. S. A., and the C. C. C. than it is in organizing a productive food program. At that same time I pointed out that Government employees on the Federal pay roll were traveling about the State of Wisconsin and my district organizing meetings for the purpose of condemning Members of Congress because they would not go along with the Department's program as it affected these agencies. Now again my attention is called to further activities by these same Government employees in which appeal is made to Federal Security Agency clients and to R. A. C. C. borrowers, A. A. A. committeemen and cooperators, and business and professional men in the State of Wisconsin.

Mr. Speaker, I insert at this point in the RECORD a copy of a letter bearing the imprint of the Department of Agriculture and signed by one Paul Mutanen, chairman. The letter is self-explanatory and again clearly evidences a movement by the Department of Agriculture to stir up sentiment and create pressure on Members of Congress to the end that these identical agencies may be spared.

It is time, it seems to me, that Mr. Wickard and his organization should be active in doing the work it is charged to do rather than spending time and money of the Government in a program designed to thwart the will of Congress.

The letter referred to follows:

UNITED STATES DEPARTMENT
OF AGRICULTURE, AGRICULTURAL
ADJUSTMENT ADMINISTRATION,
Hurley, Wis., May 26, 1943.

To Farm Security Administration Clients and Regional Agricultural Credit Corporation Borrowers, Agricultural Adjustment Administration Committeemen and Cooperators, Business and Professional Men of Iron County.

DEAR FRIENDS: Within the next few weeks, Congress will decide the fate of the food-production policies of our Nation.

We are informed by our friends on Capitol Hill, the press, and radio that the congressional farm bloc can be expected to seriously cripple or abolish the Farm Security Administration, Crop Insurance, parity payments, Regional Agricultural Credit Corporation loan program, and the Agricultural Conservation Administration, Rural Electrification Administration, and farmer administration of agricultural programs.

This is a serious situation when farmers need all possible Federal assistance to help raise the needed food and fiber to win this war. Therefore, a county-wide meeting is being called by the Iron County Farm Mobilization Committee to be held at the courthouse in Hurley at 2 p. m., May 28. At this meeting we shall decide—

(a) Whether we are going to sit idly on the side lines and wait for some miracle to secure enough congressional support to safeguard the present aids to agriculture; or

(b) Shall we raise a few dollars to help the small group of farmers who are now in Washington carrying on a valiant fight to preserve the present agricultural agencies with emphasis on family-sized farms and farmer administration.

This meeting is part of the educational work carried out by the National Agricultural Mobilization Committee now 2 months old and covering 18 States. It is a temporary emergency movement which will function only as long as the emergency exists.

Henry Danes, of New Holstein, Wis., chairman of the Wisconsin Agriculture Mobilization Committee will talk. He is a very interesting speaker and has a message you will want to hear.

Please ask a neighbor or businessman to attend this meeting with you.

Sincerely,

PAUL MUTANEN,
Chairman, Iron County Agricultural Mobilization Committee.

Commencement Address at Rogers City High School

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the commencement address which I delivered today in my home town of Rogers City, Mich., in the high school of which I am an alumnus:

Greetings and congratulations to you members of the graduating class of the Rogers City High School. In this year 1943, as you all know, you are graduating in perhaps the most critical year of our Nation's history. You are graduating and entering upon a world faced with more uncertainty than at any time in the history of our country. Few, if any, of us in public life can offer any definite predictions for the future, and if we can't safely predict the future, how can we expect you to do so?

We can, however, approach the problem studiously and carefully, based on our past experience and our knowledge of the fundamental American history and principles, about which so many in responsible positions today seem to know so very little. If we will go back to those fundamentals and will have faith in the America of the past, in the America of today, and in the America of the future, we can venture some predictions. If in making those predictions, we can bring you some encouragement and light to an otherwise blackened horizon, perhaps we can ease your mind as you look forward to the future.

My advice to you all, as you face the future, is to find out when and how you can continue your education; and in gaining that higher education, keep your eyes not only glued to the future prospects of this Nation, but cemented firmly on the past history of this Nation.

What I am fearful of is that when some of you go into the armed services of this country—or if others of you find your normal pursuit for higher education otherwise interrupted by the war—you may lose your incentive to obtain that essential higher education in the future; and this, in my opinion, would be a calamity. In the post-war world you are going to need every bit of higher education you can gain; and the Nation is going to need from you the benefits you have received from that higher education.

Now in looking into the future, we must take into account a number of fundamental factors to guide us in our thinking.

Of paramount importance, of course, are the coming events in this world-wide struggle for military victory. No man living can safely predict on what day victory will be ours; but we can be definitely certain in our own minds that victory will be ours—and I hope that final victory will be ours by the end of next year. From the various events which have transpired on the battle fronts of the world in recent months; from what inklings we can get out of the recent historic military conferences in Washington and elsewhere; from the trend of changes in our war-production schedules, we may gain some pattern of our war plans. From what Mr. Churchill said in his recent address to the Congress, we can safely predict an ever-increasing aerial onslaught on Germany and the occupied countries. From Mr. Roosevelt's recent sayings—and based upon our spectacular victory in Africa—we may assume the early probability of an all-out ground and aerial attack on Italy—the soft underbelly of the Axis—and possibly also an assault on Norway, thus catching the Germans in a gigantic pincers movement on the west, coupled with a new Russian offensive from the east. When this three-pronged spear has been launched and Germany and the occupied Polish, Russian, and Balkan territory, as well as France and the Low Countries are sufficiently reduced by aerial bombings, then a possible direct frontal assault on the shores of France may be in order. All of this might transpire with considerable suddenness, and when the German and Italian peoples thus realize themselves completely surrounded; when their morale will have been shattered by ever increasingly heavy bombings; when their principal hope of forestalling a successful invasion, through increasingly successful submarine activities in the Atlantic, has been thwarted, through a combination of superior weapons and scientific developments; and when, in turn, they are beset by ever-increasing revolutionary activities in the conquered countries, then surely it is not beyond the realm of possibility that Germany may suddenly collapse as she did before in 1918. That might happen yet this year. Just how much of a factor Italy may be in further tangible aid to Germany is doubtful. Italy gives every indication of cracking now. She is said to be in panic over the invasion threat.

What of the Pacific? There are many of us in Washington who have felt from the very start that our most dangerous enemy in this great war is Japan. Many of us feel that we have too long delayed a greater degree of offensive action against the Japs. Many of us are disturbed by the failure of the Russians to assume a more cooperative spirit in permitting us to establish in Russia many huge air bases from which the heart of Japan proper can be thoroughly, efficiently, and promptly bombed into submission.

On the other hand, there are other encouraging factors in the Japanese situation. First of all, we have been told by Mr. Churchill that the greater proportion of our American troops now overseas are in the Pacific area. As our merchant fleet, being built on the west coast, expands; as our naval strength in the Pacific increases by leaps and bounds; and as our storage of battle equipment in England reaches the saturation point; it is logical to assume that ever more aircraft and other offensive fighting equipment will be diverted to the Pacific war theater. We may expect, therefore, a constant and ever increasing strengthening of General MacArthur's forces in the southwest Pacific. We may confidently expect greater security in Alaska now that our highway through Canada is playing its part.

We are told the British have massed a huge army of some 2,000,000 men on the edge of Burma and at the proper time we may expect that army and a greatly enlarged allied air force, striking from new bases in India, will push through Burma to China and get the necessary aid to the Chinese to enable them to drive the Japanese back off their Chinese shores. And when this is done, it seems to me that by striking at Japan in her own islands we can destroy her; and having destroyed her manufacturing facilities at home can thus more easily drive her out of her vast occupied territory. True, we have learned the Japs are good fighters and do not give up easily, and it may take much longer than any of us suspect; but we can hope for a final allied victory by the end of 1944. Yet that will not mean all of our boys and girls can be demobilized and rush home; because whether we like it or not there is the distinct probability that the United States may be called upon to furnish an army of occupation of around 4,000,000 men as our contribution to at least a temporary United Nations police force to insure post-war peace for some years to come.

Now as to the safety of our young men and women of today, who are graduating from high schools. Even though you may be called into the armed services, I think you need have no serious fears of not coming back safe and sound; and when you do, the experience and training you will have received will have been a mighty good thing for you, providing you are determined that as soon as you can be released from the Army you will resume your higher education. When I say "you can feel safe," I say that advisedly because by the end of this year, we will have raised our total in the armed forces to about 11,000,000 of which it is very doubtful that we will be able to have transported more than 4,000,000 overseas and of these doubtless less than half will ever see actual combat until the victory shall have been won. So much for the possible war events of the future.

The second subject of extreme importance which will affect our lives in this country—but more particularly the lives of your fathers and mothers and the rest of us who stay at home—is just what changes may come about in our Government programs over this stretch of time.

Down in Washington today, we have an ever-increasing number of foreign-born economists and lawyers, seated in the high councils of our Government, who are seeking to change the fundamentals of our American way of life. This we may presume is but natural, because many of them have come to this country in recent years. They know little if anything of our past history. They have themselves lived under the yoke of regimentation and governmental orders, issued by bureaucrats rather than by freely chosen representative law-making bodies of these foreign nations and so, having been entrusted with positions of responsibility in our Government, and having been supported by the Administration in the issuance of bureaucratic edicts—frequently in direct opposition to the spirit and the intent of the Congress in creating those bureaus originally—they have not hesitated to fasten upon the people of this country an ever-increasing amount of regimentation. We may, therefore, expect for the time being considerably more difficulties with rationing of food, clothing, gasoline, and the like. This in turn will tend to disrupt our thinking even more; will drive more and more of our small merchants out of business and will in all probability cause a political upheaval in the national elections of next year—which will be the only way of driving these foreign-born, foreign-educated, foreign-minded bureaucrats out of responsible positions in the Government of the United States. That ballot box is the one way we can return this Government of America to Americans to manage.

One of the greatest economic calamities that could happen to the United States of America and the perpetuation of the American way of life would be the ultimate and permanent collapse of the small businessman of America or the ultimate and permanent ruination of what is known as the middle class of America. That is the backbone of the American way of life. It must be protected at all costs and it is this class that the foreign-born theorists, presently ruling the bureaucracy of America, seek to destroy. Crush the middle class and you crush our freedom.

Now there is another important change which is bound to come about in the Government program which is of potentially great importance in the changing of our economy. As the fortunes of war change, and more especially as our enormous war-production program catches up, and indeed surpasses the requirements of our military commanders and allies at the front, it is but logical to assume that there will be important changes in matériel requirements and there will be

cancelation of many contracts and a few increases in others to fit the impending shift in major war operations. But the over-all war production will drop off sharply.

These changes will be instantly felt in our entire industrial program, both on the part of industry and labor. These changes and these cancelations of contracts will undoubtedly cause the closing down of many war-production lines and will inevitably result in one of several things. Either it will result in a temporary but extremely important wave of unemployment or it will of necessity result in converting those war-production lines into the production of peacetime equipment and peacetime consumer goods.

A great struggle will be in progress to determine whether the Government, which has assumed such a dominant position of ownership in the war-industry field, will permit private initiative and private enterprise to function, either in changing those privately owned properties over into peacetime production, even while war is in progress, or in permitting the temporary and later permanent use of Government-owned facilities for such production. All this, of course, is assuming that sufficient of our present huge production facilities will be kept in production order fully sufficient to be able to cope with the enemy's ability to destroy our fighting equipment thus produced. Or putting it in another way, we must keep these lines in war production sufficiently to supply the needs of our fighting men and those of our allies.

Now, as we approach that period or that following immediately after any collapse or threatened collapse of the Germans and Italians, we will, of course, assume that most of the Government programs will have a distinctly political atmosphere, looking toward the Presidential elections of 1944. It is obvious that both major parties will be soliciting the political favoritism of the well-known large voting blocks. For instance, we will hear much of the National Resources Planning Board's cradle-to-the-grave plan, which, after all, is the well-known British Beveridge plan; both parties will make concessions to the labor and farm groups, and both parties will be offering solutions to the problem of inflation. Later, as the election approaches, we will hear great agitation for guaranteed employment for all discharged armed forces, and it is probable that our present Administration will be placing large orders with manufacturers tor the rehabilitation of the presently occupied countries, which we hope will by that time have been liberated. It is very probable that the internationalist element within our country will be advocating that Uncle Sam finance the reconstruction program for all the occupied countries and that many in the opposition party will be equally as opposed to most of these plans. The nationalists will be standing in opposition to the internationalists. Or, to put it another way, those of us who believe we should look out for America first will stand in opposition to those internationalists who feel America's first duty is to the rest of the world or to the rehabilitation of certain nations in which some of our citizens have huge investments—or in which they seek investments for their own profit.

Meanwhile, and during this period, a gigantic struggle will be waged to maintain the life of free enterprise in this country. Industry will be doing its utmost to provide for refinancing in the post-war period to get ready for all-out peacetime production. Many of our foreign-born bureaucrats, intent on holding on to their fat-salaried Government positions, will most likely be striving to maintain Government controls over free industry and thus further the strangulation of free enterprise.

Those great industries of this Nation which have made such important contributions to our war production effort will be striving to rebuild their sales and advertising forces in order to capitalize on the war effort and to build up their markets for the future within our own Nation and with the foreign countries which we will have benefited. With it all will come improved labor relations and a greater understanding of the mutual objectives of labor and employer, and then the closer we approach the ultimate victcry the more we will see ever increasing study being given to the peacetime applications of the scientific developments that have occurred during this war production rush.

Great will be the stepped-up tempo in production for peacetime transportation. It is universally recognized that, in the post-war world, transportation by air will play a very dominant part. Hundreds of thousands of well-trained pilots will be able to secure their release from the occupational or world police air force and return to civilian flying on a hitherto unheard of international scale. Airplanes as yet undreamed of by the average citizen will fill the skies.

However, great as are the possibilities of the air-borne commerce of the future, nevertheless, the fact still remains that neither our land transportation nor our marine transportation systems will be supplanted.

In the pre-war world, we had just begun to scratch the surface in the rapid means of overland transportation. The streamliner trains had just made their appearance. There will be many more in the post-war world—faster, smoother, more comfortable. On the highways, our automobiles, as we have known them in the pre-war world, will be definitely a thing of the past. Right today even in the manufacture of such heavy cumbersome looking things as the 32- and 60-ton tanks, the marvels of our war-production program are constructing them with a thoroughness of skill hereto unheard of in the manufacture of our highest-priced pre-war automobiles. Your cars of the future will not only be marvels of beauty and stamina and speed but they will be traveling on the super high-speed highways of the future and in greater quantities than heretofore dreamed of, even in this great automotive Nation.

Yes, in the post-war world, even in our homes and in our daily lives—in the food we eat and in the clothes we wear—we will learn quickly of the marvels of modern science as developed in our war-production rush. But all of this—all of these marvels of the post-war world—is going to require an enormous post-war production program, an enormous post-war scientific program; an enormous post-war sales program.

The level of success attained in our post-war economy will be directly proportionate to the energy of our people and the vision of our leaders.

One thing must not be permitted to happen in this post-war world as it happened in 1918. None of the boys who come back from overseas, who elect to return to civilian life, rather than remain in the armies of occupation, must be permitted to sell apples on the street corners. Jobs must be found for all of them—jobs will be found for all of them. But one of our big problems in the post-war world is to keep as many as possible of our young folks in the colleges of this Nation, obtaining their higher education.

Remember these fundamental facts as to employment in the post-war world. First of all, there are today engaged in the war-production program about twenty-two and one-half million people, with 9,000,000 in the armed forces and thirty-one and one-half million in the civilian industries. In the post-war world five of those nine million under arms will be returned to private industry. Our war industries will not completely stop, because we will have to keep abreast the military developments of even our present friends and allies and so it is probable that four or five million will still be engaged in the production of more efficient tanks, more efficient planes, and other implements of death. And so this means that we will have to find employment for approximately 54,000,000 people in civilian industries as opposed to thirty-one and one-half million today. But it is believed that these jobs can be found for them. It is going to take considerable study and cooperation between industry and Government—but not force and regimentation on the part of Government. Governmental force and regimentation stifle production and stifle initiative and make for over-all inefficiency.

There are undoubtedly those who will wonder in view of steadily rising taxes and an inevitable rising cost of living, how we are going to be able to financially stand this increase in civilian employment.

To understand that, I must discuss briefly the questions of changes in production levels and buying power as they were in the pre-war period, as they are today, and as it is predicted they will be in the post-war period.

In the 10 years preceding the war, our total annual production was about $45,000,000,000 and, of course, up until the war broke out in Europe all of that was strictly civilian production. Today our civilian production still averages about $45,000,000,000, but we have added to that a war production costing about $80,000,000,000, so that our total production cost today is about $125,000,000,000. In the post-war world our total production will drop to about $97,000,000,000, of which war production will represent $15,000,000,000 and civilian production $82,000,000,000.

The question naturally arises, where is the buying power to be found to pay for this production? In the pre-war period we had a total national income averaging about $60,000,000,000. Today that has jumped up to $135,000,000,000, broken down into annual savings of about forty-seven billion, which of course is presently going largely into the purchases of War bonds and War Savings stamps. Then we are paying about fifteen and one-half billions in taxes and spending about seventy billions for goods and services. Today we have in this Nation accumulated savings of about one hundred and eighty-two and one-half billion dollars. In the post-war world it is estimated that our national income will drop slightly to about one hundred and thirty billion a year; the increase in savings will drop considerably to about sixteen billions, but at the same time our accumulated savings will have gradually moved up to about two hundred and thirty billion. In the post-war year of 1945—if my schedule is correct—our taxes will have jumped up to twenty-one and one-half billion a year, while our expenditures for goods and services will have come up to $90,000,000,000. In other words, here is the buying power situation in a nutshell. Many people in this country today are making more money than they have ever made in the pre-war period. On the other hand, due to pulling out of the markets many normal civilian goods, due to the regimentation of our economy in the form of rationing, etc., and due to the patriotic urge to buy War bonds, those people are by and large not able to, nor desirous of, purchasing many of the things of life that they would like to buy. However, when the immediate need for the purchase of War bonds and stamps has become a thing of the past and when, on the other hand, these consumer goods they have wanted to buy—such as automobiles, finer clothes, higher grades of food, to say nothing of new washing machines, vacuum cleaners, radios, etc.—make their reappearance on the civilian market, then you will find those people cashing in their War bonds and stamps and converting them into the acquisition of civilian goods.

Two things I want you to remember are these: First of all, in our war-production effort today there are millions of young women capably performing tasks heretofore reserved for men. Some of these women will

want to return to their private lives at the fireside of the home, but many of them will, perhaps, prefer to gain that independence that comes from earning their own individual livelihood. Secondly, remember that when the Government voted to draft men into its armed forces, the Congress provided definitely that those men on their return to civilian life would be able to get their jobs back. It will be very difficult for you to compete with either class.

Therefore, I repeat, the thing for you young men and women to do is to continue your education. Learn all you can so that you will better be able to compete in the post-war world. You will be the scientists of the future; you will be the business executives of the future; you will be the statesmen of the future, providing you apply yourselves to your studies, and providing you apply yourselves to a careful study of the fundamentals of American history and American government and American economy. No one can deny that we in America have our faults. No one can deny that our system has not been heretofore perfect. Study the faults in that system, but remember this: Fundamentally the American system of free enterprise and free initiative has made this country great. Above all and at all cost must we ever dedicate ourselves to the preservation of the Bill of Rights as guaranteed us in the Constitution. And, finally, and in conclusion, let us remember this: We must not at any time permit the abrogation of the principles of the Atlantic Charter as applied to ourselves in these United States of America. We must not give up in this country the freedom of speech, freedom of the press, freedom of religion, and we must in the post-war world provide freedom from the fear of want. These things we must preserve for America, but at one and the same time it is not up to us to tell the other nations of the world how they shall live and how they shall conduct themselves; and we shall forever insist that they do not tell us how to run our country. European ideologies did not make America great. Some European ideologies are dedicated to the wrecking of America; some European ideologies are dedicated to the subordination of the great United States of America into some highly idealistic form of world state in which we shall be expected to pay the bills and furnish manpower, but in which we will have but a minor vote when it comes to the expenditure of those funds or that manpower. This must not happen. It is up to you graduates of the high schools and colleges of this country today to dedicate your lives to see to it that that does not happen. We can collaborate; we can cooperate with the rest of the world, but we must preserve America for Americans. The opportunity is yours. What will you do with it?

Resolution Adopted by the Arkansas Press Association

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution adopted by the Arkansas Press Association, in annual convention, June 5, 1943:

Whereas our sons, our brothers, and other loved ones today are offering their lives upon the altar of their country's freedom to preserve sacred the great fundamentals of our Nation, guaranteed to us under the Constitution; and

Whereas we at home are suffering inconveniences now and will hereafter gladly suffer sacrifices great and small in our effort to contribute what help we can in their struggle; and

Whereas there appears to be a concentrated effort on the part of certain groups to promote pet political theories and un-American principles under the guise that they are war-born necessities, and these subversive principles are undermining the American way of life, promoting great and powerful centralized governmental bureaus and regimentation of our people; and

Whereas we are fully aware that unless definite steps are taken to curb these rapidly growing tendencies our individual liberties will be lost, our consciences subsidized, great freedoms destroyed, and in their place will be established an all-powerful centralized government ruling the people through virtual dictatorship and against their will; and

Whereas we realize that it is a patriotic responsibility of the unshackled press of our Nation to exert its vast influence in checking the spread of these un-American doctrines: Now, therefore, be it

Resolved, That the Arkansas Press Association does hereby express itself as unequivocally favoring the principles of free American enterprise and individual initiative, and fully recognizes the wonderful job that American business and industry—the highest exemplifications of these American fundamentals—have done toward winning the war; and be it further

Resolved, That this association and its members do hereby pledge to use their fullest resources and abilities to prevent the destruction of these high American principles, to check the encroaching bureaucratic tendencies, and to preserve those freedoms guaranteed to us under the Constitution of the United States, so that our sons and our brothers and our loved ones who are now offering their lives on the battle fronts will have, when they return to their homes, the right to live their lives and conduct their business in the way they desire; and be it further

Resolved, That a copy of this resolution be sent to every newspaper publisher and its publication urged; and that a copy be sent to every Member of the House of Representatives and Senate of the United States Congress.

H. R. 2536—A Great Step Forward

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. HART. Mr. Speaker, it is very likely that today the House will have under consideration H. R. 2536, a bill to amend the act entitled "An act to provide for the promotion of vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment," approved June 2, 1920, as amended, and for other purposes.

This bill was the subject of conscientious and long-continued consideration by the House Committee on Education. It was evolved only after long consultation among Hon. GRAHAM BARDEN, chairman of that committee and Federal officials in charge of agencies directly interested in the work which the bill authorizes to be performed. The result of these conferences appeared in the form of a bill known as H. R. 699. This bill in turn was given exhaustive study by practically all of the members of the House committee, who in cooperation with the chairman, and after long-extended hearings, both public and executive, have now presented for enactment H. R. 2536.

One of the most notable features of this bill is that it authorizes for the first time the physical restoration of disabled persons, and through contributions by the Federal Government, added to those made by the States themselves, seeks to enable unnumbered thousands of people who now live a life of economic uselessness and are a financial burden on society, to be so rehabilitated physically as to be enabled to take their places, proudly and happily, in the ranks of men and women who are self-sustaining.

For more than 20 years the State of New Jersey, through its rehabilitation commission, and at its own expense, has been carrying on this kind of physical restoration work. The present director of the New Jersey Rehabilitation Commission is Hon. John J. Toohey, Jr. He has shown an intense interest in all phases of the commission's work. Under his administration the work of this commission has gone forward with tremendous enthusiasm and success. As an instance of the benefit not only to those who are physically restored by methods similar to those set out in H. R. 2536, but of the benefit to industry wherein they are given an opportunity to show their abilities, and the ultimate benefit to the communities in which they live, I submit herewith two statements.

The first statement is that of Mr. James Cassidy, which speaks for itself. The second statement is that of Mr. Jacques Kreisler, one of the chief executives of the Kreisler Manufacturing Corporation of North Bergen, N. J. Both statements relate interesting and important stories. In addition to bringing home to us a realization that persons physically handicapped can make good in industry if given a chance, and add to the sum total of happiness and wealth in our country, these statements also offer the surprising and welcome information that not a single workday has been lost through absenteeism by any of this handicapped group employed by the Kreisler Corporation. This instance of their patriotism is at least matched by the further information afforded by the statements that these handicapped workers have made a 100 percent record as blood donors to the Red Cross.

H. R. 2536 is badly needed legislation. The statements follow:

STATEMENT OF JAMES CASSIDY

I became employed with the Jacques Kreisler Manufacturing Corporation on August 1, 1941. The first meeting with Mr. Kreisler and Mr. Stern was in the form of a personal interview in regard to my employment. Mr. Kreisler and Mr. Stern noticed that I was handicapped and at the outset told me that I should not feel self-conscious in the event people stared at me—take it as a matter of form.

My first duties with the Kreisler organization was as timekeeper. Having proven my ability, I was then put in complete charge of all personnel activities. Soon after becoming employed with Kreisler we ran up against a serious personnel problem; that is, the finding of new employees. I spoke with Mr. Kreisler and Mr. Stern and asked them if my work had been satisfactory from the time of my employment to that day. Their answer was "yes." I then asked Mr. Kreisler and Mr. Stern if they would not consider hiring other handicapped people who I thought could do the work that was required of them, such as assembly, power press, lathe work, and polishing metals for precision Government war work. Mr. Kreisler and Mr. Stern told me to go ahead in my own way and employ for a start half a dozen people.

I contacted the New Jersey rehabilitation bureau office, located in Jersey City, and they, in turn, sent me the required number of people. Everyone without exception qualified for the type of work we would employ them for. From then on we employed additional handicapped people until our present complement of handicapped people is between 45 and 50. One department itself, the second shift, from 4 p. m. to midnight, is comprised solely of handicapped men. These men perform war work; that is, operate hubbing machines and bullet dies.

Two of these men own and drive their own cars with the help of what is known as the Stone control. They also transport their fellow workers to and from work. One of these fellows in particular, Daniel Puro, up until about 8 months ago navigated with the sole help of crutches. About 5 months ago he discarded the crutches and took up the use of two canes. About 2 months ago he threw one of the canes away and now owns and drives his own automobile, transporting workers. All the handicapped workers on this shift are transported from their homes to work and back again with the two machines owned and driven by their two fellow handicapped workers.

Since the inception of the employment of these handicapped people we have noticed, by Mr. Kreisler and Mr. Stern granting them this long-awaited opportunity to show industry that if given a chance, they can prove their ability and be self-sustaining.

We have noticed that production in the various departments where these people were placed has gone up considerably. Not only that, but they actually put to shame the other employees in their respective departments who are not handicapped, and production went up noticeably throughout the organization.

Among these handicapped people not one person has lost 1 day from attending to his duties at the Kreisler plant. Most of these people are heads of families, and now, instead of being financial drains on their fine families and the community, are supporting their families and will also make returns in the form of income tax. They are constructively employed toward aiding the war effort.

So successful has this experiment been that further additions of handicapped people are contemplated in the Kreisler organization. Among other duties that these people perform, is that of night nurse performed by a woman 60 years old.

Recently, while at work, one of our handicapped men, Henry Hertel, who is employed in our bullet die hubbing department, experienced the following words running through his mind:

"Rough out that ring and start to sing,
And do the best you can;
You've got a lot of bullet dies,
To polish for Uncle Sam.

"What if they're tough, just use more rough.
Come on, prove you're a man.
And when you do, you'll receive that thanks
Of the sons of Uncle Sam.

"The job's a bore and your hands are sore.
But you're just as proud as I am
To be part of the fight for Democracy
For peace and Uncle Sam."

The above poem was framed and hung in a conspicuous place in the building.

During a recent survey among our employees made on behalf of the Red Cross by our general manager, Mr. Alfred Diringer, for blood donors, to date we have received 288 volunteer blood donors. To date we have computed our findings among the handicapped employees and we found that it totaled 100 percent.

It was explained by Mr. Diringer to the handicapped employees that if they felt that they were not physically able to give their blood, that it would be perfectly all right, but the only reason that they were approached was that the firm of Jacques Kreisler did not want them to think they were being overlooked due to their physical disabilities.

Every one of these people, without exception, insisted that they be considered as a blood donor and stated individually that they considered it an honor and a privilege to give their blood in the hopes that it might save some wounded man regardless of nationality, race, creed, or color.

STATEMENT OF JACQUES KREISLER

NOT TO THE STRONG ALONE

The battle, sir, is not to the strong alone; it is to the vigilant, the active, the brave. (PATRICK HENRY.)

The halt, the lame and the blind are coming into their own. They are finding their place in industry. And industry is the winner. For it is the alert mind in the feeble body, the strong shoulders of the lame, the sensitive fingers of the blind that are helping industry overcome its manpower handicap.

In this respect, we at Kreisler are in debt to a young man with a "bum wing." Name: Jimmy Cassidy. He started as a timekeeper and advanced to personnel manager.

It was Jimmy who proposed that in adding to our personnel we employ handicapped people wherever possible. His own success gave weight to his argument. "Go ahead, Jimmy, in your own way and try it out," we said. His next stop was the Rehabilitation Bureau in Jersey City.

And they came.

The man who uttered no word but whose eyes were eloquent * * * the woman who knew no sound but heard words unspoken * * * the man with vision in his finger tips * * *.

They came to replace the fighting men. They stayed to serve the fighting men.

Gentlemen, here are the facts.

There are 50 in our plant and their number is increasing. In one department, the four-to-midnight shift is comprised entirely of men physically handicapped. Here the output actually increased and other departments profited by this example. Among the handicapped, not a single man has lost a single day from his vital war work. Their bodies seem to have taken strength from their spirits.

The Red Cross appeal for blood donors was answered by almost half of the plant's personnel. But the handicapped volunteered without a single exception * * * to give their blood that others might live. Their spokesman said, "It is our honor and our privilege."

These are the brave whom the Nazi "supermen" would condemn to extermination as unfit! These are the weak who will conquer! For the weak who are free are stronger than the strong who are enslaved.

The physically handicapped have come into their own. They have proved themselves! And all of mankind reaps the benefit.

The Connally Bill

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 4, 1943

Mrs. BOLTON. Mr. Speaker, I want to make clear my position relative to S. 796. The House on Friday, June 4, passed this bill, interpreted as a strike preventive, which I voted against for two reasons. First, because the departments of government having the most to do with the conduct of the war, the Army, the Navy, and the Maritime Commission, testified that in their opinion the bill would retard the war effort. Second, because I could not join with a wrathful Congress in making a scapegoat of the great body of loyal workers for the outrageous and flagrant misuse of power by disloyal leadership in pursuing what is in truth a personal feud or vendetta.

I am perfectly aware that the temper of the people is such that they would like to string Lewis up by his thumbs. I am not willing, however, to be a party to letting Lewis wreck the results of long years of honest and constructive effort on the part of responsible organized labor. Do not misunderstand me. I am not saying, "The poor, dear workingman." I am thoroughly disgusted when I see him permit himself to be misrepresented by those who use him for their own interests. But I know these men are as unhappy as I am myself. They are Americans. Their sons—yes, and their daughters, too—are on the battle line. These are fighting for freedom, grimly and to the death. The casualty lists bring home to all of us the bitter toll of war.

The men at the front have more than justification for anger over a situation for which there is no excuse. But if they could have all the facts they too would recognize that two wrongs never make a right.

In considering all the angles of this whole matter, we should remember there is always the possibility that we have failed to see how clever have been the manipulations of those who in the near future will try to shift the responsibility for increasing unrest onto the shoulders of Congress whose power and influence they have long been seeking to undermine.

I believe the time has come when there must and should be sane labor legislation enacted to protect the country as a whole from the depredations of undisciplined, uncontrolled labor power. Just such a moment came to industry. It had to be and was controlled. Labor's moment has now come. If the country is to renew its full confidence in labor there will be no opposition to carefully considered, fair, and just controls, which will give protection to the laboring man against just the kind of destructive leadership the coal miners have permitted themselves to be subjected to, and will

protect the rest of us against unjustifiable demands and strikes.

I recognize that much of the rank and file of labor is not only ready but anxious for the registration of unions and insistence upon financial responsibility to which this bill subscribes. I am as keenly alive to the need to curb strikes as anyone. But as I believe sincerely that S. 796 is opposed to the principles of freedom for which we have gone to war I cannot do otherwise than vote against it. I appreciate that there will be those who disagree with me, but I am sure I can count upon them to believe I have acted upon nothing less than deep conviction.

Justice for Asiatics

EXTENSION OF REMARKS

OF

HON. RANULF COMPTON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. COMPTON. Mr. Speaker, in view of legislation pending in the Congress and the need for enlightenment and discussion on the subject of a change in our Immigration and Naturalization laws, I wish to include in the Appendix of the CONGRESSIONAL RECORD, as informative matter, a part of an article from the weekly periodical, the Christian Century.

This article throws light on the subject that should be under discussion with that increasing number of citizens who take an interest in international affairs. The article follows:

JUSTICE FOR ASIATICS

Congressman MARTIN J. KENNEDY, influential Democrat from New York, has introduced a bill which would grant admission to Chinese under the quota system. Congressman WALTER JUDD, newly elected Republican from Minnesota, who owes his election largely to the agitation which he has conducted for more intelligent American participation in Oriental affairs, is about to offer a bill which would lift all discriminatory enactments against all Asiatics. (The Minnesota Congressman was formerly a medical missionary in China.) Dr. JUDD'S bill, it is forecast, will debar Japanese so long as we remain at war with that country. Such a provision seems legally unnecessary, though it may be politically expedient. While the two nations are at war there can be, in the nature of the case, no immigration.

Of the two bills, that to be sponsored by Congressman JUDD is immeasurably superior. Bear in mind that the issue at stake is the rankling sense of injustice felt throughout Asia at the present discriminatory racial policies of the United States. An exception made in the case of China alone would be universally regarded on that continent as simply a war bribe offered to soothe an ally who must be kept in line if victory is to be won. It would not be regarded as a genuine effort to do justice; it would leave Filipinos, Indonesians, Malayans, Siamese, Burmans, Indians, and Koreans with an intensified resentment. Indeed, it would be resented by the more thoughtful Chinese, who feel every slight inflicted on other Orientals as an injury to themselves.

Rumors from Washington indicate that there is a possibility that a Senator and a Representative from Pacific Coast States may offer simultaneously in both Houses of Congress a bill designed to deal with this issue. We trust that these rumors prove well founded, and that the bill will, when offered, follow the inclusive pattern set by that on which Congressman JUDD has been working. The Asiatic color bar has been maintained to this day largely as a football of Pacific coast politics. West coast politicians intent on reelection have used this issue much as the "white supremacy" slogan has been used by demagogues in the South. There are evidences, however, that labor, which was originally responsible for the enactment of the various Oriental exclusion laws, is gaining a new point of view. Various Congress of Industrial Organizations unions have gone on record in favor of dropping racial bars, and Philip Murray, president of the Congress of Industrial Organizations, is understood to be ready to support such a bill if it comes before Congress. If two or three American Federation of Labor leaders on the Pacific coast can be persuaded to change their position, the chances for amendment of the immigration and naturalization laws would be greatly enhanced.

Before the American public can be fully aroused to the importance of the issue at stake, however, it is evident that much still needs to be done to make clear exactly what is proposed and what would be involved if the legislative action advocated should be taken. What is proposed? It is proposed that the people of all nations be placed on exactly the same basis with regard to entrance into this country and the gaining of United States citizenship. It is proposed that all discrimination, overt or implied, on grounds of race, color or place of birth be stricken from our laws. What would be involved if this were done? In the case of one Asiatic nation, China, operation of the quota system would permit 105 Chinese a year to enter this country. In the case of less than a dozen other Asiatic nations, 100 of their citizens a year might be admitted. The total number of admissions would be less than 1,000 a year—a figure far lower than the number which Government authorities estimate were being smuggled in annually from Asia before the war. All thus admitted would be eligible for citizenship.

Such public agitation as has so far supported the elimination of racial discrimination from our immigration and naturalization laws has dealt almost entirely with the wisdom of such a policy as a win-the-war method. The Japanese propaganda in Asia, it is claimed, has pointed to our present laws as evidence of our pretensions to racial superiority. Let those laws be changed, therefore, in order thus to deprive the Japanese of a most effective propaganda weapon. The argument is perfectly sound, as far as it goes. If we are ever to win the enthusiastic support of the "billion potential allies" of Asia, that particular Japanese propaganda gun will have to be spiked. But the Christian Century advocates this change in American policy on another, and a higher, ground. We believe that these laws should be amended as a matter of justice—justice to the Asiatics and justice to the claim of our own Declaration of Independence that we hold all men created equal.

The American churches have a particular stake in this issue. While racial discrimination remains written in our laws, their loyalty to their own gospel of human brotherhood must be in question. And the reality of their professions of concern regarding the nature of the post-war order must be measured in the light of the fact that this is one point at which the building of a better world order can begin now. That better world order waits on our willingness to do justice. And in this matter of racial discrimination it is wholly within the power of the United States either to do or to withhold justice. We need consult with no other nation; the responsibility is ours alone. It is ours now. Drop the Asiatic color bar.

Address by Assistant Secretary Berle to Graduating Class of Utah State Agricultural College

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the exceedingly interesting and able address delivered by Assistant Secretary of State, Hon. Adolf A. Berle, Jr., to the graduating class of Utah State Agricultural College, at Logan, Utah, on May 29, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Only a few short years ago graduation from universities and technical schools was a difficult and unhappy occasion. The young men and women asked anxiously of their elders whether there was any place in the world for them; whether they were needed or wanted; whether their training was of real value. Their elders were not able to give any satisfactory answer. Every profession was said to be overcrowded. In most lines of endeavor a terrible word was used: overproduction. Graduates, who rightly combine great realism with high ideals, left their schools with a real reason to wonder whether their room would not be more welcome than their company.

You have been fortunate in many matters, but particularly in this respect. No one today will leave you wondering whether you are really needed. Instead, there is a great wish that there were many, many more of you. No one will ask whether your training is useful. Everyone knows that every bit of it will be put to work overnight. No one talks of overproduction. Everything that can be produced will be needed, and still there will be none too much. Youth today has its great hour.

I think this is not merely the temporary stress of war. In recent years your elders, too, have been at school—a harder school, which has its own severe way of teaching and which imposes its lessons.

It is not likely that we shall talk of overproduction for some time to come, not even in agriculture. The signs are already out, indeed, that for some time to come every means of agricultural production will be strained to the limit to take care of outstanding and pressing obligations. This situation will last for some time. A single illustration will perhaps serve.

We are at this moment entering a desperate but hopeful stage of this vast World War. We do not fight alone; it is open to question, indeed, whether we could fight alone with real chance of final victory. Our allies, notably Britain, Russia, China, as well as the other United Nations, have strained every nerve to check and defeat the modern imitators of Genghis Khan. Russia alone has had to throw into a fighting front 3,000 miles long the flower of her productive manhood and

womanhood; she lost temporarily a great part of her most fertile land. She will need food to the utmost extent of our transport; she will need it now but she will need it even more pressingly next year. It is, rightly, a part of our obligation to see that food is available and that it goes forward. And this is but one of many claims which we must meet as a necessary and obvious part of winning the war. Even after the military defeat of the Axis there will be a continuing obligation to work toward the necessary clean-up of the greatest mess in history; and supply of food inevitably will be a major part of this process.

This is a single dramatic illustration, but it scarcely gives an idea of the real problem. As countries are liberated, one by one, the immediate problems will not diminish but will grow. Every new victory means an increased demand for supplies. It cannot be otherwise.

You are, therefore, fortunate in having trained yourselves for direct production. That holds equal place with fighting; when the fighting stops, it will hold first place. For production is the base of all economic life. It must be the source of supply. It must make possible necessary distribution. It alone can give value to money and currency. Without it, no structure, economic or social, has any meaning. Today we think of the battle of production as a part of winning the war. It will indeed be the principal factor in winning the peace.

Among the lessons which have been learned of recent years in the hard school of experience has been the lesson that production in any country today depends in great measure on international understanding. This is because, if you disconnect any country from others, production suddenly becomes difficult and is rapidly found to be insufficient. We used to think that the United States was so nearly self-sufficient that international matters did not mean much to our factory towns and to our great farm areas. Many people still felt that as late as December 1941. Then one day a Japanese fleet cut us off from Malaya and the Dutch East Indies; and only a little later a surprised country began to wonder whether it would not be paralyzed for lack of rubber and tin—a paralysis which would cut our motor traffic to nothing, cripple our farm machinery and our distribution, and force its effects back into the most isolated mountain home.

I do not think that anyone here who has faced the possibility that motor transport would stop will say again that this country has no interest in foreign affairs. Again, the illustration could be carried, with less drama, into a thousand fields of life.

Any production of farm or factory is most effective today if it is part of a general cooperative process in which substantially all the nations of the world have a part. Cut any country from the main channels of exchange and trade and you condemn great numbers in that country to economic misery.

There is a name for international economic cooperation. That name is commerce. By commerce we have exchanged services for services, goods for goods, payments against payments. The process can be helped from time to time by credit. When all the lines go down, and when we are dealing with ultimates, as we are in this war, we cut all the corners; we ask all hands to contribute what they can to the common cause; and we call the process "lend-lease." Today substantially all the United Nations are lend-leasing to each other—we to our allies and they to us.

Wars fortunately do not last forever; and it is to be expected that in due time we shall no longer need lend-lease and will develop again the processes of trade and commerce which make your production and mine possible. Probably the readjustment will have to be assisted by credit. But it must be assumed that if we are to live at all the international process will be reestablished. Certainly, if you are to lead happy and fruitful lives in agriculture it must be restored.

These are elementary and obvious facts. Less often do we go behind those facts and see what is really needed if this process of international agreement is to be maintained. There, too, the bitter school of experience has taught some lessons.

Before there can be any soundly based international commerce, there must be peace and the assurance of peace. No one, in the United States certainly, will accept without a struggle the idea that we and our children will live out our lives in a world perpetually at war or perpetually under the threat of war. We propose, if we can, to create a situation in which peace exists and in which the peace will be kept. This is what is meant by President Roosevelt's phrase "freedom from fear." We have learned that peace is not had by wishing. We have seen the most peaceful countries in the world—Norway, for example—shattered, despite the most correct behavior, by a neighbor from whom she had every right to expect gratitude and not enmity. Clearly, more is needed than good intentions and good conduct.

We have learned, too, that the United States has no God-given immunity from this problem. On two occasions during the present war we have been in the most desperate national peril. The first occasion was in the summer of 1940, when the British alone stood against the Axis; when Germany planned, and indeed may have had within her power, the conquest of Britain. In that summer we were not adequately prepared; and had the German plan of seizing Britain, Iceland, and Greenland been carried out we should have had war on our own shores.

The second occasion was last November. An American and British expedition was afloat, headed for north Africa to invade the Mediterranean. At that same moment a powerful Japanese force was launched against Guadalcanal. Fortune blessed our arms and gave us victory in both battles. But had the issue been different we should have been sorely tried. If the Germans had forestalled us on the African shoulder and clinched their control of the Atlantic, if the Japanese had been able to drive us back to the mid-Pacific, we should today have been a besieged country.

The two victories, coming within a few days, changed the entire aspect of the war.

We must never forget that we could not have met this double peril alone. Our north African force was powerfully supported by the British attacking in Libya, by British naval and transport units, and by British and French armies. On the Pacific side, we were working in conjunction with Australia, were using British islands and territories, and could develop our position only because we were in partnership with Australia, New Zealand, and Britain, who held the islands. Together we could block an attack in the Pacific and could smash into the Axis Mediterranean line. Separately, neither would have been able to meet the onslaught.

Just as the combined effort prevented the peace-breaker from being victorious, combined effort could and can prevent anyone from daring to break the peace. The lesson which we did not learn in 1919 is writ for us in letters of fire today. Understandings with peace-loving nations must be found to assure that the peace will be kept. With assurance of peace, the energies of this and other countries can be liberated for the constructive tasks which ought to be the crown of modern civilization. This has to be said and repeated and repeated again. The peace is lost unless it carries with it reasonable assurance that it will continue. Unless this is done, no businessman can make plans; no serious commerce can be started; no constructive program can be realized; no progressive program stands a chance of success.

The second essential is the reliance that the line of free movement of ideas, goods, and services must be kept open. This is itself a short statement of a profound set of conditions. You do not get open channels of trade unless you have safe routes, adequate transport, and safety and certainty of handling. These, in turn, can only exist in a world in which standards of honesty and fair dealing are not only accepted in words but lived up to in dependable practice. In other words, the continued transit of goods which is needed for the life of every country depends at last on a world of honest men, dealing fairly with each other.

National policies must be such that this can happen. You cannot expect to have free transit of goods if the nations of the world are engaged in building higher barriers to trade; if their tariff systems are rigged, one against the other, in the futile hope of catching a temporary advantage; if they have tricks of discriminatory practice; if money and banking and international exchange rates are being worked one against the other. That is why the present discussion in Washington of the Trade Agreements Act, the American method of seeking steadily to reduce these barriers, is of inestimable importance, both as a symbol of our willingness to work in a fairly organized world and for the solid achievements which have been reached by applying this method.

That is why any Government intent on winning the peace as well as the war has to think of the problem of monetary stabilization and to seek sound ways and means by which money shall assist and not retard the flow of goods.

That is why we have to be working toward fair and equitable arrangements for transport, by sea and by air; toward systems of communications which will adequately serve the needs of a modern world; and a number of similar problems.

All these matters are a part of the fabric of affairs which has enabled this country to be productive beyond measure; which has made it possible for the United States to enjoy an abundance unknown in previous history. Perhaps a minor blessing out of the great sorrow of war is the fact that the war has taught us our vital interest in this fabric of arrangement between nations. These arrangements were always present from the beginning of our history; but in older days we took no thought of them or, more accurately, we took them for granted. In the quiet era of the nineteenth century the patterns had been set and they were peacefully observed. We had sufficient freedom to enter these patterns without working toward their creation. First, as a small power, we had little responsibility for building the pattern; later, in our growing strength, we were careful not to interrupt it. This great fabric of national relations thus existed by general consent; and we enjoyed the fruits of it.

With 1914 that peaceful pattern came to a shattering end. It was never fully reestablished, though we had the illusion of its existence during the decade of the twenties. We know today that the forces were building even then for a new and greater catastrophe. One by one, the great trade routes were being cut or strangled; in different parts of the world three nations ordered their lives with the intent not of keeping the peace but of breaking it; of setting up a campaign for world conquest and world plunder on a scale so vast that this country declined to believe that it was the work of sane men. The convulsion of today is the result. Winning the

peace of tomorrow must mean the rebuilding of those conditions under which peace and production under freedom can again go forward.

Today no world offers us entry into a ready-made system. As the strongest single power, the world asks of us what system we will join in creating. It is our turn and time to speak.

Victory, to be complete, must give us the structure of a new plateau of peace—not only as serving our vital national interest but also to meet the dictates of common humanity. It is notable that the conditions of such a plateau of peace are stated as "freedoms"—freedoms under which individuals as well as nations shall enjoy the fruit of victory. We know that freedom from fear and want are within the range of modern productive equipment. Your agricultural technique has opened great vistas in new products. The technicians in laboratories see endless visions to be drawn from the raw materials of the earth. The question asked of us—a question which will be answered by your generation—is whether we are wise enough, restrained enough, straight-thinking enough, and good enough to make sure that our social and political arrangements will permit us to benefit from this advance in technique.

In closing, I dare not omit a statement which may seem strange in these days when economics and engineering are supposed to be dominant. I do not believe in economics or engineering or technique by themselves unless they are informed and directed by a faith which transcends material things. It has recently become usual to sneer at spiritual forces. But the hardest-boiled technical students of history and the men who manage great affairs do not enter into that laughter. The anthropologist knows that no civilization has lasted more than a few years without transcending life itself. The diplomat knows that no community, and no empire has yet been built except by men who had a faith transcending life itself. The diplomat knows that national strength is based on national morals. The building of Utah in a forbidding wilderness is a living witness. Your State was not set up by a colonization company. It was made by men of vision and passionate spiritual belief.

In this war we dispose of forces beyond the conceptions of history. At the close of it we shall have possibilities of production undreamed of by our fathers. We shall have in our hands the tools to make the world as we wish it. But what we wish, and what we will do turns on the faith which each of us has.

We must hold and keep our spiritual life poignantly in the hour of battle, humbly in the hour of victory, proudly in the hour of sacrifice, steadily in the long years of reconstruction. You, as young men and women, will spend your lives in creating the new world. It may not be amiss to remember the words of the One Hundred and Twenty-seventh Psalm: "Except the Lord build the house, they labor in vain that build it; except the Lord keep the city, the watchman waketh but in vain."

Our Great Wall Against the Chinese

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Republic of November 23, 1942, which is still remarkably pertinent to a subject which will soon come to this floor—the repeal of the Chinese-exclusion laws:

OUR GREAT WALL AGAINST THE CHINESE

On the eve of the Chinese Independence Day, called Double-Ten, October 10, our State Department announced that we are ready at last to give up our special rights in China. That one gesture has already done us much good in the eyes and hearts of the Chinese people—and I hope in our own hearts and consciences.

What is the next step?

Clearly it must be the revision of those laws which continue to insult the Chinese.

It is well known that we exclude all Orientals from entry into this country for permanent residence. Our courts do get mixed up sometimes and naturalize a Syrian or a Cossack, or a Parsee, or someone else of Asiatic origin, as Raymond Buell has pointed out, and some of the people we let in from southern Europe have much darker skins than the Chinese.

But the main point—and one not so well known—is that while we are excluding all Orientals under one law, we keep on the books a special, older, and therefore even more humiliating restriction against our allies, the Chinese. Before this war it was easier for a Japanese salesman, perhaps a spy, than for a Chinese scholar to visit this country.

This special restriction has to do not with immigration but with visiting, which is going to be important during and after this war—that is, if we are going to have, as I believe we shall, a free world in which men of like minds wish to meet one another, move about freely and together conduct the affairs of science, business, government, and the humanities.

Now, how is it that we discriminate against the Chinese more crudely than against any other people? It goes back to 1880, when we began to pass a series of laws which first regulated and limited, and then suspended, and at last prohibited, permanent Chinese immigration to the United States. Of course that was because we were afraid of what was called a flood of cheap Chinese labor. Nothing that is now proposed would in any way threaten us with such a flood.

Under the comprehensive Oriental exclusion law passed in 1924 we said that we want no Asiatics here as permanent residents. But we do admit certain classes as travelers or visitors—students, merchants, scholars. When that law was passed, we did not put the Chinese on the same footing as the Japanese, the Siamese, and other Orientals.

In the case of Japan and other Asiatic nations we accepted the passport of the traveler's own government as evidence that the visitor was one of those favored classes who were permitted to visit us. A Chinese wishing to visit this country, however, has to have a special certificate called a Section 6 Certificate. We do not accept the passport of the Chinese government but demand in addition to his passport this special American document telling his occupational status. And even so he is likely to be held up for long questioning—even though he be a distinguished Chinese gentleman, coming here, let us say, to give a course of lectures. Only a Chinese government official, with his passport stamped official, can get in without this certificate.

* * * * *

The blunt truth is that we have a peculiar discriminatory attitude toward the Chinese, treating them as we treat the people of no other nation.

An American citizen, born here but perhaps of Chinese descent, who goes to China and marries a Chinese wife, cannot bring her back here. As a Chinese official says, "Many of those whom God has joined together the immigration officials have put asunder."

Chinese can enter the United States only at certain designated ports. A Chinese student booked for a certain college may have to travel hundreds of extra miles by rail or bus because he is not allowed to land at the port nearest his destination. A Chinese merchant in Mexico who may seek entry into the United States in order to sail for China from San Francisco or Los Angeles has to be accompanied by an immigration guard all the way from San Antonio to the West coast and has to provide for the guard's traveling expenses as well as his own. No other nationality is subjected to this.

A Chinese not born in the United States cannot become a citizen by naturalization. We naturalize people of German or Italian descent, but not Chinese.

There are exceptions to this, under the Selective Service Act. Chinese living here are subject to the draft. After being drafted, a Chinese can apply for American citizenship, but only on condition that he has documents to show that he entered this country legally. To a great many of the Chinese now in this country this is just another way of saying that they cannot ever become American citizens. So the strange and unjust situation is that we are forcing them to fight—and perhaps die—for a country which will not accept them as citizens.

Every true American can be heartily ashamed of this attitude of inequality.

What should we do to set ourselves straight?

First, we should repeal at once all those special exclusion laws which discriminate against the Chinese in particular. I take it that no one will object to the abolition of laws which rate our Chinese allies lower than the Japanese and other Asiatics.

The next step would be immediately to take the Chinese out from under the comprehensive Asiatic Exclusion Act of 1924 and put them on the quota basis which we apply to immigrants from European and other countries. The quota system admits a small yearly number from each country, based upon the number of that nationality already here in 1890. On a quota basis, the number of Chinese admitted, according to the official estimates of the United States Department of Justice, would be 100 per year. Certainly not a flood of cheap Chinese labor.

Finally, and as part of the same action, we should make the Chinese living here eligible for naturalization as American citizens. We now have a fourth generation of Chinese-Americans growing up in this country. Those born here are American citizens. Their relatives and friends and others who come here after being born in China should be equally free to become citizens if they wish and if they can pass the rigid requirements which we put upon all foreign-born. The Chinese are almost the best citizens we have. They are industrious, they made almost no calls for relief during the depression, they are notably honest and law abiding. Among all nationalities here, I believe their crime record is the lowest.

If it is argued that we cannot make exceptions of the Chinese, let us remember that before 1870 we allowed naturalization only to "free white persons." After slavery was abolished we extended naturalization rights to "aliens of African nativity and persons of African descent."

We find ways to do these things when we want to do them. I believe that we are now ready, when the Chinese are our valued allies, to take these next steps forward in the march toward human equality.

The Chinese saying is, "Around the four seas all men are brothers." Our saying is, "All men are created free and equal." Let us prove by our acts that we mean it.

RICHARD J. WALSH.

Increased Allotments to Dependents of Enlisted Men

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, June 10 (legislative day of Monday, May 24), 1943

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on June 9, 1943, on the subject of a bill I have introduced providing for an increase in the allotments to dependents of enlisted men in the armed services.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen. This is HENRY CABOT LODGE, Jr., United States Senator from Massachusetts. I speak to you tonight in the midstream of this terrible war, upon which the future of our country and the daily life of every man, woman, and child within this country depends. It is a war in which we have made some real progress. It is really not so long ago that we confronted the humiliation at Pearl Harbor, the tragedy at Bataan, and that we saw our allies, Great Britain and Russia, undergoing a series of reverses. The trend is now our way, although the road ahead is still a hard one.

In order to win this war on which—and I repeat—our very survival depends, we must have large numbers of men in our armed forces. This war must be fought and won by our armed forces under a unified allied command of experienced leaders in the field and not by armchair commentators in the home.

The figure of 10,800,000 men for the Army and Navy has been reached by our General Staff. It is a figure which has been approved by the General Board of the Navy, the joint Chiefs of Staff, the Secretaries of War and Navy, and, finally, the President. It was based on the data of the War Production Board, the Department of Agriculture, the Manpower Commission, the Labor Department, and Treasury Department. Both the Chairman of the War Production Board and the War Manpower Commission have accepted this figure as an objective which it is their duty to reach. The total of 10,800,000 includes 2,600,000 for the Navy, and the rest—that is, 8,200,000—is for the Army. Of this number about 3,000,000 is for the Air Force, and the rest goes to constitute an Army of 100 divisions. Compare 100 divisions for the United States with 300 for Germany, with the 80 divisions which enfeebled Italy possessed just a short time ago. Compare the fact that our armed forces amount to something more than 7 percent of our population as contrasted with armed forces for Russia which are almost 9 percent, and of Germany which are over 12 percent of their respective populations.

This is a figure, therefore, which we can meet, but in order to meet it we shall probably have to call every physically qualified man.

This is a far-reaching step. It is a hard step, because we all sympathize with the proposition that the man with dependents should be left with his family just as long as possible. This is a view which I have held since the beginning of the war. Only recently the Military Affairs Committee secured a promise from the Selective Service authorities that they would not call the fathers of families into the armed services until all other available categories have been taken. We must be sure that every possible step is taken to prevent the dislocation of family life in the United States.

But at the same time we must realize that a continuance of this war will compel the drafting of all physically qualified men regardles of their family status. This inevitably means the drafting of married men because among married men is found such a high percentage of individuals who are physically qualified.

What more, therefore, can one do to safeguard the family life of the United States? Well, we can try to reach the man with no dependents who is now exempted from the draft without good reason. There has been some talk that in the Federal Government, men were exempted from the draft because of their employment in the Government. To meet this situation, I drafted a bill which passed the House and Senate and was signed by the President and is now law which prevents service in the Federal Government from being used as a device to evade the draft. This type of legislation is helpful to fathers because as long as men who are not family men are being called into the Army the calling of fathers is postponed. What else can we do for the family man? Well, we can see to it that if he is drafted, his wife and children receive proper support from the Government. We not only can see to it—I should use stronger language—we must see to it. It is a duty. It is a humanitarian cause to make sure that the dependents of these men who fight for their country shall be properly cared for. It is for this reason that I decided to introduce a bill to increase the amount to be paid to the dependents of soldiers. The law now in effect was enacted in June 1942 and the rates prescribed in that bill have not been changed since that time. My bill calls for an increase of 15 percent in the amount of the Government contribution to dependents only of enlisted men.

Let us see what the Servicemen's Dependents Allowance Act of 1942, which is now in force, provides. Let me give you some typical cases showing the total monthly allowance, including the Government's contribution and the soldiers' contribution.

In the case of a wife but no children, $50 a month.

A wife and one child, $62.
A wife and two children, $72.
A wife and three children, $82.
One child, wife deceased, $42.
Three children, wife deceased, $62.
One parent, $37.
One parent and one sister or brother, $42.
One parent and four sisters or brothers, $57.
Two parents, $47.
Two parents and two sisters or brothers, $57.
No parent but two sisters or brothers, $32.
No parents but five sisters or brothers, $47.
Wife, but no child, and one parent, $70.
Wife, two children, and one parent, $92.

Many other combinations of relatives and dependents are possible and are authorized for allowances when eligible. I have presented the above only as typical examples.

To meet the inadequacies of the present allowance system caused by the rising cost of living, I have introduced a measure which would increase the Government's contribution to dependents 15 percent over what it is now.

I would like tonight to give you my reasons for introducing this bill. I hope I may convince you that it is a worthy bill and that you will feel like giving it your support. It applies only for the duration.

The first reason is that the cost of living has increased since the original law was first enacted. This fact has been recognized by the President of the United States. This fact was recognized by the Congress of the United States when it passed legislation increasing the pay of Federal employees. One of these acts applying to the overtime compensation of Government employees as a whole was approved May 7, 1943. Another, providing additional compensation for employees in the Postal Service, was approved April 9, 1943. If you look at the monthly report of employment by the United States Civil Service Commission for March 1943, you will see that the average monthly salary as of March 31 of this year has increased 15.4 percent over the salary paid in June 1942. In June 1942, the average salary was $160.11 and March 31 it was $184.77.

Another indication as to the increase of living costs is found in the reports regarding the number of dependents of servicemen who are receiving various forms of public assistance. I am advised that in Massachusetts, for example, in the period from September 1941, to June 1942, there were 33 aid-to-dependent-children cases attributable to the fact that their fathers had entered the service. On the other hand, on March 15, 1943, in a report covering 90 percent of the whole State, 446 aid-to-dependent-children cases were found which are attributable to the fact that their fathers had gone into the service. An increase from 33 cases to 446 cases in a year is a substantial and impressive increase. In May 1942, there were 78 families listed in Massachusetts with members in the service who were on general relief. On March 15 of this year, on the other hand, there were 1,481 cases of servicemen whose dependents were receiving various forms of public assistance. What is true of one State is undoubtedly true of others.

I will not tonight attempt to tell you why the cost of living has gone up as much as it has. It will probably increase. I want to talk about the results, about the consequences, of these rapid increases in prices. One of our leading economists and one of our most trusted elder statesmen is Mr. Bernard M. Baruch. In a masterly argument for a really effective price control he says, and I quote, "The point I want to raise is that price control is essential if Government salaries and appropriations are to have any meaning. What will happen to the teachers, war veterans, social security beneficiaries, policemen, firemen, all the hundreds of thousands of Government employees, Federal, State, county, and city, if prices are allowed to run wild? Will the Federal, State, and city governments advance the wages of these people to meet increased costs of living? Or do they propose to leave them victims of fortuitous circumstances?" In a letter to me dated June 3 this eminent man notes the fact that I have introduced this bill to increase the allowance to servicemen's dependents by 15 percent and he says, "In this I heartily concur. The necessity for this was brought about entirely by the inaction and procrastination of the Government. All of the consequences were pointed out in plenty of time from 1931 on and also the remedy that was necessary. I cannot see any argument against the passage of your bill unless the cost of living is controlled and even reduced."

Writing in the Christian Science Monitor, Mr. Robert R. Mullen makes this significant contribution to this vital question:

"The present provision is both inadequate and uncertain. It is inadequate because it provides a total of only $62 a month for a wife with one child, $72 for a wife with two children. It is uncertain because supplementary payments—and who could insist supplementary payments will not be necessary in many instances—are left to the discretion, and resources of local charity.

"The question goes beyond morale and beyond humaneness, for the family, and especially the young, growing families chiefly represented in the age groups to be called, are the social and economic backbone of the Nation.

"Department of Labor figures indicate that about 37 percent of the Nation's families are composed of husband and wife and from one to four children under 16 years of age. While, of course, the largest number of these families are found in the lower-income brackets, it is worth the sharpest notice that as many as 26 percent of those families having one child earn and spend upwards of $2,100 a year, while nearly 20 percent of those having up to four children have unit expenditures in excess of $500, which means incomes above $2,000.

"This is merely supporting arithmetic for that which is apparent to all who look about them in the clean, new suburbs of which America is so proud, namely, that a substantial portion of the home-establishing population of the country is included in the group about to be called to the colors. Economically, this group has advanced beyond the position of most of the young, unmarried men thus far called, in that they have surrounded themselves with a certain amount of property, but few have advanced to positions of full ownership. They have continuing obligations in the form of house mortgages, insurance premiums, installment accounts, and what not.

"To reduce the mother of two small children from an annual expenditure on a plane above $2,000 a year to the $864 presently provided by law implies hardships and heartbreaks that the country should shrink from imposing.

"Great Britain, after fumbling with this question not too successfully, finally adopted a flexible system of grants, tailored pretty much to individual needs, insofar as custom tailoring is possible under a £3 weekly maximum. Russia has done better, at least so it appears on paper, by granting realistic allowances, cutting rents in half for dependents' wives, guaranteeing certain rations and clothing, and by providing jobs for wives and good nursery schools for children."

We have the word of Mr. Paul V. McNutt, the Federal Security Administrator, that in Canada the treatment of soldiers' families is more liberal. Says he, "From the American point of view in contrast with the pay of our own soldiers, the Canadian soldiers' pay and allowances seems to be strikingly generous. A man with a wife and two children received his pay plus allowance of $99 a month in addition to his own keep."

Ladies and gentlemen, this is a solemn duty. Never in the whole of human history have men been willing to fight if they were worried about their loved ones at home. History is full of instances in which armies were well equipped and ably led, yet did not fight because they were worried about conditions at home. The wife and children of the soldier have a first claim on our affection. Congress should recognize that fact and do so promptly. I am happy to say that the chairman of the Military Affairs Committee, Senator ROBERT R. REYNOLDS, has promised me prompt action.

If the war continues, and we must expect that it will, these men with dependents will be called. To provide for them now is merely to exercise common foresight. As was well said recently by the Lowell Sun, "There is merit to the bill presented by Senator LODGE which would increase the Government's contribution to dependents of enlisted men by 15 percent. Particularly is this so because before the year is out it is possible that many men with families and dependents, who have been heretofore exempt from the draft, will be in the armed forces."

"The Senator anticipates such a development, and, at the same time, attemps to correct existing ills through his bill.

"Throughout the country, many cities and towns are reporting that it has been necessary in numerous cases to provide direct welfare to dependents of men at the fighting fronts. The Government's contribution in these cases is admittedly inadequate and not commensurate with the rising cost of living.

"Soldiers and sailors who are fighting to preserve this Nation and its Government deserve more consideration; they must wonder, as they continue their heroic battle under the most torturous conditions, why their Government thinks so little of them as to deny their folks at home enough assistance with which to get by.

"This is no time to pinch pennies and make the families of servicemen the victims. It is not fair that any person legitimately dependent upon a soldier for support, whether a parent, wife, or child, should be forced to the humiliation of applying for local public welfare.

"Senator LODGE's bill should receive ready endorsement from his colleagues in the Senate and likewise from the House."

We must do our simple duty. Good night.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. LAMBERTSON. Mr. Speaker, every time we watch Senator BYRD perform, his true and unappreciated worth impresses us.

The new Byrnes set-up takes over about everything but the coal mines and the kitchen stove.

On top of all our wars in the seven seas, we have got to quell this zoot war at home. When it rains it pours.

When Herbert Hoover talks about food it sounds different than hearing a long-haired professor speak on technology.

Senator REYNOLDS' definition of an isolationist: "One who loves this country more than he loves any other country in the whole wide world."

While the promised continental invasion remains short of real, the Senate and House Appropriations Committees will try to entertain you for the rest of June with the battle of the billions.

Mr. Albert J. Goss, head of the National Grange, made a profound contribution before the Senate committee against incentive or subsidy payments. His parent farm organization can be proud of him.

Senator BAILEY'S ardor in limiting all future presidents to two terms is the perfect example of the traditional stolen horse and the barn door. Some believe, too, that the plan has White House sanction.

The original purpose of the WAAC's and the WAVES was that each should "release a man for active duty." Now there is a sponsored effort to make them equal with men in service with all its hazards—one of the last Nudeal subterfuges.

Mr. Guyer was the dean of the Kansas House delegation, the oldest in years and service. He revered the Constitution; he upheld to the end the finer traditions of his State; and he chose to be buried with the boys and girls whom he had taught.

Post-War Air Transport and the Average Man

EXTENSION OF REMARKS

OF

HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 10, 1943

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to insert an address delivered by Juan T. Trippe, president, Pan American World Airways System, on the occasion of the award to Mr. Trippe of the gold medal of the National Institute of Social Sciences, in New York City, Wednesday, May 19, 1943:

POST-WAR AIR TRANSPORT AND THE AVERAGE MAN

Mr. President, members and guests of the National Institute of Social Sciences, 88,000 men and women should be here tonight to receive this medal—the 88,000 members of the Pan American Airways organization. Each shares the responsibility for the services our merchant fleet of the air has rendered to its country—each will share responsibility for the services we hope to render to all people of the world—and by people I mean the people—the average man and woman everywhere.

I welcome this honor for all of us: for the faithful weather observer who at this moment checks the cloud ceiling on a mountain top in China; for a mechanic in Africa testing the ignition of a Clipper as if the world's fate hung on his accuracy; for the ground officials and flying crews who, in cooperation with our Army Air Forces and the British, created in 61 days a modern United Nations supply route across Africa; for the master pilot and his flight crew of 10 who on the occasion of the Casablanca Conference flew President Roosevelt to Liberia and safely home again; for those who took Vice President WALLACE on his epic good-will tour of Latin America; for the flight crews who, on many trips throughout her country, transported that gallant woman, Madame Chiang Kai-shek; for all the Pan American men who have pioneered, in 16 years, first the Caribbean, then the Pacific, then Latin America, then Alaska and the Pacific to Australasia and the Orient, then the Atlantic to Europe and Africa until their wings are, indeed, over the world, and all its seven seas.

I accept for all of these men and women not only the medal of the Institute of Social Sciences, but the moral responsibility that goes with it. You have bestowed this honor in other years upon historians, scientists, doctors, educators, churchmen, masters of the arts, and leaders of industry. They make civilization. We hope to carry it, to the common man in the remotest land in the farthest sea. And we shall carry back from that land to the common man in America, the many things that every land has to supply and to teach.

We can carry Americans and American ideas on a scale undreamed of only a few short years ago. Just think! Only 16 years ago, in 1927, American air transport operated its first overseas flight with the one and only plane Pan American owned. It was a flight of 90 miles from Key West to Havana, carrying the mail and eight passengers. Today Pan American Airways has completed more than 120,000,000 miles of overseas flight with the great four-engined Clippers. And as those miles were logged—as problems arose and solutions were found—there developed a treasury of scientific fact elsewhere undiscovered—a fund upon which our armed forces and those of our allies have been free to draw.

There have been such developments as the multiple flight crew, the accessibility of power plants in flight, and a system of scientific flight control so accurate, so scrupulously adhered to, that Clippers regularly keep schedules over 2,000 miles of open sea and set passengers down on time and without incident.

America has evolved a highly trained, professional organization whose precision is unique in world aviation. Pioneering has proceeded in many remote areas—in Labrador, Greenland, Iceland, and Alaska in 1932, in Africa in 1933, in China in 1934. Even in these war days, 60 countries and colonies, including all our Latin American neighbors, are being served. Transit which took months is now telescoped to days.

And let me repeat—this is done by an organization, men and women working in cooperation, but each dependent on the other. No one man, not even a Clipper's master pilot, could fly the ocean without relying on countless other people, on his crew, on the engineers, maintenance men, radio operators, weather observers, forecasters, airport crews—in fact, on the great and complex organization that today conducts any modern transport system.

When the war is won, we will still have a real job to do, to solidify the peace.

As we carry men, mail, and merchandise—ideas and ideals—science, medicine, culture, and the arts, we will again be carrying cargoes of goodwill. I hope we will never carry cargoes of imperialism and hate. We Americans must see that they are not sent. We must remember that air transport is the vehicle, not the cargo. It can serve good ends or bad.

North and South America relied on our air transport to implement the good-neighbor policy. But the Nazis, by the same token, counted on their international air line, the Lufthansa, to help dominate and crush the world.

Air power can further anarchy or peace. It can destroy or build. It can be a lethal weapon or a life-giving tool—sword or plowshare, Frankenstein or Aladdin's lamp, Stuka bomber or Clipper. And as surely as we meet here tonight it can enslave the common man—or it can free him.

Let me suggest, for your consideration, some ways in which air transport can be on the right side and do the right thing—how it can be made more completely the instrument of the common man.

The first way is simple. It is to assume our natural responsibility as a private enterprise and to offer the most value to the most people. That isn't as obvious as it sounds. Because air transport does have the choice, the very clear choice, of becoming a luxury service to carry the well-to-do at high prices, or to carry the average man for what he can afford to pay. Pan American has chosen the latter course.

The decision was made before Pearl Harbor. And over a year ago Pan American had started its program for the construction of 50 giant Clippers, each capable of carrying 153 passengers from New York to London in 10 hours at a fare of a hundred dollars. These same clippers operating over other Pan American Airways' routes would provide 24-hour service to Australia or China, 22 hours to Buenos Aires—all at comparably low fares.

In future years we will do even better. The war has been a bitter laboratory for air transport, but a laboratory nonetheless. Its benefits should be available to all the people in the peace to come.

Nor will these benefits be limited to low-cost travel and fast mail. There will be more instances of the flying of serums and doctors to epidemic areas. There will be food to fight famine. Air transport will bring greater prosperity to all the world—in tourist expenditures abroad—by stepping up the tempo of trade and commerce.

And surely the other great national air-transport systems of the Allies—British Overseas Airways, the Soviet Civil Air Line, Air France, Royal Dutch Airlines, Trans-Canada, and the rest—as well as Pan American will wish to make sure that this new prosperity benefits the people—all the people of all the world.

These are the tangible benefits we may hope for. The intangible may be more precious still.

Understanding between nations should grow as more of us meet each other face to face and talk things over.

If America's railroads had run north and south instead of east and west, there would probably have been no Civil War. We all recall people against whom we were prejudiced by reputation, but whom we have come to like when we knew them. In my opinion the two old adages should be transposed to read "Absence breeds contempt," and "Familiarity makes the heart grow fonder." Our country can foster greater international good will by providing frequent and cheap communications with the countries of the world.

And what is true of passenger service is equally true for mail. A ton of air mail is a normal part of a clipper cargo. A ton of mail—80,000 letters, 80,000 separate ideas—have crossed an international boundary. It would be hard to overstate their influence.

In all these ways, air transport can carry the gospel of international good will. But we must also put our own house in order so that we may serve the peoples of the world to greatest advantage. And along this line we still have work to do.

It is obvious, of course, that the great national air transport monopolies, which represent each of the principal foreign nations, will continue to compete with each other and with us.

But it is vital to establish an equitable basis for such competition. Friendship will result from fair play. And we must correct certain unfair situations that have developed. To cite only one, there is the war-born problem confronting Great Britain.

In our joint war effort, the British are building essentially fighter planes, and other military types. America is building military types and transports. It has been stated that at the peace, America will possess most of the planes that could be used in international air transport—that while both countries have served a war role, unmindful of future commercial advantages, Great Britain, in so doing, has suffered a post-war handicap.

We all share the healthy American aspiration to be the winner of a race or a ball game or international business competition. But fair is fair. If you want to win a baseball game, you try to out-hit the other fellow, but you don't take away his bat.

British Overseas Airways already has in essential war service, three of Pan American's four-engined ocean clippers. But these as well as their sister ships still in our own service will be obsolete. For these compelling reasons, I urge that when the fighting stops British Overseas Airways be permitted to secure on equitable terms all the ocean transport planes that are needed to restore the balance for fair competition. In fact, I urge that this principle shall have application to our dealings with the national air lines representing each of the United Nations.

This world of ours, in the age of flight, should be one world.

Your National Institute of Social Sciences has proved it can be, by confirming in research many of the highest concepts we hold about the natural brotherhood of man.

The law of life is not so much the survival of the fittest as the survival of those fittest to cooperate. In the world scheme of things, only those who cooperate will survive.

Air transport has made use of many sciences, aerodynamics, metallurgy, celestial navigation—in fact every known branch of mathematics—medicine, electronics, chemistry and physics.

But it is to the social sciences that we turn for the solution of the human problems which must be met if we are to be sure of world cooperation without which we cannot progress.

Pan American Airways recently undertook to give wide distribution to the views of such social scientists as John Dewey, Dr. Hu Shih, Jan Masaryk, Foreign Minister Padilla, Stephen Leacock, the late Dr. George Crile and the Archbishop of Canterbury. We invited each freely to express his concept of the future. These enlightened minds did not agree on every detail—but there is a basic harmony in all their thinking. We must build a world which increases the stature of the common man.

To the extent that air transport by its vision and its faith can serve the common man, it is worthy of the honor you have conferred tonight.

Chinese Exclusion

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. JUDD. Mr. Speaker, among the scores of editorials now appearing in all sections of the press in all parts of the country advocating extending to the Chinese an immigration quota on the same basis as to other Allied countries, one of the most lucid and convincing is from the Minneapolis Tribune of June 9, 1943, as follows:

STIGMATIZED

There is a movement on foot in Congress to remove from the Federal statute books the "stigma" of Chinese exclusion.

A stigma, says the dictionary, is a mark made with a branding iron, and so far as the Chinese are concerned, the brand of our discrimination has been cruelly deep and humiliating. Not even the Japanese have been so sharply segregated by American restrictions; the Chinese, more than any peoples on earth, have been made officially to feel that we regard them as complete inferiors.

Take the oriental exclusion law of 1924, for example. That law said, in effect, that we wanted no Asiatics as permanent residents. But in the case of all Asiatic nations save China, visitors and travelers were admitted on presentation of their government's own passport. For Chinese visitors—even students and educators—we required special precautions. We demanded a special certificate of admission, an extra measure of red tape and questioning.

Even today, while China fights with us as a valiant ally, we cling stubbornly to our old positions of discrimination. The Chinese are good enough to die by the millions in a war against Axis tyranny—but a Chinese who is not born in the United States is not good enough, so the law implies, to become an American citizen by naturalization. A man of German descent may be so naturalized, and so may an Italian. But a Chinese alien is not so fortunate. He is beyond the pale. Officially we regard him as a racial inferior, too far beneath us to deserve the boon of citizenship. To be sure, he may be drafted, and under the Selective Service Act, may then apply for citizenship; but even in these special circumstances, we demand proof of legal entry, which many find it almost impossible to offer.

So the story runs; the Chinese have been a race apart, singled out for discriminations which crassly served notice to them that we considered China a nation on the coolie level, unworthy of our own distinguished company. Yet Americans, deep in their hearts, know better. Within recent years, particularly, they have developed a warm regard for the Chinese, and it is not a regard born solely of China's magnificent resistance to Japan. In the United States we have come to admire the Chinese for his industry, his intelligence, his patriotism, and his good faith, and we have come to see, in the person of Mme. Chiang Kai-shek, the symbol of a truly great people.

Under the circumstances it is high time that the injustices inherent in our official attitudes and polices be eliminated. If we placed the Chinese on a quota basis with other nationalities, it would result, according to one official estimate, in only 100 immigrants a year. If we made all Chinese living here eligible for naturalization, it would be no more than they deserve. In such ways as by our rejection last year of the system of extraterritoriality, we could help make amends to a galiant ally for the humiliations we have heaped upon her.

On July 7 China will enter its seventh year of war against Japan, and the occasion will be marked by many glowing tributes from America. More eloquent than words, though, would be the removal of the old stigmas. The Chinese, as a people, have richly earned it.

The Hawaiian People

EXTENSION OF REMARKS

OF

HON. JOSEPH RIDER FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. FARRINGTON. Mr. Speaker, on this day, June 11, the Territory of Hawaii annually commemorates the birth of a great man, who unified the islands in the years between 1790 and 1810. He was Kamehameha I, founder of the Hawaiian kingdom at a time when the United States was organizing its own independent national existence following the American Revolution.

By the standards of any people, Kamehameha was a man of extraordinary powers, both in war and peace. It was he who welded the islands into an independent nation, and it was as an independent nation and not as a purchased or conquered country that Hawaii voluntarily relinquished her sovereignty in 1898 to become an integral part of the United States.

Because of the relationship of the Congress to Hawaii, I feel it is appropriate to call to the attention of Congress some of the contributions the native Hawaiian people have made to our common country. A fitting opportunity to bring that record briefly to your attention is furnished by this Hawaiian holiday, established by act of the Territorial legislature in honor of Kamehameha the Great.

The foremost contribution of the native Hawaiian people, needless to say, was their voluntary transfer to the United States of their political sovereignty, and the riches and strategic value of their land. For that cession, the United States is everlastingly the richer, and the more secure.

Kamehameha was a youth when the islands were first brought to the attention of the outside world by Captain Cook, the British explorer, in 1778. In 1790 he began the series of campaigns which ultimately subdued the warring chieftains of Hawaii and brought the islands together under his own rule. With that consolidation accomplished by force of arms, he firmly established peace, strengthened his government, developed agriculture, and engaged in trade with other peoples of the Pacific. The United States was trading with Hawaiians in 1790, and has been ever since for a century and a half, until now the trade has reached a point which prompted the Joint Congressional Committee on Hawaii to report in 1937:

> It is not often realized that the commerce of Hawaii with other parts of the United States exceeds that between America and all but a few of the great nations of the world.

Hawaii was as much a crossroads of the Pacific in 1800 as it is today. It was the indispensable center from which radiated trade routes to China, Kamchatka, the Pacific northwest, California, and New England via Cape Horn. Over those routes moved cargoes important in the maritime and commercial history of the United States—sandalwood, furs, tea, sperm oil, merchandise from Canton, supplies for miners in the California gold fields. Whaling captains recruited replacements for their crews among Hawaiians. Sailing ships were provisioned with Hawaiian produce, outfitted by Hawaiian chandlers, repaired in Hawaiian ports. In the 1840's and 1850's, when New Bedford was the whaling capital of the world, Honolulu was the principal field base in the Pacific, where six-sevenths of the whaling fleet operated.

During those years Hawaiians willingly made room in their kingdom for an increasing number of settlers from the American mainland and furnished an opportunity for them to establish their businesses in the islands. Hawaiians furnished the land that supports Hawaii's valuable sugar and pineapple industries today.

Hawaii's first treaty with a foreign nation was signed on December 23, 1826, by representatives of the kingdom and by Capt. Thomas Catesby Jones, of the United States Navy, for the latter country. It was a treaty of friendship, commerce, and navigation. In that document the Hawaiian government agreed to admit American ships into Hawaiian ports and to afford them ample protection in time of peace and war, "the citizens of the United States being permitted to trade freely with the people of the Sandwich Islands."

As early as 1853 annexation of Hawaii to the United States was under discussion. On February 6, 1854, Kamehameha III signed an order directing his minister of foreign relations—

> To take such immediate steps as may be necessary and proper * * * to ascertain the views of the United States in relation to the annexation thereto of these islands.

Representatives of Hawaii and the United States drafted a treaty providing for incorporation of the islands as a State into the American union. The king died shortly thereafter, with the treaty left unsigned, and annexation waited until 1898.

In many ways the contributions of the native Hawaiians as a people are distinctive, as it is based on traits of their Polynesian character. What they have offered as a people cannot be measured in terms of prices and trade statistics but in qualities of a more individual and lasting nature.

Conspicuous among these is loyalty, which stems from their devotion to their chiefs in early days down to their present allegiance to the United States as citizens. As loyal citizens today, they are second only to the Caucasians in the number of registered voters in the Territory, and as such are contributing to the stability of the islands and the Nation.

The native Hawaiians' ancient and abiding love of politics is a steadying factor in the islands. They follow political campaigns with intense interest and avail themselves of the ballot with near unanimity at election times. Hawaiians are elected and appointed in large numbers to responsible positions in the Territorial legislature, county governments, and boards and commissions. For more than 20 years the Territory sent Prince Jonah Kuhio Kalanianaole, an Hawaiian of beloved memory, to Washington as Delegate to Congress. Many men of native Hawaiian stock have served, and still are serving with distinction, as officers as well as in the ranks of our Army and Navy.

Hawaiians have added color to American sports. Duke Kahanamoku, now sheriff of Honolulu, achieved athletic immortality as a United States Olympic swimming champion.

In song, dance, and the graphic arts Hawaii's Polynesian contribution to American culture has been considerable.

In the war, the native Hawaiians are playing their part as true Americans, in the armed services and out. Their per-

formance in the civil defense of the islands has been conspicuous, both in the pre-war organization of emergency disaster units, in the crisis of Pearl Harbor, and ever since.

Finally, the native Hawaiians have something to offer simply by perpetuating their fine traditions in their capacity as American citizens. Not the least of the qualities they brought with them into the Union on Annexation Day were generosity, hospitality, racial tolerance, gayety, loyalty, serenity, and lack of pretension. Hawaiians, as much as the gentle climate, have modified life in Hawaii into a civilization which has distinctive characteristics of its own, consisting in part of the ability of varying peoples to adapt themselves to each other and to a common nation.

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Will P. Kennedy from the Washington Sunday Star of May 30, 1943:

CAPITAL SIDELIGHTS

(By Will P. Kennedy)

House Members and veteran Capitol employees are boasting these days of another page boy and active member of the Little Congress who has made good in a big, patriotic way—all within 20 years. He is David Lynn 5th (now 37 years of age), nephew of David Lynn, Architect of the Capitol, who also is an example of the principle of working one's way up by industry, devotion to duty, and courtesy. Young Dave Lynn was a House page in 1919 and 1920. He next served as a clerk in the office of the Architect from 1922 to 1930, during which time he attended Emerson Institute, George Washington University, and the National University, from which he graduated in 1929 with a bachelor of laws degree. By extra studies and intensive work he completed his course in March 1929, ahead of the rest of the class. As soon as he was admitted to practice before the District Court of the United States for the District of Columbia and the United States Court of Appeals for the District in 1930, he went to St. Louis, where he held legal positions with various insurance companies and independent adjusters. From December 1936 until March 16, 1942, when he was inducted into the military service, he was actively and successfully engaged in the practice of law in California. After 3 weeks' basic training, he was selected to join the regimental headquarters, Gilroy, Calif. While at the headquarters he assisted the trial judge advocate, Major Des Rosier. He was chosen regimental War bond salesman June 12, 1942, and on June 23 was promoted from private to corporal and selected to give a series of orientation lectures to the men of the regiment. On July 17 he was promoted to sergeant and on August 4 was transferred to the service company to work in the plans and training section. On August 20 he was again promoted to master sergeant as regimental operations sergeant in the plans and training section. He was promoted to first lieutenant on October 10 and a week later was sent to Ann Arbor to attend school at the University of Michigan law school. He reported for duty December 26 to the commanding general, northern section, Western Defense Command, Presidio of San Francisco, Calif., which is present headquarters. Since then he has been serving as assistant sector judge advocate of the northern California sector, Western Defense Command.

Statement of Luther Harr, United States Bituminous Coal Consumers' Counsel

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Luther Harr, United States Bituminous Coal Consumers' Counsel, Washington, D. C.:

All major industrial disputes—regardless of whether or not they involve strikes, lockouts, or voluntary stoppage of work—lead to waste and loss of money. Those of the coal industry are no exception.

Since the cost of these disputes is reflected later in a higher price for the product or commodity involved, it is clear that the ultimate burden falls on the consumer. In fact, it is the consumer who, through no fault of his own, is forced to finance most industrial disagreements.

As the Federal representative of the bituminous coal consumer, I urge that steps be taken immediately to end these perennial wrangles between representatives of the producers and the miners. The consumers, virtually unorganized, are weary of footing the bills for such prolonged controversies as the one which today is delaying and dislocating America's war effort.

In the past 40 years the coal industry has experienced a long series of strikes, little and big, some orderly and many violent. These disputes must not be repeated year after year, for the cost to the public goes on and on. It must be apparent to all that a permanent solution to the coal labor problem must be found. An industry with an average weekly pay roll of approximately $20,000,000 deserves better labor relations—and the consumer now insists such relations be achieved.

Copernicus, the First Modern

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial that recently appeared in the Chicago Daily News, entitled "Copernicus, the First Modern":

COPERNICUS, THE FIRST MODERN

Four hundred years ago today, on May 24, 1543, there died in Frauenburg, Prussia, a man who may be called the first modern, for he was the father of modern science and the founder of the scientific method that has become the keystone of the modern world.

Nikolaus Kopernik—or Copernicus, to use the more familiar Latinized version—was trained for the church, but postponed taking orders so that he might continue his scientific studies. He died little dreaming of the religious upheaval his work was to cause, unaware of the fact that an editor's note had been inserted in his book calculated to create the impression that his statement that the earth moved around the sun was theory rather than fact. Despite this disclaimer, Copernicus' book remained on the proscribed list of the church for a century and a half.

Copernicus resumed the study of astronomy where Ptolemy had left off more than 1,000 years previous. The centuries between the two great searchers of the skies were almost barren of scientific advance. The centuries immediately following Copernicus found science remaking the world.

Copernicus, dissatisfied with scientific theories and dogma, abandoned the practice of seeking facts to support a hypothesis and sought to discover physical truths, regardless of whether they supported a theory or not. This method has been the basis of modern scientific research.

Throughout the world people of Polish ancestry will honor Copernicus this year. Scientists and educators will pay him homage. For the Polish people, the observance will have a double significance because Copernicus, in addition to being the first modern scientist, was a Polish patriot—an outspoken foe of the arrogant Prussianism that was exemplified in Copernicus' day by the Teutonic knights, as in modern times by the Junkers and Nazis. In the state archives of Sweden, at Stockholm, is a document brought back by Gustavus Adolphus from his expedition into Poland. It is in the handwriting of Copernicus and, over his signature, it denounces the Teutonic knights for their ruthless invasions. This makes the quadricentennial of his death particularly significant to the Polish people; but to all peoples of the world who believe that the truth shall make men free, the name and the memory of Nickolaus Copernicus should be objects of veneration.

Forest Fire Protection

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. COFFEE. Mr. Speaker, I have just received a letter from Col. W. B. Greeley, former Chief Forester of the United States, now Secretary-Manager of the West Coast Lumbermen's Association, which warmly commends the action of the Senate Committee on Agriculture and Forestry in recommending $6,300,000 for cooperation by the Federal Government with the States and

private forest owners for forest fire prevention and suppression. The letter advances cogent and persuasive arguments in support of prompt and effective protection of Pacific Northwest forest resources. I urge all my colleagues to read it. The letter speaks for itself. The danger is immediate and pressing. We cannot afford to neglect protecting the great standing timber of the Pacific Northwest from the dangers of sabotage or bombing. The epistle is as follows:

WEST COAST LUMBERMEN'S ASSOCIATION,
Seattle, Wash., June 7, 1943.

Hon. JOHN M. COFFEE,
House of Representatives,
Washington, D. C.

MY DEAR MR. COFFEE: It is a matter of deep gratification to all of us who are close to the forest-protection problems of the Pacific Northwest, that the Senate Committee on Agriculture and Forestry has so greatly strengthened the provision for protecting forest areas from fire. The committee's recommendation of $6,300,000 for cooperation by the Federal Government with the States and private forest owners, in forest-fire prevention and suppression, will enable the Pacific coast agencies to carry out their plans for unified, minute-man protection of the forest areas; and gives us assurance that we will be well prepared for whatever forest-fire emergencies the coming summer may bring upon us.

In western Washington, the Federal and State forest services and associations of forest owners have just completed 15 conferences with 250 loggers, community by community. Each of these was a strategical planning of the Allies, covering every detail for the mobilization of men and equipment—under unified command—to handle any form of forest-fire emergency. Similar planning and unification of effort are going on in the other Pacific Coast States. They illustrate both the seriousness of the forest-fire hazard as these experienced fire fighters know it, and the necessity for giving their campaign full support of the Federal Government. The defense command of the United States Army is participating in these arrangements and giving them splendid support.

Few people in the United States have any appreciation of what organized forest-fire bombing, or sabotage, could do to the forest areas fronting the Pacific Ocean, timed with one of our midsummer periods of extremely low humidity, unless effectively stopped at the outset. Not only the destruction of forests and logging camps and the essential supplies of war materials—the break-down of hydroelectric power, dislocation of labor, blocking of transportation, and menace to countless communities and war industries might easily turn such an occurrence into a major catastrophe of the war.

The favorable action of the Senate committee was largely, I believe, in response to the strong fight made by the men from the Pacific Northwest in both House and Senate. We greatly appreciate your own efforts in bringing this to pass. May we now ask for your continued aggressive work to hold the forest protection items in the appropriation bill, especially in the crucial test of the conference? There is no question as to the merit of this action and the urgency of this phase of the war. The accomplishment of the full Senate committee's program will be fine service, not only to your State but to the whole country.

Sincerely yours,

W. B. GREELEY,
Secretary-Manager.

Help for Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Chicago Daily Times regarding a rally recently held in Humboldt Park, Chicago, Ill.:

THIRTY THOUSAND PERSONS AT RALLY ASK FRANKLIN D. ROOSEVELT TO HELP POLAND

A strong conviction that the United States will champion the rights of Poland in her struggle with Russia was expressed today in a resolution approved by acclaim by 30,000 persons celebrating Polish Constitution Day in Humboldt Park.

"We beseech President Roosevelt to find means of deliverance from Russia of as many Polish citizens as possible," the resolution read.

"We are certain these people, if given the opportunity, would utilize their strength and ability for the common victory of the United Nations."

The celebration, commemorating the one hundred and fifty-second anniversary of the adoption of the Polish Constitution, was sponsored by the Polish National Alliance.

F. X. Swietlik, dean of Marquette University Law School and board chairman of the Alliance, touched on the Polish-Russian conflict by inference.

"Poland is looking forward to the end of the war and a whole Poland—not a crippled or despoiled one," he said.

"Poland will never yield herself even to one of our Allies. American citizens are not fighting to bring about a fourth partition of Poland."

Other speakers at the ceremonies, held at the Kosciuszko Monument, included Governor Green and Mayor Kelly.

Tighten the Belts, Folks

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Daily News of June 9, 1943:

TIGHTEN THE BELTS, FOLKS

Ex-President Hoover and Governor Dewey of New York in the last couple of days have issued warnings of a fast-deepening food crisis. Dewey's warning came with the report of his State emergency food commission, released Monday, and Mr. Hoover's in a speech delivered and broadcast last night before the American Farm Bureau Federation meeting in New York.

The two warnings add up to the same thing; namely, that we are running into a period of food shortages at a time when we need to produce more food than ever before.

Reasons for the situation are the scarcity of farm machinery because of cut-backs only recently restored in part; the bad planting weather this spring; the gasoline shortage; the overdrafting of labor off the farms into the armed forces; the big war plant wages that attract more labor off the farms; the ever-growing armed forces, which produce no food but have to eat; and the fact that nine separate Government agencies are now working at cross purposes to try to raise food production.

Governor Dewey's emergency food commission contributes the fantastic information that production-restriction regulations hanging over from the 1930's are still enforced against many farmers, so that they cannot organize their land for top production.

There is the further fact, just recently floated into the public mind, that we never were the chronic food-surplus Nation we used to be told we were. We long exported a good deal of wheat and meat, but our imports of other foods outweighed those exports, so that on balance we have for decades been a food-importing Nation.

To make the picture still more cheerful, our lend-lease clients are demanding more and more food; and we shall have to help feed any Nazi-stripped territories we may presently take from the Nazis.

All in all, the prospect is not good. We had better all punch another hole or two in our belts and get ready for still leaner times foodwise than we are experiencing now. A stiff dose of that plain living and high thinking which so appealed to our ancestors seems indicated for us. Of course, high thinking comes all but automatically to all Americans, but the plain living may not be so much fun.

Perhaps our trouble at bottom is, as some people surmise, that we have undertaken to fight a 500,000,000-population war with a population of about 132,000,000. If that is the trouble, some of the consequences will be a little tough to take.

Meanwhile, the President, at a farewell reception to the delegates to the recent Hot Springs, Va., United Nations Food Conference, has just made a speech picturing such a postwar paradise as has never yet existed anywhere on this earth.

Everything is going to be lovely after this most devastating of wars, as the President sees it.

PEPPER'S AMBITION

Nations are going to pool their resources for food production, so that every one of the world's 2,000,000,000 people can have the essentials of a balanced diet. Tariff barriers and international exchange difficulties are going to be taken care of, though the President doesn't say how.

We are all going to enjoy freedom of religion and freedom from want and fear. The fourth freedom—freedom of expression—was watered down in this speech to "the opportunity to think freely," perhaps in memory of the White House's partly defeated effort to wall the Food Conference off from the reporters.

Mr. Roosevelt in his farewell address to the food delegates especially welcomed their creation of an interim international food commission to function in Washington, our Government to do the work of getting it well started.

From this interim commission the President hopes that "a permanent United Nations organization" will eventually grow. This outfit's job, we take it, will be to deliver that

quart of milk a day to every man, woman, and child in the world after the war, whether they like milk or not.

All this paints a beautiful picture of happiness to come, though it does not relieve the present food crisis.

The talk about the world food organization indicates one thing clearly, as we see it. That is that when Senator PEPPER of Florida trumpets: "My ambition: To nominate Franklin Delano Roosevelt for the Presidency of the United States of the World," Mr. Roosevelt is in agreement with Senator PEPPER.

War and the Constitution

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, June 11 (legislative day of Monday, May 24), 1943

Mr. AUSTIN. Mr. President, I ask uanimous consent to have printed in the Appendix of the RECORD an address delivered by Gilbert H. Montague, of the New York Bar, before the New York State Bar Association annual meeting on January 22, 1943, entitled "War and the Constitution."

This address is offered by me now because of its remarkably clear exposition and interpretation of the background of war agency boards, many of which have a foundation in acts of Congress, some of which depend wholly upon the powers of the President, and the Commander in Chief by virtue of the great law of necessity in time of war, and many upon that enormous reservoir, the Constitution, which grants such power to the President, but some of them being of doubtful source. We are about to consider a conference report on the Connally bill which will remove the doubt regarding certain of the agency boards which are deemed by Congress to be important for the prosecution of the war.

This address will have interest not merely to Members of Congress but to the public generally.

I should state the printing of the address will somewhat exceed the two printed pages allowed, under the rule, and will cost $258.75.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

American economic life today is dominated by war agencies, such as the War Production Board, the Office of Price Administration, the National War Labor Board, the Office of Economic Stabilization, the Office for Emergency Management, the Office of Defense Transportation, the Board of Economic Warfare, the Office of Civilian Defense, the War Manpower Commission, the War Shipping Administration, the Petroleum Coordinator for War, the Office of War Information, the Office of Censorship, the Defense Communications Board, and many others.

The prime characteristic of these war agency boards is that they usually originate and derive their authority from some Executive order of the President, resting on some very general or remote act of Congress, or resting only on the President's powers under the Constitution, and that they seldom originate or derive their authority from an organic act contained in specific legislation enacted by Congress pursuant to one or another of the powers vested in Congress by the Constitution, like the acts from which peacetime departments and Government agencies usually originate and derive their authority, such as the Departments of State, Treasury, War, Navy, Interior, Agriculture, Commerce, and Labor, and the Federal Reserve Board, the Interstate Commerce Commission, the Federal Trade Commission, the Tariff Commission, the Federal Power Commission, the Federal Communications Commission, the Securities and Exchange Commission, the National Labor Relations Board, the Federal Security Agency, and many others.

Thus the War Production Board was created by an Executive order of the President in the following manner. In the First World War the act of August 29, 1916, established the Council of National Defense, consisting of the Secretaries of War, Navy, Interior, Agriculture, Commerce, and Labor. By the act of June 4, 1920, Congress charged the Assistant Secretary of War with the duty of mobilizing material and organizing industry essential to war uses. Between 1921 and 1940, therefore, the Council of National Defense had no meetings or appropriations, and its records with those of other First World War agencies, such as the War Industries Board and the Committee on Public Information, were kept by the National Archivist. Like Rip Van Winkle, however, the Council of National Defense awakened from its 20 years' sleep in 1940, and the President, by Executive order on May 29, 1940, approved rules and regulations adopted by this reawakened Council of National Defense and established within the Office for Emergency Management an Advisory Commission to the Council of National Defense, with seven divisions, namely, industrial production, industrial materials, employment, raw products, price stabilization, transportation, and consumer protection.

Here a digression is necessary to explain the Office for Emergency Management. Under the Reorganization Act passed by Congress in 1939, the President promulgated his reorganization plans I and II and in his Executive order of September 8, 1939, authorized "in the event of a national emergency, or a threat of a national emergency, such Office for Emergency Management as the President shall determine." Thereunder the administrative order of May 25, 1940, established the Office for Emergency Management, whose status and functions were further defined by the President's Executive orders of January 7, 1941, and January 11, 1941, and by the administrative order of January 7, 1941.

Returning now to the Advisory Commission to the Council of National Defense established May 29, 1940, in the Office for Emergency Management. Like a dissolving scene in the movies, out of this Advisory Commission to the Council of National Defense, but still within the Office for Emergency Management, there emerged by the President's Executive order of January 7, 1941, the Office of Production Management consisting of William S. Knudsen, Sidney Hillman, and the Secretaries of War and the Navy. Again like a dissolving scene in the movies, out of this Office of Production Management, but still within the Office for Emergency Management, there emerged, by the President's Executive order of January 16, 1942, the War Production Board, which succeeded to the Office of Production Management, abolished by the President's Executive order of January 29, 1942, and also to the Supply Priorities and Allocations Board, which in turn was abolished by the President's Executive order of January 16, 1942.

This phantasmagoria of war agencies, emerging and merging and submerging like dissolving scenes in the movies, is not perhaps as inexcusable as some think, for in any rapidly expanding business enterprise trial and error are inevitable, and in expanding the national war production from less than $6,000,000,000 in 1940 to nearly $100,000,000,000 in 1943, it is surprising, not that there has been so much, but that there has not been more, of this dizzy succession of councils, advisory commissions, offices, and boards.

Another illustration is the Office of Price Administration. In the Advisory Commission to the Council of National Defense created May 29, 1940, as already described were divisions for Price Stabilization and Consumer Protection. Out of these, but still within the Office for Emergency Management, there emerged, by the President's Executive order of April 11, 1941, the Office of Price Administration and Civilian Supply headed by Leon Henderson. This Executive order, typical of most of the President's Executive orders, began:

"By virtue of the authority vested in me by the Constitution and the statutes, and in order to define further the functions and duties of the Office for Emergency Management with respect to the national emergency as declared by the President on September 8, 1939, for the purpose of avoiding profiteering and unwarranted price rises, and of facilitating an adequate supply and the equitable distribution of materials and commodities for civilian use, and finding that the stabilization of prices is in the interest of national defense and that this order is necessary to increase the efficiency of the defense program, it is hereby ordered:

"1. There shall be in the Office for Emergency Management of the Executive Office of the President an Office of Price Administration and Civilian Supply."

This vast generality of purpose, and total indefiniteness of constitutional and legislative authority, and all-embracing assertion of whatever authority may be spelled out of the entire Constitution and the entire statute book, are all characteristic of most of the President's Executive orders. For 9 months the Office of Price Administration and Civilian Supply carried on with what Mr. Henderson picturesquely described as jaw-bone enforcement.

Actually this enforcement was more than "jaw bone," for over the head of anyone disobeying his price schedules Mr. Henderson held at all times the threat of all the powers the President had obtained from Congress in various emergency statutes between 1933 and 1941, and also all the powers which the Council of National Defense Act of 1916 and the Trading With the Enemy Act of 1917 and the Espionage Act of 1917 and other First World War legislation had long ago vested in the President and which Congress had left standing or forgotten to repeal, and also all the powers which, unnoticed and forgotten, had survived in the President through the years in ancient statutes scattered through the statute book, and finally all the vast expanse of power which the President derives as President and Commander in Chief, not from congressional statutes but directly from the Constitution. This miscellany of powers, it was widely assumed, was impressive enough to raise a presumption of constitutionality and validity for all of Mr. Henderson's price schedules during his "jaw bone" enforcement, and this continued until January 30, 1942, when Congress enacted the Emergency Price Control Act which established the Office of Price Administration. This act illustrates the wide generality of language in which Congress has been conferring powers upon the President and his war agencies:

"SECTION 1. (a) It is hereby declared to be in the interest of the national defense and

security and necessary to the effective prosecution of the present war, and the purposes of this act are, to stabilize prices and to prevent speculative, unwarranted, and abnormal increases in prices and rents; to eliminate and prevent profiteering, hoarding, manipulation, speculation, and other disruptive practices resulting from abnormal market conditions or scarcities caused by or contributing to the national emergency; to assure that defense appropriations are not dissipated by excessive prices; to protect persons with relatively fixed and limited incomes, consumers, wage earners, investors, and persons dependent on life insurance, annuities, and pensions, from undue impairment of their standard of living; to prevent hardships to persons engaged in business, to schools, universities, and other institutions, and to the Federal, State, and local governments, which would result from abnormal increases in prices; to assist in securing adequate production of commodities and facilities; to prevent a post emergency collapse of values; to stabilize agricultural prices in the manner provided in section 3; and to permit voluntary cooperation between the Government and producers, processors, and others to accomplish the aforesaid purposes."

The act then continues:

"SEC. 2. (a) Whenever in the judgment of the Price Administrator (provided for in section 201) the price or prices of a commodity or commodities have risen or threaten to rise to an extent or in a manner inconsistent with the purposes of this act, he may by regulation or order establish such maximum price or maximum prices as in his judgment will be generally fair and equitable and will effectuate the purposes of this act. So far as practicable, in establishing any maximum price, the Administrator shall ascertain and give due consideration to the prices prevailing between October 1 and October 15, 1941, or if, in the case of any commodity, there are no prevailing prices between such dates, or the prevailing prices between such dates are not generally representative because of abnormal or seasonal market conditions or other cause, then to the prices prevailing during the nearest 2-week period in which, in the judgment of the Administrator, the prices for such commodity are generally representative for the commodity or commodities included under such regulation or order, and shall make adjustments for such relevant factors as he may determine and deem to be of general applicability, including the following: Speculative fluctuations, general increases or decreases in costs of production, distribution, and transportation, and general increases or decreases in profits earned by sellers of the commodity or commodities, during and subsequent to the year ended October 1, 1941."

Greater generality of language, and wider discretion to the Price Administrator, would be difficult to imagine.[1]

The Office of Economic Stabilization illustrates what may result from generality of language in a statute and wide discretion in an administrator.

In September 1942 the President gave notice that unless Congress acted to stabilize prices, wages, and salaries, and to curb inflation, the President would do so. Senator Prentiss M. Brown, who had charge of the stabilization bill in the Senate, maintained that the President already had this power, because he was Commander in Chief and because of title III, section 301, of the Second War Powers Act of March 27, 1942. This power was certainly well hidden in this title, which read "Title III—Priority Powers". This power was also well hidden in section 301, for everything earlier in that section related only to contracts or orders of the Army or Navy. How well hidden this power was appears from the paragraph in which it was contained:

"Deliveries under any contract or order specified in this subsection (a) (that is, any contract or order of the Army or Navy) may be assigned priority over deliveries under any other contract or order; and the President may require acceptance of and performance under such contracts or orders in preference to other contracts or orders for the purpose of assuring such priority. Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or of any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions, and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense."

From all these verbal wrappages, like a rabbit from a hat, this power was picked out and exhibited by Senator Brown to the Senate:

"Remember," said Senator Brown, "that the Second War Powers Act was passed in March 1942, a little over a month after the price-control bill was passed, and therefore it supersedes the Price Control Act as to any matters with respect to which the two laws may conflict.

"What does title 3, section 301, of the Second War Powers Act say in substance? I have composed in sentence form a paraphrase of the provisions of the act which apply to the present situation:

" 'That whenever the President is satisfied that the fulfillments of requirements for the defense of the United States will result in a shortage in the supply of any material'—

"At the present time there are very few materials which do not come within that category, for we are short of almost everything.

"For what? First—'for national defense'—

"The Army and Navy. Second—'or for export'—

"That means the lend-lease operations, the support of Russia, of England, of China, and of our other allies. Third—'or for private account.'

"That is the exact language of the law. What does 'private account' mean? It could mean nothing other than the use of the things that you and I wear and the things that you and I eat. That is the subject matter of title 3 of the Second War Powers Act.

"Continuing with the paraphrase—'he may allot such material'—

"How may he allot it? He may allot it 'in such manner'—

"That means the manner of getting it to those who need it 'upon such conditions'—

"What can that mean other than the conditions of the price, terms, and so forth, by which the materials and supplies will reach the public for private account, will reach the Army, and will reach the lend-lease operations? He shall, when he finds it necessary for the defense of the United States, allot the supplies to those three great divisions of consumption 'in such manner, upon such conditions, and to such extent as he shall deem necessary in the public interest and to promote the national defense.'

"Mr. President, I can conceive of no language which could be written in general terms which would give the President of the United States greater power over the economic life, the service of supply, and the prices of the things we have to buy and sell, than would the language contained in the Second War Powers Act.

"In my own mind I have not the slightest doubt that the President can handle the entire situation in that way."

This demonstration of unnoticed and unsuspected conferring of power did not deter Congress from enacting the Stabilization Act of October 2, 1942, amending the Emergency Price Control Act of January 30, 1942. This Stabilization Act began:

"That in order to aid in the effective prosecution of the war, the President is authorized and directed, on or before November 1, 1942, to issue a general order stabilizing prices, wages, and salaries, affecting the cost of living; and, except as otherwise provided in this act, such stabilization shall so far as practicable be on the basis of the levels which existed on September 15, 1942. The President may, except as otherwise provided in this act, thereafter provide for making adjustments with respect to prices, wages, and salaries, to the extent that he finds necessary to aid in the effective prosecution of the war or to correct gross inequities."

Twice within the previous 6 months the President had proposed that no one should be allowed to have an income exceeding approximately $25,000 net after taxes. While this stabilization bill was pending before the Senate, therefore, Senator ARTHUR H. VANDENBERG, Senator Brown's colleague from Michigan, apparently feared another case of unnoticed and unsuspected conferring of power. Accordingly, in the course of the

[1] A price schedule issued by Mr. Henderson during his "jaw bone" enforcement prior to this act was challenged as unconstitutional and void in the Supreme Court, New York County, but was upheld (Schmuck, J., not officially reported), affirmed without opinion by the Appellate Division, *Export Syndicate of Steel Producers, Inc.*, v. *Dilisizian, Inc.*, (265 A. D. 923 (Dec. 18, 1942)). In the Appellate Division the then Office of Price Administration filed a brief amicus curiae, in which it cited in *Matter of Kramer & Uchitelle, Inc.* (288 N. Y. 467 (July 29, 1942)) and *Pennsylvania Company for Insurance on Lives and Granting Annuities* v. *Cincinnati & L. E. Ry.* (S. D. Ohio, unreported, Sept. 19, 1941). This brief stated that "vital Presidental acts have necessarily had to be carried out in the absence of legislation specifically dealing with the subject matter involved," examples being "the institution of an emergency price-control program prior to the adoption of the Price Control Act • • • the establishment of the National Defense Mediation Board, establishment of the Office of Civilian Defense, establishment of the Supply Priorities and Allocations Board, opening of the North American Aviation plant, and opening of the Federal Shipbuilding plant at Kearny, N. J." Continuing, this brief stated that "the President as Chief Executive and Commander in Chief must necessarily exercise certain inherent emergency powers for the preservation of the Nation in time of danger," and that "these Presidential powers are strictly constitutional," but "are difficult to define and, indeed, have never been fully defined." This brief mentioned President Lincoln's acts in 1861 and cited *The Prize Cases* (67 U. S. (2 Black), 635, 668–669 (1863)); *In re Neagle* (135 U. S. 1, 64 (1890)); *In re Debs* (158 U. S. 564, 584, 586 (1895)); *Myers* v. *United States* (272 U. S. 52, 116–117 (1926)); *Ex parte Richard Quirin et al.* (317 U. S. 1, 26 (July 31, 1942)); *Columbus Ry. Power & Light Co.* v. *City of Columbus* (253 Fed. 499, 501 (S. D. Ohio 1918)); *United States* v. *Gordin* (287 Fed. 565, 568 (S. D. Ohio 1922)), affirmed 9 F. 2d 394 (C. C. A. Sixth Cir. 1925); E. S. Corwin, The President, Office and Powers (1940), 133, 157–166. The Emergency Price Control Act of 1937 has been held constitutional in *Henderson* v. *Kimmel* (U. S. D. C., D. Kans., Oct. 23, 1942 (not yet officially reported)); *Henderson* v. *Detweiler* (U. S. D. C., D. Nev. Oct. 27, 1942 (not yet officially reported)); *Vecchio* v. *Kelley* (Cir. Ct. Wayne Co. Mich., Sept. 19, 1942 (not yet officially reported)); *Whatley* v. *Love* (First City Court, New Orleans, La., Dec. 8, 1942 (not yet officially reported)).

Senate debate on this bill, Senator VANDENBERG put to Senator Brown, who was in charge of the bill and was one of its authors and was speaking for the administration in connection with it, the following question:

"Could he not"—meaning the President—"Could he not, under that language, reduce all incomes to $25,000 by Executive order?"

Senator Brown's reply was, "I desire to go into that subject later, but it is my judgment that the authority is not contained in a bill which stabilizes salaries as of September 15, 1942."

The impression conveyed by Senator Brown's reply was enhanced by subsequent colloquy with other Senators, in which it was explained that generality of language was necessary in order to enable the President to permit equitable increases of salaries and wages.

On the day following the enactment of the Stabilization Act of October 2, 1942, the President made an Executive order stating:

"By virtue of the authority vested in me by the Constitution and the statutes, and particularly by the act of October 2, 1942 [namely, the Anti-Inflation Act], * * * and in order to control so far as possible the inflationary tendencies and the vast dislocations attendant thereon which threaten our military effort and our domestic economic structure, and for the more effective prosecution of the war, it is hereby ordered as follows: * * *

"1. There is established in the Office for Emergency Management of the Executive Office of the President an Office of Economic Stabilization, at the head of which shall be an Economic Stabilization Director."

The President then appointed as Economic Director former Supreme Court Justice James F. Byrnes, and on October 27, 1942, Justice Byrnes issued his famous regulation reducing salaries to approximately $25,000 net after taxes, thus achieving what Congress had twice refused to do in the previous 6 months when twice requested by the President. In this build-up of statute, Executive order, and regulation leading up to this $25,000 salary limitation after taxes, it may be harsh to say there was a lack of frankness, but there certainly was a lack of clarity.[2]

The National War Labor Board is an example of an agency created by Executive order resting only on the President's powers under the Constitution. Its background and history are extraordinary.

Relying solely on his powers under the Constitution, and with no act of Congress or legislative warrant of any kind, the President by Executive order of March 19, 1941, created within the Office for Emergency Management the National Defense Mediation Board for the purpose of mediating, settling, and disposing of disputes certified to the Board by the Secretary of Labor, which threatened to "hinder or obstruct the production or transportation of material essential to national defense." To this Board the President appointed two labor members proposed by the American Federation of Labor and two labor members proposed by the Congress of Industrial Organizations, and four public members and four industry members who were entirely the President's own selection. Each of these four public members was strongly prolabor and each of these four employer members was more labor-minded than any national organization of employers, so that as selected by the President this Board was strongly prolabor, and contained no one proposed by or representing any organization of employers, and no one in any way affiliated with any employer coming before this Board, while the labor members of this Board were all union officials affiliated with either the American Federation of Labor or the Congress of Industrial Organizations, with one or another of which was then affiliated practically every employee coming before this Board.

To get a controversy certified to this National Defense Mediation Board it was allowable, and even essential, under the Executive order creating this Board, for a labor union to carry a controversy to the point of threatening to interfere with the national defense. This would suffice to change even an impartial board from an adjudicating to an appeasement agency, and to this strongly prolabor Board it inevitably imparted the spirit of a pressure agency, exerting all the force of the Nation on the brink of war to induce employers to yield whatever was needed in order to dissuade employees, especially those affiliated with the American Federation of Labor or the Congress of Industrial Organizations, from instigating strikes and boycotts that might interfere with the national defense. This Board continued to function in this manner until John L. Lewis, then affiliated with the Congress of Industrial Organizations, demanded for his United Mine Workers the exclusive right to work in coal mines operated by the steel companies. When his demand was denied by this Board, Mr. Lewis broke up this Board by forcing the resignations therefrom of all the labor members who were direct representatives and officials of the Congress of Industrial Organizations.

Immediately after this National Defense Mediation Board broke up the President selected from industry and the public several men to confer with union officials representing the American Federation of Labor and the Congress of Industrial Organizations in the effort to agree on the basis for a new board.

Though the United States was then in the Second World War, this conference failed to agree because the labor members of the conference, unlike their predecessors in the First World War, were unwilling that labor should agree to refrain during wartime from raising controversies about union status, and were immovable in their insistence that throughout the Second World War labor should be permitted to raise controversies on union status or any other labor matter, and to carry these controversies to the point of threatening to interfere with the war effort.

Though the conference deadlocked sharply on this fundamental issue, the President chose nevertheless to ignore this disagreement, and announced blandly that on the agreement of the conference he was creating by Executive order of January 12, 1942, a new board, namely the National War Labor Board, to finally determine all labor disputes, which might interrupt work which contributes to the effective prosecution of the war.

To this new National War Labor Board the President appointed half the membership of its predecessor the National Defense Mediation Board, so that like its predecessor the National War Labor Board consists of two labor members proposed by the American Federation of Labor, and two labor members proposed by the Congress of Industrial Organizations, and four public members and four industry members who are entirely the President's own selection. In the National War Labor Board, as in its predecessor, there are four strongly prolabor public members, and four employer members who are more labor-minded than any national organization of employers, so that as selected by the President the National War Labor Board is strongly prolabor, and contains no one proposed by any organization of employers, and no one in any way affiliated with any employer coming before the Board, while the members of the Board are all union officials affiliated with either the American Federation of Labor or the Congress of Industrial Organizations, with one or another of which is affiliated almost every employee coming before the Board.

Under the Executive order creating the National War Labor Board, in order to get a controversy certified to the Board, it is allowable, and even essential, for a labor union to carry the controversy to the point of threatening to interfere with the war effort. Against this force, even an impartial Board could not function as an adjudicating agency, but could only act as an appeasement agency. Succumbing to this force, therefore, the National War Labor Board, like its predecessor the National Defense Mediation Board, has become a strongly prolabor pressure agency, exerting all the force of the Nation at war to induce employers to yield whatever is needed in order to dissuade employees, especially those affiliated with the American Federation of Labor or the Congress of Industrial Organizations, from instigating strikes or boycotts that may interfere with the war effort.

Both the National War Labor Board and its predecessor the National Defense Mediation Board have each been called boards, and have each been sedulous to imitate much of the form and language of the decisions of peacetime adjudicating administrative agencies like the National Labor Relations Board, the Federal Trade Commission, the Securities and Exchange Commission, and many other peacetime adjudicating administrative agencies. But the resemblance is only superficial, for all these peacetime adjudicating administrative agencies arrive at their decisions by weighing and adjudicating the legal or at least the moral rights involved in the disputes coming before them, while the National War Labor Board and its predecessor the National Defense Mediation Board, though rendering decisions that in form and language appear to weigh and adjudicate legal and moral rights, have in fact been chiefly influenced by the economic strength of the disputants before them, and thus have really been appeasement, not adjudicating agencies, exerting all the force of the Nation at war to induce employers to yield whatever is needed in order to dissuade employees, especially those affiliated with the American Federation of Labor or the Congress of Industrial Organizations,

[2] This account of the Stabilization Act of October 2, 1942 is supported by statements in the issues of the CONGRESSIONAL RECORD of September 21-30 and November 5, 1942. Since this address was made on January 22, 1942, Congress has wiped out this $25,000 salary limitation after taxes, by attaching to the Public Debt Increase Act a rider amending the Stabilization Act of 1942 so as to repeal the provisions which served as the basis for the Executive order and regulation reducing salaries to approximately $25,000 net after taxes. A provision retroactive to October 2, 1942, rescinded this Executive order and regulation and all orders, directives, and decisions promulgated or made thereunder that were in conflict with this rider amending the Stabilization Act of 1942. This became law without the President's signature on April 10, 1943. The President vigorously protested and resisted this action by Congress, but it was carried in both branches of Congress by very large majorities in which party lines were disregarded. Throughout this contest between Congress and the President, it seems to have been universally conceded that Congress had the constitutional right to override the President in this matter, and that the power which the President derived from the Constitution, as President and Commander in Chief, did not entitle him to act in defiance of express legislation enacted by Congress.

from instigating strikes and boycotts that may interfere with the war effort.[3]

The Constitution provides (art. II, sec. 1): "The executive power shall be vested in a President of the United States of America."

Section 2: "The President shall be Commander in Chief of the Army and Navy of the United States and of the militia of the several States when called into the actual service of the United States * * *."

Section 3: "He shall take care that the laws be faithfully executed, and shall commission all the officers of the United States."

[3] This account of the National War Labor Board and its predecessor the National Defense Mediation Board is supported by statements of William H. Davis, chairman of both Boards, and statements of other sympathetic observers of these Boards. See Labor Relations and the War, Annals of American Academy of Political and Social Science, volume 224, November 1942, especially vii, 32–39, 128–134, 141–146. Referring to the National War Labor Board, Chairman Davis says that "a predisposition toward collective bargaining aided by meditation and voluntary arbitration was built into its very fiber" (ibid. 142). Chairman Davis emphasizes that in any procedure based on collective bargaining, mediation, voluntary arbitration or agreement, the dominating factor must be the economic strength of the disputants. "In normal times," says Chairman Davis, "the economic strength that lies behind the right to strike or lock-out is by all odds the most effective single agency for settling labor troubles. This is particularly true of the more serious disputes. The possibility of a strike always colors the normal processes of collective bargaining. It is the common experience of mediators that the parties to most labor disputes, and particularly the more important ones, are brought to agreement in the end by considerations of the possibilities and the costs of a strike or lock-out. After full discussions which have not broken the deadlock, when the alternatives are clearly spread upon the table and the choice has finally to be made, it is then—in the last 15 minutes—that the parties really have to face these possibilities and costs. And it is then, under pressure of economic facts, that the final adjustment is commonly reached" (ibid. 141–142). Dr. Lloyd G. Reynolds, associate professor of political economy, Johns Hopkins University, and State price executive for Maryland for the Office of Price Administration; and Charles C. Killingsworth, instructor of political economy at Johns Hopkins University, referring to the National War Labor Board's decisions say: "The Board has carefully refrained from stating the conditions under which a union security clause will be awarded, on the ground that each case must be considered on its merits; and the Board often modifies the security clause to suit the circumstances of a particular case. Therefore, one does not get very far by looking to Board decisions for general criteria. Decisions awarding maintenance of membership have stressed the threat to the union's existence from the employer or from rival unions, the prevalence of union-shop agreements in the industry or area involved, the extent to which the union constitution safeguards members against arbitrary action by officers, and similar factors. But these seem to be rationalizations rather than reasons for action" (Ibid. 36). "Satisfying dynamic labor groups and their virile leaders" is the summation of the whole matter by Prof. Herman Feldman, formerly dean, school of business and civic administration, College of the City of New York, and now professor of industrial relations, Amos Tuck School of Business Administration, Dartmouth College (Ibid. vii).

The Constitution also provides (art. I, sec. 8): "The Congress shall have power to * * * provide for the common defense and general welfare of the United States; * * * to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water; to raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years; to provide and maintain a navy; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress * * *; to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

Section 9: "The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it."

From these provisions a man from Mars might conclude that the Constitution confers no war power on the President, and merely directs him to execute the laws enacted by Congress. But a hundred years of American history have established that there is a vast reservoir of power which the President derives as President and Commander in Chief, not from congressional statutes, but directly from the Constitution itself.

President Polk in 1846, with no act of Congress or legislative warrant of any kind, moved American troops into Mexico, and declared a blockade of Mexican ports. One of President Polk's most vigorous critics at that time was Abraham Lincoln, then a Congressman from Illinois.

In April 1861, when Fort Sumter was fired on, Congress was not in session, and President Lincoln did not bring it into session until July 1861. During this interval, with no act of Congress or legislative warrant of any kind, President Lincoln called for 75,000 volunteers, incurred a national indebtedness of $250,000,000—a great sum of money in those days—proclaimed a blockade of thousands of miles of the Southern Confederacy coast line, and in many localities throughout the North suspended the writ of habeas corpus and ordered arrests and military detention of many citizens. In those early weeks opinion throughout the North was divided, and President Lincoln knew that action by Congress would certainly be slow, and might be doubtful. Our Southern cousins call it the War between the States, but the term "Civil War" seems to be a truer description, for throughout most of the Northern States there were intense differences of opinion regarding most of the legal and constitutional questions raised by the war.

President Lincoln seems to have believed at first that he was acting without authority, and that he needed ratification by Congress in order to make his acts legal. Soon however he progressed to the view that the Constitution conferred upon him as President and Commander in Chief ample power without any congressional legislation. In this view he was upheld in 1863 by the 5-to-4 decision of the Supreme Court in the Prize Cases. But before this Supreme Court decision was rendered, President Lincoln seems to have progressed to the view that there were many subjects—particularly slavery and the relations between the seceding States and the United States—on which he could act under the constitutional war power he possessed as President and Commander in Chief, but on which Congress could not act under its war power or any other power that it possessed under the Constitution. This view irritated many Republican Senators and Congressmen as much as it irritated the Democratic opposition in and out of Congress, but President Lincoln clung to it tenaciously. Congress in July 1862 enacted that all slaves taking refuge or who were captured should be free. But President Lincoln in his Emancipation Proclamation in September 1862 ignored this act, and relied solely on his constitutional power as President and Commander in Chief. Soon after Fort Sumter was fired on in April 1861, President Lincoln had begun to suspend the writ of habeas corpus. In July 1862 an act of Congress authorized the President to suspend the writ of habeas corpus and to make arrests and hold persons in military detention, but the act required that these arrests and detentions should be reported by the Secretary of War to the United States judge in those localities, and that the judge should discharge these persons if within 60 days the grand jury found no indictment for "aid and comfort to rebellion" or other offense.

In September 1862 President Lincoln issued a proclamation in which he ignored this act and declared that "all rebels, * * * their aiders and abettors, within the United States and all persons discouraging voluntary enlistments, resisting military drafts, or guilty of any disloyal practices, giving aid and comfort to rebels * * * shall be subject to * * * courts martial or military commissions," and suspended the writ of habeas corpus. This proclamation did not require any report to the United States judge and no report was made. In March 1863 another act of Congress authorized the President to suspend the writ of habeas corpus and required that the Secretary of War should report to the United States judge. But again the Secretary of War never reported, doubtless because in his view all arrests and military detentions were made only by the authority of the President's proclamations and not by virtue of these acts of Congress.

How many persons were thus arrested and held in military detention between 1861 and 1865, in disregard of these acts of Congress and in accordance with these proclamations of President Lincoln, is not shown by the War Department records, for many cases do not show charges. The Chief of the Record and Pension Office of the War Department estimated in 1897, however, that this number was at least 13,535. Lalor's Cyclopedia says 38,000, and hostile contemporary estimates ran as high as 75,000.

Eighteen hundred and sixty-two was a congressional election year, and J. W. Wall, an editorial writer of the New York Daily News, was arrested in New Jersey and detained in Fort Lafayette, and Dr. Edson, 70 years old, who had served three terms in the Ohio Legislature and 6 years in Congress, was arrested at night and also detained in Fort Lafayette. Political feeling ran high. Benjamin R. Curtis, a former Justice of the Supreme Court of the United States, whose minority opinion in favor of Dred Scott had made him a hero throughout the North, denounced President Lincoln as a military despot. Dr. Edson was elected to the Ohio Legislature, and in New York the Democratic nominee for Governor, Horatio Seymour, with the slogan, "The Constitution as it is, and the Union as it was," triumphed over the Republican candidate, Gen. James W. Wadsworth. In these congressional elections of 1862, the Lincoln administration was defeated in New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, and Wisconsin.

In 1863, in the Prize Cases, the nine Justices of the Supreme Court comprised three appointed by President Lincoln and six members of the old Court headed by Chief Justice Taney. Two members of the old Court joined with President Lincoln's three appointees in the decision, from which Chief Justice Taney and three members of the old Court dissented. Justice Grier, a member of the old Court, writing the opinion for the majority of the Court, said:

"The greatest of civil wars was not gradually developed by popular commotion, tumultuous assemblies, or local unorganized insurrections. However long may have been its previous conception, it nevertheless sprung forth suddenly from the parent brain, a Minerva in full panoply of war. The President was bound to meet it in the shape it presented itself, without waiting for Congress to baptize it with a name; and no name given to it by him or them could change the fact. * * *

"Whether the President in fulfilling his duties as Commander in Chief, in suppressing an insurrection, has met with such armed resistance, and a civil war of such alarming proportions as will compel him to accord to them the character of belligerents, is a question to be decided by him, and this Court must be governed by the decisions and acts of the political department of the Government to which this power was entrusted * * * the proclamation of blockade is itself official and conclusive evidence to the Court that a state of war existed which demanded and authorized a recourse to such a measure under the circumstances peculiar to the case."

On this ground the majority of the Supreme Court held in the Prize Cases that President Lincoln's blockade, without any act of Congress or legislative warrant, was a valid exercise of the President's war power under the Constitution.

In 1866 in Ex parte Milligan the nine justices of the Supreme Court comprised five appointed by President Lincoln and four members of the old Court. By that time, however, every object of the arrests and military detentions and proclamations during President Lincoln's administration had long since been accomplished. Every member of the Supreme Court in Ex parte Milligan held in effect that these proclamations were unconstitutional outside the theater of military operations and when the civil courts were open. On the constitutionality of these acts of Congress the Supreme Court divided. A minority of four members, comprising two members of the old Court and Chief Justice Chase and another appointee of President Lincoln, held in effect that these acts of Congress were constitutional regardless of the theater of military operations and whether the civil courts were open. The majority of the Court, however, comprising three members of the old Court and Justice Davis and another appointee of President Lincoln, held in effect that these acts of Congress, like the proclamations, were unconstitutional outside the theater of military operations and where the civil courts were open.

Ex parte Milligan, some authorities now believe, is today sound to the extent it indicates that it is unconstitutional to supersede civil with military government, except when the United States is at war, and then only by express act of Congress. The Prize Cases they now think are today sound to the extent they indicate that the President may use such force as he deems necessary to put down public disorder without having to justify his measures in court save in extreme cases of abuse of power. They now concede to judicial review somewhat more than the Prize Cases did, but considerably less than Ex parte Milligan did.[4]

The National War Labor Board likes to bolster its own assertion of the Presidential power by referring to Theodore Roosevelt, who stated in his autobiography that throughout his administration—

"My view was that every executive officer, and above all every executive officer in high position, was a steward of the people bound actively and affirmatively to do all he could for the people. * * * I declined to adopt the view that what was imperatively necessary for the Nation could not be done by the President unless he could find some specific authorization to do it. My belief was that it was not only his right but his duty to do anything that the needs of the Nation demanded unless such action was forbidden by the Constitution or by the laws. Under this interpretation of executive power I did and caused to be done many things not previously done by the President and the heads of the departments. I did not usurp power, but I did greatly broaden the use of executive power."

Ex-President Taft vigorously criticized this "stewardship theory" in his book Our Chief Magistrate and His Powers, but later he changed his view and as Chief Justice writing the opinion for the Supreme Court in Myers against United States he found a grant of power to the President in the opening clause of article II of the Constitution.

The strongest precedents for the most extreme assertion of Presidential power thus seem to come from Republican sources. Most of the war powers exercised by the Democratic war Presidents, President Wilson and President Roosevelt, appear to have been conferred on them or their war agencies by acts of Congress in express or general or colorable terms. But President Wilson armed merchantmen in March 1917 after his bill for that purpose had been defeated in Congress, and he established by Executive order the Committee on Public Information with its voluntary censorship and the War Industries Board "coordinating private industry." Most of the war powers President Wilson exercised, however, were derived from acts enacted by Congress before or during the First World War, such as the Council of National Defense Act, the Priorities Act, the Selective Service Act, the Espionage Act, the Trading With the Enemy Act, and the Lever Food and Fuel Control Act.[5]

[4] This account of the Mexican War and Civil War period is derived from many sources. A few are J. F. Rhodes, History of the United States (1899) volume 4; J. G. Randall, Constitutional Problems Under Lincoln (1926); E. S. Corwin, The President, Office and Powers (1940); *Ex parte Merryman* (Fed. Cas. No. 9, 487 (1861)); *The Prize Cases* (67 U. S. (2 Bl.) 635 (1863)); *Ex parte Milligan* (71 U. S. (4 Wall.) 2 (1866).

[5] This account of the period of President Theodore Roosevelt, President Taft, and President Wilson is derived from many sources. A few are Theodore Roosevelt, Autobiography (1924) 388–389, and W. H. Taft, Our Chief Magistrate and His Powers (1916) 139–140, quoted in the decision of the National War Labor Board in *In re Bethlehem Steel Corporation, Republic Steel Corporation, Youngstown Sheet and Tube Co., Inland Steel Co. and United Steel Workers of America* (C. I. O.) ("Little Steel Companies") reported in 11 Labor Relations Reporter No. 24, September 28, 1942, pp. 32–33, 1 War Labor Reports 342, 352 (1942); E. S. Corwin, The President, Office and Powers (1940); *In re Neagle* (135 U. S. 1 (1890)); *In re Debs* (158 U. S. 564 (1895)); *Myers* v. *United States* (272 U. S. 52 (1926)).

No American war President has been so successful as President Roosevelt in so often inducing Congress to share with him joint responsibility for the powers exercised by him and his war agencies, and in having so seldom been obliged to assert against Congress his constitutional powers as President and Commander in Chief. But like President Lincoln and President Wilson, President Roosevelt has been willing to rely solely on his constitutional power as President and Commander in Chief, when Congress seemed unwilling to confer on him or on a war agency a power that he deemed necessary for the prosecution of the war.

Returning now to President Roosevelt's Executive orders creating the National Defense Mediation Board in 1941 and the National War Labor Board in 1942. Concede that these Boards have not been impartial adjudicating administrative agencies, but have really been prolabor appeasement pressure agencies. Concede also that these Boards have been exerting all the force of the Nation at war to induce employers to yield whatever is needed in order to dissuade employees, especially those affiliated with the American Federation of Labor or the Congress of Industrial Organizations, from instigating strikes or boycotts that may interfere with the war effort. Nevertheless a powerful argument can be made, on the precedents of the past 100 years, that the President's Executive orders creating these Boards have been a valid exercise of the President's constitutional war power.

Under the conditions of modern total all-out global war, it seems at least arguable that the morale of American workingmen in the production plants and distribution channels and assembly lines throughout the American economy now engaged in all-out war effort is not less important than the morale of American fighting men on the battle lines in Guadalcanal and North Africa. The Executive orders creating these Boards indicate that President Roosevelt believes this, and that he also believes that a prolabor appeasement pressure agency is a proper means for maintaining the morale of American workingmen. He is the President and Commander in Chief, and Congress has refrained from exercising its constitutional power to rescind these Executive orders or to forbid the President to exercise his war power in this manner. On these facts, is it likely that anyone challenging the constitutionality of these Boards can ever in wartime convince the Supreme Court or any other Federal court that any court has any right to substitute its own judgment for that of the President as to what are the proper means for procuring the uninterrupted production that seems to be essential to national survival in a modern total all-out global war?

The failure of Congress to overrule the President's Executive orders creating the National Defense Mediation Board and the National War Labor Board seems to be of prime importance, but here must be noted what perhaps may be another case of unnoticed and unsuspected conferring of power by Congress. No one believes that Congress in 1941 and 1942 could knowingly ever have been induced to pass any legislation conferring upon the President or anyone else any such powers and jurisdiction as the National Defense Mediation Board and the National War Labor Board have been asserting and exercising under the President's Executive orders. So high has been the tension, in Congress and outside, on the general subject of labor relations, that Congress has not legislated beyond the National Labor Relations Act of 1935, and repeatedly since 1938 the House of Representatives has indicated its disposition to amend even that act to the

disadvantage of labor. But in the Emergency Price Control Act of January 30, 1942, in section 1 (a) Congress enacted that

"It shall be the policy of those departments and agencies of the Government dealing with wages (including the Department of Labor and its various Bureaus, the War Department, the Navy Department, the War Production Board, the National Labor Relations Board, the National Mediation Board, the National War Labor Board, and others heretofore or hereafter created), within the limits of their authority and jurisdiction, to work toward a stabilization of prices, fair and equitable wages, and cost of production."

It will be recalled that the Stabilization Act of October 2, 1942, was an amendment to this Emergency Price Control Act of January 30, 1942, and that it was under this amendment that there were issued, as already described, President Roosevelt's much-discussed salary-and-wage-limitation Executive order of October 3, 1942, and Justice Byrnes' much-discussed salary-and-wage-limitation regulation of October 27, 1942. Throughout this Executive order and this regulation the National War Labor Board was repeatedly mentioned, and this Board has also been mentioned in various appropriation acts enacted by Congress. On these facts, anyone challenging in court the constitutionality of the National War Labor Board may have to face the argument that Congress may in some degree have ratified this Board.[6]

In any wartime discussion of the constitutionality of war measures it must not be forgotten that after 1865, and again after 1918, the Supreme Court evinced a disposition to hold invalid war measures which the Supreme Court might perhaps have held valid in wartime.[7]

All this points to the conclusion that for deciding all wartime disputes regarding the proper means for prosecuting a war the best and quickest tribunal has always been the ballot box. This is the lesson of the political reverses suffered by the Lincoln administration in the 1862 elections, and by the Wilson administration in the 1918 elections, and by the Roosevelt administration in the 1942 elections. Today this is doubly significant, for the present Supreme Court seems more disposed than any of its predecessors to rely wherever possible upon the normal political processes as the appropriate check and correction for any extravagances or deficiencies or aberrations of Presidential and congressional action or inaction.

We have traveled far since the Lincoln administration. Civil rights, as we have seen, were then often disregarded. Property rights, however, were then sedulously protected. From 1862 to 1864 the Federal income tax on incomes over $10,000 was only 5 percent, and after 1864 it was only 10 percent. Today income taxes approach confiscation, and property rights in peacetime and wartime have been drastically curtailed by acts of Congress and by Supreme Court decisions. Arrests and military detentions under Presidential proclamations, without an act of Congress or any legislative warrant, were numbered by the thousands during the Lincoln administration. This would be intolerable and inconceivable today, and if a single instance should now occur the administration would immediately be condemned by the country and by Congress irrespective of party and also by the entire Supreme Court, eight of whose nine members owe their present appointment to this administration, for never has the Supreme Court been more determined than now to exert all its judicial power to check and correct any restraint on due process, free speech, free press, and other civil rights, or any restraint that can possibly tend to impede the free operation of the normal political processes.

William Green's Threat to Purge Congressmen

EXTENSION OF REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. STEWART. Mr. Speaker, this afternoon we are to vote upon the passage of the conference report of the Smith-Connally bill, and each of the 238 Members that voted for the bill have been branded collectively by William Green, the president of A. F. of L., as enemies, under the heading of "The roll call of labor's enemies" in the weekly news sheet of the American Federation of Labor, issue of the date of June 8, 1943, at Washington, D. C.

Personally and individually we cherish his appellation, for we know differently. Now he might have dubbed us enemy to labor racketeers and strikers, and he would have told the whole truth, for we are exactly that. Organized labor leaders have become so dictatorial and won so many battles that the president of the A. F. of L. took off a real high chew when he took unto himself—he and a few labor satellites will defeat those voting for the bill and again after the vote calling to our attention his threat if Congress did vote for this bill and listing those that did vote for the bill in what he terms "mandate" pleases me very much, for the people in Oklahoma are ready to meet his proposal blow for blow at the ballot box.

Now he is ready to throw cut of the window all Members of Congress who see and know of the necessity for even much more stringent laws than this bill is that voted for its passage. Organized labor's policies demand 100 percent performance for a Congressman to cast one vote against any measure in which the leaders oppose is self-inflicted suicide insofar as the leadership is concerned.

I am a new Member of Congress. The people of Oklahoma know my position. I promised to do all within my power to stop racketeering and strikes, and this bill is the best measure that I have had an opportunity to vote upon. I have sponsored and passed through the Oklahoma State senate antilabor racketeering bills, and I am ready to leave nothing undone as a Member of Congress to correct the abuses labor leaders are inflicting upon the war effort.

The country would be much better off by the passage of corrective labor laws than defeating me for reelection. After all I have to live with my conscience and if the price of staying here is letting John L. Lewis, Philip Murray and William Green make my mind up for me I should be defeated.

As aforesaid, I am a new member of this body. I am informed that a reading of the CONGRESSIONAL RECORD will clearly disclose that fully 75 percent of those Representatives now classed as "enemies of labor" are the men who fought the battles for all the gains in labor legislation brought to the worker during the Roosevelt administration. Oh, Mr. Speaker, ingratitude is a viper in the hands of those vicious labor leaders of organized labor who forget their responsibility to our Nation at war.

I am so proud of my classification by William Green that I wish for his threat and outburst in promising to purge this body be preserved in the archives of this Republic, in the CONGRESSIONAL RECORD. Mr. Speaker, since my time is coming to a close after having first obtained your permission, I wish to have printed in the RECORD Mr. Green's doubleheader threat with 238 members listed for political slaughter, as follows, to wit:

THE ROLL CALL OF LABOR'S ENEMIES

WASHINGTON, D. C.—Before the House of Representatives acted on the Connally-Smith bill, the Executive Council of the American Federation of Labor issued this warning:

"The American Federation of Labor calls upon Congress to defeat the Connally-Smith bill. We will demand a record vote on this measure. Regardless of whether it is killed or adopted, we shall endeavor to vote out of office any member of Congress who supports it. Into this effort, the American Federation of Labor will pour every resource at its command."

In compliance with this mandate, we publish herewith the names of the 238 members of the House of Representatives who voted for adoption of this vicious antilabor bill.

Abernethy, Mississippi; Allen, Illinois; Allen, Louisiana; Andresen, H. Carl, Minnesota; Anderson, California; August H. Andresen, Minnesota; Andrews, New York; Arends, Illinois; Arnold, Illinois; Auchincloss, New Jersey; Baldwin, Maryland; Barden, North Carolina; Barrett, Wyoming; Bates, Massachusetts; Beckworth, Texas; Bender, Ohio; Bennett, Missouri; Bland, Virginia; Bolton, Ohio; Bonner, North Carolina; Boren, Oklahoma; Boykin, Alabama; Brooks, Louisiana; Brown, Georgia; Brown, Ohio; Bryson, South Carolina; Buffett, Nebraska; Bulwinkle, North Carolina; Burch, Virginia; Burgin, North Carolina; Camp, Georgia; Cannon, Missouri; Carlson, Kansas; Carson, Ohio; Case, South Dakota; Chenoweth, Colorado; Chiperfield, Illinois; Church, Illinois; Clark, North Carolina; Clason, Massachusetts; Clevenger, Ohio; Colmer, Mississippi; Cooley, North Carolina; Cooper, Tennessee; Courtney, Tennessee; Cox, Georgia; Cravens, Arkansas; Creal, Kentucky; Cunningham, Iowa; Curtis, Nebraska; Davis, Tennessee; Dewey, Illinois; Dirksen, Illinois; Disney, Oklahoma; Ditter, Pennsylvania; Dondero, Michigan; Doughton, North Carolina; Drewry, Virginia; Durham, North Carolina; Dworshak, Idaho; Eaton, New Jersey; Elliott, California; Ellis, Arkansas; Ellsworth, Oregon; Elmer, Missouri; Elston, Ohio; Fellows, Maine; Fish, New York; Fisher, Texas; Fulbright, Arkansas; Gale, Minnesota; Gamble, New York; Gathings, Arkansas; Gavin, Pennsylvania; Gearhart, California; Gerlach, Pennsylvania; Gibson, Georgia; Gilchrist, Iowa; Gillette, Pennsylvania; Gillie, Indiana; Goodwin, Massachusetts; Gore, Tennessee; Gossett, Texas; Graham, Pennsylvania; Grant,

Skipper Gillan

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, June 11 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which was published in many newspapers through the Consolidated News Features, Inc. It is the story of Skipper Gillan, written by his father, Jim Gillan, for Jay Franklin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE, THE PEOPLE; RELIEF FROM DRAMA

(By Jay Franklin)

He's not very big, but the Hitlers and the Japs are words that fascinate him. He had a cousin killed at Pearl Harbor and an uncle, a captain in the Navy, whose car was riddled a minute after he had jumped from it at the Honolulu naval base.

Even at 4 years and under, he has the guns, soldiers, ships, and tanks lined up each day, fighting Japs mostly. His aircraft carrier and planes are always busy.

The rest of the news he does not know: That Japs are wounding Americans intentionally under the theory that it takes other men and time to care for wounded, more trouble for us than the dead. He wouldn't understand, anyway, why American soldiers, in fog and snowdrifts, fighting above the clouds on Attu, face an enemy who prefers death to surrender—or why in the whole Attu battle only four prisoners have been taken by his Uncle Sammy.

Bugs, ants, mosquitoes, vermin, and animals are a part of the daily life of the soldier and marine down in the south Pacific, but to "Skipper," for that's what they call him, those things are just a part of the strange living things that are a constant source of amazement.

Things that do not touch him are many. There is the ugly mood of John L. Lewis, the bickering between Government agencies, the desire of many people to embarrass his nice man, as he calls the President of the Nation whenever he encounters his picture in the magazines.

Nor does he understand the pattern of life in democratic countries which seems to make inevitable such things as the coal strikes, and the lust for power and money at times when the very lives of the nations are at stake. He will read some day of the fall of France and wonder. He will get some kind of an understandable picture of the struggle for political and economic power in north Africa—before the enemy was run out, while the battles were going on and then intensified when the smoke had cleared away. The reason for the writing of all this is a simple incident—the sort of incident, amid all the agony and fear, terrorism and horror, that makes for unforgettable moments in the lives of civilians or soldiers.

For the other day the boy was standing in the driveway of his home watching a long column of soldier-filled jeeps and trucks on their way to maneuvers. He had watched them on many days before. They always waved and they had become a sort of personal fixture and a part of his own personal property.

This last time, he stood in the driveway with an American flag in his hand. He waved it wildly at the passing column. At first there were waves from the uniformed men, then there were yells and then shouts. The whole column shouted and cheered and continued until the last jeep and the last truck were far down the road.

He wondered and then asked why the men had waved so frantically and shouted so loudly. He couldn't make it out. The answers to his questions were difficult.

Difficult, because here was a column of men who soon will be traveling roads through foreign mountains or on foreign deserts. Here were men who soon will have a great deal of time going over the past, remembering America as they left it. They will soon be thinking of home and savagely fighting for the moment they can return.

But the Skipper's question never will be quite answered. No one wants to tell him because no one really knows what goes on in the hearts and heads of the passing column. It's just one of those things packed away in hearts that elevate men into something higher than themselves, that brings shouts and cheers from hardened, sometimes embittered, lips.

The question will, in part, be answered on the battlefield. It will, in part, be answered whenever a man of that column lies awake and asks himself what it's all about.

Part of that answer will be a little golden-haired boy with his blue eyes shining and his flag waving, back in a little Virginia town, standing on the lawn of an ordinary American's home. There are so many of the same homes in Maine, in California, in Texas, and Montana. He is something different from closed mines, the sacredness of a dollar-a-day, or 6 percent, or sales taxes.

Quite different from the worry over the Presidential election of next year, which cripples and distorts older minds.

Different, too, from a snarling, greedy, ambitious enemy bent upon destroying the boy and his future hopes and fun and freedom.

What We Are Fighting For

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, June 11 (legislative day of Monday, May 24), 1943

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a war message entitled "I Am Not Playing for Marbles," which was published by the Nash-Kelvinator Corporation and which I think is especially outstanding.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

"I'M NOT PLAYING FOR MARBLES * * *"

This is it.

We're headed straight for the open doors of hell, and when we get inside they'll slam 'em shut and lock 'em.

Maybe I'll come out alive, and maybe I won't.

I'll take that chance. I'll take it because I know, now, what I'm playing for over here. And it isn't marbles.

I'm not fighting for the right to wait in line for my daily bread.

I'm not using a bayonet and a knife to carve myself a hole where I'll hide in fear for the rest of my days.

I'm not betting my life out here so anyone can tell me where and what and how to worship.

I'm not outguessing madmen with machine guns in their hands for the privilege of being told what to say and when to say it.

I'm fighting for freedom!

I'm fighting for the things that made America the greatest place in the world to live in * * * that are going to keep America the greatest place in this world to live in!

So don't anybody tell me I'll find America changed. Don't anybody tell me there's no future any more in America.

Don't anybody tell me there's a ceiling on my opportunity to make a million or be President.

Don't anybody tell me there's a bridle and bit waiting for me with my name on it!

That's what took the humanity out of the men I'm up against now. And I don't want any part of it!

I want to come back to the same America I left behind me * * * where our way of living has always brought us new and better things * * * and always will * * * the America where there's clean, hard work to do * * * where there's freedom, and justice, and opportunity for all * * * where, if you can think and plan and act on your own, there are no limits on how high you can rise, how far you can go.

That's what I'm fighting for.

That's America to me.

Keep it that way until I come back!

That This Nation, Under God

EXTENSION OF REMARKS

OF

HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a sermon by the Reverend John Curry Walker, D. D., Second Congregational Church, Waterbury, Conn., May 16, 1943:

"Finally, my brethren, be strong in the Lord and in the power of His might." (Ephesians 6: 10.)

The most of us read our newspapers somewhat carelessly after we have finished the leading articles on the first page and the items or features which appeal to our special interest. Ever and again, however, when we catch a familiar name or topic in an unfamiliar place we concentrate again suddenly and eagerly. Some few weeks since I was reading a paper on the train and I was about to put it to one side when my eye caught an unusual heading for a column on the editorial page, "Religion must have place at peace council." I am accustomed to reading admonitions about the importance of religion in the home and the school and even in the market place, but to stress the importance of religion at the peace table was something else again and something very striking and significant. I read that letter to the editor and the editorial comment on the same page with all the greater interest because this letter had been written by none other than our good friend and neighbor, Mr. William Montgomery Bennett, of Woodbury, a layman who has proved his Christian concern and his sound business judgment by his amazing success in the furtherance of such good causes as Bundles for Britain and the British War Relief Society.

What is the gist of Mr. Bennett's suggestion? He founds his appeal on our common conviction that modern western civilization flowed out of and was based upon fundamental Christian religion. It must follow then that to save and perpetuate that civilization we must have Christian principles as the standards and norms by which the thinking, the acts and decisions of the peace conference are to be judged. We must bring the spirit and ethics of Jesus to bear on the hearts and minds of the delegates so that for the first time in history a just and lasting peace, under God, may be established for all nations of the world.

Mr. Bennett reminds us that at all modern international conferences the accredited delegates are supported by a corps of experts, consultants, and specialists on every subject—except religion. Political, material, financial, mercenary considerations have very largely guided the various delegations in times past, notwithstanding the fact that the civilization they professed to wish to save and sustain sprang from spiritual ideals, Christian ideals. Let us have, then, at the peace conference which follows this war a religious committee with clerical and lay delegates representing the major communions in the various countries, an international religious advisory committee. Must not the forces of high religion be brought to bear if we are to hope for any large measure of justice in the forthcoming peace treaty? Must we not seek unity for our war-torn world in the righteousness which seeks justice, loves mercy, and walks humbly before God?

The suggestion that our friend makes is so simple, so sound, and the penalties so inevitable if we ignore the suggestion that I wonder that it has not been brought to the fore long ago. We must try religion, we must use religion. Religion must be brought to bear at the point where we can exert the greatest possible leverage on the future of mankind, at the time when to ignore moral principles and religious convictions would prove to be the most criminal folly. We have scores of peace plans, hundreds of utopian schemes, all manner of post-war blueprints, any number of committees and commissions, but here is a simple suggestion to bring the conscience and the vision of the Christian Church to bear on the most fateful issues of our day and generation. There is a time of extremity in the life of every man when he feels that he must call upon God for help. This is a time of extremity in the life of our civilization when, of all times, we should call upon God for guidance. Let the Church of Christ speak in the name of the God of Justice.

We can anticipate that certain objections will be raised in certain quarters. The practical men, the realists, will scoff at the idea of advice from visionary men like religious leaders. They will insist that we must deal with the facts in the case, we must deal with the realities of the situation, we must look out after our own national interests and let other nations look after theirs. They will question the ability of these same religious leaders to agree on what we want in the way of a settlement and they will assume that the less attention is paid to clerics and idealists the better.

Suppose we face some of these objections as frankly and as fairly as we can. Is it the visionary that men fear, or profess to fear? Let us look at the record at the end of the last war. Religion went unrepresented at the last peace conference, and will anyone contend that we got either a just or a wise peace? In those days it was Woodrow Wilson who was dubbed the visionary. It is true that the practical men, the realists, were too clever for him. Foreign realists like Lloyd George and Clemenceau outwitted him on many issues at the peace conference, and that little group of willful, stubborn, short-sighted men in the United States Senate prevented the ratification of the League of Nations Covenant. The practical men had a field day, a whole series of field days, after the First World War. They made their kind of a peace, the kind of a peace we may get this time unless the peoples of the world, the religious leaders of the United Nations, rise up and demand something better, wiser, more just, and more humane.

Gerald W. Johnson, special writer for the Baltimore Evening Sun, one of the keenest minds, one of the best informed men in this country, commented on the Wilson legend recently. He said, in part, "For 20 years this country had a grand time laughing at old Woodrow Wilson as a wool-gathering, fuzzy-minded Simple Simon who didn't know a hawk from a handsaw. The professor in politics, the impractical idealist, the man with the Messianic delusion, became our current descriptions of all that is undesirable in public life. But the laughter began to die down soon after one Adolf Hitler became Chancelor of the German Reich in 1933; and on December 7, 1941, it stopped completely. Today the evidence is incontrovertible that Woodrow Wilson had more hard, common sense in his little finger than most of his critics had in their whole bodies, skulls included."

Mr. Johnson recalls that "In 1924, just before his death, he wrote that the tragedy of the last 6 years was that America's refusal to accept responsibility made it inevitable that within 20 years the whole job would have to be done over again at '10 times the cost.' He underestimated the time. It was 17 years, not 20. He certainly underestimated the cost in money, for we have already spent 10 times what the war of 1917–18 cost, and we have hardly more than begun. Did he underestimate the cost in lives? That is for the future to reveal, as far as the Army is concerned, but the Navy has already announced losses for the first day of the war nearly 3 times as great as was the number of Navy personnel killed in battle in 1917–18. That man knew what he was talking about."

With a punitive, realist, practical man's peace, who did win the last war? Strange as it may seem, the ultimate victors proved to be Vladimir Lenin, Benito Mussolini, Adolf Hitler, the Japanese militarists. These were the men who took full advantage of the opportunities offered by a peace that rewarded the imperialists among the Allies, confirmed America in a policy of political and economic isolationism, and invited aggressors to reap the rewards of international chaos and anarchy. "Without vision the people perish." Those men who were responsible for the Versailles Treaty were blind leaders of the blind. They sowed the wind with their realism and we reap the whirlwind of agony and slaughter.

Religion, the Christian religion, has a right to be heard. It will go ill with us and with the nations of the world unless moral principles are invoked, religious insights are given their fair weight, when the treaty of peace shall be written. What William Penn said long ago has been underscored by the history of the last 25 years, "Mankind will ultimately be governed either by God or by tyrants." Crass selfishness, flagrant injustice, brutal intolerance, open denial, and disregard of the moral law, lead as certainly to disaster in the family of nations as they do in the lives of the individual human family. Ten years ago Jan Christiaan Smuts, the philosopher, statesman, field marshal of South Africa said, "If you ask me what is wrong with Europe I should say that the moral basis in Europe, the bedrock of the Christian moral code, has become undermined and can no longer support all that superstructure of economic and industrial prosperity which the last century built up on it." What the field marshal said of Europe was true of the whole international world and no small part of the cause of the steady disintegration of international relations during the twenties and thirties was the realism, the cynicism with which the last peace treaty was written.

It is too much to hope that those who write the next peace will be animated by the purest possible motives and that they will give us perfect justice. What we do ask is a peace which will give us the larger measure of justice, that will sow as few dragon's teeth as possible, that will be essentially a

dynamic peace, a peace that will give us and all men some new hope and promise for the future. It has been pointed out by Sir Norman Angell that what we call the Treaty of Versailles was really the second Treaty of Versailles, the first having been imposed by the Germans on France at the end of the Franco-Prussian War. To all intents and purposes Hitler wrote a third Treaty of Versailles by successfully defying and flouting the provisions of the second treaty. Do we want another Versailles, written in the same temper of revenge or do we want to break the fatal chain and begin to write a new kind of a treaty? We cannot afford to punish Germany according to what might seem her just deserts in the light of the law of an eye for an eye and a tooth for a tooth. We must think in terms of future justice and enduring peace.

Quite recently Senator WILEY, of Wisconsin, made a plea for a spiritual second front. He began by saying that "the whole world cries out for clear-thinking leadership." He notes that we can perform miracles on the scientific and industrial front but that we need above all else a great moral and spiritual renaissance. "This is a war for men's minds," says Wendell Willkie in his epoch-making book, One World. "This is a war of the spirit," says General Smuts. How great then the danger if we are to leave it to cynicism, so-called realism, to determine what kind of a peace the peoples of the world are to have at the end of the conflict when they have paid the full price of devotion. These religious leaders, and I assume that they would be men of the type and stature of the Archbishop of Canterbury and the officers of the Federal Council of Churches of Christ in America, would not attempt to dictate provisions or to make specific demands but rather to lay down broad principles of action, to point out certain essential elements of common justice, to voice the dreams and aspirations of the great masses of men and women who have given so freely of their very life's blood in the hope that freedom might be preserved and lasting peace might prevail. Dr. Nicholas Murray Butler of Columbia University has said that "To speak of an independent nation and its government as sovereign is to use a legal formula. It is the moral law that is sovereign—and only that. This is true of nations and their governments as well as of individuals." In its essence this suggestion of religious aid and counsel is an attempt to bring the moral law to bear at the point where the destinies of 2,000,000,000 people hang in the balance and where old mistakes and cynical revenges will make countless millions mourn if the moral law is flouted.

Yes, I think religion has a right to be heard. We have no right to ask for a hearing at the peace conference if our purpose is to further the interests of our own denomination or communion. Churchmen have no special claim to a hearing if they speak as Catholics or Protestants but they have every right to be heard if they speak in terms of humanity, if they speak in the name of Christ. On the notice board of a church in Ohio there appeared these words: "This church has 33 members in the armed forces and 530 members praying for a just peace." Insofar as that is the spirit of a church, or a synagogue, its members have the right to be heard in the councils of state and at the conference table of the nations. Men say, "Why doesn't God stop this war?" or "Why don't the churches stop this war?" What can God do if men refuse to take account of His laws of justice and righteousness? How can men hold the churches accountable for failure to prevent war when statesmen refuse to take counsel with the churches or be guided by them except when war has already become a tragic reality?

It has been left to a refugee professor at the New School of Social Research in New York, one Dr. Eduard Heinmann, to point out that Abraham Lincoln's famous phrase about "government of the people, by the people, for the people shall not perish from the earth," is constantly and regularly quoted apart from its context and therefore misquoted. The familiar phrase is qualified, and fortified, by the clause preceding. This is what our great President said, "that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth." The words, "under God," are the integral part of Lincoln's thought. He did not believe that democracy could be made secure except as under God. He did not believe men were immune from greed, nationalism, vindictiveness, moral and spiritual blindness except as under the guidance of Almighty God.

"Except the Lord build the house they labor in vain that build it: except the Lord keep the city, the watchman waketh but in vain." At a time when we hope to turn a new and shining page in the history of man's life here on earth, our last, best hope is to be found in compliance with the will of God. How shall we make democracy secure, what will guarantee our "four freedoms," what can we do to heal the wounds of war and still the hot passions of hate and revenge if we cannot rely on other than human help? We have knowledge such as will remove material mountains, but we lack the wisdom and the faith that will break down the barriers that divide and curse our modern world. If there is any high Christian statesmanship available anywhere in this world, we need it and we need it desperately in these days.

The New York Times of March 27, 1943, reported the eyewitness account of the loss of four chaplains who went down with a cargo-transport torpedoed in the North Atlantic early in February of this year. The moving story of what happened is summed up in the words of a 19-year-old lad who was one of the survivors. This Daniel O'Keefe said, "Just before the ship went down the chaplains gave their life preservers to members of the crew. They were standing on the deck praying when our boat drifted out of sight." One of the chaplains was a Jew, one a Roman Catholic, two were Protestants. In time of tragedy religion finds a common denominator in sacrifice. In a time of crisis I believe religion can find a common denominator, a united voice, to speak justice and peace to the nations. Let us pray God that it may be so.

Congress and the Bureaucrats

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. KEFAUVER. Mr. Speaker, the growing breach between Congress and the executive departments is an alarming condition which gives all of us much concern. The problem was ably discussed in a recent address delivered by William C. Fitts, Jr., general counsel of the Tennessee Valley Authority, to the Knoxville branch of the American Society of Civil Engineers. Under leave to extend my remarks, I include the text of Mr. Fitts' address and commend it for your consideration:

At a time when unity and cohesion of effort are more important than at any time in recent history, an internal conflict is developing which has not received the public attention that it deserves. At a time when we can least afford bitterness and bickering, the effective functioning of the processes of government is being seriously threatened by a growing cleavage between the Congress and the so-called bureaucrats. Since many of us here are bureaucrats according to the accepted popular definition of that term, and since all of us have a substantial stake in the answer to the question of whether the machinery of government is geared to withstand the stresses and strains that must inevitably follow this war, this controversy is worthy of our serious attention.

In my opinion, this conflict is a senseless one and springs from a lack of historical perspective and an appalling ignorance of the basic framework of government established by the Constitution. There is a surprising lack of understanding on the part of administrators, the Congress, and the public of the proper division of authority and responsibility in the conduct of the public's business. At one extreme there is the type of administrator who insists that he knows what is best for the people, that it is his business not only to make the day-to-day administrative decisions that are his proper function but also to determine the long-range objectives and policies to be pursued, and that the Congress has no legitimate concern with the policy decisions that he makes even when those decisions affect the lives and welfare of large segments of the public.

This attitude of mind, which seems to me to be the negation of representative government, reaches its climax when we find administrators insisting that it is their prerogative to draft legislation and present it to the Congress for rubber-stamp approval and complaining that the Congress is making a nuisance of itself if it insists on scrutinizing the proposal, debating it, and amending it to bring it in accord with congressional policy. Those who would thus deny to the legislative branch its constitutional function of shaping and controlling policy decisions and who seek to create public contempt for the legislative process are guilty of a tragic error. The acceptance of such a theory would reduce the Congress to the status of the German Reichstag immediately prior to its permanent demise.

Fortunately, those who take this view are but a handful. They are either inept and inexperienced administrators who simply fail to understand the Government under which they live, or they represent that distinct minority who believe that representative government has outlived its usefulness and seek to ride what they conceive to be "the wave of the future." Most administrators today have a clear recognition of the limitations of their powers and are honestly seeking to strengthen—not to destroy—representative government. The tragedy is that the mistakes of the minority are now being attributed to the entire executive branch, and all administrators are lumped together under the opprobrious epithet "bureaucrat" and pictured as despots seeking to ride roughshod over the public and Congress alike.

To understand how prevalent is this misconception and how deep this bitterness has gone, it is only necessary to read the columnists in the daily newspapers or to glance at random at any issue of the CONGRESSIONAL RECORD. As a result, the defenders of legislative power have taken an equally indefensible and destructive position at the opposite extreme. It now appears that the accepted position in Congress is that it is the

business of that body not only to legislate—that is, to lay down the broad framework of policy within which government is to function—but also to control the detail and minutia of managing the public business.

The manifestations of this view are everywhere. We find them in the extreme theory of the implications of the legislative power of control over the purse. As legitimately construed, that power is one of the bulwarks of free government. It was wrested by the Commons from the Crown after centuries of bitter struggle, and all of us recognize that our system of government depends upon retaining intact in the legislative branch the basic control over appropriations. But the legislative power is the power to determine and declare the broad policies and objectives for which Federal funds shall be expended. It is not the power to supervise the detailed method of the spending or to determine the personnel to be employed in the administrative branch. The theory of the Constitution is that the function of the legislative branch is to legislate; that is, to declare policy. The function of the executive branch, in the words of the Constitution, is to "see that the laws are faithfully executed," and that includes the details of management and the hiring and firing of personnel.

Yet that theory is today being nullified by the simple expedient of extending the power over the purse to the details of managing this vast and complicated business we call government. A few examples reveal the method.

The orthodox congressional theory of the status of the Comptroller General is that that officer is a special representative of the legislative branch set up for the express purpose of supervising and controlling the detailed manner and method by which appropriated funds are expended by the executive departments. This is bad theory and worse practice. If the control is not exercised, it is worse than useless. If it is exercised, it results in placing final responsibility for the faithful execution of the laws in one branch of the Government while vesting final authority over the manner of expenditure in the representative of another branch. Such a system stifles imagination and initiative in the administrative offices and makes for an administration of the people's business that is encased in a strait jacket of rules and regulations.

The auditing of expenditures by the executive departments is clearly an executive function. What is needed is a modern executive audit of administrative expenditures, with adequate provision for systematic reports of the results of those audits to the proper congressional committees. Under such a system the legislative branch would be in position to keep fully informed as to the manner in which appropriated funds are being spent and would have available the necessary information upon which to base performance of its constitutional function of laying down the policies to govern that spending.

Closely akin to this attempt to control the executive through the device of legislative policing of expenditures is the even more indefensible practice of writing into the various appropriation acts detailed regulations of the day-to-day decisions that must be made in the management of any business. This practice is a nightmare to administrative lawyers. Scattered throughout hundreds of statutes we find—if our eyes are sharp enough—funds appropriated with provisos that no part of the money appropriated by that or any other act may be spent for travel, or that no automobiles may be purchased, or that only typewriters of a certain make or model may be obtained. If this tendency continues, it would not be surprising to find a proviso that only people with red hair may be employed with appropriated funds.

The most recent legislation, resulting from the activities of the Dies and Kerr committees, shows how this extremist view of the power over the purse may be applied to vest in the legislature the purely executive power of the selection of administrative personnel. For several years the Dies committee has been conducting what is politely called an investigation of the social, economic, and political views of Government employees. When the committee reaches the conclusion that any employee has Communist sympathies or is a member of a subversive organization, it brings the information before Congress with a recommendation that a proviso be written into the appropriation act prohibiting the payment of salary for any government position to the suspect. On several recent occasions these recommendations have been written into law. Thus, by the simple expedient of withholding funds, the Congress is exercising the Executive function of passing on the qualifications of subordinate employees in the administrative agencies. We are not here interested in the question of whether the particular proscribed employees are in fact Communists, Fascists, radicals, or liberals. The point is that when the legislative branch attempts to arrogate to itself the power of determining the qualifications of individual employees in the executive branch, it is pursuing a course that can lead only to chaos in government.

There is another related practice, increasing in usage in recent years, by which the Congress in effect deprives the President of an important power vested in him by the Constitution. I am referring to the device of circumventing the veto power by attaching highly controversial legislation in the form of riders to essential appropriation bills. Under the orthodox view that the President is without power to veto particular items but must either accept or veto the bill in its entirety, he is thus forced to acquiesce in legislation to which he is opposed since, to exercise the veto power would be to jeopardize, and, in many important instances, to block essential Government activities. While this practice may be defensible on strict legal grounds, it is clearly contrary to the spirit of the Constitution in that it amounts to abrogation by legislative action of one of the Chief Executive's most vital powers.

This same tendency toward confusion and usurpation by indirection is reflected in the present trend toward legislative control over the power of appointment and employment. The theory of the Constitution, and historical precedent for 150 years, is clear to the effect that the selection of employees in the executive departments is an Executive function. The purpose of the constitutional provision for senatorial confirmation of certain officers was to give to the legislative branch a veto power over the appointment of a limited number of policy-making officers in recognition of the legislature's primary interest in all matters of policy determination. This provision was never intended to have the effect of transferring the effective power of selection to the legislative branch. Nevertheless, that is exactly what has happened with respect to a large number of Federal employees. The actual power of selection and appointment of United States judges, district attorneys, marshals, collectors of internal revenue, postmasters, and a large number of miscellaneous appointees rests with the Senators from the State of residence of the appointee or, in the case of postmasters, with the Representative from the district.

The President, in effect, merely rubberstamps the senatorial appointment. This has not always been true, and there is nothing in the Constitution or historical precedent that compels it. There can be no hope for a stable career service in Government until this trend is reversed and the Executive insists with Jackson, Cleveland, and Wilson that the senatorial power to confirm is merely the power to accept or reject an Executive selection and is not the power to appoint.

Unfortunately, the trend is in the opposite direction. There is now pending in Congress a bill that would subject the employment of thousands of professional, technical, scientific, and management employees of the executive branch to senatorial confirmation. This would be bad enough if Senate action were limited to approval or rejection of an Executive appointment by vote of a majority of the Senate. It is much worse when we understand that under the practice of senatorial courtesy it means, in practice, that the selection of these Executive employees will be placed in the hands of the Senator or Senators controlling patronage for the particular State of residence of the employee. Under such a system every employee will retain his position at the will of the Senator or Senators from his home State. Every decision that is made, every action that is taken, must be with full recognition that if it arouses the displeasure of the patronage dispenser, the employee responsible may be forced out of his chosen work. No one in the administrative service would dare act without considering the consequences. Thus final control over management is to be transferred to the Halls of the Senate.

This tendency toward legislative interference with the details of management is further illustrated in a different field by the proposals that have been pressed in recent years to deprive the T. V. A. of the right to use its power revenues in the payment of operating expenses and thus to place the Congress in control of the complicated business of managing a vast utility system. The enactment of any such proposal would mean that such business decisions as the making of contracts for new loads, the increase of substation and transmission facilities, and the repair or replacement of major items of equipment would be made in Congress and not by the managers of the business.

While many of these matters to which I have referred are of great public importance on their own merits, the major significance lies in the dangerous trend toward confusion of function and division of responsibility. This trend threatens to dislocate the machinery of government from two directions.

The successful conduct of any business requires that those charged with the responsibility for management should be clothed with sufficient authority and independence of decision to make the determinations upon which the results depend. If those determinations are inhibited by the fear of legislative reprisals or by the necessity for obtaining legislative approval in advance of action, the inevitable result will be a type of administration that follows the safe road, that does only those things that have been done before, and that rigidly adheres to the path of tradition and precedent. This is stultification at a point in time when there is a crying need for imaginative leadership.

Equally serious is the adverse effect upon the legislature itself. The job that has been assigned by the Constitution to the legislative branch—that of charting the course that Government is to follow—is of such paramount importance that it demands the undivided attention of the Congress. When that body diverts its efforts and energy to the details of administration, it, to that extent, disables itself from discharging the great obligations placed upon it by the Constitution.

Government today touches the lives of all of us. The welfare of each of us may well be affected if this misunderstanding of power and function is permitted to continue. It is time that a demand be heard for mutual respect and understanding—in short, for a re-

turn to the middle ground which is in essence the great compromise of the Constitution. To understand where we have gone wrong it is essential to realize that the system of government established by the Constitution was fashioned out of the conflict between two groups of extremists. On one side were those who, fresh from the struggle with the Crown, feared a strong executive and insisted upon placing the final power of sovereignty in the hands of the Legislature. Opposed to them were those who, like Alexander Hamilton and Gouverneur Morris, distrusted the people, feared what they called the tyranny of the majority, and demanded a strong central executive to keep in check what they feared would be the excesses of a popular assembly.

The doctrine of the separation of powers and the system of checks and balances that are grounded in the Constitution represent the middle ground between those two extremes. Thus, there was created a strong executive with broad powers to administer the laws but with only two methods of influencing legislation: First, the power to recommend and to appeal to the public for popular support, and, second, a modified veto. As an offset to this Executive power the complete power to legislate and to appropriate was lodged in the Congress, supplemented by the limited power of senatorial confirmation as a check on the Executive selection over what was intended to be a very limited class of policy-making offices. No one contends that this system is perfect. It has definite weaknesses, and it may well be that the parliamentary system which blends Executive and legislative power is preferable. But our immediate task is to make our present system work. It is clear that that objective cannot be accomplished by ignoring the legislative power or by substituting legislative control for management.

What is required is a cooperative endeavor to strengthen both the administrative and legislative branches and to provide the means for an effective working arrangement between them. To this end every responsible administrator in the Federal service should devote his efforts toward providing and keeping open channels of communication between himself and the Representatives of Congress. Instead of avoiding contacts with congressional committees and the reporting of the conduct of his business to the Congress, he should make a deliberate effort to find opportunities for informing the legislative Representatives of all aspects of his administration. In presenting appropriation requests, and in other appearances before congressional committees, the responsible administrators should at all times be willing to make a full disclosure of all of their activities and should avoid any indications of an attempt to conceal or a desire to deprive Congress of an opportunity to review the work of the administrative agencies and, where necessary, to legislate concerning their powers and responsibilities.

In all relations with the Congress it is essential that the representatives of the administrative agencies make clear their recognition of the final responsibility of Congress in the development and control of policy, while insisting upon the necessity of preserving to the administrators the right to make the detailed decisions upon which the efficient conduct of the agencies depends. Finally, it is essential that the Chief Executive begin now to regain that large part of the appointing power that has been whittled away and to insist on limiting legislative participation in the appointment and removal of employees to the boundaries contemplated by the Constitution.

On the other side of the picture there are adjustments both in thinking and procedures that seem to me to be essential. If I were in any position to give advice to the legislative branch, it would run somewhat as follows: Be realistic enough to recognize that modern government is a complicated business that requires the services of experienced and qualified management personnel. In performing your high constitutional function of declaring the policies that the management agencies are to follow, exercise care in defining the purposes and objectives that you desire to accomplish and then vest those managers with sufficient independence and discretionary authority to make it possible for them to accomplish those purposes. Make it clear that in carrying out your mandate those managers are responsible to you and to the people and be sure that they have sufficient authority to discharge that responsibility. Establish the necessary machinery in the legislative branch to keep fully informed as to the manner in which these managers are discharging their responsibility. One helpful suggestion toward this end is found in the proposals that have been made for equipping the Appropriations Committees and other special committees of Congress with expert staffs, qualified to obtain, analyze, and explain the data relating to the programs of the operating agencies. Preserve inviolate your control over appropriations and the general policies and objectives for which such appropriations may be spent. Avoid all attempts at controlling administrative personnel or the detailed business decisions through the device of minute appropriation restrictions.

It has been said that the great weakness of our Government as compared with the parliamentary system is the isolation of the Executive from the legislature. This is a valid criticism, but there is nothing in the Constitution that makes the defect irremediable. If there is a sincere determination to keep open the lines of communication and to perfect the machinery for doing so, there is no insurmountable obstacle to cooperation. If this Government is to succeed in meeting the conditions that will shortly confront us, such a spirit of mutual confidence and respect is essential.

America's Aviation Tomorrow

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 20, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts and quotations from an article entitled "America's Air Lines in the War":

Excerpt from President Roosevelt's annual address to Congress on the state of the Nation, January 6, 1942:

"Only this all-out scale of production will hasten the ultimate all-out victory. Speed will count. Lost ground can always be regained—lost time never. Speed will save lives; speed will save this Nation, which is in peril; speed will save our freedom and civilization—and slowness has never been an American characteristic."

Excerpt from address by the President of the United States to the National Aviation Forum on January 24, 1939:

"The country's welfare in time of peace and its safety in time of war rests upon the existence of a stabilized aircraft production—an economically and technically sound air transportation system, both domestic and overseas."

Excerpt from joint letter dated September 13, 1940, from the Secretaries of War and the Navy to the Secretary of Commerce, jointly stating the official Army and Navy policy with respect to the relation of the armed forces to the air transport industry:

"The War and Navy Departments consider that the air transport industry is a necessary adjunct to the national defense * * * it is both necessary and practicable to allocate available aviation personnel and matériel in such a manner as to insure the maintenance of air-line service without reduction in its safety and reliability."

On August 9, 1940, Secretary of War Stimson said to Congress:

"Air power today has decided the fate of nations."

Excerpt from a letter dated April 1, 1942, from the Secretary of War to the commanding general, Army Air Forces:

"Civil air transportation is of vital importance to the war effort. * * * Key air-line personnel should be encouraged to stay at their posts."

In the letter of Secretary of War Henry L. Stimson to the chairman of the Military Affairs Committee of the House of Representatives, and to the chairman of the Military Affairs Committee of the Senate, in paragraph 2 thereof, the Secretary said in each letter as follows:

"Continued uninterrupted service by domestic air lines is essential in the interest of national security."

Excerpt from letter dated November 6, 1942, from General George C. Marshall, Chief of Staff, United States Army, to the president of the Air Transport Association of America:

"This job (transportation by air by America's air lines) * * * is essential to our business of getting on with the war."

By order of the Secretary of War, signed by General George C. Marshall, Chief of Staff, War Department circular No. 211, dated July 1, 1942, directs:

"In the performance of its mission, both within and without the continental United States, the Army Air Forces will utilize to the fullest extent possible, the services, facilities, and personnel of the civil air carriers."

Lewis B. Hershey, Director, Selective Service System, January 26, 1942:

"Air transportation is a vital and necessary adjunct to our defense and war effort. Almost daily the military services are calling upon the air lines to perform special missions in connection with the urgent and expedited transportation of personnel (including the transportation of troops and their equipment) and matériel necessary to our war effort. * * * The air lines are increasingly being called upon to perform vital maintenance, airplane assembly, weather forecast and communication. * * * Delay of above services will impede the war-production program, and in that sense will endanger the national safety."

At his press conference on January 8, 1942, Joseph B. Eastman, Director of Defense Transportation, stated:

"Efficient transportation is just as important to the war effort as the furnishing of machine tools."

Excerpt from an address of the Honorable James A. Farley, former Postmaster General of the United States, at the dedication of the LaGuardia Airport, New York City, October 15, 1939:

"The very existence of these air lines, with their excellent equipment and personnel, is a strong guaranty of the Nation's peace and safety."

The Honorable KARL STEFAN, United States Congressman from Nebraska and member of

the House Committee on Appropriations, in speaking to the Honorable William A. M. Burden, Assistant for Aeronautics to the Secretary of Commerce, said of the Civil Aeronautics Administration in its administration of the Federal Airways System and of the traffic over it (p. 125 of the printed hearings of the House Committee on Appropriations, Department of Commerce appropriation bill for 1944):

"You are more in the war than the railroads."

During the debate in the House of Commons in London on February 25, 1942, Mr. Hore-Belisha, Secretary of State for War in the Chamberlain Government at the outset of World War No. 2, declared:

"There is inadequacy of machines of the kind to carry parachute troops, and not enough transport-carrying airplanes.

Excerpts from page 366 of the CONGRESSIONAL RECORD of January 25, 1943, from the speech of the Honorable CARL VINSON, United States Congressman from Georgia:

"Aviation, we all know, has advanced by leaps and bounds. It will continue to grow. After the war it may become the chief common carrier within and to points without our borders. * * *

"The Congress has established in recent years a Civil Aeronautics Administration and a Civil Aeronautics Board. That legislation originated in the Committee on Interstate and Foreign Commerce * * * and for it the country should be profoundly grateful to that committee's great chairman, the gentleman from California [Mr. LEA], and to his committee colleagues, for their wisdom and foresight. Its value in this war situation has proved to be immeasurable. * * *

"The civilian pilot-training program, the development of landing areas, the installation of air navigation facilities and the development thereof, including communications and directional guidance, and the accomplishments of the Civil Aeronautics Board, have all been of the greatest value to the country in the prosecution of the war, and every phase of the work of these agencies today is performed under the closest kind of cooperation with our military and naval air arms. In time of war, in fact, they may be said to be adjuncts of our defense arms, like the Coast Guard, for example, is of the Navy. They are part and parcel of the defense establishments."

Extract from New York Herald Tribune of May 6, 1943, quoting Maj. Gen. Harold L. George, commanding general, Air Transport Command United States Army Air Forces:

"If it had not been for their (air lines in world-wide air transportation) wholehearted spirit of cooperation, it would have been as nearly impossible as anything can be impossible for us (the Army) to carry out the job in the way it has been done."

Antistrike Legislation

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. O'CONNOR. Mr. Speaker, we have before us today the conference report on S. 796, known as the Connally bill. I opposed the passage of this bill in the House for several reasons. Among them was that the Commander in Chief of the Army and Navy has never asked for this legislation. Neither did the departments of Government having to do with the prosecution of the war; namely, the Navy, the Army, and the Maritime Commission. As a matter of fact, the representatives of these departments testified before the committee that in their opinion such legislation would retard our war effort. To whom must we look for guidance and leadership in such matters as this? The responsibility of the conduct of this war rests upon the Chief Executive as Commander in Chief of the Army and Navy, and upon the Army and Navy.

There are also many vital defects in the bill as finally agreed upon by the conferees. No one can escape the conclusion that it is a direct slap at the millions and millions of patriotic, hard-working American citizens. James F. Byrnes, Director of War Mobilization, said in a speech just the other day:

> When you condemn the few who strike do not forget that the great mass of the workers, and with rare exceptions, the leaders of organized labor, are doing as much as any of us, and more than many of us, to see that there is no interruption of war production.

He went on to say:

> Do not forget that during 1942 only one-twentieth of 1 percent of the time of workers engaged in war work was lost on strikes. The striker in war industry is almost as rare as the slacker in the Army.

These millions of workers have in the services of our Army and Navy upward of 1,000,000 boys, as well as many of their daughters. They are just as concerned and just as patriotic as any class of people in the United States. I think it goes without saying that this bill will do more to create industrial unrest than any other one thing.

I wish to state that I observed to one of the conferees in the course of the debate the following: Let us assume that this bill is before the House because of the so-called coal strike as production of war materials has reached an unparalleled peak, which assumption I think is fair. Now assume such to be a fact, are we not bypassing this bill deciding that the operators are without fault and that the miners are not entitled to their increase in pay? Such action on our part, in my opinion, is unfair.

If we pass this legislation, we not only condemn the miners for their action in stopping work but we also decide the issue against the miners. All of this, I am not prepared to do. I happen to know that the coal-mining occupation is a seasonal occupation. Seldom do these men work continuously during the year; that they are underpaid in view of living conditions, I do not think any fair-minded person will deny. Again, may I call your attention to the dangerous and hazardous occupation of coal mining. Just recently 79 dead bodies were removed from a coal mine in my district after several days of frantic work on the part of the rescuers. They came from Butte and every other place to rescue their fellow miners. I am not prepared by my vote today to decide against this group of patriotic Americans even though we may believe at the time that they are being misled by misguided and over-ambitious leaders and that their procedure in getting their rights is wrong. On the whole I think it is a vicious piece of legislation passed at a mighty dangerous time. England had trouble with her coal miners until Churchill came into power and he placed a Bevin at the head of labor. What we need in this country is a Bevin. In this over-all picture let us not forget the words of the immortal Abraham Lincoln uttered as far back as 1860 in discussing the Massachusetts shoemakers' strike when he said:

> Thank God that we have a system of labor where there can be a strike. Whatever the pressure, there is a point where the workman may stop.

Lower Production of Dairy Products Is Apparent

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. MURRAY of Wisconsin. Mr. Speaker, whether a few individuals or groups are going to be allowed to ruin the war dairy food program should be of concern to every Member of this House and to every consumer in America.

The following official weekly report of the United States Department of Agriculture shows a decrease of 25 percent in cheese production in comparison to the same week in 1942:

Weekly American cheese production—Changes in production for week ending Thursday, May 13, 1943

Geographic divisions [1]	Percent of United States production	Change from same week year ago (percent)
North and South Atlantic	5.1	−64
East North Central (except Wisconsin)	15.2	−27
Wisconsin	50.8	−19
West North Central	8.5	−30
South Central	10.2	−28
West	10.2	−15
United States	100.0	−25

[1] Geographic divisions:

North and South Atlantic: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida.

East North Central (except Wisconsin): Ohio, Indiana, Illinois, and Michigan.

West North Central: Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas.

South Central: Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas.

West: Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California.

American cheese production for the week ending May 13 rose 5 percent from the preceding week, the United States Department of Agriculture reports. Pasture growth has

been retarded this year due to cool weather and the shift from winter rations to pasture feed was delayed as a result. Production was 25 percent lower than the extremely high levels a year earlier.

The seasonal gain in Wisconsin was 6 percent. Compared with a year earlier, production remained 19 percent lower.

Gains in production from the preceding week occurred in all areas except the South Central, where declines in Texas, Oklahoma, and Arkansas caused a 1-percent decrease for the area. A 2-percent rise was shown in the North and South Atlantic States. The 11 percent increase in the East North Central States outside Wisconsin was reflected about equally in all States of that area. Production increased 5 percent in the West North Central area and 3 percent in the West.

Production by areas when compared with the corresponding week a year earlier, showed much the same pattern which had prevailed for several weeks. All areas were sharply lower, the decrease in the North and South Atlantic of 64 percent being particularly marked. A 27 percent decline was reported for the East North Central area except Wisconsin. Production of the West North Central area was 30 percent lower, which is the same level as last week. The decrease in the South Central's output was 28 percent, while in the West a 15 percent reduction was shown.

Mr. Speaker, the national butter production is still about equal to the 1942 production. The evaporated milk production for the first 4 months of 1943 shows a decrease of 28 percent in comparison to the first 4 months of 1942. The May 1943 evaporated milk (case goods) held by manufacturers was 114,000,000 pounds, or 48 percent less than May 1, 1942, stocks and 27 percent less than the 1937-41 May 1 average.

There was 14 percent less dried skim milk from the spray process and 25 percent less dried skim milk from the roller process produced from January 1 to May 1, 1943, than during the corresponding months of 1942.

The dried skim milk production by both spray and roller processes for the first 4 months of 1943 was 19 percent smaller than during the same months of 1942. There were 100,000,000 pounds of milk solids produced from skim milk January 1 to May 1, 1943. Of this 79,900,000 pounds were by the spray process and 21,100,000 pounds were by the roller process, part of which is used for animal food.

A summary of the dairy situation, then, would be that the total fluid milk production has not shown much change from last year; the butter production is fairly even in comparison to previous yearly production figures though less is available for domestic consumption; the Cheddar cheese production is 20 to 25 percent below the 1942 production; the evaporated milk production is 28 percent below the 1942 production for the first 4 months of the year; the storage stocks of evaporated milk are 48 percent below the May 1, 1942, stocks. The dried skim milk production by the spray process is 14 percent below the January to May production of 1942; the skim milk solids by the roller process is 25 percent below the January to May 1942 production.

In 1939 good Wisconsin cheese was selling in the Washington chain stores for as low as 14 to 15 cents per pound. Cheese was 11.7 cents per pound the first 6 months of 1939 in Wisconsin. This was a spread of only 3 to 4 cents per pound between Plymouth, Wis., price and consumer price in Washington.

December 1, 1942, the subsidy program was extended to cheese. The price was pegged at 23¼ cents per pound and the subsidy was placed at 3¾ cents per pound on the basis of helping the consumer. The present price of cheese in Washington is at least 38 cents per pound. We now have a spread, then, of 38 to 23¼ or 14¾ cents per pound or more than cheese sold for in Washington in 1939. I ask where did this subsidy keep the consumer in this particular article of food?

Since one article of an industry like cheese shows a 14–15 cents per pound spread that is supposed to enjoy a subsidy, and another article of the same industry, like butter, has had only a small spread, without any subsidy, it appears that there are more important factors to be considered in food prices than the imaginary benefits of a 10-percent roll-back in the price of butter.

I realize in some stores cheese has been 49 cents per pound, but I have tried to keep this comparison on comparable grades of cheese, and have given the opposition the benefit of the doubt.

It is regrettable that no one in the high places has ever had any practical experience in food production nor any training for food production. These food-production programs would be more effectively executed if we had representation in these bureaus from States that not only could and do feed themselves but are furnishing the food for the armed forces, lease-lend, and other foreign commitments. While Mr Harry Hopkins, with his copartners Messrs. Frankfurter, Cohen, and Rosenmann, may be past masters in the political approaches, their leadership on domestic issues, including food production, should be questioned by all interested in the war food program.

If the butter roll-back results in reduced milk production and in less milk-solids production, great harm will be done to the war dairy program. We must also take into consideration the fact that our 1943 production of dairy products is being shared with the people of many lands and that the amounts available for our domestic requirements is gradually becoming less and less.

What Is Freedom of the Air?

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by L. Welch Pogue, published in Nation's Business for June 1943:

WHAT IS FREEDOM OF THE AIR?—THE CHAIRMAN OF THE CIVIL AERONAUTICS BOARD OFFERS A COMMON SENSE PROGRAM FOR INTERNATIONAL AIR COMMERCE

(By L. Welch Pogue)

In time of war, the airplane is a destroyer of civilization. But after the war, the airplane—if wisely used as a vehicle of trade and travel—may be our best means of keeping the world at peace.

Traveling at 300 miles an hour—a cruising speed which transport planes could attain shortly after the war—it will take less time to go from New York to Moscow by air than to go from New York to Chicago by train. It will take less time to go from Minneapolis to Tokyo by air than from Minneapolis to New York by train.

The airplane, by pulling the world closer together, will be a force for good. But, before it can be made to fulfill that purpose, certain peace-time problems of international air operations must be solved:

1. Problems concerning military aircraft: The extent to which military planes shall be permitted to fly outside their own countries.

2. Problems, in the nonmilitary field, having to do with the requirements each country lays down for the operation over its domain of its own and foreign aircraft: safety, customs, immigration, traffic control, public health.

3. Problems involving the rights of private and commercial aircraft of each country to fly over and to land in other countries.

Let us confine ourselves here to the rights of commercial aircraft. These problems are not only interrelated with many matters of national concern, but also inject new considerations into the international picture.

TERMS ARE LACKING

We make a mistake, therefore, if we assume that the future of aviation can be worked out more or less as an incident in relation to other issues. Hard, close thinking is necessary if the future of world aviation is to be soundly planned.

Heretofore, the field of international aviation has lacked even an adequate accepted terminology. Such terms as "air sovereignty" and "freedom of the air," for example, mean all things to all men. Without some agreement as to the meaning of such terms, cooperative effort among nations, the key to the solution of the major problems of international aviation, is clearly impossible.

But we cannot even begin with definitions. We must first analyze some of the problems which we are trying to define.

Today all nations must decide to what extent artificial barriers can and should be removed from the path of world aviation. This is an important issue to our own country because it will determine the extent to which America, for years to come, shall have the right to engage in air commerce, over the shortest routes and in the most economical way, with other nations.

Out of the past has grown a doctrine of international law under which each nation may legally exclude foreign commercial planes from the air space over its domain. Special permission—generally obtained through tedious negotiation—is now required before any commercial aircraft may enter or pass through a foreign nation's air space.

Special permission is also required to land on foreign soil, not only to discharge or take on passengers and cargo, but for the far more limited purposes of refueling, making repairs, or taking refuge from storms.

Oliver J. Lissitzyn, in discussing international aviation problems in his book International Air Transport, says:

The necessity to bargain for landing rights has exercised a retarding effect upon the development of world air commerce. Routes which are technically feasible and commercially promising have remained unopened. * * * Small but favorably situated countries have at times exacted conditions for the grant of landing rights that may have been financially burdensome to the foreign carriers involved.

Italy, at a time when Italian air transport was weak and highly unprofitable, refused to grant landing rights to the British Imperial Airways on their way to the East, unless the British company's receipts on a certain run were divided equally with the Italian company, which had much less traffic.

Iran compelled Imperial to shift its route to the southern shore of the Persian Gulf by insisting that, in flying over Iran, the company's planes follow an inland route over mountains and deserts that was found to be too difficult and dangerous for use.

Turkey barred all foreign air lines from passing over it in an east-west direction, primarily for military reasons and, as a result, European services to southern Asia were deprived of the use of the shortest route. Turkey's attitude redounded to the advantage of Greece, which, it was reported, required all foreign air liners passing over its territory to land at Athens and to coordinate their schedules with those of the internal Greek air services. Similar illustrations could be multiplied indefinitely.

YOU HAVE TO GET THERE

Obviously, before you can discharge and take on passengers and cargo at a foreign point, you must get there. In most cases, intervening countries must be crossed. The question of the right to get there is the first problem we meet in the international air riddle.

In the field of private flying, the right to pass through the air space of a foreign country is known as the right of innocent passage. In the field of commercial flying, this right to get there has no name. Let us give it one now.

We shall call it the right of commercial air transit. To assure common understanding of the term, let us define it as the right of commercial aircraft to fly through the air space of any nation, which has agreed to the international arrangement. It would include the right to land at agreed airports to refuel, to make repairs, or to avoid bad weather. It would not include the right to discharge or take on passengers and cargo.

The right to discharge or take on passengers and cargo might be called the right to a commercial outlet. This would not include the right to carry traffic between points in our own or in a foreign country, a right called cabotage. That right will normally be reserved, naturally, for a nation's own air lines.

Of course, commercial outlets at desirable points are what we want. Many nations will see commercial and possibly other advantages to themselves in becoming such outlets for foreign air transportation; and some nations, having their own foreign air transportation systems, will naturally seek reciprocal arrangements for commercial outlets.

The right of commercial air transit, as has been said, means the right to get there. Our own enlightened self-interest, and that of all other nations, requires that, as part of aviation's future international arrangements, aviation be generally granted this right of commercial air transit.

WORLD-WIDE FRAMEWORK

Such a charter, flexible like our own Constitution, would constitute a world-wide framework, facilitating the future establishment of commercial outlets at all points where future world developments may make them desirable.

When the Convention for the Regulation of Air Navigation was held in Paris in 1919, certain provisions affecting the right of commercial air operation through the air space of a foreign nation were not entirely clear. Some of the countries, notably England and the United States, favored interpreting these provisions as authorizing commercial aircraft of any of the parties to the convention to operate over the territories of the others provided only that they follow designated routes.

Other nations interpreted the original provisions as permitting such operations only after permission was obtained from each nation through whose air space any commercial operation would pass.

In 1929 an amendment settled the ambiguity in favor of the latter construction, 27 nations favoring the proposal and 4—England, the United States, the Netherlands, and Sweden—voting against it. The United States has never ratified this convention, either originally or as amended.

Twenty-one nations of the Western Hemisphere in 1928 completed and signed the Pan-American Convention for Air Navigation, known as the Habana Convention, under which each of the countries agreed to permit commercial aircraft of the others to pass through its air space provided designated routes were followed. However, only a few nations (the United States being one) have ratified this convention and it, of course, does not apply to the rest of the world.

So generally, throughout the world, the establishment of both the right of commercial air transit and commercial outlets requires the negotiation of agreements with each nation whose air space is used.

It is sometimes urged that we cannot permit foreign planes to fly over our territory and thus have the opportunity to see and photograph our entire country with all of its military and defense establishments.

That argument overlooks the fact that our own domestic air lines, covering many more routes than would ever be used for commercial air transit, are always available to anyone.

The United States lies on Canada's shortest route to Mexico, Central America, South America, and the Caribbean area. China occupies a somewhat similar position with respect to Russia's shortest route to southeast Asia. Alaska lies athwart Canada's probable route to all Asia. Canada, in turn, lies under our great circle courses to both Asia and Europe. And Russia extends along all the north and much of the west of China. Certainly these four nations should strongly support the right of commercial air transit on a world-wide basis.

New trade routes by air are inevitable. But if every nation is to control the air space over its own territory, the benefit of international operations may be lost. The problem, therefore, is what kind of common sense arrangements can nations make for commercial use of the air.

First, of course, they could continue the unsatisfactory practices of the past.

Second, they could, by a single agreement between nations, designate particular routes and airports for international air traffic. This suggestion assumes the ability to determine for all time the future map of international air commerce, a task obviously impossible now.

Third, zones of influence throughout the world could be assigned, one to each nation having extensive air-transport industries. Such a plan has an obviously limiting effect on the rights of smaller nations, as well as the inherent danger that overlapping of zones would create friction. Furthermore, any such arrangement is inconsistent with the operational characteristics of the airplane which knows no boundaries or barriers.

Fourth and more practical, each nation which is a party to the commercial air-transit agreement would grant each of the others the right of commercial air transit for nonmilitary aircraft over its domain, thus enabling the planes of each to fly to their commercial outlets.

Already we know something, but far from all, about the changes the airplane will bring. It has reduced the world to manageable proportions. Let us have the vision, and above all the courage, to give to aviation a charter equal to its need. That is common sense, and common sense eventually will and must win out in the solution of world aviation problems.

Dr. Lars W. Boe

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 7, 1943

Mr. AUGUST H. ANDRESEN. Mr. Speaker, men of vision, Christian character, and perseverance, have made our country and its institutions worthy of the heritage for which freemen now struggle. Dr. Lars W. Boe, president of St. Olaf College at Northfield, Minn., was such a man. He died on December 27, 1942, at the age of 67.

Dr. Boe was one of the outstanding men from the Middle West. He will be remembered for his keen insight and understanding of the realities of life, and for his contribution in the field of education. Thousands of men and women graduates of St. Olaf College, and others who had the privilege of becoming acquainted with Dr. Boe, will treasure his memory and be guided through life by the example which he set for them. He was a builder of character in men.

Under leave granted me in the House, I am including a biographical sketch and other remarks by friends of Dr. Boe in tribute to his memory:

BIOGRAPHICAL SKETCH OF PRESIDENT LARS W. BOE

(By Dr. C. A. Mellby)

Lars Wilhelm Boe was born on December 27, 1875, in Calumet, Mich., the son of Pastor Nils E. Boe and Anne Reque Boe. Four years later the family moved to Leland, Ill., where his father served as a pastor of several Lutheran congregations, and 10 years later to Silver Lake, Iowa, where his father had accepted another call.

His precollegiate training was taken at the St. Ansgar Seminary and at the preparatory department of the United Lutheran Church Seminary at Minneapolis. In 1894 he entered the freshman class at St. Olaf College and graduated from that institution in 1898. During the following 3 years he studied theology at the United Lutheran Church Seminary at St. Paul, graduating as a candidate of theology in 1901. After serving for 3 years as the pastor of several Lutheran congregations at Lawler, Iowa, he was called in 1904 to the presidency of the newly organized Waldorf College at Forest City, Iowa, a position which he held until 1915. During his incumbency of this office he showed the eminent qualities of leadership and the

breadth of interest which were to characterize his subsequent career by placing this young and struggling institution on a sound financial basis and winning scholarly recognition for it in the church and in the larger community. For many years during this period he also served as the pastor of the local Lutheran church. In the interest of better government, he entered the political arena and served as a member of the lower house of the Iowa Legislature from 1909 to 1911, and as a member of the State senate from 1911 to 1913. He was urged by many State leaders to become a candidate for the State governorship but preferred to return to his profession as an educator and churchman.

In 1915 he resigned from the presidency of Waldorf College to take over the position of financial and executive secretary of the board of trustees and the board of education of the United Lutheran Church of America, continuing in the same office after the church union of 1917 and the formation of the Norwegian Lutheran Church of America.

At the early June convention of this church body in 1918 he was elected president of St. Olaf College and assumed this position in September 1 of the same year. The difficult war situation and the severe influenza epidemic which invaded the college population and caused many deaths was a severe test of the judgment and courage of the new leader, but gave equal proof of his ability to solve these as well as the difficult problem of the post-war period.

During the 24 years in which he was the head of the college the student registration rose from 650 to 1,150, a new group of modern buildings was erected at a cost of more than one and a half million dollars, and its various endowment funds greatly increased. The advance during these years in scholastic standing and teaching efficiency was equally impressive and could be credited as well to the vision and the enthusiasm of the president as to the cordial and wholehearted cooperative spirit existing between president, faculty, and student organizations. President Boe's deepest interest, however, went beyond those of scholarship and administration and centered particularly in the sound and rich development of the religious and spiritual life in the staff and student membership. The results of his care and his efforts in this field will surely be felt for years to come.

President Boe ranked high among the leaders in the former united church and in the later Norwegian Lutheran Church of America. He held numerous offices in important boards and commissions, his advice was sought on many important undertakings, and his voice carried authority in the annual church conventions. Some of the enterprises in which he took a leading part were the founding of the pastors' pension system, the launching of the Lutheran Men's Brotherhood and the centennial fund drive. He was one of the first promoters of the Norwegian-American Historical Association and served during the last 5 years as its vice president.

During the First World War he took a leading part in organizing the intersynodical plan for the Lutheran Soldiers' Welfare Service, which led to the organization of the National Lutheran Council, of which he was a member up to his death. He was one of the American representatives on the international committee of the Lutheran World Convention and for a number of years made an annual tour in Europe to consult and plan with other representatives in regard to Lutheran world and mission problems.

During the last few years his chief interest lay in the field of Lutheran church union. He participated in the formation of the American Lutheran Conference, was a delegate of our church to its annual conferences, and wrote and spoke vigorously for an extension of the union movement to all American Lutheran bodies. Much of the inspiration as well as the actual planning for this movement can be put to his credit.

President Boe was the recipient of many honors and distinctions. He received the honorary D. D. degree from Roanoke College and LL. D. and Litt. D. degrees from Wittenburg College. In 1924 he was decorated by the King of Norway with the Knighthood of the Order of St. Olaf and was raised in 1940 to the rank of Commander in the same Order. He was at one time president of the National Association of Lutheran Colleges, and from 1937 held the position of president of the State Council of Minnesota Colleges.

President Boe was married in 1909 to Helga Jacobson, at that time a member of the faculty of Waldorf College, who, with their two daughters, Esther and Margaret, both graduates of St. Olaf, survive him.

TRIBUTE TO DR. LARS W. BOE

(By Dr. J. A. Aasgaard, president of the Norwegian Lutheran Church of America)

Although he received appreciation and honors and positions because of his ability and capacity for leadership, he was a humble man. These things meant very little to him. In fact they rather embarrassed him. His concern was only that things could be done and accomplished—as for the credit and the honor it never bothered him who got it.

Through his dealing with his students as well as others, there was ever a sense of fairness, understanding, and willingness to help that was remarkable. Even in his crowded life he was never too busy to listen to the need or the plea of someone who needed help and advice.

At the same time, having arrived at a conviction and understanding, he was fearless in his pressing it and working for it.

Today, his life among us closes and yet over all this land there are thousands who think of him with thankfulness to God, that L. W. Boe touched their lives in one way or another.

IN MEMORIAM—PRESIDENT L. W. BOE

Say not he left the city on the hill
Where once he dwelt, and which he helped to build,
As master workman in the chosen guild
Of God. He planned and toiled with utmost skill,
Wrought patiently and steadily until
He saw, before the mighty pulse was stilled,
The growing city as his dreams fulfilled,
The mirror of his mind and heart and will.
In memory his sturdy footstep falls
As once it fell on shaded walk, and broke
The sleeping silence; and his dauntless thought
Resounds in vibrant words through echoing halls.
The very walls intone the tongue he spoke.
Say not he left the city that he wrought.

—*George Weida Spohn.*

Hon. Cordell Hull

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to take this opportunity to place therein an account by James D. White of one of the most distinguished Americans of our day. As I recall, my uncle, the late Admiral Richmond Pearson Hobson, was in Congress at the same time with this distinguished American. He was a great admirer and a devoted friend of Mr. Hull. It is therefore with a great deal of pleasure that I am privileged to insert the following in the RECORD:

SECRETARY HULL'S PATIENCE PAYS DIVIDENDS—PREPARED GROUNDWORK FOR NORTH AFRICAN SUCCESS

(By James D. White)

The last of our log-cabin statesmen prepared much of the groundwork for our success in French North Africa.

Secretary of State Cordell Hull, son of a Tennessee logger, is to the rest of the world our outstanding example of the think-and-act-first-before-talking-about-it type of mind which has been a notable product of the American frontier.

He is the man who figured out when France fell that there was still much to be salvaged for democracy from the wreck.

The occupation of Algiers and Morocco climaxed 2½ years of difficult and often uncomfortable diplomacy directed by the white-haired mountaineer who guides our foreign policy.

Execution of such a policy, involving long-range vision and steadfast adherence to essential purpose, is the kind of job Cordell Hull likes and does best.

POLICY PAID DIVIDENDS

Results this time: Admiral Francois Darlan ordered all resistance to cease in French North Africa after 76 hours of American assault, and came over to the Allied side. Gen. Henri Honore Giraud, France's military Houdini and popular idol, was on hand to take over administration of this new base for Allied counterthrust against the Axis.

Still water ran deep in the hills around Olympus, Tenn., where Mr. Hull was born, and he never has been much of a talker.

Now just past his seventy-first birthday, he has been Secretary of State longer than any predecessor. Somewhere, during a lonely boyhood, he developed distinctive processes of thought which today make his name abroad synonymous with American keenness and integrity. Like Abraham Lincoln, he was born in a log cabin.

At his press conferences newspapermen see a frail man, stooped to a little less than his natural 5 feet 11 inches. More often than not Mr. Hull just asks for questions. He answers, in the drawl of his native Tennessee, with no hesitation—even when the boys have figured out queries with hooks in them. If Mr. Hull ever has given anything away, the newspapers haven't printed it.

GAVE UP POKER

He is no longer a poker player, and few people know he was a captain in Cuba during the Spanish-American War. But a regimental victim recalls:

"He could look sad and beautiful and humble while he held four of a kind, timidly and carefully betting against other soldiers' full houses."

He won three-quarters of all the money in the regiment, and then, he says, "I gave it all back."

What constitutes the right seems clear to Cordell Hull as it does to a few contemporary minds. His life is a round of adherence to carefully thought-out purpose.

As soon as he learned there was such a thing as democracy—call it politics, government, administration, or what you like—he made up his mind. He helped elect a Governor when he was 17, was admitted to the bar at the age of 19, and by 21 was in the Tennessee State Legislature.

Back from the Spanish-American War, he became "Jedge" Hull, then in 1907 went to Congress for 14 years.

In Washington he became known as an authority on taxes and an advocate of free trade. He helped draft the first income-tax bill, and his faith in his convictions resulted in his voting a tariff bill that would have enriched his own State. Ousted in the Harding landslide of 1920, he became chairman of the overshadowed Democratic Party for 2 years, and then returned to Congress as Representative from Tennessee.

DRAFTED BY ROOSEVELT

He was Senator Hull for 2 years before Franklin D. Roosevelt drafted him to become Secretary of State in 1933.

He was comparatively unknown and suffered a set-back when his particular pet, the London Economic Conference, came to nothing.

But Mr. Hull saw further and clearer than the men who scuttled that effort to remedy the world's ills and thereby to avert another war. Back in the State Department there was some talk behind closed doors. Other men went out; Cordell Hull stayed.

Unable to reform international economics wholesale, he attacked them piecemeal, and his success in carrying out our good-neighbor policy with the rest of America was due to a network of reciprocal trade pacts which Washington observers believe few others would have had the vision to conceive or the patience to carry out.

Mr. Hull early called the turn on the Axis. He branded the Japanese as "bandits" in 1937 when they attacked China, and was one of the first to realize that Germany, under Hitler, meant to conquer the world.

WORKED WITH PATIENCE

Foreseeing inevitable war, he concentrated on gaining time for national preparedness. The break with Japan might have come much sooner—and with Germany, too—had not the Hull patience, vision, and poker face been on our side.

On November 27, 1941, he informed the President that war with Japan was finally inevitable and might come at any moment. How he abandoned diplomatic language on December 7, and treated Japanese envoys Nomura and Kurusu to some native Tennessee verbiage as they scuttled out of the State Department is now legend around those musty corridors.

Many times branded as an appeaser of the despised Laval regime, Secretary Hull has worked with characteristic patience and foresight, since the fall of France, to use to the utmost the traditional bond between the people of that stricken republic and ourselves.

ACCOMPLISHMENTS WITH FRANCE

He kept American diplomats at Vichy, long after it took nothing but German orders, to accomplish these things:

1. Obtain vital information in what was virtually German-occupied territory.
2. Keep the idea of freedom alive in France.
3. Keep French friends and encourage anti-Hitlerism.
4. Watch French collaboration with Germany.
5. Prepare the background for an invasion of the Mediterranean.

The world knows how that policy has benefited the United Nations.

Mr. Hull lives quietly in a Washington hotel. His health is not perfect, and in recent years he has taken two vacations to recover from the effects of the long hours he works.

Back of our foreign policy there is a Hull statement which runs:

"The first [lesson of history] is that man's innate striving for freedom cannot be extinguished. * * * The second is that liberty is truly won only when it is guarded by the same watchfulness, the same courage, the same willingness to fight for it which first secured it."

To one American, back after years in troubled foreign parts where our policy was on trial, "Mr. Hull is, with the exception of our President, one of our few high officials whose public statements and applied policy have invariably reflected the dignity and vision which I like to think my country stands for."

Gasoline Rationing

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. SPRINGER. Mr. Speaker, much confusion has resulted recently regarding the distribution of gasoline throughout our country. The eastern coastal States and the adjacent area has taken the attitude that because they have experienced a shortage of gasoline, caused largely by limited transportation facilities, that the Midwest section and all other sections of our country should likewise be curtailed in their allowance of gasoline. In other words, those States have taken the attitude that if we cannot have gasoline then no other State should have it either.

I am quite familiar with the gasoline situation in the city of Washington, D. C., because I have been riding busses and streetcars for quite a long period of time. I know that the filling stations do not have the gasoline to sell. However, that shortage has been very largely caused by reason of the lack of transportation facilities and the inability to send the gasoline here. I am convinced that this same lack of transportation is the cause of the great shortage that now exists in this commodity in the various States which are now complaining so loudly because of their gasoline shortage.

Mr. Speaker, if the apparent unusual demand for gasoline, which would take it away from the various States at the present, is caused by the demand for it to go to the fighting fronts, then I am certain that there is no one who will complain. We want the Army and the Navy and the Air Corps to have all of the gasoline they need; we want to win this war; we do not want the supply diminished in any particular which is needed for the war. However, whatever the surplus may be of the commercial gasoline, that which is not needed for our war effort, we protest against any State or States, which is unable to secure gasoline in quantities because of limited transportation facilities, taking gasoline away from our States in the Midwest. Our farmers have the problem of producing the food for our war effort, and they require gasoline for that purpose; our businessmen need gasoline for the purpose of maintaining their businesses; our laboring men need gasoline in order to transport themselves, and those who ride with them, to the defense plants where the materials and supplies for war are produced. May I say that many of those defense plants are located quite a distance from the homes of those who are employed therein, and they have the serious problem of driving to and from their work each day. Therefore, Mr. Speaker, there should not be any restrictions placed upon the people of the Midwest States—and especially upon the people of my home State of Indiana—simply because some other State is disappointed in the amount of gasoline it is receiving. Those are problems of transportation, and those problems must be solved by those who are in charge. The fact is, the distribution of gasoline has been mismanaged, and the proper allocation of the same has been bungled, so that the present dilemma has resulted.

Mr. Speaker, if the people in the great Midwest cannot have gasoline then the food production will be materially diminished. Yet, a few of the Eastern States have taken the dog-in-the-manger attitude that "if those Eastern States cannot have all the gasoline they want, then no one should have it." And, as a matter of fact, their serious problem has been one of transportation—that of getting the gasoline into their particular locality. It is my hope that Indiana, Ohio, Illinois, Kansas, Iowa, Missouri, Michigan, Nebraska, Wisconsin, and all other great food-producing States may not be limited in the necessary supply of gasoline, because we do not want the production of food to be diminished. It is my considered opinion that there will be a great food shortage this winter even under the most favorable circumstances for production. We must have food to win this war. This production of food must not be limited by the limitation of gasoline in those food-producing areas.

Mr. Speaker, in the further extension of my remarks on this subject, I wish to include herewith an editorial which appeared recently in the Indianapolis Star, of Indianapolis, Ind., on this same subject, which is as follows:

WIDENING GASOLINE BAN

Sharp restrictions on pleasure driving which have been effective in 12 Eastern States will be extended to cover the Middle West, perhaps over the entire Nation, according to reports from Washington. It was intimated that the ban on driving for other than essential business might be imposed before the end of the week. Admission that such moves are under way was made by Maj. J. R. Parten, transportation director of the Petroleum Administration.

Patriotic motorists are ready to accept any reduction which the urgent demands of war may impose. Vast quantities of high-octane gasoline must be shipped to the various fronts to sustain the repeated bombing raids that are spreading destruction through axis cities and bases.

Automobile owners in this section, however, are not entirely convinced that necessity has prompted the impending ban of petroleum agencies of the Government. The expected action savors strongly of efforts to

placate the eastern area which still clings to its dog-in-the-manger attitude. A special group of coast Congressmen has been organized under Representative HARTLEY of New Jersey, to prevent discrimination against the seaboard territory.

This bloc insists that if the East cannot have more gasoline, nobody shall have any. That narrow, selfish sectionalism reflects anything but credit on HARTLEY and his crowd, thinking not of war needs, but of their own desires. Liberal fuel supplies are available in the Central States and even more, of course, in the producing territory of the Southwest. Indiana does not envy the better fortune of southern motorists. No part of the land, however, is expected to profit from its ample gasoline stocks so long as the easterners do not share the benefits.

Food Conservation

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. GROSS. Mr. Speaker, I feel justified in calling the attention of the House today to statements I made here on the floor 3 months ago. I called the attention of this body at that time to a threatened food shortage in 1943. At that time I gave many reasons for that statement.

Today, I read in the papers that Chester Davis, the food czar, has predicted that crop production during this year will fall far below 1942 production.

This is exactly what a few Members of this body and myself, who know the food situation, have been trying to tell this House and the country for some time.

This is what I had in mind 3 months ago when I started my war on waste, and coined the phrase, which is now nationally recognized, of "Lick Your Platter Clean."

Chester Davis yesterday issued a statement saying we must conserve every scrap of food. We must waste nothing. The food czar now recognizes the importance of saving food while we have it.

He warned that production of food in 1943 will be as much in some cases as 26 percent less than a year ago, and warned that the livestock production, in other words, our meat supply, will be based largely on our feed supplies and goes on to say that we will be short 26 percent in our production of wheat.

While it makes no particular difference now as to why we are going to be short of wheat and other foodstuffs, and while we have present shortages, but with the situation as it is, it might be well to let our minds go back just a few years when we were destroying wheat and when the taxpayers' money was being used to get wheat acreage out of production. I recall that the ever-normal granary was established with a guarantee that there would be no shortage for many years. These things have had their effect on the farmer who just naturally got careless about his wheat acreage and on many farms the acreage was reduced as much as 50 percent below what it was back in the 1920's.

The food czar reports further that we are going to be short 24,000,000 bushels of rye, as well as 310,000,000 bushels of oats. The shortage of barley will be 55,000,000 bushels. Peach crops will be 15,000,000 bushels short, and pears about 6,000,000 under last year.

The prospects for a good corn crop are not so good. We find that on June 1 we still had 15,000,000 acres of corn to be planted, or about 15 percent of the normal acreage to be planted. This means that we will have to have an extremely good growing season, with no early frosts next fall, in order to have an average yield of corn.

Due to late and wet weather in the Central States, many thousands of acres of our most fertile soils will not be planted to the crops to which they have normally grown.

The boast made earlier in the year by certain agencies of the Government that the crops of 1942 broke all records and that 1943 would be just as good, if not better, are now admittedly wrong. While these boasts were being made here in Washington farmers from all sections of the country were declaring that because of labor shortages, their inability to secure proper equipment, as well as repairs for equipment, it would be impossible for them to produce the Nation's needs and those of our allies, regardless of how anxious they were to do so.

One of the greatest contributing factors to our food-shortage threat is the confusion created by the Government agencies and bureaucrats who are trying to work out the details in every line of business as well as agriculture. I am one of those farmers who believes that no one knows as well as the farmer how to operate his farm. I believe, too, that businessmen know best how to conduct their operations, and if these various governmental agencies did not have the cockeyed idea that there are no brains in the country except in Washington we would not find ourselves with such an extremely alarming food situation on our hands.

Certain individuals in Washington have from time to time thrown up their hands in holy horror and thrown fear into the people because there were surpluses of corn lying around and urged less production. They could see nothing in it but corn. The farmers could see most anything in that pile of corn. They could see milk, butter, cheese, pork, lard, mutton, wool, eggs, and poultry. In fact, just about everything it takes to feed the world could be seen by the farmer in that corn, and that applies to other grains as well.

While there is apparently plenty of these grains on hand now, dairymen are unable to get the grain they need to keep up the production of milk. Now, I see in the morning paper that milk is to be placed on the ration list. God help us.

I know feed dealers who are manufacturing dairy feed who are unable to buy a bushel of corn, which is the basis for our best dairy ration. Poultrymen cannot buy the proper concentrates to make up the balanced rations for their chicks. The result is retarded development, and these pullets will come into production several months later than they ordinarily would. They will go into the winter not sufficiently strong and thrifty to guarantee good production throughout the year.

The turkey industry has in recent years become one of our most important suppliers of food. Everywhere they are complaining that they cannot get the proper feed. This is one line of production that is more seriously affected than perhaps any other.

And while the O. P. A. has interfered with prices and claims to have held down prices, after all they have failed miserably. Just this morning I have received a letter from a market gardener with a bill attached showing that he paid $102.15 for 75 pounds of spinach seed, or $1.35 a pound. A year ago this same seed sold for 16 cents a pound. This same gardener was compelled to pay $7.25 a bushel for onion sets on which the price ceiling was only $3.25.

These market gardeners are working 12 to 16 hours a day, trying to produce, and are producing. They take their products to the market and have little left after they have paid excessive prices for fertilizer and seed. The labor in most of these cases is done largely by the boss himself, and while he is complaining bitterly, I want to call to the attention of the House that he is not striking. He is willing to carry on and do everything in his power to supply this food so that the workers in our plants will be able to make the munitions of war that are so sorely needed by our armed forces.

The O. P. A.'s interference with the canning industry is certainly going to be the cause for a great shortage in food supplies this year. Because of this interference with the canning industry, one-third of the spinach crop in certain sections of the country remained in the field. Much of the crop that has gone into the cans has done so with no guaranty to the producer. Canning crops are known as cash crops. The producers plant with that in mind, and they not only want the money, but need it. The O. P. A. with its grade labeling and general interference with the industry is going to cause us to have probably the lightest pack that we have had in many years, when, by all the rules of the game, we should have the heaviest pack we have ever had.

Like every other farmer, I want my farm to produce to the limit, but do need the support of the Government. In other words, we should have a chance to do the things we know the country needs us to do. We want to help win this war. We want to back up our sons and daughters on the far-flung battle fronts. We want to feed the workers in every plant, the coal miners in every mine, the men, women, and children at home, so that this war effort is not hindered in any way whatsoever. We are not now blaming anyone for the unfortunate position in which we find ourselves. We want to

cooperate and get the war over so we can again live our lives in the American way.

But, gentlemen of the House, I believe the time has come for the Government to take a different attitude. To forget politics and social programs and get down to producing food and winning the war, and let's produce all we can and save all we can. Lest we get hungry.

The Connally-Smith Bill

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release from the Brotherhood of Locomotive Firemen and Engineers:

NEW YORK, June 8, 1943.—The Association of General Grievance Committees of the Brotherhood of Locomotive Firemen and Enginemen, representing practically all railroads in the United States, meeting here today issued the following statement respecting the Connally-Smith bill now before Congress:

"Through the press and over the air waves of the Nation many varied reports are being circulated as to the insistence of the Congress to enact legislation to curb the activities of the workers, all in the guise of a necessary adjunct to the stepping up of production and the early winning of the war.

"The proponents of this character of legislation, notably the so-called Connally-Smith bill, are either deliberately or unwittingly overlooking the over-all contribution being made by American workers in establishing unprecedented production records, or are guilty of fomenting treasonable hysteria to now achieve the utter stripping of the workers of every semblance of modern and democratic reform which safeguards them against social, economic, and industrial injustices.

"Our fight today against the forces of dictatorship and despotic rule is as much the concern of working men and women as it is of any other single segment of our Nation. The zeal with which they are performing their separate and varied tasks amply attests to that fact.

"Workers know too well the many horrors which have been inflicted upon the populace of subjugated nations by our common enemy. And they realize, too, that the freeing of those stricken people the world over and the preservation of our democracy here at home must be accomplished through our democratic way and as free people, not as shackled workers shorn of every right that is as traditionally American as the Bill of Rights itself.

"Is the Congress of the United States ready to concede that collective bargaining and the peaceful and orderly adjudication of labor disputes under its own statutory enactments, have broken down or are inadequate and unworkable in this present emergency? We think not. Neither do we think that the Congress, the administration, or the people of our Nation as a whole will accept as a prerequisite to the successful prosecution of the war any distorted or ulterior precepts which are founded upon anti-labor policies and promoted by traditionally anti-labor interests.

"To all of us it is a privilege to serve our Nation. No one shall dare challenge publicly the forthrightness with which that privilege is being embraced by workers generally—and this is all-inclusive as to those on the fighting front and on the industrial front.

"As Americans engaged in the vital task of keeping our rail transportation arteries open and the commerce of the Nation flowing smoothly and efficiently, we publicly challenge the patriotism of any group or individual who deems it essential or necessary to strip the workers of those traditional American rights which in a very large sense several millions of our associates under arms are fighting and dying to preserve.

"We call upon the fair-minded, free-thinking Members of Congress and of the Nation to continue our traditionally American collective bargaining processes for the settlement of labor disputes, and the defeat of any measure designed to destroy that monument of the free workers and American industry. If the time is now considered opportune by those in power to invoke worker-bondage then we must at the same time accept political dictatorship. That would not be democracy; that irrevocably would be Hitlerism, something which will never be accepted by the workers of the country while we remain a Nation of free people."

The Anti-Poll-Tax Bill

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the Legislature of the State of Alabama:

"Senate Joint Resolution 42

"Whereas there is now pending before the Senate of the United States a bill to abolish the poll tax; and

"Whereas since the formation of this Republic the qualifications of voters have been matters of State and not Federal control, and the maintenance of this State control is absolutely essential if any measure of local self-government is to be retained; and

"Whereas it is well understood in Alabama that this move to secure Federal control of elections is part of the attack continually being made on local self-government in the South, and is purely political in origin and intent; and

"Whereas it is clearly realized also that once the Federal Government secures control over the qualifications of voters, it will then proceed completely to dominate elections not only in Alabama, but in all other States as well, and use this power to destroy our Federal-State relationship, our remaining system of checks and balances, against arbitrary Federal authority and fundamental democracy itself; and

"Whereas in these times of desperate national danger from a powerful foreign foe, it is essential that there be no changes of our form of Government, no promotion of crack-pot reforms, and the individual or group which insists on such change, with its consequent loss of national unity, is of positive help to our enemies; and

"Whereas the States of the South which are under attack in this bill have for many years been loyal in their allegiance to the Democratic Party, and our people feel that they have every right and reason to expect this national Democratic administration and the Democratic Members of the Congress to assist in striking down this attack on them and their institutions; and

"Whereas throughout the years since reconstruction there has been an amicable and friendly relationship between the two races in the South, and the continuous agitation from outside sources is creating bitterness and hostility, greatly to the detriment of our people, both while and black, creating racial disturbances much to be regretted at any time, but particularly so in time of war, and is preventing the orderly solution of our problems in a manner assuring lasting justice to both races: Now, therefore, it is

"Resolved by the senate (the House of Representatives of Alabama concurring):

"1. That we urge our Senators to fight this bill with all the power at their command until its final defeat.

"2. That we deeply deplore the bringing up of this issue, with its consequent dangerous effect on the political structure of the South, and its serious disturbance of national unity in this time of national peril.

"3. That we caution the people of this Nation, Democrats and Republicans alike, that through the means of this bill there is being made an attack on State control of elections, with the deliberate purpose of destroying this local control and delivering our people over to the power of the Federal Government without the time-honored restraints found necessary throughout the existence of this Republic.

"4. That we remind our fellow Democrats in the Congress and the national Democratic administration, of the loyalty of our people in the past to the principles of the party, and urge that no attacks be permitted to succeed against us which would shake and destroy this loyalty.

"5. That we urge the Governor of Alabama to use his influence in the fight against this bill, and, on behalf of our southern people, to work with the other southern Governors in arousing our people to the danger presented to them and in assisting in any way the southern Senators in this fight to preserve democracy and local self-government; be it further

"Resolved, That copies of this resolution shall be forwarded to the President of the United States, to the Members of the Congress from Alabama, to the Governor of Alabama, and the other southern Governors and to the press."

The above resolution was adopted by the Senate of Alabama on June 3, 1943, and by the House of Representatives of Alabama on June 4, 1943.

J. E. SPEIGHT,
Secretary of the Senate.

National Youth Administration

EXTENSION OF REMARKS
OF
HON. JOE B. BATES
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. BATES of Kentucky. Mr. Speaker, there are those who criticize the N. Y. A. because allegedly it has taken youth from farm areas and has sent them to war-production centers. Actually what N. Y. A. has done has been to take youth from areas where they were of little or no value to the war effort, trained them for war production, and placed them in industries that are manu-

facturing munitions of war. For my part I believe the N. Y. A. deserves great credit for what it has done in this respect and in general.

In the eastern section of the State of Kentucky, that part of the Nation which I know best and which is most dear to me, there are thousands of youth, particularly girls, in our small communities. Without the intercession of N. Y. A. these girls—and many of the boys—would contribute little to the war effort. From the mountain areas N. Y. A. has brought these youth to training centers at West Liberty, Prestonburg, Jackson, Hazard, Ashland, and other places in eastern Kentucky, where they have been trained as welders, as machine-shop helpers, as sheet-metal workers, and in other types of work upon which the building of planes, tanks, ships, and the other munitions of war depends. In the communities where these training and resident centers are located the citizens of those communities have lent a ready and willing hand because they know that the work they were doing represented a genuine and incontestable contribution to the war effort.

In connection with the foregoing, there has come to my attention the April 28, 1943, issue of the Labor Force Bulletin of the Department of Commerce, in which I find these startling statements which it would do well for all of us to take to heart:

In February 1943, after an almost uninterrupted decline of 7 months, the civilian labor force reached a wartime low of 52,300,000. This development is significant in view of the plans for increasing the production of war goods still further while raising the number of men in the armed forces. The decline in the labor force during the past year is the net result of a decrease of 3,300,000 men and an increase of 2,200,000 women. Thus the civilian labor force has decreased because of the failure of women to enter the labor market in sufficient numbers to balance the number of men leaving for the armed forces.

With such an ominous fact staring us in the face, there are some who cavil at N. Y. A. because it has done all that was within its legal power to do to help remedy this situation. It seems to me that it is high time that we face facts and let them and not our pet prejudices and peeves guide us in our thinking and in our decisions.

The Pay-As-You-Go Tax Law

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. BENNETT of Missouri. Mr. Speaker, the President yesterday signed the pay-as-you-go tax bill recently passed by Congress. I voted for this measure with great misgivings. I am, and always have been, strong for pay-as-you-go tax legislation, but I had hoped that the administration's plan to require citizens to pay 2 years' taxes—1942 and 1943—in 1, in order to get current, would not prevail in any particular. It did prevail, for many of our taxpayers, to an extent of 25 percent. Of course, all legislation is by compromise. That is the democratic process of our Republic. I voted for this bill because I knew that it was necessary to have money to win the war and that this was the only measure we could pass. It was either this bill or nothing. Five months of arguing proved that. I also felt obligated to support the measure because of the overwhelming sentiment of my constituents in its behalf.

The measure in question has many desirable features. But it also will give rise to a great many headaches. It multiplies the red tape and regulations which are binding our taxpayers. It will make good business for the legal profession and accountants. Five tax returns per year are in prospect for many citizens. Employers will become Government tax collectors and bookkeepers without pay for their additional trouble and expense.

INCREASED TAXES

The President has indicated that Congress, having revised the method of collecting taxes, should now raise taxes. I am against any increase in taxes until I see some evidence that the administration intends to cut down useless nonwar expenditures. It has thus far shown no real disposition to retrench and save. Half the alphabetical agencies could be abolished and half of the 3,000,000 Federal civilian employees fired, and it would greatly strengthen the war effort and our national economy.

TAX-LAW SUMMARY

Without any attempt to go into detail or make a complete analysis, I am going to enumerate the important points in the new tax-collection bill for benefit of those who may be interested. A copy of this law can be obtained by any of my constituents who requests it of my office.

The new tax law will place the collection of our income taxes on a current basis, which it is believed will be advantageous to the average citizen. The plan of current collection of income taxes should protect those who are now making higher than normal wages against the possibility of being required to pay taxes on a high income year during a post-war depression year when incomes are low. Persons whose incomes fluctuate sharply from year to year, as is often true of our farmers' incomes, are also protected from the necessity of paying income taxes on income received in a prosperous year during a following year of crop failure or low farm prices. Too, delayed collection of taxes creates an illusion of high net incomes, whereas this method of collection will give each of us an opportunity to ascertain our exact net income not subject to taxes, and we may adjust our current living expenditures accordingly.

WITHHOLDING AND FORGIVENESS

The law provides for the withholding by the employer of 20 percent of the net incomes in the first bracket beginning July 1, 1943. Included in this 20 percent will be a 3-percent Victory tax, replacing the 5-percent Victory tax heretofore withheld. Taxpayers are required to pay their tax installment due June 15, 1943. Farmers, doctors, lawyers, clergymen, servicemen, and all nonwage or nonsalary groups will be exempt from the withholding tax and will pay their taxes currently on the present quarterly system, estimating their obligations in advance. Servicemen will be allowed a $1,500 exemption in addition to the regular personal exemptions which have been changed. The $500 exemption for a single person has been made $624 and the $1,200 for a married person is now $1,248.

Taxpayers owing $50 or less on their 1942 taxes will be completely released from their obligation and those owing between $50 and $66.67 will only have to pay the difference between the $50 and the amount they owe. Taxpayers owing more than $66.67 will be forgiven 75 percent of either the 1942 or 1943 taxes, whichever is the smaller, and the payment of the remaining 25 percent is apportioned over 2 years. An antiwindfall provision is included in the law to impose a penalty tax on those persons whose surtax net income in 1942 or 1943 increased by more than $20,000 above that of the highest surtax net income in any of the years 1937, 1938, 1939, or 1940.

A return will be made at the end of each year at which time the taxpayer will include all of his exemptions, such as taxes, losses, excess medical expenses and deductible business expenses. He will either pay the additional owing or the amount he has already overpaid will be refunded.

All taxes owing by any person killed in our armed forces will be canceled. This is a further concession to servicemen and their dependents, demanded by those of us in Congress who did not want the widows of our men in the service burdened with any unpaid income taxes.

Renegotiation of War Contracts

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks, I include the following article from Newsweek for June 7, 1943:

RENEGOTIATION PROCEDURE IS ATTACKED ANEW AS CONFUSING AND UNNECESSARY

Ever since April 28, 1942, when Public Law 528 was passed as a rider on an appropriation bill, business and legislative sources have clamored for its repeal or modification.

Their arguments were two: (1) that authorization for the Secretaries of War and Navy and the chairman of the Maritime Commission to renegotiate the terms of war contracts and recover profits which in their individual judgments are excessive creates

too much uncertainty, and (2) that the law is unnecessary because high wartime taxes are an effective barrier to big profits.

Ferment: The law was changed once. Last fall a rider to the tax bill narrowed the time in which profits may be recovered to approximately 1 year after the end of the contractor's fiscal year, instead of any time up to 3 years after the end of the war. Last March the Truman committee made nine recommendations aimed generally at the establishment of uniform price-adjustment policies and at reducing the amount and extent of renegotiation. Then, a fortnight ago, Senator STYLES BRIDGES, Republican, of New Hampshire, armed with the results of a survey among 5,000 manufacturers, met with a bipartisan group of Senate and House Members who had been awaiting completion of the poll before considering further reforms.

This and other events all seemed shaping up recently as stage setting for further easing of the act and many businessmen thought the worst of their renegotiation troubles would soon be over. But last week they were rudely awakened from their dream: the Army suddenly announced that it would bear down still tougher this year in reviewing profits.

Maurice Karker, chairman of the War Department Price Adjustment Board, said the allowable profits on 1943 business would be lower than for 1942. He explained that the War Department hoped to wind up renegotiation of 1942 contracts (82.6 percent incomplete as of May 22) this year, and get a flying start in 1944 at the 1943 income accounts.

SIGNIFICANCE

Karker, along with other proponents of renegotiation, defends it mainly with the argument that the initial emphasis for speed in production and in the letting of billions of dollars' worth of contracts for materials (The cost of which neither procurement agency nor manufacturer knew) had made the procedure desirable. This opinion was backed up by the Truman committee which, however, said that the act should be "writing its own death warrant by utilization of early war experience in late war contracting."

Such an objective, of course, cannot obtain if the procurement agencies and the manufacturers, after 3 years' experience in setting contract rates, suddenly find the renegotiators calling new signals. In other words, Karker, by stating that a point which was not excessive in 1942 may be excessive in 1943, wrote not a death warrant for the involved renegotiation procedure but a reprieve. And, in the meantime, businessmen who had been figuring reserves, dividends, capital expenditures, etc., for 1943 on the basis of what the boards allowed as a satisfactory profit in 1942 now have their plans thrown higher than the new superbombers will fly.

At this advanced stage of experience in war-goods purchases, and with the excess-profits tax at 90 percent, there is considerable doubt in many circles over the need for continuing renegotiation at all. The $2,539,000,000 of savings to the Government, reported by renegotiation boards as the result of their first year's activities, does not stand up as real savings when it is analyzed.

In the first place, by far the greater portion of it would have been eaten up by the 90 percent excess-profits tax. In the second place, if there is subtracted from the remainder the total cost of this renegotiation, not only to the Government, but to the companies involved, the relatively small amount left could be fairly stated as the net job done by the renegotiating efforts of the Government.

Coal, John Lewis, and the Revolution

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of Thursday, June 10, 1943:

COAL, JOHN LEWIS, AND THE REVOLUTION

John L. Lewis is trying to get a contract without submission to Mr. Roosevelt, or what's the same thing, his War Labor Board. Mr. Roosevelt is trying to get coal for industry and transportation—he must get it—and also Mr. Lewis' head for himself. A contract thoroughly satisfactory to the administration would deliver the Lewis head as one of the first lumps. The quarrel started when Lewis said he had not paid $600,000 to eat crumbs from Mr. Roosevelt's political table. That was in the second term. Lewis made it good by bolting the third term.

The United Mine Workers' chief at one time may have thought that he was destined to take the radical movement in the United States away from Mr. Roosevelt, make it a farmer-labor dictatorship (workers and peasants; the hammer and the sickle) and be the creator of a new order. He's smart and strong-willed, but he forgot that Mr. Roosevelt had more than a labor-union treasury behind him. He had the Federal Treasury. He broke Mr. Lewis.

Seven years ago Lewis was the foremost revolutionary leader in the country. With the Congress of Industrial Organizations he marched out to meet the largest industries. He had Mr. Roosevelt's support. He was recognized as the head of the military action section of the New Deal. Big Steel capitulated. General Motors made its peace. Henry Ford resisted. So did Little Steel. The Government came down on them. Law was distorted to fit the need of Lewis' tactics. He welcomed in the Communists as experienced street and shop fighters. New Deal intellectuals backed him as the dynamic force of the revolution. He was the practitioner for the theorists. Government officials existed as his factotums.

Now Lewis is in a tough spot. He may have miscalculated his time when he undertook to supplant Mr. Roosevelt in the vanguard of the new order. He certainly miscalculated the comparative resources involved and was foolish to underestimate the system of privileges and profits which attached men to the administration and its head. In the uneven conflict he lost his intellectuals, his ideological friends, nearly all of his labor supporters, and all of the pliant Cabinet members, except possibly Harold Ickes, who in the present rough-water maneuvering has been a life line. Lewis was cast out as a ruined pretender. He had only his loyal mine workers. With them the falling Lucifer of the revolution is making his stand with no little skill. He'll need all he has. He confronts the New Deal with its own doctrines and its own side-show barking, demanding by collective bargaining a larger share in the money of the coal-production business.

Along this line he would expect to find himself correct, and the demonology would be all on his side. He is a legitimate son of the New Deal, although disinherited. The owners and operators, however, have been shoved to one side, and Mr. Roosevelt and the War Labor Board have stepped into their places, taking over the role customarily imposed upon the selfish few, the economic royalists, and the predatory interests, to tell the miners they will get what the Government says they can have, that they will like it and go back to work.

It is said that the operators and the miners were very near an agreement when the War Labor Board intervened to prevent a settlement. There are other things at stake than the production of coal. Unconditional surrender of Lewis is demanded. The miners must realize that they are in a hopeless position as hold-outs. The Government which once enabled their chief to bring great private enterprises to terms is now the hard bargainer across the table. Public sentiment is against them. Their attempt to get more pay is stigmatized as a crime against the Nation. Their contumacy is regarded as tantamount to treason, giving aid to the enemy. They know the mining of coal must not and cannot be stopped.

Mr. Ickes, as Administrator of Solid Fuel and by authority of Mr. Roosevelt in charge of the mines for the Government, has given Lewis tactical assistance enabling him to ignore the Chief Executive himself. Mr. Ickes also had something to say of the few unscrupulous owners. That slanted criticism in a familiar fashion away from the miners, but this time in the direction of the Government itself as well as the proprietors.

In its origins, in its ideas, and in its characters this is a New Deal family affair which has threatened the service of supplies to men on the fighting fronts. The formulas and the apparatus in the contest are stamped with the New Deal trade-mark of proprietorship. The Roosevelt revolution has run into the Roosevelt hierarchy. At that point revolution becomes rebellion.

Repeal of the Chinese Exclusion Act

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. FORD. Mr. Speaker, I am heartily in favor of the repeal of the Chinese Exclusion Act. My reasons are that, in the first place, the Chinese are a great people. They have developed a civilization that is shot through with cultural elements that would be tremendously beneficial to our western civilization.

Secondly, they have demonstrated that as a nation they possess qualities that are closely akin to the qualities that we as a Nation prize most—a love of liberty—a love so intense that they are willing to sacrifice blood and treasure immeasurably to sustain that principle.

In addition to this, they are a reliable people. Though the number that have dwelt amongst us is small, it is sufficient, I believe, to demonstrate that they possess traits of character that are entirely consonant with our own ideals.

They are first of all honest. They have on innumerable occasions demonstrated that they are loyal. They are good citizens in every sense of the word and those born here and endowed with citizenship

rights by reason of birth have demonstrated that they are sound, sane, and patriotic American citizens.

Personally I have found that the Chinese with whom I have come in contact are splendid individuals worthy of confidence in all matters.

I have always felt that Chinese exclusion was a mistake. It has deprived us of a type of citizenship that would have been a real contribution to our body politic.

I sincerely hope that the Congress will promptly rectify this erroneous discrimination against a great people who, if permitted to enter on equal terms with other nations into our American body politic, I am sure the Chinese will make a distinct and tremendously valuable contribution to freedom as conceived by democracy.

While the proposed quota is very small its principal virtue is that it removes the stigma of exclusion from a great and friendly nation.

I hope the bill will pass. I shall be most happy to vote for it.

Honor to a Hero of Our Merchant Marine

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. O'BRIEN of Michigan. Mr. Speaker, the heroic service of the personnel of our merchant marine is all too often left unnoticed. I think it is deserving of attention that the Distinguished Service Medal has been conferred by the President of the United States upon Frederick James Mills, of the merchant marine, a resident of my congressional district in Detroit, Mich., for meritorious service under unusual hazards.

The citation is as follows:

Survivor of the sinking of his own ship, he was homeward bound on an Allied ship when it was struck by two torpedoes. The explosions wrecked all but one lifeboat which succeeded in taking off 70 survivors. Nearly 200 others were either thrown into the sea by the blasts, or were forced to jump from the rapidly sinking ship. When the ship went under, one of the damaged lifeboats floated free. It was swamped to the gunwales; peppered with many small holes; the rudder and part of the stern were gone; and a large hole, 20 by 40 inches, was blown through its side. But it meant hope, and some of the desperate men had already climbed into it even though there was momentary danger it would sink under them. Mills sensed the situation from a distance, and swam over. Persuading the men to leave the boat, he took sheets of lead from its emergency repair kit and shaped a patch over the large hole. With two men holding the lead patch against the outboard side, he and two others climbed back into the boat. These two held onto his legs while he went head down over the side to nail the patch to the planking. Over this he nailed a piece of salvaged canvas. Each time the men lowered him under, he could drive only one nail, then the two would pull him up for a gasp of air. Many times he did this until, little by little, the hole was closed and the planking caulked. He then took strips from the bottom gratings and repaired the shattered gunwale. The end of the canvas was stretched over the gunwale and made fast. With the largest leak thus stoppered, the rest of the men climbed back aboard and started bailing. Throughout the night Mills plugged the many small leaks as the boat slowly rose in the water. Daybreak brought to him the grim and heartbreaking task of picking from the many survivors still clinging to wreckage the few additional men his weakened lifeboat could carry. When no other aid seemed possible for those they were forced to leave behind, the lifeboat, now with 60 aboard, set out for land. Constantly bailing, and with only one pair of oars to keep headway, the survivors made a safe landing 8 days later.

His indomitable courage and practical leadership, so largely contributory to the ultimate rescue of his shipmates, are in keeping with the highest traditions of the United States merchant marine.

For the President:

EMORY SCOTT LAND,
Chairman.

Ulysses Samuel Guyer

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 7, 1943

Mr. DICKSTEIN. Mr. Speaker, Ulysses S. Guyer became a member of the Special Committee to Investigate Un-American Activities which was created in 1934. This committee, as you know, made an investigation, for the first time in American history, of Nazi and Fascist propaganda with a view of providing proper remedies and enacting legislation which would put an end to such pernicious activities on the part of the enemies of this Nation.

Judge Guyer was made a member of this committee and thereby afforded me the unusual pleasure and distinction of close association with him.

Now Guyer is gone. His views will no longer be heard in this Chamber. His friends and associates mourn his passing, and I feel that his untimely death is a very great personal loss.

Judge Guyer was one of the finest orators on the floor of this House. Not only by expressing his views in a very forceful and eloquent language, but in the depth of his very thorough knowledge of things, his expressions of opinion shown with unusual clarity and conviction. We who were privileged to listen to him as he addressed this House on the many subjects which engaged our attention through the years, cannot forget the fine speeches he made on matters involving our national welfare and the lot of the common man. His manner was convincing, his delivery entertaining, and his arguments unanswerable.

Judge Guyer was one of those Members whom we are wont to designate as nature's gentlemen. One of those who will leave a lasting impression on our colleagues with whom he has been associated for many years. His life was a life of untiring devotion and he had a varied public career. He was a lawyer and gained honors in this profession, being elected as judge of the city court of Kansas City early in his career. He was an educator of note and served as a high-school principal and superintendent of schools in his native State of Kansas. He was the mayor of Kansas City and he was an active fraternalist, being a Mason and a member of the Scottish Rite.

He was a grand gentleman of the old school and while progressive in his thought and progressive in action, he believed in the conservative principles of our Constitution and was opposed to any centralization of powers in Washington. He was thoroughly religious, devoted to the service of God and man, believing in immortality of the soul, and I am sure that by his death he has reaped the reward of upright and honorable life and the commendation of the Great Architect of the universe, who, in the words of the Bible, said, "Well done, thou good and faithful servant, enter now into thy reward."

Lincoln and the Kirkham Grammar

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks, I include herein an article entitled "Lincoln and the Kirkham Grammar," written by Mr. Bruce Wheeler, of Springfield, Ill., and which appeared in the February issue of Hobbies, the magazine for collectors.

The article follows:

LINCOLN AND THE KIRKHAM GRAMMAR

(By Bruce E. Wheeler)

"English Grammar in Familiar Lectures Accompanied by a Compendium: Embracing a New Systematick Order of Parsing—a New System of Punctuation, Exercises in False Syntax and a Key to the Exercises: Designed for the Use of Schools and Private Learners—By Samuel Kirkham—Sixth Edition—Enlarged and Much Improved—1828—Cincinnati—Published by N. & G. Guilford."

So reads the title page of one of the world's most famous textbooks, the grammar studied by Abraham Lincoln at New Salem in 1831. Kirkham's Grammar is not to be compared with the New England Primer, Webster's Speller, or the McGuffey Readers with respect to fame or popularity, but it is probably the only text on grammar studied by the man whose literary style was to become and remain the model for others in the use of effective English.

LAW LIBRARY
FEDERAL TRADE COMMISSION

Kirkham's Grammar appeared first in 1824 and had gone through 105 editions by 1841. Kirkham, a Scotchman, lived at one time in Fredericktown, Md. He was connected with some of the schools or academies of that time, but evidently spent a considerable amount of time in lecturing and instructing adult classes in various cities on a subscription basis. It is definitely known that he conducted such classes in Pittsburgh and New York City. As he says himself, he was in extremely poor health and, therefore, did not attempt to revise or improve his grammar as is now the custom before a new edition is presented to the public. Inasmuch as the one hundred and fifth edition appears to be identical with earlier ones, and still contains the preface to the eleventh edition, the assumption is that he did not offer any improvements or changes after the eleventh edition. It is not known how many copies were sold during these 16 years, but he says in the preface to the eleventh edition that 22,000 had been sold during the preceding year (1828–29) and that, altogether, 40,000 copies had been sold without any pecuniary benefit to the author. It is likely that some of the editions or printings were of an exceedingly small number of copies.

Kirkham's Grammar had considerable competition from other textbooks in grammar. The most popular and widely used book in this field was the English grammar of Lindley Murray. All of the writers of textbooks on grammar, including Kirkham, were indebted to Murray for guidance and fundamental principles and invariably acknowledged the debt in the preface or introductory statement in the various books as they appeared. Murray's book was quite complete and was of a difficult and complex nature. Kirkham, Bullion, Brown, Green, and others sought to simplify the study of grammar by making it less technical, more systematic, but with greater appeal. Accordingly, they brought out books with that avowed purpose. As Murray was an Englishman, it is probable that the trend away from his book was quite as much the result of a development of nationalism as of any discernment of superiority in textbooks written by American writers.

Kirkham's Grammar has been mentioned so frequently by the biographers of Lincoln that at least one writer has suggested that confusion may have arisen in the minds of many as to whether Lincoln made Kirkham famous, or whether Kirkham's Grammar made Lincoln famous. It is true that nearly all of the well-known writers on Lincoln allude to the Kirkham Grammar, and nearly all of them allocate to this book an important place in the education of the Great Emancipator. On the other hand, it is quite noticeable that Kirkham is mentioned by these same writers only in the most general terms. The inferences and conclusions drawn are probably the result of presumption, the result of a great respect for tradition, or have been copied from other writers. Perhaps Lincoln's well-known ability to use oral and written language may have prompted many to state that the study of Kirkham was the crucial factor in Lincoln's subsequent language usage. In view of the absence of a critical examination of Kirkham's Grammar by those qualified to evaluate its worth, it appears that many writers have erred in making such positive statements in its behalf without having valid data or appropriate criteria upon which to predicate such assertions.

The Kirkham Grammar is unimpressive in appearance. It is of small size, 12 mo and, like many other books of the early nineteenth century, is leather bound. The typography is similar to books of that period also. The type is small, closely spaced, and shows narrow margins. Now and then there is some attempt to relieve eye strain and monotony by using large or black-faced type. There are no illustrations in the form of cuts or pictures. In general, the book may be characterized as unattractive and more likely to repel than attract the student. In the front of the book are many pages given over to recommendations and testimonials. There are the most flattering extracts from the National Crisis, the Hesperus, and the Western Review, all influential publications of the day, Governor De Witt Clinton of New York sent the following recommendation:

"I consider the Compendium of English Grammar, by Samuel Kirkham, a work deserving encouragement and well calculated to facilitate the acquisition of this useful science."

DE WITT CLINTON.
ALBANY, *September 25, 1824.*

In a long preface, Kirkham half apologizes for presuming to offer a new book in an old field, but justifies his determination to do so because of the great excellence and superiority of his offering when compared to others then in use. He says:

"By this method, he (the teacher) can advance his pupils farther in the principles of this abstruse science in 2 months than he could in 1 year when he taught in the old way."

The remainder of the preface treats of the author's philosophy, his accomplishments, and his intentions for the future (health permitting). He definitely states that the book is suitable and well adapted for private learners. Kirkham is not lacking in verbosity. He states his case, including a lengthy reply to potential critics, in the characteristic and elegant language so frequently used by early writers, and well exemplifies the perspicuity which he hoped to inculcate in those who assiduously followed his system.

The Kirkham Grammar, which many claimed was studied by Lincoln, was published in 1828 and was then in the sixth edition. It is said that Lincoln was encouraged to study grammar by Mentor Graham, schoolmaster of New Salem. As no grammar was available in New Salem, he was obliged to borrow one from John Vance, about 6 miles away. The identical book (sixth edition) studied by Lincoln is now in the Library of Congress. This particular book has the following inscription on the title page: "Ann M. Rutledge is now learning grammar." As the story goes, Lincoln helped Ann with her grammar and then presented her with the copy which he had previously borrowed from Vance. The inscription in the book may or may not be in Ann Rutledge's handwriting; it certainly is not that of Lincoln. R. B. Ruthledge, a brother of Ann, in writing to Herndon in 1866 states, "Mr. Lincoln studied Kirkham's Grammar; the valuable copy which he delighted to peruse is now in my possession." In view of the fact that the date of issue (1828) appears to be about the time we may accept, that Ann Rutledge's name appears in it, and that R. B. Rutledge claimed to own it, we may assume that the book came down through the family and then to the Library of Congress and is fairly well authenticated.

In reality, it makes little difference which edition Lincoln studied; the similarity of all editions issued by Kirkham has been referred to. The writer has examined carefully four different issues, some before and others subsequent to the sixth edition, and has found them substantially the same in content. Emphasis is placed on parsing in all editions examined and, for the most part, the exercises are identical. The philosophical notes in the later editions are, as the author says, for the erudite and literary connoisseur.

As suggested by its title, the book purports to be a new order of parsing. In it the student is led step by step through the 10 parts of speech as conceived by the author to a complete parsing of the most complex sentences and long passages of poetry. It was often necessary to transpose the poetry into prose and supply the missing or understood parts. The student was then required to parse each word and write out the number, case, gender, and person, as well as the definitions and rules that applied. This was a long and laborious task and probably cost Lincoln many an hour of hard work. However, Kirkham contended, "Parsing poetry was more profitable because it brought more immediately into requisition the reasoning faculties than parsing in prose and will necessarily tend to facilitate progress more rapidly." There is scarcely anything else in Kirkham. Parsing is meant to be the core of the book, and only hints are given with respect to other grammatical principles.

How much value Lincoln received from the Kirkham Grammar is a matter of opinion. Having been supplanted many years ago by more modern and totally different books, it is likely that the only reason that it has not been forgotten is because of the association of Lincoln's name with it. On the other hand, a book which went through 105 editions or printings must have been in demand and probably had the approval of a large number of teachers. It must be said that Kirkham introduced some improvements in his book.

The book was organized in such a way that the teacher was not required to interrogate the pupil at all times, yet the pupil was required to work out the exercises and apply the rules and definitions as he did so. This method, new at that time, is the beginning of and approaches what we now designate as the laboratory method of study. Perhaps it would be better to classify it as more nearly like the supervised study plan which was in vogue for many years. Doubtless, many students of the education of Lincoln will contend that he learned much from Kirkham. Such opinions will probably be based upon the fact that Lincoln studied no other grammar, and, therefore, had no opportunity to learn it elsewhere. Perhaps they will inquire where he acquired his style. We might just as well inquire where Chaucer, Shakespeare, and Burns acquired their respective styles. None of these great writers ever saw a grammar, but the masterpieces of literature of such writers is no less appreciated because we cannot account for the development of the various styles used.

It is not intended to discredit the value of formal grammar, nor to contend that Lincoln did not profit by 3 weeks' intensive study of Kirkham's Grammar. On the other hand, the writer does not believe Kirkham was the sole agency whereby Lincoln became adept in using the vernacular employed in his political speeches and state papers. Most educators will agree that there is a place and a need for some functional grammar if it is accompanied by suitable exercises in language usage. Formal grammar is a science and is to be understood, memorized, and remembered. Language usage is an art and is to be practiced. Lincoln may have mastered Kirkham's Grammar in 3 weeks, as is sometimes claimed. If so, he studied it as a science and probably learned the rules, definitions, and the technique of parsing. Kirkham does not provide exercises in language usage, but only those relating to parsing; that is, the science of grammar. A series of patterns for language usage requires time for development. Lincoln had acquired the beginnings of a style long before this time, as he read from Addison, Hume, Blair, Weems, Paine, Volney, and others. Moreover, Lincoln was 23 years of age when he studied Kirkham at New Salem. Those who are familiar with the most elementary concepts of psychology will realize that there was little likelihood of Lincoln's language usage undergoing great modification by a rapid résumé of a textbook.

Reference has already been made to the fact that parsing is an analytical process. The procedure is, in reality, a taking apart or dissection of a literary unit. One who

wishes to speak or write is faced with a situation which is quite the reverse. Creating a literary unit, however small, is a synthetic process. What one says or writes is not ordinarily evaluated in terms of words, but in the excellence of the sentences, paragraphs, and the product en toto. It appears that the most noted and most acceptable writers are those who have developed facility in the choice of their functional words, the form of the words employed, and the order in which they are arranged. The Gettysburg Address when reduced to mere words is nothing. Another writer might have used almost identically the same words but in somewhat different arrangement and his product would have appeared grammatical, stiff, or stereotyped. When used by Lincoln, with his arrangement, a masterpiece is the result. This type of performance, which is far above the standard set by the rank and file of literary men, is possible because of discrimination, selectivity, and a refined sense of feeling for language. The rhythm displayed by Lincoln in the Gettysburg Address and other literary contributions come only after development of a more subtle conception of relationships and a deep and widespread appreciation of language as an art. It is to be noted that many students came in contact with Kirkham's Grammar, but only a Lincoln could so intelligently observe the style of others and adopt it for his own use.

As one of the most outstanding examples of an integrating individual, Lincoln consistently preserved, modified, extended, and improved his integration. In this way, he was enabled continuously to observe, appropriate, and adopt the work of others with purpose. Not only was he an extraordinary person in the matter of refinement of the contributions of others but, more important, Lincoln was a master in his ability to make use of his experience for improved performance in subsequent efforts. All of these desirable qualities which enter into and constitute the ultimate in style are to be found and evolved in situations and in conditions quite remote from a formal textbook. The only safe-and-sane conclusion that may be drawn is that such a refined and effective mode of expression of thought was largely independent of or supplementary to the study of Kirkham's Grammar. It is the thought of the writer that Lincoln may have gained quite as much from the admonition given at the close of the first lecture in Kirkham as from the skill he may have developed in parsing. Kirkham says:

"You are aware, my young friend, that you live in an age of light and knowledge; an age in which the arts and science are marching on with gigantic strides. You live, too, in a land of liberty; a land on which the smiles of Heaven beam with uncommon refulgence. The trump of the warrior and the clangor of arms no longer echo on our mountains, or in our valleys; the garments dyed in blood have passed away; the mighty struggle for independence is over; and you live to enjoy the rich boon of freedom and prosperity which was purchased with the blood of our fathers. These considerations forbid that you should ever be so unmindful of your duty to your country, to your Creator, to yourself, and to succeeding generations, as to be content to grovel in ignorance. Remember that knowledge is power; that an enlightened and a virtuous people can never be enslaved; and that, on the intelligence of our youth, rest the future liberty, the prosperity, the happiness, the grandeur, and the glory of our beloved country. Go on then, with a laudable ambition, and an unyielding perseverance, in the path which leads to honor and renown. Press forward. Go and gather laurels on the hill of science; linger among her unfading beauties; 'drink deep' of her crystal fountain; and then join in 'the march of fame.' Become learned and virtuous and you will be great. Love God and serve him, and you will be happy."

Perhaps there are many concomitant learnings that Lincoln acquired while studying Kirkham that we have not recognized. We may be inclined to minimize the value Lincoln received from a study of the formal portion of Kirkham's Grammar, but scarcely a person is to be found who would not admit that Lincoln went on to achieve a major portion of the objectives as outlined in the foregoing admonition.

Feed Situation

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Feed Situation," by J. A. McConnell, chairman, Feed Industry Council, and general manager, Cooperative G. L. F. Exchange, Northeastern Farm Bureau Conference, New York City, June 9, 1943:

The livestock industry of this county and the nonagricultural population—this means people in cities and towns who must eat to live, that depends on it for a large proportion of its high-quality diet—are in a critical situation.

Following 5 above-average crop years plus a sixth miracle crop year in 1942, we find ourselves in a position of having insufficient grains to feed the hogs, the hens, the beef, and the dairy cattle of this country. We are not just looking ahead to such a situation, we are in it right this moment. The lack of balance between livestock and feed has been getting increasingly worse for the last 10 months.

It has been variously estimated that we lack from 15 to 25 percent enough feed to continue the present rate of feeding of our existing livestock and poultry numbers. In spite of this, expansion in hog and poultry numbers is still taking place at a rapid rate.

It is literally impossible to go to the regular market places of the country today and secure any sizable quantity of feed such as normally exist in abundance in these market places. The legitimate demand (not hoarding) has far outstripped the supply.

We have seen times before when, due to drought, a shortage of feeds has existed, but never have we seen the strange phenomenon in this country of deep-seated feed shortages, such as now exist, following years of heavy production of crops.

Rationing of feed, both by Government and by the entire feed trade, has been going on at an increasing rate for many months. The Government has by one means and another taken possession of large stocks of feed grains and soybean meal and doled it out here and there to prevent serious regional killing of livestock and poultry and the shutting down of industries depending on corn.

Since January of this year most feed manufacturers and producers of feed ingredients have been compelled, because of inability to get grain, to ration country dealers on the basis of the tonnage they took out in corresponding months of 1941 or 1942.

CORN

Corn, which under ordinary conditions comprises approximately 62 percent of the entire grain ration of the country, has ceased to move into the marketplaces. While there is perhaps something over a billion bushels, roughly a third of the amount of last year's crop still in the country, try and get it. The ceiling on corn stopped the movement from farms. While the Government estimates that we will have a carry-over October 1 of perhaps a half billion bushels of corn, most competent private observers, within and without the trade, believe this figure to be 300,000,000 bushels.

Vital food industries using corn for manufacture into human foods, livestock foods, and materials essential for war industries are on the verge of closing down because of inability to get corn. Although these industries are in the Corn Belt, where the present billion-bushel stock of corn is located all around them, they are not permitted to bid for it against the Corn-Belt livestock and poultry farmers because of corn ceilings.

WHEAT

Some people point to the large surpluses of wheat, here and in Canada, as a way out, but it must be remembered that these surpluses are large only in terms of flour needs. In terms of feed required by our livestock population, they are pitifully small and in view of the demand for human food in the world, it is a grave question as to whether or not they should be used, even in the present emergency, to sustain our unwieldy livestock population for a few more months. (If I were Mr. Lehman, I should be quite concerned as to the disposal of wheat for livestock which is now going on at a rapid rate.)

PROTEIN INGREDIENTS

Although we are producing high-protein feeds such as soybean and cottonseed products at the rate of about ten and a half million tons per year, under present conditions, we could easily use twice that amount, and we could do this even with an ample supply of feed grain.

From this stock of high-protein ingredients ordinarily used for livestock and poultry feed, the civilian population and lend-lease are drawing increasingly large amounts for direct human consumption.

TRANSPORTATION

The impression has gotten around that our livestock feed supplies in this country can be brought into balance by importation of Canadian wheat, barley, and oats; wheat from Australia; meat scraps, corn, and oil-bearing seeds from South America.

If the ships and boxcars were available to bring all the surplus feed commodities, which these countries would and could spare, into this country as needed, even then we could not feed our present livestock. However, the facts are that we cannot bring, according to the best estimates, over 100,000,000 bushels of grain from Canada and very limited amounts from other countries. The boats and the boxcars just aren't available. A hundred million bushels of grain from Canada will feed between 1 and 2 percent of our present livestock numbers.

There exist stocks of molasses today in the West Indies, Cuba, Puerto Rico, and others—equivalent to 65,000,000 bushels of corn. We haven't the tankers—or the policy-makers are unwilling to assign them to this job—to bring that molasses in. In the face of such transportation difficulties, it is foolish for this Nation to kid itself any longer with the possibility that we can import enough feed to keep on with our present fantastic livestock program. Even if the feedstuffs were available in other countries, which they are not in anything like sufficient amounts, shipping to get them here is not available.

ROUGHAGE

One shortage leads to another. As the heavy grain-consuming animals, hogs and poultry, bite deeper and deeper into the feed pile, there is less than the normal amount for the animals whose diet consists of a high amount of roughage, such as dairy and beef cattle.

There is but one answer to this: Cattle will be compelled to eat more hay and less grain. An acute national shortage of hay will likely develop by the spring of 1944.

LIQUIDATION OF LIVESTOCK

It is, of course, apparent to every thinking man that fairly heavy killing—particularly of heavy grain-consuming animals, such as poultry and hogs—will take place. If we take the drought years of 1934 and 1936—which were years when we had sufficient feed to carry out livestock—as a pattern, liquidation would take place in the following order: Hogs, poultry, beef, cattle, dairy calves and heifers, and last, dairy cows. In those years, the heaviest liquidation was in the western Corn Belt States and least in the dairy areas.

Planned economy in those days had not reached its present state of complexity so that liquidation took place naturally. Administration action may, and probably will, change this natural order. It will be difficult, however, for the administration to devise a policy that will do three things at the same time, namely: (1) be really in the Nation's interest, (2) meet the test of equality of sacrifice, and (3) be politically expedient.

In summing up the general situation, it is now apparent that our livestock and poultry production is gaited at a rate that will use up all of the carry-overs of grain from former crops, all of the grain that can be raised this coming year, even figuring a normal crop, which is doubtful, plus all of the grains which we can import from other countries, and still be far short of meeting the feed requirements of our livestock. If all of the feed grain available were allotted to livestock, first, on the basis of their needs, it would leave nothing for industrial use, such as grain for industrial alcohol, starch, sirup, cereals, and other vital necessities.

HOW DO WE EXPLAIN SUCH MALADJUSTMENTS IN OUR NATIONAL FOOD PROGRAM?

It is of the utmost importance that people interested in continuing to eat should inquire as to how, under planned economy, the food situation could have been otten into such a mess. They should make further inquiries as to what effect the continuation of such a policy will have on our war program. It must be remembered that the food policy of the United States Government determines not only the food supply of all the people of this country but also that of many other nations. The present food policy is a proven failure. A continuation of it spells national and world disaster.

There are many reasons for the failure of this Government to develop a food policy consistent with the needs.

First, there has at no time, since the war started, been included in the war-policy group anyone who has any fundamental conception of food production.

Second, the administration promised the industrial worker of this country, and particularly the organized worker, that this war would be fought without sacrificing any of the so-called social objectives of the New Deal. In layman's language, this meant that they would feed the industrial worker, not the same amount but increasing amounts of beefsteak, at no increase in cost. The attempt to make good on this promise is cloaked under the fight against inflation.

Third, this administration committed itself to deliver perfectly enormous quantities of meat, milk, and eggs to foreign countries without any knowledge of what the real capacity of this country is to produce these things.

Harry Hopkins is called Chairman of the Munitions Assignment Board. It would almost appear to the layman as if he is, in fact, just an order clerk for the governments of the foreign nations allied with us. The orders they send in he confirms.

As a result of these promises and commitments to labor and to other nations, even before Pearl Harbor, our Government adopted a cheap-feed policy in order enormously to expand the production of meat, milk, and eggs without giving the necessary feed supplies.

The Government is not to blame for the weather. We have, however, the right to expect that the Government will always take the weather into consideration when it takes on the commitment of feeding the world. Now, because of this ill-conceived policy, plus adverse weather, we are rapidly approaching an acute crisis in our food supply. Shortages of all kinds are showing up. The food industry, including farmers and distributors, are being weighted down with burdensome regulations which produce more shortages. Price policies, which are supposed to produce plenty and keep down the cost of living, are doing neither. Increasing shortages will make it necessary to extend rationing to an increasing number of essential foods.

The realization that we were in difficulty with our food supply broke upon this country a year ago this coming September. Still after almost a year no workable policy has been evolved. The blame for unworkable policies can be laid neither to the Food Administrator, the Department of Agriculture, the War Production Board, nor the Office of Price Administration. It must be laid on the doorstep of the former Director of Economic Stabilization—now promoted to a higher office—Mr. James Byrnes. Br. Byrnes has consistently closed his eyes and ears to the things that were happening on the food front of this country. In the face of constantly rising food demands and a steady decline in total food supplies, he has refused to act. He has persisted in continuing to adhere to an unworkable price and wage policy—a policy based on consumer ignorance of fundamental food problems—a policy brazenly designed to catch the city vote in 1944.

To illustrate this, let us take the corn price ceiling. It was apparent, within a few weeks after being put on, that the corn price ceiling was unworkable and would lead to freezing the entire stocks of corn on farms where it was produced, with the consequent shutting off of its flow to feed-deficient areas and consuming industries. In spite of the fact that this was demonstrated in a very short time, Mr. Byrnes, through the Office of Price Administration reaffirmed this politically expedient policy. Conditions have now become so bad that our whole feed economy and our industrial economy based on corn, is breaking down. The only excuse given for continuing this policy which is bringing about such dire results, is that to raise the ceilings would increase the cost of feed to dairymen, resulting in the necessity of raising the price of milk to the consumer. Contrary to that assumption, corn or its by-products in a dairy ration are fast becoming just a memory. The corn ceiling price is not helping the dairyman to keep down costs. Instead, it is creating such a scarcity of feed that it is actually increasing the dairyman's cost of milk production.

It is reported that price policy of this country is being determined by a member of that famous old team, Cohen and Corcoran, namely, Mr. Cohen. It is said, however, that Mr. Corcoran hovers close in the background.

Can it be that Mr. Byrnes is more interested in getting the 1944 Vice Presidential nomination than he is in a workable food policy under which this country and its allies can be assured of a maximum quantity of food at some price and not wholly indequate quantity of food at some lower price?

PRICE

It would seem that under the cloak of fighting inflation, Byrnes' Office is carrying on a political campaign looking toward the 1944 election. They are still telling the city consumer that he can have plenty of meat, milk, and eggs at no increase in cost. Every few days they reach into the hat and pull out a new rabbit. The latest is the roll-back on butter, meat, and coffee. Anyone who knows anything at all about food production knows that this is an impossible job of fulfillment and that the attempt to fulfill it can only result in a decrease in total food supply.

Mr. Fulton Lewis, Jr., had this to say in his broadcast on May 31, 1943:

"We've had Office of Price Administration programs in the past that were accused of being unsound, or unworkable, or impractical. On this one, ladies and gentlemen, the time has passed for any such terms. This one is sheer humbuggery. No shell game in a circus was ever designed more directly to fool, or mislead the public. It is dishonest government policy in its most simple form.

"The advertised purpose of this subsidy program is to roll back price to the consumer—roll-back being a polite Office of Price Administration term for reducing prices—and to prevent inflation. Let's take it apart and see whether it does either one of them:

"It's true, the dollars-and-cents price, which the housewife pays to the corner grocer for a pound of butter, will be reduced 5 cents. We'll say it has been 45 cents; it will be 40 cents in the future.

"That 5-cent reduction will be made up by the 5-cent subsidy, which the Government pays to cover the loss at the creamery.

"And the 5 cents that the Government pays comes out of the pocket of the same housewife, the same identical housewife who thinks she is paying five cents less. In reality, she's still paying 45 cents a pound, except that she now will be paying 40 cents a pound direct and the other 5 cents in taxes through the Treasury."

In addition, Mr. Lewis points out that a whole army of Government employees will have to be set up to handle this roll-back, all of which has to be figured into the final cost.

CONGRESS

Since it would appear that Byrnes is more interested in the outcome of the 1944 election than he is in a workable food policy, we might as well write off Mr. Byrnes' office, as far as getting any effective program which will look forward to filling the bellies of the millions of civilians of this country, the armed forces, and our allies. It is not a case of higher prices on farm commodities for profit; it is a case of having sufficient food of any kind to come anywhere near meeting our needs.

We must find some way of getting a workable food policy. There is no easy way out. It is obvious, however, that the food front of this country is right now an important, if not the most important, front in the war effort. This was not necessarily true a year and a half ago, but, because all the other fronts have been expanded at the expense of the food front, we have now reached the position where food has become our No. 1 problem.

Because Mr. Byrnes and his New Deal associates do not understand food in the first place, and in the second place are more interested in politics than they are in food production, it is time that Congress created a food administrator with sufficient power over all phases of food production, including price, so that as a nation we may deal with our food problem in an intelligent and effective way.

The formation of a workable food policy and its management is the biggest war job the country now faces. Since Mr. Byrnes has refused to deal with it, only congressional action is left. Secretary Wickard was sacrificed to the political objectives of the administration. Every succeeding food administrator will be similarly sacrificed, unless Congress acts.

The promises being made by the administration to the city consumer cannot be filled, that is, plentiful food at low cost. Further attempts will further jeopardize our war front and our home front. The New York City consumer, for instance, can even now assure himself of 10 percent less milk from the dairymen of the New York milkshed than he had last year, and there is no other place for him to get it. Dairymen will do all they can to produce the maximum amount of milk, but they cannot produce without livestock feed, without labor, without sufficient price to offset their rising costs. They are now lacking in all three.

The problem of food supply is more important to the city dweller than it is to the farmer. The people of the cities must no longer be misled by promises based on political expediency; they must insist on congressional action leading to a workable food-production policy.

The Late James Wilkinson

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. HÉBERT. Mr. Speaker, there is no name in all of Louisiana's glorious history more closely associated with the State than that of Wilkinson.

Long before Thomas Jefferson, with his great farsightedness, purchased from Napoleon that vast, fertile, and promising empire then known as the Louisiana Territory and from which has been carved so many great States now represented in this body, the name of Wilkinson was prominent in the development of this Nation.

When Louisiana was purchased from France the name of James Wilkinson was among the three commissioners who participated in the formal transfer from France to the United States.

From father to son down through the generations the heritage of the Wilkinson name has been cherished and embellished with the added luster of continued accomplishments in the civic and political life of the State.

Today Louisiana is in mourning.

The great grandson of Gen. James Wilkinson of yesteryear, James Wilkinson, the namesake of that fabulous character, is dead.

James Wilkinson of today has left his mark on the history of Louisiana in much the same manner as his illustrious forebear. He, too, will be long remembered after most of us have gone to our graves.

James Wilkinson, like his sire and his sire's sire before him has left behind an illustrious son of an illustrious sire to carry on the name of Wilkinson in the history of Louisiana which is yet to be written.

Hugh M. Wilkinson, who, with a brother and sister, survive James Wilkinson, already is a name to conjure with in the courts of Louisiana and in the civic and political life of the city of New Orleans.

When lawyers of tomorrow discuss the lawyers of today the name of Hugh Wilkinson will find its place among the great criminal lawyers of Louisiana. From his father Hugh Wilkinson has not only received his great legal talent but he, on his own initiative and ability, has brightened the star which shines over the name of Wilkinson in Louisiana.

Mr. Speaker, as a boy I remember most vividly the first time I heard of the name of Wilkinson. It was during a sensational murder trial in the criminal courts of New Orleans in the district which I, in later years, was to have the honor to represent in the Halls of Congress. The defense was in the hands of the Wilkinsons, James and Hugh, father and son. It was a great combination; it was a most effective team; it was an inspiring sight which the crowded courtroom saw.

Yes, Mr. Speaker, the defendant was acquitted because of the splendid work of his counsel. It was a great triumph for the Wilkinsons; it was a crowning victory for father and son.

In later years when I had grown to manhood I again saw the Wilkinsons in a courtroom. This time the situation was quite different. Not only were father and son present in that courtroom but still another Wilkinson, a grandson, was present.

The elder Wilkinson occupied a chair in the front row of the audience. He came this time, in his declining years, as a spectator, to witness a new triumph, a new victory for his son, Hugh Wilkinson, who during the span of years between that murder trial of years before and the present time, had risen to majestic heights before Louisiana's bar of distinguished lawyers. And alongside the elder Wilkinson sat a Wilkinson of still a younger generation, the son of the son, who came to hear his father carry on the name of Wilkinson in the courts of Louisiana.

Mr. Speaker, I shall never forget that memorable day in the Federal courtroom in New Orleans.

A father watching his son, a son watching his father, the father and son fulfilling every hope, every dream, every ambition, every pride of father and son, while son and grandson sat proudly by in silent admiration of those Wilkinsons who had preceded him.

I describe these events, Mr. Speaker, to demonstrate to you and to the ladies and gentlemen of this House what significance there is attached to the passing of a Wilkinson in Louisiana.

Now James Wilkinson is dead. He is among the last of a fast-dying era. Little more can be said at this time except to recite his life's history. That life's history speaks for itself, that life's history speaks more eloquently than anything I might say or somebody write about James Wilkinson.

In my humble and inadequate manner I have attempted to pay tribute to the name of Wilkinson in Louisiana. I leave more full tribute to the pens of the accomplished editorial writers of his own State, which I submit to you with the permission of the House.

Briefly the career of James Wilkinson is sketched here, after which I insert an editorial.

They tell the story of the career of James Wilkinson and the esteem and high regard in which he was held by those who knew him best, by those who were his neighbors and friends in his native Louisiana, which he loved so well:

James Wilkinson, who was 87 years old, was believed to be the oldest member of the Louisiana bar. He was admitted to the bar in 1881, and served as counsel for the Orleans Levee Board since 1912.

Born March 8, 1856, at Riverside Plantation in Plaquemines Parish, James Wilkinson was the son of Dr. Joseph Biddle Wilkinson and Josephine Osborn Stark. He was a great-grandson of Gen. James Wilkinson, one of two commissioners appointed by President Thomas Jefferson to receive the Louisiana Territory from the French Government in 1803. He took the role of his ancestor in ceremonies conducted at the Cabildo on the one hundredth anniversary of the transfer.

James Wilkinson began his career in 1884 when he was appointed district attorney for the judicial district composed of the parishes of St. Bernard and Plaquemines in Louisiana. He served in that post for 13 years.

He was one of the few survivors of the White League, which participated in the battle at the foot of Canal Street on September 14, 1874, and restored white supremacy to Louisiana. He was an officer and member of the Louisiana Historical Society for many years. In 1935 he published a biography of General Wilkinson, titled "Wilkinson, Soldier and Pioneer."

He was the last survivor of seven brothers, all of whom were prominent in public life, including Theodore S. Wilkinson, candidate for Governor of Louisiana in 1908, and Horace Wilkinson, member of the legislature from East Baton Rouge Parish.

James Wilkinson studied law in the old Louisiana University, forerunner of Tulane University, graduating in the same class with the late Judge Hugh C. Cage. He established his residence in New Orleans shortly after the turn of the century and thereafter took an active part in the city's public affairs.

Appointed by Gov. Luther Hall to be attorney for the levee board in 1912, he served with that body under 10 subsequent Governors. Because of advanced age and desire for less responsibility, he served the board for the past 3 years in the capacity of associate counsel.

For many years he was a recognized legal authority on matters of flood control and riparian rights, and lectured on those subjects at Loyola University. He wrote much of the legislation under which the lake-front improvement, the industrial canal, the Rohemia spillway in New Orleans, and other like projects were organized. Interested in the development of Grand Isle, he built a hotel there which was destroyed by the hurricane of 1893.

He was named Louisiana representative in 1931 to the sesquicentennial celebration at Yorktown, Va., which was held to commemorate the termination of the Revolutionary War.

He is survived by three children, James Wilkinson, Jr., Hugh M. Wilkinson, New Orleans attorney, and Mrs. Walter E. Dawes, of Keesler Field, Miss. He was married to Miss Cecilia Peters, of New Orleans, who died in 1942. His first wife, the late Miss Mattie Sypker, of Plaquemines Parish, died many years ago.

He is also survived by six grandchildren, Lt. Hugh M. Wilkinson, Jr., United States Naval Reserve; Aviation Cadet James Wilkinson, III; Mrs. Leila Wilkinson Scheyd; Miss Sheila Bosworth Wilkinson; John Wilkinson, and James Wilkinson Dawes, and one great-grandchild.

[From the New Orleans States]

JAMES WILKINSON

Death yesterday wrote finis to the outstanding professional and political career of 87-year-old James Wilkinson, probably the oldest member of the Louisiana bar. His life had been always active, and sometimes turbulent in the heat of political battles and controversies of law or politics, or both. He has earned the rest, peace, serenity that come for such active characters only when life's labors are finished.

Mr. Wilkinson was reared, schooled, and began the practice of law in his native Plaquemines Parish. He was a practitioner for about 62 years, and his first public office came to him nearly 60 years ago. Thereafter, he has always been in public life, and for the last 30 years was continuously connected with the Orleans levee board as chief or associate counsel.

Mr. Wilkinson was one of the prominent leaders in the great political reform battle of 1912 when the late Luther E. Hall was elected Governor. That victory brought a great improvement in the quality of State government, and in the government of Orleans Parish, too, that was to last for many years, with many of the advantages and betterments continuing until this day.

Mr. Wilkinson was only 18 years old when New Orleans citizens fought and won the historic Liberty battle at the foot of Canal Street on September 14, 1874. He carried a rifle with them, being one of the youngest warriors of the day. At his death he was one of the few survivors of the clash that ended the evil oppression of "carpetbagism." Mr. Wilkinson was for many years active in the affairs of the Louisiana Historical Society, and a few years ago wrote a volume on the life and career of his great-grandfather, Gen. James Wilkinson, soldier, pioneer, and diplomat, who was one of the three commissioners appointed by President Jefferson to receive the new Territory of Louisiana for the Union.

He was a consistent supporter of many causes and movements projected for the welfare of New Orleans. The people of this city and State have many reasons to remember, with feelings of deep gratitude, the public services performed by James Wilkinson.

Hon. Christopher D. Sullivan

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. KENNEDY. Mr. Speaker, on August 3, 1942, this House and this country lost a valued colleague and a devoted public servant in the death of Christopher D. Sullivan.

It is not given to many men in public life to devote the major portion of seventy-two years to the public good. Indeed, too, it is given to but a fortunate few to pass away in the midst of their labors and amid scenes familiar to their eyes, surrounded by their faithful and loyal friends. This was the blessing afforded to Christopher D. Sullivan, and none merited it more than he.

Representative Sullivan passed away in the executive office of his district where, for more than thirty years, he had presided over the political and personal affairs of his constituents with kindness and patience, with loyalty and understanding.

He had long been loved and revered in the downtown section of New York. Although his devoted services to the Democratic Party claimed his presence for over twenty-three years, both in the Legislature at Albany, where one of his colleagues was a young senator named Franklin D. Roosevelt, and in this House of Representatives at Washington, his heart was never far away from his beloved East Side. There he was born and there, every Monday and Thursday, he met with his constituents, to hear their grievances, to solve their problems, and to dispense benefactions.

As a Congressman, Mr. Sullivan served with distinction under Presidents Woodrow Wilson, Warren Harding, Calvin Coolidge, Herbert Hoover, and Franklin Delano Roosevelt. During his service under these great men, Representative Sullivan filled many assignments on important committees and, at the time he decided to conclude his congressional service, Mr. Sullivan was a member of the powerful Ways and Means Committee.

Because of his many obligations and duties as leader of the Democratic Party in New York City and that he might be able to devote all of his time to the leadership of his party, the Congressman declined to stand for election to the Seventy-seventh Congress.

Representative Sullivan enjoyed the confidence of the officers who guided our ship of state under the command of President Franklin Delano Roosevelt. In the early days of the New Deal when many men of less strength of character and courage questioned some of the plans of the President, Christopher D. Sullivan stood four-square behind Mr. Roosevelt and worked and voted and succeeded in having enacted into law the legislative program of his fellow New Yorker, Franklin Roosevelt.

I am sure that during the period immediately following the inauguration of Mr. Roosevelt on March 4, 1933, and down to the very day the Congressman's services ended, the cooperation and wholehearted support of Mr. Sullivan must have been a source of inspiration and encouragement to the Congressional leaders and the President.

Upon his passing, the press of New York paid editorial tribute to the character of Mr. Sullivan, to his fine qualities as a man and to the unselfish service he had rendered to the people of his district, his city, his State and his Nation.

Nothing that I can say would add to the high esteem and genuine friendship that Mr. Sullivan enjoyed from his fellow New Yorkers and from his multitude of friends throughout the Nation. He was a true friend, a splendid citizen, and a devoted father.

I believe the following poetic lines best portray the character of our friend Representative Christopher D. Sullivan:

Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor, men who will not lie

Emory and Henry's Dr. James Shannon Miller

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. FLANNAGAN. Mr. Speaker, down in my district, nestling among the blue grass hills of the Holston, is situated a venerable Christian college whose very name, Emory and Henry, symbolizes the mission for which it was established, the training of young men in the liberal arts under Christian and American influences and environments. Yes, Mr. Speaker; it would be hard to find an American who better symbolizes Christianity than did Bishop John Emory, and it would be equally as hard to find an American who better symbolizes Americanism than did Patrick Henry.

Established by the Methodists over 100 years ago, Emory and Henry has gloriously fulfilled its mission, ever living up to the Christian and American ideals of those whose names it bears.

This year marks the half century teaching record of Emory and Henry's best beloved and most outstanding teacher, Dr. James Shannon Miller. During his half century of teaching, 48 years of which have been spent at Emory and Henry, he has not only grounded hundreds of young men in the basic principles of mathematics and physics, but he has done something infinitely greater in that, by precept and example, he has led them along the path that leads upward, guided them in the true American way of life, and planted in them the urge to develop their talents and devote them to service.

Small Christian colleges, in some mysterious way, have ever been able to retain among their facilities at least one or two strong outstanding men. For 48 long eventful years, years filled with honor and glory, with genuine achievements, Dr. Miller has been Emory and Henry's strong outstanding man.

I used to marvel over what caused such men to remain with our small Christian colleges. What mysterious force, as it were, chained these strong, outstanding men to our small Christian colleges? Why should men of unusual talents, when larger institutions of learning would gladly pay them a wage commensurate with their worth, voluntarily

remain, ofttimes under adverse circumstances, with these small colleges? These were some of the questions that frequently entered my mind. At last I think I know the answer: These strong, outstanding men, I have observed, are all men of consecration and vision. Having consecrated their lives to service, their vision opened up to them the great field the small Christian college affords as a training ground for future Christian-American leadership. They have, one and all, been interested in developing men and not in accumulating dollars. And because of such men the small Christian college has become the bulwark of our Christian democracy. May the challenge to democracy that today is being made by the accursed dictators awaken us to a true evaluation of the important part the small Christian colleges have played in keeping alive the spirit of Christianity and democracy is my fervent prayer. If it does, then the future problem of keeping these wellsprings of Christian democracy alive will have been solved.

Mr. Speaker, a short time ago the Associated Press carried a story on Dr. Miller. Under unanimous consent, I incorporate the story at this point in my remarks:

EMORY, VA., March 9.—Fifty years as a college professor—that's the record set by Dr. James Shannon Miller, professor of mathematics and physics at Emory and Henry College.

Although Dr. Miller taught the fathers of many of the present Emory and Henry students, he is still just as active as he has always been and doubtlessly belies his age. New courses are eagerly undertaken when the occasion demands; he operates a large farm in Pulaski County and also raises thoroughbred chickens as a hobby.

It was back in 1893 when Dr. Miller first came to Emory and Henry College, and his has been a period of uninterrupted service to the advancement of learning. Only 3 years of the 50 were away from Emory and Henry, these being spent at Hampden-Sydney College, 1919–22.

Dr. Miller received his B. S. and C. E. degrees in 1889 and Sc. D. degree in 1893, all from the University of Virginia. One year, 1891–92, he was a student at the University of Goettingen, one of the famous centers of science and culture of old Germany. In addition to his 50 years as a college professor, he also was an instructor in mathematics and physics at the University of Virginia for 6 years while he was a graduate student there.

The University of Virginia now has on its faculty a number of professors who received their basic scientific study under Dr. Miller at Emory and Henry College. Among them are James Miller, Jr., professor of electrical engineering; Dr. E. J. Oglesby, professor of engineering and mathematics; Dr. Joseph K. Roberts, professor of biology and geology; Dr. G. T. Starnes and Dr. T. R. Snavely, professors of economics, and Dr. John W. P. Graham, professor of French. Virginia Polytechnic Institute has Dr. George W. Tyler and Dr. O. W. Addington in its mathematics department, and also Dr. L. B. Tate, professor of rural sociology, and Dr. P. H. Farrier, professor of English, all Emory and Henry graduates. W. J. Young, professor of physics, and Sam W. Shelton, professor of mathematics, are two of Dr. Miller's former students who are now in his own department at Emory and Henry College. Other Emory and Henry graduates on the Emory faculty are President Foye G. Gibson; Dr. V. S. Armbrister, dean and professor of English; Woodrow Flanary, professor of English; T. L. Porterfield, coach and college treasurer, and Rev. Frank A. Settle, college pastor and professor of Bible.

One of Dr. Miller's former students discovered the last two elements, alabamine and virginum; he was Dr. Fred Allison, professor of physics at Alabama Polytechnic Institute. New York University has two professors of mathematics from Emory and Henry, Milton Maiden and Palmer Graham.

Some other outstanding men who studied under Dr. Miller are Dr. Joseph L. McGhee, professor of biochemistry at Emory University; Dr. John A. Kelly, professor of German at Haverford College; Dr. Claude Bruce, professor of mathematics, Wesleyan College; Rear Admiral Charles S. Butler, of Bristol; ex-Governor George C. Peery, Tazewell; Stanley Reeves, construction engineer, William A. Stewart, lawyer, and Dr. Harry M. Hayter, physician, Abingdon, and Hon. W. N. Neff, southwest Virginia businessman.

When Dr. Miller first came to Emory and Henry, Dr. R. G. Waterhouse was president of the college in its 55th year. There were only six professors on the faculty, among whom were Dr. Joseph L. Jarman, professor of chemistry, who is now president of Farmville State Teachers College.

Dr. Miller was married in Florence, Italy, in 1892 to Miss Sallie Board, of Bedford, Va., who died in 1936. They were the parents of two children, Juliet, who lives with her father, and James S. Miller, Jr., of the University of Virginia. There is one grandson, James III.

The service rendered by Dr. J. S. Miller during the past 50 years well illustrates the contribution of liberal arts colleges on the life of the Nation. Dr. "Mathey" Miller is a gentleman of keenest intellect and thorough preparation and personifies the highest attribute of small college professors.

Dr. Miller, on this your fiftieth anniversary as a teacher, personally and as the Representative in Congress of the people of the mountain empire, I salute you, and publicly express the hope and prayer that your years of usefulness and service may be extended.

Along the Milky Way

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. PHILLIPS. Mr. Speaker, it has become a more or less popular pastime to criticize Congress. Perhaps we deserve criticism. However that may be, it is a heartening thing when the editor of an agricultural journal as well known as the Pacific Dairy Review in its issue of May 1943, gives an entire page to the development of an editorial which begins, "These are the days when we say most humbly and sincerely, thank God for Congress." The editorial appears under the heading "Along the milky way," which is the standing caption of the monthly editorial page, and perhaps we can appreciate the sentiments more than ever when we realize that the editor, Mr. Robert E. Jones, has spent a great deal of time in Washington this session, on matters affecting the milk industry, and therefore speaks from personal observation. Mr. Speaker, I ask unanimous consent to include in these remarks the entire editorial:

ALONG THE MILKY WAY

These are days when we say most humbly and sincerely, "Thank God for the Congress!" We say this because the framers of our Constitution had the foresight to set up the legislative branch in its present form as one of the checks and balances to safeguard this Republic. We say it also because of the general high average in character and ability of the men who are Members of our House of Representatives and the Senate. Most of these men are serving their country at a material sacrifice; they are in public service because they are able and it satisfies them to be serving.

It was fashionable a little while ago to belittle Members of the Congress. That fashion still exists in some quarters. Be suspicious that this fashion stems from those schemers who want to drive us into a centralized form of government, the European manifestation of which is so hateful to all Americans. The temper of the people is changing and there is a rebirth of realization of the vital place occupied by the Congress in our body politic. We are determined not to lose our liberties either to external enemies or to schemers within, and Congress is the anchor of these liberties.

Now everyone grants that during wartime, certain restrictions on liberties must be accepted. This editorial has no part in criticizing any legitimate restriction to individual liberty that will help successfully to finish this war. Like most everyone, our families are deeply and directly involved. Any sacrifice we as civilians can make until the war is won, we willingly make.

But the encroachment of the executive branch of government upon the liberties of the people is older than the war threat. The greatest single surge came in the years following 1933 when "brain trusters" had such a vogue and they swarmed from Manhattan and Harvard College into Washington.

We, the people, encouraged this because of our laziness in public affairs. We even asked bureaucrats to help run our businesses because we could not get along among ourselves. And there is no life unit in the animal or plant kingdom that grows more rapidly than a bureau once it has a diet of power. This is just plain nature asserting itself, the urge to do a job completely, power feeding on power, self-justification.

Well, here we might launch into a tirade on bureaucrats. But the trouble is you can't generalize. Noble things have been accomplished in this Government of ours by bureaucrats. Witness the great work of our Weather Bureau, the Forest Service, National Park Service, Geologic Survey, the Post Office Department, all now taken for granted. When we hotly denounce the bureaucrat we are not thinking of these people. But there are also fine quality men in other kinds of Government services. Those touching our economic life are most recent, and it is here that the restriction of liberties becomes most apparent. And it is this service in the economic field that attracts the kind of bureaucrat who fancies he can do a better job of government by regimenting people. Often he is the product of Manhattan, yet he may have an assignment that deeply affects the life of rural America. To such the farmer is a peasant, who has the gall to expect compensation equal to that paid industrial workers.

The bureaucrat's character is affected by his long tenure in office; exercising much power over long period with little restraint. As a famous Senator once said, the bureaucrats don't have to come up for election and answer to the electors for deeds done, but Senators and Congressmen have to answer. Bureaucrats may stay in office 10, 20, 30 and even 40 years.

Where can you find a human being that is good enough to occupy a position of power 20 years, let alone 30 and 40 years, unrestrained? The Congress, therefore, is our safeguard. It is the restraining power.

We've had a good deal of experience in recent months with the national legislators and have come to know many of them personally. This experience has been a happy one. It has renewed our faith in the framework of our Government. These Senators and Congressmen are the kind of people you like to know and trust. We have no hesitancy in saying that there must be two score in the Congress today who could creditably occupy the office of President of the United States. If you doubt this, consider how many generals and admirals there are doing great big jobs today; men you never heard of 2 years ago. Greatness exists in the Halls of Congress, even if it has not been called to service in executive work and so publicized.

A Senator or a Congressman by force of circumstances is most of the time a resident of Washington. But unlike the bureaucrat, he does not "live" in Washington. He "lives" in his home district. His office walls are adorned with pictures from his district, his desk is piled with letters from his constituents, and sometimes a thoughtful constituent will even send a cheese or a box of fruit from the home soil. There is nothing quite so gratifying to a Senator or a Congressman as word from, or better, the sight of the face of a constituent. Because he is directly answerable to the people at the next election and because he "lives" in his district, your Congressman and your Senator (with their colleagues) can save you from centralized regimentation.

Friends of the dairy industry, we are trying to paint the picture for you. There is no branch of agriculture more controlled than the dairy industry. So this means much to you. We make no partisan plea. We plead for the support of people who will adhere to the pattern that Washington and Jefferson framed for the American people. Your Senators and your Congressmen are your safeguard. Judge them. Support the worthy. See that they vote their convictions and the wishes of their people. Watch carefully to determine if they merely "take program" from the executive branch.

So, while giving the job of winning this war everything we have, let's not forget to watch our Government at home and support the Congress. In the language of L. S. Crawford, president of the National Manufacturers Association, "I'm all done criticizing Congress. I'm going to get in and help."

The Plant Seizure and Antistrike Bill

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. ROBSION of Kentucky. Mr. Speaker, the conference report on Senate 796, sometimes spoken of as the Connally-Smith bill, came up for consideration in the House today. The Senate some time ago passed S. 96. Its principal purpose was to provide for the seizure of plants, shops, and other production facilities. It came to the House, and instead of it being referred to the Committee on Labor, where it should have gone for investigation, it was referred to the Military Affairs Committee. The Military Affairs Committee, without holding hearings on that particular bill, struck out all of the Senate bill and adopted what is known as the May bill. The House struck out the May bill and passed the Harness substitute bill. It then went to conference and the conferees of the House and Senate brought in this report. It restored the principal features of the Connally bill and includes some provisions of the May and Harness bills. In other words, the bill has been rewritten and is included in this conference report, and if this report is adopted, the provisions of this report will be the law governing the seizure of plants, equipment, and materials and will also govern the conduct of owners of such plants and the persons working therein. After most careful reading of this conference report, I cannot give it my support.

We all agree that the important problem before the American people is to win the war. Every loyal American should be willing to do whatever is within his or her power to win the war at the earliest moment possible, so that the millions of fathers, sons, and brothers, including my own son, may return to their homes and loved ones, and our country be restored to its normal conditions and normal life once more.

The souls of owners and managers of every plant, shop, mill, and mine, and every farm, railroad, and other instrumentality of production, transportation, and communication, and the workers should be fired with the same patriotic zeal to win the war as our boys are on land and sea and in the air, and I might say that, in my opinion, 99 percent of those of management and labor are as loyal and as anxious to win the war as are Members of Congress. No one should do or say anything that would hinder our war effort.

WILL THIS MEASURE HELP OR HURT THE WAR EFFORT?

Mr. Donald M. Nelson, an experienced, hard-headed businessman, for many years identified with a very large business enterprise, and who is now in charge of our production activities for the war, and Admiral Land, who is in charge of our shipping production, have urged the Congress not to pass this type of legislation at this time, as it would likely slow up and hurt our war-production effort.

Secretary of War Stimson, a great lawyer, and identified with big business for many years, and Secretary of State during President Hoover's administration; and Secretary of the Navy Knox, who was for years connected with big business enterprises, say it will hinder and not help our war effort. This same position has been emphasized by other persons in high places in our Government and connected with our armed forces and the production of ships, bombers, planes, guns, tanks, shells, and other war equipment and supplies. These men, who have advised against this legislation, are in a better position to know what will be helpful and what will be hurtful to our war effort than perhaps any Member of the House and Senate. They have been in close touch with our war production, dealing with management and labor, and they should know our war needs and what progress we have made toward meeting these war needs. We have been voting them hundreds of billions of dollars and granting them extraordinary powers. If these persons in charge of our production and the direction of our armed forces are not doing the job as it should be done, and we are unwilling to follow their counsel, vigorous steps should be taken to have them removed and replaced by persons in whom the Congress could place confidence.

The Congress is not the executive branch of the Government. The enforcement of any laws we pass must depend on the executive branch of the Government. If they still hold to the view this is not a good law and that its enforcement will bring about discord and hurt our war efforts, will they enforce it?

I have said heretofore that the Congress could perhaps accomplish very little along these lines until those in charge of production and in charge of our armed forces come to the conclusion that such legislation is necessary and call upon the Congress to pass such legislation, and it will do so.

PRIVATE ENTERPRISE AND LABOR

I am firmly of the opinion that many of the provisions contained in this measure, affecting both industry and labor, are clearly unconstitutional. While some part of management may favor this act on the idea it will do something to labor, they will find, after careful reading of this revised antistrike and plant-seizure measure that private enterprise will likely receive a much greater blow than labor. Before we entered into this war on a number of occasions, in the Congress and out, I expressed the feeling that if we became involved in this World War that we would find it the costliest, longest, and bloodiest war in which this country ever engaged; that it would disrupt our economic, social, and political life as it had never been disrupted before; that our standard of living would be greatly lowered; that our country would be driven almost to bankruptcy; and, greatest of all, we might lose our own liberty and freedom and whatever we might have expended in treasure and blood. I have tried to keep before my mind all the time the preservation of the freedom and liberty of the American people. I should like to see freedom for all the peoples across the seas, but I am more concerned with preserving it here at home.

When we destroy private enterprise in this country we strike at the very foundation of the growth, prosperity, success, and liberty of the American people. I do not want to take any step that would destroy private enterprise or would destroy the liberty and freedom of the

farmers, the workers, and the whole people of this country.

If the records are to be believed, private industry and labor in this country have done a great job of production. War Mobilization Director Byrnes, stated the other night, that we had built 100,000 planes and bombers; we have doubled the American Navy; we are building more than 1,000,000 tons of shipping a month; we have produced 2,225,000 machine guns; we have produced 44,830,000 bombs; 100,000 antiaircraft guns, millions of smaller weapons and great quantities of other war munitions. We are building merchant marine ships four times as fast as they are being sunk. In a single year we built more than 1,000 ocean-going cargo ships and 100 ocean-going tankers. In fact, man for man and tool for tool we are producing faster than Great Britain, Germany, Russia, Japan, or any other country. They all have so-called antistrike laws.

Let me say in passing, I am informed Great Britain has an antistrike law and she has lost in strikes more man-days per man since she has been in the war than have been lost in the United States.

Some managers and owners of plants have not always measured up to what they ought to have done. Some of them have made excessive profits on Government contracts but by and large they have done a great job of production and transportation. The no-strike agreements made by labor have been carried out more than 98 percent.

None of us wants to see strikes or stoppages on the part of management or labor. There should be no stoppage. Strikes or stoppage in production or transportation give encouragement to our enemies, and as I have said before owners or managers in industry and those toiling in plants, shops, mills, and mines or on the railroads or farms should feel and know these stoppages lengthen the war and will cost the lives of many of their sons and our sons.

I am glad to say the working people of my district are practically all native Americans. They love this country and, as a rule, are as loyal and patriotic as any Member of this House. We must not forget there are more than 40,000,000 men and women working in industry in this country in thousands of plants, both large and small, and we find persons on one side and sometimes on both sides who will not yield. Each one of us should be satisfied to sacrifice some of our personal interests and rights that our war effort may be held at its highest point and that our courageous, patriotic boys be equipped with everything necessary to protect them and win the war.

IS THE ANTISTRIKE BILL A THREAT TO PRIVATE OWNERSHIP?

I have a great many coal mines and other industries in my congressional district. I have not heard a word from any of them urging me to support this bill. They may have seen in the bill what the New York Wall Street Journal saw in the way of danger to private enterprise, private ownership, and private control. On Friday, June 11, 1943, among other things, this conservative business journal has this to say in an editorial captioned "The antistrike bill":

For one thing, the whole scheme of the bill so far as it can claim to be called an antistrike measure depends on Government seizure of production facilities threatened by labor trouble. Its adoption as a general rule would certainly bring along another new chain of problems and perhaps destroy the effectiveness of plant seizure as an emergency action. Certainly it tends to perpetuate Government operation of war plants.

In speaking of the so-called cooling-off period this editorial says:

Of course, during the prescribed waiting period the Government could seize the property, but that only proves the major point set forth above, namely, that the enforcement really depends on Government operation. There are some labor groups which would be well content to use strike threats or almost anything else to extend the scope of Government ownership or operation of private industry. Such a law would play right into their hands.

Now, let us see how broad this act will be. We are told that this law applies only to munitions plants or plants producing ships, weapons, and other munitions of war under Government contract. Subsection 3 of section 2 of the act says that it includes a contract, whether or not with the United States, for the production, manufacture, construction, reconstruction, installation, maintenance, storage, repair, mining, or transportation of—

(A) any weapon, munition, aircraft, vessel, or boat;

(B) any building, structure, or facility;

(C) any machinery, tool, material, supply, article, or commodity; or

(D) any component material or part of or equipment for any article described in subparagraph (A), (B), or (C).

This may include all contractors and everything in industry, agriculture, and transportation. It includes the finished product, or any material or part of any material, or any commodity or part of any commodity, or any tool or part. So the Government can take over almost anything in this ccuntry under this bill.

Section 3 provides that the President may take over any of these plants, shops, mills, mines, or facilities when the President claims that there is an interruption in the operation of such plant, mine, or facility as the result of a strike or other labor disturbance and that the war effort will be unduly impeded or delayed. I regret to say that we do have some people in many of our plants who do not believe in private enterprise or private ownership. In fact, they do not believe in the American way of life. Some of them are radical Socialists or Communists. As pointed out in the Wall Street Journal, such persons could start some labor disturbance in the plant and under this measure the President could take it over. But it is urged that the plant would have to be returned to the owners as soon as practicable. We find this language:

But in no event more than 60 days after the restoration of the productive efficiency thereof prevailing prior to the taking of possession thereof.

In other words, if the Government takes it over, the Government can hold it until the restoration of the productive efficiency thereof prevailing prior to the taking possession thereof.

Our plants are generally efficiently operated by trained and efficient management and these plants, as a rule, would be at their highest point of efficiency of production at the time they are taken over. Does anyone believe that these plants under Government control and operation would ever reach the point of productive efficiency they had before they were taken over? It is also urged, and as stated in the bill, that the authority to operate any such plant, mine, or facility shall terminate after the end of 6 months after the termination of hostilities. We are in a global war and no one can foresee how many years there will be some form of outbreak or hostilities after the war is really over. The President is the man who proclaims when hostilities have ceased. Under this bill it seems to me that plants could be taken over on slight provocation and held for many years. It is also urged that after the war is over these powers should cease by Congress passing a resolution terminating them. What if Mr. Roosevelt should realize his ambition and be elected to a fourth term and control Congress as he did for the last 10 years? This bill is as silent as the tomb as to the rights of the owners of these plants and facilities taken over by the Government. If they are managed as many Government plants are managed, the Government will, after a very few years, return them as empty shells. If the average mill, shop, mine, or plant was not owned and operated, as a rule, by patriotic men and women, and they had been loafing on the job instead of making the marvelous records they have made, we might give the Government this unlimited power to seize them and to hold them.

There is not a word in this bill to protect the honest, patriotic owner or manager of these plants, shops, mines, and facilities. He may have been doing a wonderful job, yet if some dissatisfied persons at his plant created some disturbance the bill provides for the Government to take them over instead of giving protection to the owner in operating his plant. No one deplores more than I do the recent trouble, but under the spell of this hysteria I am afraid that we have presented, and Congress will likely adopt, this measure that invades the constitutional rights of both industry and labor.

Subsection 2 of section 8 of this bill provides—

for not less than 30 days after any notice under paragraph (1) is given, the contractor and his employees shall continue production under all the conditions which prevailed when such dispute arose, except as they may be modified by mutual agreement or by the decision of the National War Labor Board.

So far as I have been able to learn, the highest courts of our States and the Supreme Court of the United States have held that Congress does not have the

power to prevent workers from striking, because it would be a violation of the fourteenth amendment to the Constitution, which prohibits enforced labor. The fourteenth amendment does not merely cover the black man, it covers us all. No one can compel another to work against his will in civil life. He can be compelled under another provision of the Constitution to serve our country in our armed forces.

You will observe this provision in the bill says that the manager and employees shall continue production under all conditions which prevailed when such dispute arose. There may be a dispute about a matter that would destroy the owner's plant or there may be a dispute about working conditions that would endanger the lives and health of the workers, yet under this bill they must continue.

MR. ICKES AND THE COAL STRIKE

One of the most unfortunate things that have occurred in this country has been the coal strike. A situation developed that this bill could not and would not reach or solve. In the first place, there was feeling between the Labor Board and the representatives of the miners. They refused to go before the War Labor Board because they claimed that the War Labor Board had already decided their case in their own minds, and the members of the War Labor Board later signed a statement, as I recall, to President Roosevelt stating that under the restrictions that he had placed on them they could not pass upon the miners' case or other disputed labor cases. They were supposed to act as a fair and unbiased tribunal, but could not under the restrictions placed on them by the President.

After the miners went back to work the first time, the miners and operators got together to make further efforts to settle their dispute, at the suggestion of Mr. Ickes, Secretary of the Interior. The War Labor Board found out that the operators and miners were about to get together and this Board ordered them to quit and not confer about the matter among themselves—that they must come before this Board. I understand that the miners and operators had practically agreed and likely would have agreed but for the Labor Board's interference. A day or two ago it looked as if this matter would be settled amicably between the operators and the miners, and then Mr. Ickes breaks in and enters fines against the miners amounting to about $3,000,000 under the provisions of the contract made in 1941 that has long ago expired. At least it is doubtful if there is authority for Mr. Ickes to impose such a fine without any hearing. This has caused another flare-up. I wonder if the administration wants the coal trouble settled and return the mines to their owners.

It is known by all men that Mr. Roosevelt is a candidate for a fourth term, and a host of thoughtful, patriotic American people believe that he and many of those associated with him are deeply interested in the outcome of the election next year and securing election for a fourth term. He and his new dealers have been trying to regiment industry, labor, agriculture, and commerce for the last 10 years, and this host of people, including myself, believe in many instances they are using the war to further this purpose and to keep Mr. Roosevelt and his new dealers in power and continue their policies, and this is another reason why I am unwilling to give to him and his associates the power over industry, labor, and commerce set out in this bill.

My vote today against this conference report and this measure has the full approval of my conscience. I realize that we are in a war. My only son, who has been married a number of years and had built up a lucrative law business, volunteered and is in a combat unit of the Coast Artillery. Perhaps three-fourths or more of the boys who are today fighting for our country on the six continents and seven seas of the world are the sons of those who own, manage, or toil in the plants, shops, mines, mills, and on the railroads and farms of this country.

This administration is responsible for the chaotic conditions that we find in this country. The Government comes along and takes men out of the mines and pays them much higher wages on Government work than they were receiving in the mines, for doing much less dangerous work. The administration has carried on a program of scarcity of food and other supplies and have helped to increase the cost of living. Only those who know the drawbacks and hazards of operating a coal mine and those who know the dangers and hardships of working in the mines can fully appreciate this mine trouble. The operators and the miners must settle their differences. I helped to pass a law in Congress that permits the Government to provide such a price for coal as will enable the operators to make a fair return on their investments and pay to the miners a real living American wage under present conditions.

We must not have a stoppage of work in the mines or in our industries, on our farms or on the railroads. Each one of us must put forth our very best efforts to win this war, and if I thought that this bill would help my son and others to win the war more quickly, of course it would have my support.

I may be in error but it is my sincere conviction that Donald Nelson, Admiral Land and others in charge of our war production, and Secretary of War Stimson, and Secretary of the Navy Knox, and other leaders of our armed forces are right in their opinion that this measure will create suspicion and discord among the loyal owners and managers of our plants and other production facilities and the workers in these plants at a time when we should encourage those who are doing a real patriotic job. They have not only been producing, they have been buying bonds, stamps, and helping in every other laudable war effort. If the measure is adopted and approved by the President, I trust that it will be helpful and not hurtful.

Teamwork in a Troubled World—Address by Robert H. Hinckley, and Editorial From the Roswell (N. Mex.) Morning Dispatch

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Teamwork in a Troubled World," delivered by the Honorable Robert H. Hinckley at the commencement exercises of the New Mexico Military Institute, at Roswell, N. Mex., June 1, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEAMWORK IN A TROUBLED WORLD

Today is June 1, 1943. In many ways this is the most momentous graduation ceremony in the history of the institute, and, as the years go by, you will remember this date. It will serve as a sort of meridian from which you will measure your life—something like B. C. and A. D. or A. M. and P. M. You may not remember much of what I say to you, but you must recognize the importance of this date to you. It is important that you remember the way you feel today. It is important that you do not lose the ideals, the ambitions, the urges toward achievement which you all have today. I know many men who could have achieved far more than they have if they had only kept these things in their minds and hearts throughout their lives; if they had not let disappointments, difficulties, disillusionments, and ill fortune take away their youthful enthusiasms, ambitions, and goals. That is why it is important for you to remember June 1, 1943.

It is also important for you to remember the condition of the world on June 1, 1943, and, in the years to come, it will be important to you if you can look back with pride on what you did about it after June 1, 1943—how much you did to win the victory that restored freedom to a world menaced by forces that endangered every ideal you had on this June 1. For you will never in your lifetime be able to live comfortably with yourself or with your fellows unless you can truthfully answer in the affirmative the question, "Did I do everything I possibly could to win the war an hour, a day, a week, or a month sooner?" For, from our experience in the last war, when many lives were lost as the last shots were being fired, we know that winning the war even an hour sooner will save thousands and thousands of lives, and, ironically enough, we never know whose lives they will be.

But we have not won that victory yet—and that is the first item on your list, the first step on the ladder of your career. Unless we do win, you will have no career, because the basic American freedom which allows each man to determine his future for himself will have been taken away. In that connection, they tell a story about Gen. Nathan Bedford Forrest, the Confederate cavalry genius, who was very annoyed because his superiors had sent an officer who had been carefully schooled in the art and science of

war to work with him on tactics. This officer told Forrest that if they were going to make a certain advance at a certain point, the cavalry should dismount and they should leave every fifth or sixth man to hold the horses while the main body advanced on foot. Forrest, in so many words, said: "Hell, why do that? We just tie our horses to the bushes and all of us go ahead." The officer replied that the idea was to be able to regain the horses easily and get away if they had to retreat. Whereupon, Forrest replied, "Well, if we win this fight, we'll have plenty of time to untie the horses, and if we don't win it, we won't need them." Just so, if we don't win this fight there won't be any career.

Of course, in this man-to-man talk, we parents must be smart enough to realize that you, our sons, have an awareness of what is going on in the world and of your responsibility in meeting the world's problems far beyond anything that we parents have had, or at least have demonstrated, over the past years. On account of that awareness of present world problems, I feel very much like the father who decided that he should have a heart-to-heart talk with his adolescent son. He called his son to him and told him that he thought it was about time they were having a discussion of the facts of life, whereupon the son replied, "Fine, Dad. What do you want to know?"

That feeling of hesitancy on my part is in no way diminished when I consider that I want to talk about something today that you graduates have been taught every day of your lives at New Mexico Military Institute, something that has been a part of your daily existence here. That is teamwork. You may think it strange that I should attempt to tell you something about teamwork. But I want to talk about it because there never was a time in which the civilized world depended on teamwork so much as now. The President of the United States, our Commander in Chief, in his Flag Day Proclamation for 1943 has given us a timely reminder. He said: "Only by teamwork can we win the war and establish a lasting peace." How urgently this troubled world needs this teamwork is the question I shall discuss in the few minutes that it will be my privilege to talk to you.

Here at New Mexico Military Institute, your organization is composed of groups of teams, and these groups combine to make the whole school a team. There are thousands and thousands of such teams that make up the great American team. And right now the American team is joined with the teams of other countries to form the United Nations team.

No matter what kind of a team it is—squad, troop, battalion, city, State, national, or international—the basic purposes of the team are the same. Teamwork requires the merging of personal interests for the common cause and for the good of all, and in that way the personal liberties and freedoms and privileges of the group are preserved, and only in that way can they be preserved.

Teamwork is and always has been really the American way. The operation and organization of the home is on the basis of teamwork. Community governments are based on teamwork. State governments are teams. Political parties are, or should be, teams. Wage earners and wage payers are a team. The armed forces of the United Nations are the mightiest team ever assembled in the history of the world. The Federal Government is a great team composed of many other teams. The great American team is fighting for America and all the things that it stands for, just as New Mexico Military Institute teams fight for the institute and its glory.

But sometimes people think that our American team is not functioning as it should. People in our own country sometimes say that in time of war we have to give up some of our democratic principles in the interest of efficiency. I don't believe it. I think we can carry on a war more efficiently if we keep every single democratic principle.

Consider, for example, the maintenance of our national congressional system. We maintain it in Washington. The Germans maintain their analogous congress, the Reichstag, only as a fiction. A small group of willful and wicked leaders take over the functions of the Reichstag. They plan the war and carry it out without any veto or check. This small gang may discuss problems among themselves, but even within this group one man, one individual, thinks and speaks, without the slightest restraint, for 90,000,000 people. Thus the Axis pits its strength, decides its fate on the intuition of one man.

Democracy assembles its leaders by the choice of you and me. These leaders meet. They know they are there because you and I put them there. They know full well that if we don't like them we can kick them out and get somebody else who, we think, can do a better job. The Axis leader can't be put out. No matter how much the people may come to mistrust him, he can't be put out. Thus, the Germans, by this lack of political experience and sagacity, have permitted themselves to be engineered into a position where they stake their existence on one man against the combined wisdom and skill of the United Nations. In this way they have put their necks in a noose. They have tied their fate to him and must follow what he says and wants or turn to an internal revolution.

He issues edicts; there is not a word against him. He orders a war on Russia; no one dares say no. He orders the village Lidice destroyed. Who among his people dare protest? Now mark well what I say. His government has the appearance of a smoothly functioning team—no back-talk—no stresses, no strain, no debates in the Reichstag—just a sweetly, smoothly-running machine-like team. All this is a snare and delusion. The stresses and strains are there; the hatreds, the anxieties, the inefficiencies are all there—but buried. They are buried in an ominous silence, but they are there. When things go badly, there is the silence of the grave, but they do go badly and they will continue to go badly. They will grow worse and worse until all go down either in an explosion of revolution or the apathy of defeat. This I call the illusion of the dictator governments.

What of our own? What about our team? We talk and quarrel and debate. We discuss in committees, we hold elaborate elections. Our radios, our newspapers and our leaders seem to be telling one story of a never-ending confusion. People speak of the Washington madhouse. This, too, is a snare and delusion. Washington is not a madhouse; neither is any State capital; neither is any county or local government; neither are the United Nations a group of confused and bungling people. I am not a Government official. I do not live in Washington, but I have been a Government official for a good many years—local, State and national—and I give you my word that the seeming confusion is just as much of an illusion as the efficiency and smoothness of the totalitarian states is an illusion.

Did you ever see a man at a football game who didn't know the game? I have. To him it looks as if every one of the 22 men is running around in accordance with his own sweet will. After he has watched a few games, he begins to see that there is method in all the seeming madness.

It is the debates in Congress, it is the hearings that are held, it is the long considerations given by the legislative branch to the recommendations of the Executive together with the patient study and conscientious interpretations by the judicial branch that make us more efficient than the totalitarian states, because, before we act, we have the combined wisdom of many men.

After long experience in business and government, I urge you to believe me when I say that a true democracy, in which the principle of teamwork, the idea of working together, is the keynote, is always more efficient than a dictator government. And that is why I have such confidence in our victory.

But teamwork means more than the mere idea of working together. It also means discipline, leadership, and responsibility. No team can function without discipline; no team can function without leadership; no team can function unless each member discharges his responsibility to carry out his particular assignment to the letter.

Discipline has been the cornerstone of your education here at New Mexico Military Institute, and you know that discipline is the first requisite of a military organization. But it is no less important on the civilian front. Any organization, military or civil, without discipline, instead of a team becomes a rabble, each member clamoring for his own interests rather than the interests of the team. Right now, civilian discipline is just as necessary for the country's welfare as is discipline in the armed forces. The many wartime regulations and restrictions have imposed a restraint on normal civilian activity. As members of the American team, it is necessary for each of us to abide by the disciplinary effects of these regulations. It is necessary to cooperate with the draft boards, rationing boards, and other instrumentalities of the Government, for these regulations are the rules by which the wartime game is played.

Here at New Mexico Military Institute you have also been trained for leadership, and you know that a team can be ever so good, but if there is no leadership, the team will never accomplish what it should and could accomplish. Leadership requires knowledge, not just a collection of assorted information, but the background necessary to reach a conclusion from a given set of facts, an understanding of the problem and its implications. Leadership requires imagination. Imagination is the ability to project present facts into the future, the ability to foresee, the ability to plan, the force which has made possible every forward step in the progress of civilization. Everything that was necessary for human flight had always been present, but it took the imagination of the Wright Brothers to arrange these things in such a manner that man was enabled to fly. Leadership requires sound thinking and common horse sense. The ability to think through a problem and reach a sound judgment is one of the most important characteristics of the leader. Leadership requires initiative.

Many men have all the other requisites of leadership, but they will never be leaders because they are afraid to start their project moving; they wait for someone else to do it; they are afraid to lead. Finally, leadership requires hard work. Many people seem to feel that the leaders of business, labor, and government have the easy life; all they have to do is to tell someone else what to do. The fact is that these leaders are the hardest workers of all; the leaders are leaders and remain leaders because they outdo their fellows in persistent, serious application to the job in hand. All these, then—knowledge, imagination, sound thinking, initiative, and hard work—are required of the team captain, the team leader, and the better the leader the better the team.

Team play also means individual responsibility. It means that each member of the team, in addition to his rights as a team

member, has certain responsibilities, certain duties, and he must fulfill those responsibilities if the team is to achieve its objective. On the gridiron, each player has a responsibility to remove a certain opponent from the play, so that the ball carrier may run with the ball unopposed. If even one man fails in this responsibility, the ball carrier gets nowhere, and the team does not score. Similarly, each of us has certain responsibilities as members of the American team. I have often thought that our great Bill of Rights should have been accompanied by a bill of duties, because, under the American system, for every right there is a corresponding responsibility, and for every responsibility you evade you imperil the corresponding right. But whether they are written or unwritten, whether in peace or in war, our duties as citizens are clear and unmistakable.

You graduates of New Mexico Military Institute have even greater responsibilities than the average citizen, because of the advantages you have had in your training for leadership. In addition to the ordinary requirements of citizenship, you have the responsibility of exercising that leadership in order that the American team may function as a team should. You have the responsibility of using your military training to the end that our United Nations team can defeat our enemies in the shortest possible time. In the years to come it will be your responsibility to help establish that environment, the only environment in which our American way of life can flourish and grow—that continuous peace, which is the product of liberty and justice. Above all, you have the responsibility to be a strong member of the team, to see to it that the welfare and objectives of the team—the American team—come first.

There is danger in teamwork only when the team itself becomes the most important thing, instead of the things it is fighting for or the organization it represents. In other words, too frequently we have seen some political groups, members of the American team, put the interest of themselves above the welfare of America. Too frequently, and in fact since we have entered this war, various business and industrial groups have put their welfare first, the country's second. Some farming and agricultural groups have been for the farmer first, the country second. Some labor groups have put labor first, country second. Your coach would never have tolerated a quarterback who put his own interests above the objective of winning the game and bringing victory to New Mexico Military Institute. Similarly, the time has come when the members of the American team must be all out and completely all out for country first, regardless of what personal sacrifices may be made in merging or submerging individual or group interests for the benefit and welfare of America. Patriotism must come before profit.

America must be first. But when I say America first, let it be clearly understood that I am not, in any way, employing the obsolete slogan of those isolationists who so delayed our preparation against aggression. Of course, I appreciate the age-old conflict between the ideal of peace and the ideal of freedom. The isolationists believed that we could have both. They thought that, because of the great oceans on each side of us, we could remain at peace in a world at war, and in that way could keep our freedom. But the isolationists were not realistic enough to understand that the airplane had long since, for all practical purposes, dried up those oceans, flattened the mountains, and changed the method of reckoning distance from miles to hours. The world playing field has no more geographical boundary lines. It was this failure to understand the changes brought about by the airplane that was responsible for the Pearl Harbors of this war and for putting us three touchdowns behind in the first quarter.

And it is my opinion that we have not yet seen the full potential of air power. What is on the drafting boards of our great aircraft manufacturers today is so much more deadly and powerful than anything that has been in action that there is no comparison. We have never seen real air power in terms of numbers, to say nothing of size. Once we do see, as we undoubtedly will—perhaps in this war—we are all going to know that some kind of world-wide safeguard must be set up to develop their use in peaceful pursuits. And here again we come back to teamwork—a team of nations so organized and so functioning that never again will any pretender to the throne of world domination dare to raise his head.

The airplane has made each country in the world geographically a neighbor to every other country. Our post-war organization must be such that we will also be neighbors socially, economically, and politically—neighbors in fact. One thing we must get out of this war is an understanding of people all over the world, a tolerance of people whose customs are not exactly like our customs. I hope that when our boys come back from far places they will have an understanding and a tolerance, rather than scorn, for people who have not had the advantages that we have had. This is necessary because these people are going to be our teammates, and a team cannot function as a team should without unity and cooperation and understanding, for these are the bases of team play. Yes; isolationism is as dead as the buffaloes who once roamed the Great Plains now occupied by this and adjoining States.

Teamwork, not isolationism, not individualism, not nationalism, is the order of the day—for civilians, for soldiers, for business, for labor, for government, for nations. Teamwork won the First World War, just as teamwork will win this one. But the armistice that followed World War No. I was not a peace. Why? Because the team that won the war did not function to keep the peace. This time it is even more imperative that the United Nations team up to win and keep the peace. In the words of our President: "Our armies, our navies, and our air forces are now perfecting the teamwork with our allies which shall, under God, bring victory in this great cause to which freedom-loving mankind has dedicated itself. Made strong by our common bonds, we shall face the future with resolution and rededicate ourselves to the achievement of permanent collaboration among nations and security for all men. For only by teamwork can we win the war and establish a lasting peace."

Mr. HATCH. I also ask to have printed an editorial entitled "America—And Confusion," from the Roswell Morning Dispatch of June 3, 1943, commenting on the address of Hon. Robert H. Hinckley, which I have just asked to have printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICA—AND CONFUSION

One of the main points, to our way of thinking, that was made by Robert H. Hinckley in his address to the graduating class at New Mexico Military Institute, was that drawing the contrast between the apparent order of the dictator nations, the apparent confusion of the democracies.

Underlying the order of the dictatorships, as pointed out by Mr. Hinckley, exists the insidious disorder and lack of teamwork born of distrust and hatred; a deep-rooted confusion and lack of teamwork that eventually dooms the dictatorships to destruction.

Underlying the apparent confusion of our democratic way of life lies the spirit of give and take, of good sportsmanship—the feeling that comes of being a "member of the team." The trust and confidence exists underneath all the arguments and bickering, the apparent confusion that comes with the democratic way of life.

Mr. Hinckley drew an excellent parallel there in his address. Only in a democracy will you find the people criticizing their government, the interdepartmental conflicts, the criticism in the public press and on the radio. But underneath it all exists the fundamental idea—we are all Americans. We are all, in our own way, working for and contributing to the common victory we want. It is democracy's way of working out its problems. But once the policy is set, once the task is undertaken, we are united 100 percent behind the enterprise at hand. There is no holding back, no "knifing in the back." That is one phase of democracy that the dictators just don't understand. They have taken the controversies of this Nation as evidence of weakness and division. Rather, it is our strength and our unity that is at work in solving the national problems.

The dictators are today beginning to realize their error. They thought they were fighting a disorganized people with the finest organization in the world. Instead, they found they were fighting an organized, united people, while sitting on the lid of an explosion among their own "united" people.

The New Current Tax Payment Act—Explanation by Assistant Secretary of the Treasury John L. Sullivan

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered last evening over the radio by Hon. John L. Sullivan, Assistant Secretary of the Treasury, dealing with the pay-as-you-go tax plan, which should be interesting to every individual who is a taxpayer.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ANNOUNCER. The new tax bill, popularly known as the pay-as-you-go tax, has just become law. It goes into effect July 1, just 3 weeks from today. Between now and then nearly 50,000,000 Americans will have to find out how this new law affects them; what they have to do to prepare for it; what new duties it places upon them; how it benefits them individually.

To help answer some of these questions we are bringing to you a round table discussion of the new tax between a high official of the Government, the Honorable John L. Sullivan, Assistant Secretary of the Treasury, and three typical American taxpayers—an employee of a business establishment, a woman war worker, and an employer. Now,

to start this discussion rolling, I am going to ask Mr. Sullivan to tell us what is the outstanding difference between this new pay-as-you-go tax and the old method of income-tax collection.

Mr. SULLIVAN. I think the first thing to understand is that this is not a new tax or an additional tax, but a new method of collecting the income tax. The new law does not change the income-tax rates. The big change comes in how a person pays the income tax. Under the old system he paid a year late. That is, on March 15 he paid, or began paying, a tax on the money he earned the previous year. Now, under the new pay-as-you-go method, he will be paying the income tax on his 1943 income during 1943, bit by bit, pay day by pay day.

EMPLOYEE. As I understand it, when you say I will pay that tax bit by bit, you mean that it will be deducted from my pay bit by bit.

Mr. SULLIVAN. That is exactly correct. Your employer will deduct part of your pay every payday. He will turn that money over to the collector of internal revenue with his quarterly return, or if your employer has enough employees to make the aggregate deductions from all employees $100 or more each month, he will deposit that money monthly in a bank which will turn it over to the Treasury of the United States. In either event, this money stands to your credit as prepayment of your tax.

EMPLOYEE. That's all right, but what's worrying me is how much is my employer going to hold back. The papers have been talking about 20 percent. Does that mean I'm going to have 20 percent taken out of my $76 every week? How can I support a wife and three kids—

Mr. SULLIVAN. Just a moment—the deduction is not 20 percent on all your pay. It is 20 percent on your pay, less your exemptions—and you have a lot of exemptions. Are your wife or any of your children working?

EMPLOYEE. No, sir.

Mr. SULLIVAN. Then a good part of your pay is exempt from the withholding tax. Twelve dollars for yourself, another $12 for your—wife—that makes $24, plus $6 for each of your 3 children, makes $18 more. That's a total of $42 of your weekly pay that's exempt. The amount withheld is 20 percent of the balance. You said your weekly pay is $76, didn't you?

EMPLOYEE. Yes, sir.

Mr. SULLIVAN. Then your employer will withhold 20 percent on the difference between your total pay of $76 and your exemption of $42—which amounts to $34.

EMPLOYEE. How much, then, would be taken out of my weekly pay?

Mr. SULLIVAN. $6.80, which means that you will receive just under $70, instead of $76.

EMPLOYEE. And the $6.80 I didn't get, is that my income tax?

Mr. SULLIVAN. Yes; that is your income tax, and it also includes your Victory tax.

EMPLOYER. May I ask a couple of questions here?

Mr. SULLIVAN. Certainly.

EMPLOYER. You see, I'm an employer, the fellow who has the job of withholding this tax. You mean I don't have to make that 5-percent Victory tax withholding any longer?

Mr. SULLIVAN. Not after your last pay roll that begins in June. All pay rolls beginning on or after July 1 are subject to the new law, and the Victory tax is included in the 20 percent withheld.

EMPLOYER. Well, here's another question. My company has about 250 employees. I don't begin to know which of them are single, or which married, or how many children they have. How can I figure their exemptions and the amount I must withhold?

Mr. SULLIVAN. That's a very important question. You've got to have that information, and here's how you get it. There is a special form called a withholding exemption certificate. The collector of internal revenue in your district will supply you with as many as you need. It is up to you to give one to every one of your employees. And it is up to you others, as employees, to fill out those certificates, sign them, and then return them promptly to your employer. On this exemption certificate you tell him whether you are married or single and how many dependents you have. It gives the employer the information he needs so that he can exempt the proper amount of your pay from the 20 percent withholding.

EMPLOYEE. What happens if I don't turn in this certificate?

Mr. SULLIVAN. Until you hand one in, the law requires your employer to withhold 20 percent on all your pay—every dollar of it. In your case, it would mean he would withhold $15.20 each week instead of $6.40.

EMPLOYEE. Believe me, I'll get that certificate in.

EMPLOYER. And get it in early, because it's going to be a big job for us employers to get all those exemptions and rates figured by the 1st of July. It is going to be especially difficult for my company, because, due to piecework bonuses, most of our employees earn odd amounts, like $63.82 or $78.90. Mr. Sullivan, do I have to figure the exact 20 percent of each of those amounts above withholding exemptions?

Mr. SULLIVAN. No. Employers may elect to use the wage-bracket tables which are written in the law. These tables set definite amounts to be withheld from each pay. For example, in the case of a married employee with three dependents, whose weekly wage is anywhere between fifty and sixty dollars, the employer is permitted to withhold a flat amount of $2.60 per week, instead of requiring him to figure the exact amount for each individual employee. The law grants the employer this short-cut method in order to simplify the job of computing the amount to be withheld from each individual employee. The amount of tax withheld may be slightly different from an exact computation at 20 percent, but this does not hurt the employee any. If a little less than the actual 20 percent is withheld, he may have a small balance to pay when next March 15 comes around. If a trifle more than the exact 20 percent is withheld, the employee will have a credit coming to him.

WOMAN WORKER. I was working last year, too, and my income tax figured to about $60. I paid a quarter of it in March this year. What happens to that $15?

EMPLOYER. That $15 stands to your credit as a payment on your income tax for this year. Isn't that so, Mr. Sullivan?

Mr. SULLIVAN. Yes; that is correct. The $15 you paid in March counts as a payment on your current 1943 income tax.

WOMAN WORKER. Well, do I have to pay another $15 this month—the June 15 quarterly installment?

Mr. SULLIVAN. Yes. Nothing in the new law changes any person's obligation to pay the June 15 installment. It also will be treated as part payment of your 1943 tax.

EMPLOYER. That applies to everybody? Everybody must pay the June 15 installment?

Mr. SULLIVAN. Yes; everybody who has been paying his 1942 tax in quarterly installments must make another payment on or before June 15.

WOMAN WORKER. Well, if we have to make these two quarterly payments, and then have 20 percent taken out of our wages, what is all this "forgiveness" there was so much talk about?

Mr. SULLIVAN. You are forgiven all or a large part of a debt which, under the old law, you owed to your Government. It is true that you will keep right on paying income tax. You get no holiday from that. But there are two differences. One difference is that you are paying your tax a little every pay day, as you earn your money, instead of having to save it up for 3 months to make quarterly payments. The other difference is——

EMPLOYER. That you are paying it against this year's income-tax debt instead of last year's—isn't that right?

Mr. SULLIVAN. That is exactly right. For the majority of the taxpayers—that is, the people with low or average incomes whose tax amounts to $50 or less for either 1942 or 1943, the whole tax for the smaller year will be forgiven.

EMPLOYER. How about the rest of us with higher incomes? I figure that 75 percent of my own personal 1942 tax will be forgiven. I still owe a quarter of it. Does the quarterly payment I made last March clear that up?

Mr. SULLIVAN. No. That quarterly payment, as I have just said, will be credited against your 1943 tax liability. You still owe the Government one-fourth of your 1942 tax. Assuming, of course, that your tax for 1942 is less than for 1943, as will be the case for the great majority of all taxpayers.

EMPLOYER. When do I pay that?

Mr. SULLIVAN. You may pay half of it March 15, 1944, and the other half a year later in March 1945.

WOMAN WORKER. I would like to ask what proof I have that I have made these payments on my income tax through the money held out of my wages.

Mr. SULLIVAN. Shortly after the close of the year, or with your last pay if you stop working before the end of the year, your employer will give you a receipt showing the total amount of the tax deducted and withheld from your pay during the year.

EMPLOYEE. What do I do with that receipt?

Mr. SULLIVAN. You take good care of it. It is your receipt for the taxes you have prepaid.

EMPLOYEE. Suppose the amount withheld during the year amounts to more than the tax I owe for the year?

Mr. SULLIVAN. Any overpayment of taxes will be refunded or credited to you.

EMPLOYEE. What would happen if my receipt from my employer gets lost or destroyed?

Mr. SULLIVAN. You apply to the employer for a copy of the receipt.

WOMAN WORKER. What would happen if my employer withheld the tax from my wages but did not turn it over to the Government?

Mr. SULLIVAN. You are completely protected. The receipt you get from your employer is your proof of the fact that you have paid that much tax.

WOMAN WORKER. Do I have to wait until the end of the year to get a tax receipt for the money my employer has withheld from my wages?

Mr. SULLIVAN. Yes; unless you change employment during the year. Then you get your receipt with your last pay.

EMPLOYEE. Suppose I change jobs several times during the year.

Mr. SULLIVAN. That does not make any difference. Each employer must give you a receipt showing the amount of the tax he withheld.

EMPLOYER. I have heard or read in the papers that some classes of employees don't have anything withheld from their wages.

Mr. SULLIVAN. That is correct. There is no withholding from the pay of the personnel of the armed services. Ministers of the gospel are also exempt from withholding. So

are all persons engaged in domestic and agricultural service. However, all those people will be required to pay their income taxes out of their current income. They do this by filing a return showing their estimated tax and pay such tax quarterly.

ANNOUNCER. Our time is almost gone. Before we close, is there anything you especially want to emphasize, Mr. Sullivan?

Mr. SULLIVAN. Yes. I wish to emphasize that nothing in the new law excuses anyone from making his or her June 15 income-tax payment. That is due next Tuesday. And finally I want to urge all employers to get those withholding exemption certificates into the hands of your employees right away. To all employees I want to say, "Please fill out and sign those certificates and return to your employer immediately."

Mission to Washington

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an article entitled "Mission to Washington," by Frank C. Waldrop, which appeared in the Washington Times-Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSION TO WASHINGTON

(By Frank C. Waldrop)

When you run out of gasoline this summer in the course of some essential business; when you do without food that couldn't be harvested because of an idle tractor; and next winter, when you are cold because there is no oil in the house, remember the case of *Gilmore and Eben* v. *Ickes*.

Roy E. Gilmore and M. N. Eben have just retired from the Washington scene to their home town of Portland, Oreg., where Gilmore plans to write a book entitled "Mission to Washington."

It will be the story of their attempt to implant here with the Honorable Secretary of the Interior, Harold Ickes, an idea by means of which oil could be brought to the east coast in a hurry, cheaply, and in great quantity. The idea is so good it may interest you to know that the military authorities have grabbed it. More cannot be said about that because of security regulations—but to repeat, the idea is good enough that the military have grabbed it.

And what is the idea? Simply that some of the 400,000 gondola-type railroad cars in the United States be converted to oil tankers by the installation in them of thin sheet-iron and wood tanks.

Gilmore-Eben, and associates naturally are trying to sell their idea to the Government—that, probably, is why they are treated as public enemies around here.

They have designed a type of tank that will go into the gondolas in a hurry. What is more, they have found the materials and the labor and the manufacturers all ready and waiting.

Such nationally known metal-working companies as Allis-Chalmers, of Milwaukee; the Butler Co., of Kansas City; Sharpsville (Pa.) Steel Fabricators; and the Scaife Co., of Oakmont, Pa., have guaranteed delivery of a total of more than 100 tanks a day beginning 30 days from any given date of contract.

Equally responsible wood-working companies, such as the Aladdin Co., of Bay City, Mich., and Timber Structures, Inc., of Portland, Oreg., are ready with the wooden parts.

The names of these companies may not mean a great deal to the ordinary citizen, but in the manufacturing world they are gilt-edged. Every one of them is a tremendous producer of war goods and a proved performer in its field.

And they say they are ready to perform on demand without diverting men or materials from war work.

In fact, they want this additional business to take up slack in departments the war tides have left behind.

They guarantee the materials and labor to make these tanks—100 a day, each to hold 10,000 gallons of oil.

This means that if a contract for these tanks were signed tomorrow by the great Petroleum Administrator, one Harold Ickes, tanks would be ready by July 10, 1943, to start an additional 1,000,000 gallons of oil each day toward the east coast of the United States.

Think of that—1,000,000 gallons a day more than we are now getting—plus an additional 1,000,000 gallons each additional day for as many days as desired.

The materials are ready, the manpower to make them is ready. The tested and proved tank-car design is ready.

But in spite of all this Eben and Gilmore yesterday advertised in the papers offering their experimental tank for sale and adding:

"This tank (shown in the ad) was designed and built in Portland, Oreg., for the transportation and storage of oil. It has been tested in use and inspected. It carried 10,500 gallons of liquid successfully from Portland, Oreg., to Washington, D. C., a distance of 3,000 miles.

"The owners, finding no market for this product, are leaving immediately.

"This tank may be examined at Twelfth and D Streets SW."

Now the obvious question is why can these men not get results from the great Petroleum Administrator?

What is stopping the Government from the use of the Eben-Gilmore tank car?

The official story given Eben and Gilmore is that of the 400,000 gondola-type railroad cars in America not even 100 can be spared for this fuel relief.

Eben and Gilmore say this is boloney and quote railroad officials to prove it. They cite C. E. Smith, vice president of the New York, New Haven & Hartford Railroad, as just one of a list of experts ready to testify there are thousands of gondolas ready for conversion to tank cars without hurt to the war effort any time the Government will say the word.

Eben and Gilmore have a proposition here which would relieve the gasoline shortage and yet not cause a shortage in any other direction. Yet they can't get Ickes to budge on it.

Is it really true the old man wants people to suffer so they will know there is a war on? It certainly looks that way.

But no matter what the reasoning behind it may be, the sort of fantastic public administration indulged in by Ickes is dangerous in the extreme.

This tank-car case is a matter that some committee of Congress had better investigate. Here is a cheap, quick method of solving the gasoline shortage, proved in field tests and accepted by the military—yet flattened out by Ickes.

Somebody competent to make intelligent decisions had better step in and take the matter out of his hands before it explodes.

The Mission to Moscow

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Mission to Moscow," written by that beloved and distinguished editor of America, Hon. Josephus Daniels, for the News and Observer of Raliegh, N. C., under date of June 10, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MISSION TO MOSCOW

The close cooperation between Russia and the United States in this global war tends to confirm a prophecy made a quarter of a century ago. In his address at the Ambassador Theater in Raleigh on Tuesday night, in which a preview of the picture "The Mission to Moscow," was given to encourage the purchase of bonds, Josephus Daniels related an incident of a quarter of a century ago which showed that a noted engineer had the gift of prophecy.

The guests at a formal dinner at the Russian Embassy were present when the Russian Ambassador, pale as a ghost, received the news of the revolution in Russia which was to be followed by the killing of the Czar, the downfall of his autocratic regime and the coming Soviet control of Russia. But before that startling news shocked the Ambassador, one of the guests of honor related to other guests his conviction that the fate of Europe rested with the United States and Russia. As recalled by Mr. Daniels, this great engineer, who knew Russia and the United States perfectly and was a statesman as well as an engineer, had told the small group of diplomats and Cabinet officers that the destiny of the world would be shaped by the two biggest countries in Europe and America. According to the statement of Mr. Daniels, the engineer pointed out that Russia was the only self-contained country in Europe as the United States was the only self-contained country in the New World. They possessed all the resources, or practically all, needed for peace or war.

Other European countries, with all their jealousies, were dependent upon supplies from abroad. Moreover, he said, the large populations of the countries made them impregnable to attack from abroad. With this superiority in population and resources, Russia and the United States needed only to work in harmony to prevent wars and to insure the best interests of both hemispheres. The engineer added that the people of both countries were "fundamentally devoted to democracy." That statement was questioned by some of the guests who reminded the engineer that Russia was a one-man ruled country in which the people had no voice. The Czar was then in power. He countered by saying that already a parliamentary form of government was in the making and that the frustrated revolution was proof that one day the people of Russia would follow the example of the United States and be self-governed.

"And when that day comes," he said, "the policies of the world will be in the keeping of Russia and the United States."

At that statement the Russian Ambassador, who would have repudiated the prophecy because he adhered to the autocratic rule of the Czar and had helped to crush the revolution, approached the group with the startling and disturbing news of the outbreak of the Russian revolution.

That was a quarter of a century ago. The outcome of that revolution, bloody and destructive of all that existed in government in Russia, was the rise of the Bolshevists and Communists who formed the Soviet Government, the rise of Trotsky, who believed Russia should seek to spread the doctrine of communism throughout the world; of Lenin, a master mind, who saw in some measure the impracticability of converting other nations to the communism in which he believed; of Stalin, whose purge shocked mankind and whose annulment of the Comintern and brave fight against the Axis has heartened the democracies.

For a decade neither the United States nor Britain maintained diplomatic relations with the Soviet Government because they resented the attempt of the Bolshevists to propagate the doctrine of communism which would undermine economic freedom of other peoples. However, in 1933, the new American President felt we should reopen relations with the Soviet Government. He may have had the same belief to which the distinguished engineer gave expression in the Russian Embassy on that fateful night. At any rate, the Mission to Moscow has borne good fruit, for in the year 1943 the peoples of these two big countries on two hemispheres are partners in a great conflict to defeat the avowed opponents of the goals of the two peoples. Russians and Americans do not deceive themselves into believing they see eye to eye in all governmental or economic principles. But the peoples of both countries are persuaded that if the forces of nazi-ism win, the rights of people to self government and freedom will be destroyed and totalitarianism will curse the world and blight the hopes of all peoples who wish for a world in which the good things will be in the reach of all.

It is for the Russians to control their own destinies, for Uncle Sam to have no fear of Nazi infiltration, for all countries—great and small—to govern themselves that Russia and the United States are partners in the greatest war of history.

After the war, let us hope they will fulfill the prediction of the great engineer, that they will lead in the maintenance of agencies that will insure independence for all peoples and a world freed from war and imperialism.

Downy Mildew or Blue Mold

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Downy Mildew or Blue Mold," written by Mr. William G. Holman, of Greensboro, N. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

During the past few years, a very destructive plant disease known as downy mildew or blue mold has been playing havoc with tobacco plants in the plant beds and causing great losses to the farmers. This disease attacks and destroys the plants in the beds before they are transplanted in the fields.

The March 1941 issue of the Southern Tobacco Journal of Winston-Salem, said that: "Tobacco blue mold is costing tobacco growers of the flue-cured area an estimated $5,000,000 per season, according to authoritative sources." I think this is an understatement. The farmers of this State sustain a loss each year of considerably more than half that amount. In fact, it is probable their losses exceed that amount.

Federal and State plant experts have been working on the problem for 12 years, and they are recommending two different treatments for blue mold today: 1, the spray treatment, and 2, the fumigation treatment. The spray treatment involves an extra cost to the farmer of about 3 cents per square yard, and the extra cost of the fumigation treatment is from 5 to 6 cents per square yard.

North Carolina planted about 511,000 acres in tobacco in 1941, and it takes 50 square yards of plant beds for growing the plants for each acre. So, the cost of the spray and fumigation treatments runs into money. Sometimes the farmers go to that extra expense and then fail to grow plants enough for their needs. When they obtain these plants from other farms, they frequently bring back other plant diseases in the soil around the roots of these plants: black shank and Granville wilt for instance. These plant diseases are more destructive than blue mold. Once the germs of these diseases get in the soil, tobacco cannot be grown on that land again for 5 or 6 years.

Dr. F. A. Wolf, of Duke University, who has been working on the problem with Government and State plant pathologists, said: "No sprays or dusts do more than decrease severity of attack." He also said that: "Sprayed plants can't be transplanted until they recover from attack, thus delaying transplantation from 1 to 2 weeks. This delay in about 9 out of 10 cases is sufficient to reduce very sharply the profitableness of the crop."

Dr. Wolf said this about fumigation: "It completely prevents or cures after an attack starts," but United States Bulletin No. 1799 said: "Mold may appear in gassed beds about a week after treatments are discontinued."

Thus we see that the spray does no more than decrease severity of attack and the fumigation will not prevent other attacks of the disease before the plants are drawn from the beds and transplanted in the fields. Obviously, neither of these costly methods prevent a delay in planting the crop which in 9 out of 10 cases is sufficient to reduce very sharply the profitableness of the crop.

Let's see what is happening today after 12 years of Government and State experimentation.

Mr. Tom Linder, Georgia's commissioner of agriculture, wrote me on March 23, 1943, saying: "Extreme cold; a blue mold has destroyed most of the tobacco plants in the Tobacco Belt of Georgia."

Several North Carolina and Virginia farm county agents have sent me written reports this year, as follows: (1) Rockingham County, N. C.: "Blue mold has affected practically every plant bed in this section. It has delayed the planting of the crop from 2 to 3 weeks." (2) "Blue mold on tobacco plants has done considerable damage in Columbus County and has delayed tobacco being transplanted in the field at least 2 weeks." (3) "Blue mold retarded the growth of tobacco plants in Johnston County about 10 days." (4) "Blue mold is doing considerable damage in Caswell County this year. It is causing a shortage of plants in some sections and delaying the planting in most cases from a week to 10 days." (5) Pittsylvania County, Va.: "Blue mold has done considerable damage in this county this year. I fear that the stand will be bad on account of this disease, making it necessary to replant considerable tobacco." (6) Halifax County, Va.: "Blue mold has done considerable damage and has delayed the planting of the crop around 10 days." Dr. Wolf says this delay in 9 out of 10 cases means a less profitable crop.

I have devoted a great deal of time and have given much thought and attention to the relation between the physiological condition of the plants and the incidence of plant diseases.

In 1941 I prepared a special fertilizer mixture that was intended to give the tender tobacco plant such a healthy growth that it would be less susceptible and more resistant to plant diseases. I conducted 26 plant bed tests of this mixture in nine counties of this State that year, one of them on Governor Broughton's farm and another on the farm of Sheriff Turner, of Wake County. At least half of these plant beds were located on farms near other plant beds on which other fertilizer had been used. In each instance blue mold attacked and did considerable damage to the plants on these nearby beds, but none of it was found on any of these 26 beds. The plants on my test bed were not only healthier and stronger than the plants in other nearby beds but they started off to growing in the fields faster than plants drawn from other beds and planted beside them in the same field at the same time.

Gov. J. M. Broughton said this: "Mr. Holman has given much thought and attention to this important subject, and with a little assistance he would undoubtedly be able to make a contribution toward the solution of this important problem. He has tried some experiments on one of my farms, on the farm of Sheriff Turner, and they have proved successful."

Sheriff Turner, of Wake County, said this: "The plant bed showed no signs of blue mold, and the plants were stronger and healthier than plants in other nearby beds that were planted 3 or 4 weeks earlier."

Dr. Earl H. Hall, professor of botany, the Woman's College of the University of North Carolina, said this: "Mr. Holman has outlined his plan of work to me and I can assure you that his thesis is physiologically as well as logically sound."

Dr. W. D. Hoyt, professor of biology, Washington and Lee University, said this: "Your reasoning seems well founded."

Dr. F. C. Bauer, professor, soil fertility, University of Illinois, said this: "It is my personal opinion that there is justification for your point of view."

In 1940 Senators BARKLEY, BYRD, GEORGE, TYDINGS, and REYNOLDS thought that the progress I had already made entitled me to a little assistance from the Government. They wrote a joint letter to the President requesting him to give his approval and to request the Department of Agriculture to approve the enactment of a bill that would make a grant of $10,000 to me for the completion of my research work. This letter was referred to the Department of Agriculture, and this Department replied to it saying, "No evidence has been submitted to the Department which would justify the belief that any public benefit would accrue."

In 1942 I tried again to get a little help from the Government. Since it appeared that I was so close to my goal, I felt that $5,000 would enable me to reach it. I therefore asked for that amount and promised to make my formula public at the completion of my research work so that all growers might have the benefit of it. I called the attention of the Department of Agriculture to two things: First, the fact that my special mixture had been used with complete success on 26 plant beds in 9 counties of this State; and

second, the fact that 3 teachers of botany had expressed the opinion that my theory was sound. These things should have weighed heavily in my favor. Furthermore the Governors of North Carolina, South Carolina, and Virginia, the Commissioners of Agriculture of North Carolina and Virginia, and many others had recommended that this assistance be given. Gov. J. M. Broughton and Maj. L. P. McLendon, of Greensboro, able members of the North Carolina bar, expressed the opinion that the Government grant to Luther Burbank "to promote agricultural experimentation is a precedent for Government aid in the promotion of experiments deemed to be of probable value to agriculture." However, this strong array of facts made no impression on the Department of Agriculture, and this application was likewise rejected. Why? There must be a reason. Can anyone tell me what it is?

A Federal grand jury in the Middle District Federal Court of this State engaged in conducting a Nation-wide investigation of the fertilizer industry made the startling charge on February 10, 1941, that collusion had existed between the fertilizer interests and State legislatures and State law enforcement officials, and the defendants admitted that this charge was true and paid fines amounting to over a quarter million dollars. Do the facts stated herein warrant the conclusion that the influence of the fertilizer interests extends beyond State legislatures—to other and higher branches of Government? If so, has this influence been powerful enough to prevent the doing of things that are undoubtedly in the public interest?

I asked for the investigation of the fertilizer industry, and the late Senator Borah helped me to get it. The evidence that I furnished helped to indict 102 fertilizer firms and individuals for practices that have been harmful to the farmers of the entire Nation. At the conclusion of this investigation, Mr. John W. Aiken, Special Assistant to the Attorney General, said this in open court: "He wanted it known that Mr. William G. Holman had cooperated fully with the Government in the preparation of the case before the grand jury and had assisted in every way possible during the presentation before the court." It is easy to see that this made me persona non grata to the fertilizer industry, but it should not have operated against me—as it seems to have done—when I tried to be of further service to my country.

Dr. Earl H. Hall has not only said that my thesis is physiologically as well as logically sound, he has also said that when I prove this to be the case "it will revolutionize the preparation and sale of commercial fertilizers wherever used and sold." It will do more than that, it will result in the enactment of a national fertilizer law that will protect the farmers of the Nation from further exploitation. This undertaking is, therefore, Nation-wide in its scope, and ought to be deserving of the helping hand of any man who wants to put a stop to the exploitation of the farmers.

WM. G. HOLMAN,
Greensboro, N. C.

Hon. Ulysses Samuel Guyer

EXTENSION OF REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 7, 1943

Mr. RANKIN. Mr. Speaker, we all mourn the passing of our distinguished colleague from Kansas, the Honorable U. S. GUYER.

He was an able, affable, learned, and eloquent representative of that great western commonwealth that has sent so many worthy and distinguished sons to the Congress of the United States.

The first time I ever heard him speak he made a lasting impression on me. It was during the memorial services for his immediate predecessor, Hon. Edward C. Little. Mr. GUYER ran against Mr. Little for the nomination for Congress in the Republican primary in 1916, and out of 21,000 ballots cast, Mr. Little was nominated by 1 vote. He was elected that fall, came to Congress and served with distinction until his death in 1924. Mr. GUYER was elected to succeed him, and during the memorial services to Mr. Little on February 1, 1925, Mr. GUYER paid him the following eloquent, inspiring, and enlightening tribute, which I should like to appropriate and dedicate to the memory of Mr. GUYER himself as my farewell expression on the life and character of a valued and cherished friend.

It reads as follows:

Mr. GUYER. Mr. Speaker, and gentlemen of the House, my predecessor, Col. Edward C. Little, was born 3 years prior to the beginning of the Civil War. His lifetime embraced all the great and stirring crises of the past three-quarters of a century.

Drawn by the magnet of the western sea, his parents joined that endless caravan that swept toward the frontier just at the close of the Civil War. That colossal conflict had set in motion energies we did not suspect we possessed, and created giants in both armies that have challenged the admiration of all the world. Those mighty energies that filtered out of the wreck and stress of that war, like electricity generated by some huge dynamo, had to be diverted into some adequate and engrossing channel to absorb the shock of the restless and reckless spirits born of that tumult of elemental passions.

Fortunately, at that time we had the richest and greatest frontier on earth, and the brawny arms that contended in that mighty struggle were bared to the shoulder to fling back the frontier toward the western sunset. At that time bluegrass, the symbol and signal of civilization, had then only timidly invaded the valleys of the Kaw and Marais des Cygnes. The embers of Lawrence were hardly cold, and its hatred still glowed with white-hot rage, when Edward C. Little, then a lad of seven summers, came to live in the district which he afterward represented with signal distinction for nearly a decade.

The soil of that historic district was stained with the first blood that was sacrificed in the great conflict, when the scenes of that struggle were shifted from the forensic battles in these halls to the plains and primeval forests of virgin Kansas. As far as Kansas and that district were concerned, the issues of the war were decided before the thunders of Sumter had awakened the smoldering fires of 1861. The question of nationality was settled there long before the guns of Gettysburg had justified the faith of Washington and Hamilton, and of Webster and John Marshall, in the indissoluble integrity of the Federal Union. The names of Lawrence, Lecompton, and Osawatomie were on the lips of the Nation when Shiloh and Chickamauga slumbered in the repose of obscurity.

The father of Edward C. Little, himself a Union soldier, settled on the very soil made historic in that brutal border warfare, at the juncture and blending of the Oregon and the old Santa Fe trails—the two most historic and romantic trails that ever mapped the frontiers of the earth. And thus it was that Colonel Little, then a child, saw the pageantry of the plains. With his childish eyes he beheld that winding, white-crowned caravan, under the protection of whose panoply the embryo of an empire was borne out upon the Great Plains. With his boyish feet he walked upon that dusty path over which Anglo-Saxon genius staggered out onto the great American desert to build an unshackled civilization. Here in the twilight he saw the blue campfire smoke rise like the sky in solution, and heard the pæan of the prairies—the hymn of the plains:

"To the West! To the West! To the land of the free,
Where the mighty Missouri rolls down to the sea;
Where a man is a man if he's willing to toil,
And the humble may gather the fruit of the soil."

At that time Kansas City was a guard at the gates of the wilderness, a sentinel on the fringe of the desert. Wichita had not yet surprised the desert, nor Dodge invaded the wilderness. The great wheatfields of the Kansas of today were the habitat of countless buffalo and the hunting ground of the savage. While eastern Kansas wore the aspect of organized society, just over the horizon to the west was the virgin prairie sea.

To that frontier, besides the Kaw, came James Butler Hickock, better known in the unwritten epic of the prairies as "Wild Bill." He settled near the Little homestead. He was a Scotchman whose ancestors came to Vermont a century and a half ago and fought by the side of Ethan Allen. He had been a Union scout in the Civil War; and so soon after Appomattox there was not that cordial relation between those who wore the blue and those who wore the gray which exists today between the gentleman from Ohio, General Sherwood, and the gentleman from North Carolina, Major Stedman. His Missouri neighbors burned his habitation twice, when he decided that farming was not a congenial occupation. So, finally, in after years, he settled down to the gentle art of keeping the peace when Wichita, Abilene, Hays, and Dodge City were engaged in a contest to decide which was the toughest town on earth—each in its turn deserved the title.

Colonel Little wrote a number of historical sketches concerning frontier life on the border in Kansas. One of these sketches, written about 20 years ago, was entitled "A Son of the Border." It is a spirited recital of that great frontiersman's career, and illustrates the skill of Colonel Little as an author. Permit me to quote the closing paragraph:

"Homer sang Achilles into 30 centuries of renown. The deeds of many frontiersmen excel the Greek's. David did his own singing and came out with a great reputation. Yet I doubt not that the McKandlas gang would have made Goliath look like an amateur. Ivanhoe in his iron kettle with his long lance killing the neighbors for love of God and lady never surpassed the courage and sacrifice of Wild Bill and his comrades. But the dime novelist has been their biographer and cheap notoriety their reward. They deserve a statelier history and a sweeter requiem. With all their faults they were brave and gallant gentlemen and made it possible for quiet men to bring decent women and establish American homes on the plains and in the mountains. Wild Bill's adventures should have come to the knowledge of that fine old Scotchman who delighted in the blare of bugles, the clash of arms, and the tale of chivalry. Walter Scott would have made this great scout and peace officer a hero of romance and a prince of the border."

This demonstrates that Colonel Little was really a gifted writer, and had he confined his efforts to literature he would no doubt have achieved a high place in the literary world. He was a traveler of note. His activities took him to the ends of the earth—as consul general to Cairo, Egypt, in 1892; to the Philippine Islands in the Spanish-American War; and over the American Continent in later life. Had he reduced to writing his varied experiences and published his literary

endeavors, I have no doubt that he would have immortalized his name in the world of letters. And what lives longer than a book? A Kansas bard, "Ironquill," expressed that thought better than anyone else:

"With granite once a genius bridged a stream;
A builder once a rugged temple wrought;
On canvas once a painter fixed a thought;
A sculptor once in marble carved a dream;
A queen once built a tomb, and in the scheme
Of gold and bronze the quivering sunbeams caught;
Then came oblivion, unseen, unsought—
Contemptuous of thinker and of theme.

"And someone wrote a book. Palace and hall
Are gone. Marble and bronze are dust. The fanes
Are fallen which the sungold sought. The rook,
At morn, caws garrulously over all.
All! All are gone. The book alone remains.
Man builds no structure which outlives a book."

Colonel Little's literary efforts were not confined to prose, for in his earlier life he wrote much superior verse. At the University of Kansas he was a leader in Greek-letter circles, being a member of one of the Greek-letter fraternities, and one of his poems of college days celebrates the fraternal ties of those college orders.

"THE GREEKS

"O college days that speed on wing so strong,
O college joys that last not long, not long,
O college friends from whom we soon shall sever.
O college friendships made for aye and ever,
O dreams of youth so sweet, so frail, so fleeting,
'Neath touch of time and care so swift retreating—

"To you the goblets clink,
Greek pledged to Greek we drink;
Eternal be the link
That binds our hearts in one.
Long mystic flames shall dance
'Neath warm fraternal glance,
Till life's last set of sun.

"From where the sunshine glistens
On mantle fair of snow,
To where old Ætna listens
To sullen depths below;
From where the morn's fair fingers
Throw ope the gates of day,
To where the daylight lingers
No more on crested spray;
O'er man and stream and hillside,
O'er all the shadows fall;
But the sunlight softly lingers
Round the dear old chapter hall.

"Aside our foes we fling,
Greek pledged to Greek we sing,
Till wall and rafter ring,
'Nor time nor space shall sever.'
The sparkling wine we quaff,
At fate and hate we laugh,
God bless the Greeks forever!"

Traveling in old Mexico he found an old temple in ruins over whose moss-covered portal was written:

"Haec est Domus Dei
Et Porta Coeli."

From this suggestion he wrote a most beautiful poem, entitled "Domus et Porta," which I will here quote:

"With moss and ivy grown,
It marks the sacred stone,
Let it stand.
It was carved by men of old,
Who have long been still and cold,
'Neath Mexic sand.

"For, you see, it's my belief
That the Domus is a reef
In the sea;
That the Porta is a dream,
Like the lights I thought did gleam
Through to me.

"I long had hope and faith,
Yet my hope was just a wraith—
For the hour;
And my prayers have gone to seed,
As a withered, ragged weed
Without flower.

"Yet still I feel the need
Of Domus, port and creed,
And a friend;
For I've neither fear nor hope,
While I sadly, blindly grope
Toward the end.

"When sinners throng the aisle,
I see them read and smile
At the shrine.
But each carries in his heart,
In a secret place, apart,
That old line:

" 'This is the house of God,
This, where sinners' feet have trod
O'er the floor,
And praise Him, 'tis Heaven's Gate,
Oh, weak one, be not too late,
At the door.'

"Though I do not enter in,
I dislike the scoffer's grin
At the scroll.
For perhaps the priest was right,
With his home and gate, so trite,
For a goal.

"Nor you nor I should sneer
At what is written here
In ancient bookish tongue.
Who knows, not I nor you,
If perchance the tale be true
That priest and martyr sung?

"What is graven on the stone,
Let us leave it, lads, alone
With its dead.
It, on souls that toil and grieve,
If they only can believe,
Hope doth shed.

"Once there came a learned priest,
Holy man from Spanish east—
With all uncovered head
Bore the cross of Christ as far
Through the smoke and flame of war,
As Cortez dared to tread.

"Laughed at famine, laughed in scorn,
At the fears from danger born,
His garments gray,
Led the boldest in the fight—
To armed soldier, plumed knight
Showed the way.

"He might have broken lances under beauty's witching glances,
Where, on an army's banners, the laughing sunshine dances,
O'er the plain.
He might have been the counselor of Castile's proudest king,
Or won the cloak of cardinal where ten thousand anthems ring,
In distant Spain.

"But he chose the sacred service
Of the Child of Nazareth,
Risked for Him his manhood's prime,
Poverty and death.
Here he built the great cathedral,
This his tomb:
His princely soul was crowned here—
Beyond the gate there's room.

"Here he rests, his task is done,
Here he lies, his peace is won;
Let him rest.
Who knows but 'tis of God's own,
And he's close beside the throne,
A welcome guest?

"Then bow low your Saxon head,
Softly speak and lightly tread,
'Neath words so grand.
To carve the line that stands above,
He gave up life and fame and love.
He believed it—let it stand.

"Haec est Domus Dei:
This is the House of God;
Et Porta Coeli:
This the gate His martyrs trod."

I am sure that all will agree that this poem displays no ordinary poetic gift. I regret that time does not permit me to speak of his gift of oratory, but Members of the House are familiar with that. Few men have had such a wide diversity of talent, and few have excelled in such varied lines. He was diplomat, poet, orator, soldier, lawyer, and statesman—preeminent in all. He drained life's brimming cup to its dregs in living his great and purposeful career, and is now gone to join that vast majority where the question of quorum is never raised.

Colonel Little had his faults, "Even as you and I," but his friends wrote them on the shifting, inconstant sands, where the forgiveness of wind and wave has washed them all away. He always retained something of the brutal frankness of the frontier, something of the brusqueness of the old border; softened only slightly by university training and masked but thinly by a highly cultivated mind. This abruptness of manner often withheld from him the credit that was due. Here in Congress he raveled out his life like a prodigal spendthrift in the service of his country, which a none too grateful Republic may never properly appreciate.

No eulogy of Colonel Little would be complete without a parenthesis including the heroic devotion of Edna Steele Little, the partner of all his triumphs, the comrade of his struggles, and the colleague of his labors. He has left to her and their son the priceless heritage of a good name and the record of a life full of devotion to his country, his family, and his friends.

What a pitiable little span is human life. When viewed from its troubled surface, what a strange and pathetic tragedy. Yesterday, the warm, sweet current of life; today, still in the chill of death. Yesterday, the thrill of preeminence and superiority; today, the democratic equality of the dust. For death, like love, levels all rank. There is no caste in the dominion of the sepulcher. Death is the universal decree. The earth itself is but one vast mausoleum. We touch it not without desecrating a myriad sepulcher. The very rocks that wall us in are but the archives of life that throbbed in long-forgotten ages. All that lives must die.

"The hand of the king that the scepter hath borne,
The brow of the priest that the miter hath worn.
The eye of the sage and the heart of the brave,
Are hidden at last in the depths of the grave."

But it is said that there is no life without death and that in nature death is the phophecy of life.

"Plato, thou reasonest well!
Else whence this pleasing hope, this fond desire,
This longing after immortality?"

Bryant says of the migratory bird:

"There is a power whose care
Teaches thy way along that pathless coast—
The desert and illimitable air—
Lone wondering, but not lost."

* * * * *

"He who from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will lead my steps aright."

The bird that sunward guides its flight does not know that eternal summer smiles beneath the tropic sun, but when the bird arrives there the summer is. The instinct with which we cling to life and which inheres in us is like the cosmic urge of the bird, and Nature does not deceive her children.

I know of no better manner of closing this faltering eulogy of your friend and mine than by quoting a little poem by that great dramatic critic, the late William Winter. Several years ago Mr. Winter was very ill and close to the gates of death. After his recovery he wrote this little poem, and in my humble opinion no sweeter honey of its kind has dripped from the hive of genius since Tennyson wrote The Crossing of the Bar. In the calm philosophy of Him who walked by the tideless sea I can well imagine Colonel Little facing death echoing the thought of William Winter as expressed in this little poem:

"One other bitter drop to drink,
And then—no more!
One little pause upon the brink,
And then—go o'er!
One sigh—and then the lib'rant morn
Of perfect day,
When my free spirit, newly born,
Shall soar away!

"One pang—and I shall rend the thrall
Where grief abides,
And generous death shall show me all
That now he hides;
And, lucid in that second birth,
I shall discern
What all the sages of the earth
Have died to learn.

"One motion—and the stream is crost,
So dark, so deep!
And I shall triumph, or be lost
In endless sleep.
Then onward, whatsoe'er my fate,
I shall not care!
Nor sin nor sorrow, love nor hate
Can touch me there."

And, finally, if I were to mark his last resting place out there beneath the sod of the prairies he loved so well, I would mark it as another great Kansan's grave is marked—with a granite boulder inscribed with a classic from his own pen.

Upon that rugged boulder I would let Colonel Little write his own epitaph, a stanza from his poem which I have just quoted:

"Here he rests, his task is done,
Here he lies, his peace is won;
Let him rest.
Who knows but 'tis of God's own
And he's close beside the throne,
A welcome guest?"

Address of Hon. Claude Pepper, of Florida, Before the Drug, Chemical, and Allied Trades Section of the New York Board of Trade

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the Waldorf-Astoria Hotel, New York City, on March 12, 1942, at the annual banquet of the drug, chemical, and allied trades section of the New York Board of Trade.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America today is in danger. The boa constrictor-like coils of tyrannical dictators are closing tighter and tighter around the globe and around us. Sinister devilish forces have set out to conquer the earth. We are the chief obstacle in their path. Except they conquer us, they cannot succeed. If they conquer us, the world will be theirs. Between us and them stand heroic, mighty nations, brave, stalwart peoples who have given the world a glorious example of fortitude and fighting. But closer and closer to us have stretched the tentacles of these mighty octopuses. They have been scooping the ships almost from our shores. Our own soil has felt the sting of their strike.

These vicious foes are bent upon no halfway measures. It is with them, as it is with us—conquer or die. We shall utterly break their backs, or they shall break ours. This is a battle to the death. And long ago we entered into this contest with the spirit of those words:

"Lay on, Macduff;
And damn'd be him that first cries, 'Hold, enough!' "

They have thrown all into the battle—materials, money, morals, decency, men, women, and children. Nothing have they held back for the morrow, or the next year, or the next decade, or for peace.

They have been long getting ready, again holding back nothing in their preparation—thinking, working, spending, planning, living for naught but war—total war.

Theirs is a warrior's tradition; in one case to die a warrior is to go to heaven; in another case to live as a warrior is to have heaven on earth. Can we stand up against such foes? If so, how? Can we do it by quarreling among ourselves? Can we do it by members of the press, Members of Congress, and members of the country yapping at the heels of the President? Can we do it merely by slight inconvenience? Can we do it just by small sacrifices? Can we do it with business merely as usual? Can we do it and haggle over contracts? Can we do it and let businessmen fight for profits? Workers battle for wages? And farmers struggle for prices? While Members of Congress labor for reelection? Can we do it and not offend anybody in our own country? Can we do it and leave everybody as well off as he now is? Can we do it and not get mad? Can we do it without somebody, President or Congress, having the guts to tell the people of this country what they have got to do as their part and their place in winning this war, and seeing to it that they do it?

From the throats of the aroused millions of this Nation pour a torrent of noes. Assuming that we had the same weapons that the dictators have got, the difference between them and us is the difference between a fighting team on edge ready to give everything they have got to win and another team composed of a bunch of fine fellows but without the will to win at any cost. There are still too many similarities between this country and poor France. We have got countless noble, gallant spirits, but the Nation as a whole has not yet developed a fighting heart.

What is the trouble? It is not just one thing. It is many things. It is not just one person. It is millions of people who are responsible—to a degree all of us. We have been bred up on a tradition of isolation which has sapped our vitality. The red blood has been drained too much out of us as a Nation. Naturally, being a nation of peace, hating war, we have not prepared for it.

We have lost our resilience. We do not bounce even the way we did in the World War. We either do not seem to know what we are fighting for, or do not believe what they tell us, or do not care.

We have not yet convinced the average man that for us to win this war means he will have a better chance in life, a better job, a better house, more recreation, more security, that his children will get a better education and come nearer to reaching the high destiny of man. If the average workman felt that that was the stake, you could not make him strike. If the manufacturer felt that for us to win this war meant a better world, better trade, wider horizons, greater opportunity, he would not bother about profits. If the farmer really felt that for us to win this war means to open for him the windows of a new life, that all the dark shadows of his narrow horizons would melt before the golden rays of a new sun, he would not care so much about parity or prices. If politicians felt that victory for us meant the crest of a mighty mountain for the race of man, and beyond immeasurably green pastures of the promised land, he would not so much care who won the next election.

If we all were leaders consumed by our determination to enjoy the permanent blessings of liberty and freedom, who would count the cost of what we should give up in a few brief years? Who quarrels about the night when he knows that it is but a shadow across the fiery dawn?

America, wake up! The sand is running out in the glass. America, wake up! That is your destiny which is sinking. Wake up, America! That is your future which is dying. It is not some of us that there is something wrong with—it is all of us. It is the duty of all of us to right ourselves. All those who love democracy will today think not of enjoying democracy, but of saving democracy. The people of the United States are listening for the strong voice of another Andrew Jackson who commands them to their places—every man and woman to a place—tense, and determined to charge as one the enemy, swearing before their children and their God to gain liberty, or death.

Address of Hon. Jesse H. Jones, Secretary of Commerce, at Official Inspection of the Synthetic Rubber Plants at Institute, W. Va.

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of Hon. Jesse H. Jones, Secretary of Commerce, at the official inspection of the synthetic rubber plants at Institute, W. Va.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Carbide & Carbon Chemicals Corporation and United States Rubber Co. have done a good job here at Institute, W. Va., as many others are doing in the 40 plants throughout the country in the manufacture of synthetic rubber.

The first unit of this butadiene plant, which uses grain alcohol as a raw material,

was contracted for August 1941, and was one of the first in the rubber program. Its capacity was multiplied after Pearl Harbor. I am advised that the process is the result of many years of research and development by Carbide & Carbon Chemicals Corporation here at Charleston.

There has never been any doubt in the mind of the President nor of industry but that we could produce synthetic rubber in large quantities within a reasonable time. I have shared this view.

When the question of synthetic rubber was first discussed in the latter part of 1940 and early 1941, it was the consensus of industry that plant facilities to meet all essential purposes could be built in less than 2 years if it should become necessary. This is being accomplished, notwithstanding that men and materials to build synthetic rubber plants have also been required for other important war activities.

The President's Rubber Survey Committee stated in its report September 1942, that, normally to develop an industry as large as this would require a dozen years, and to compress it into less than 2 years would be an almost superhuman task. I am glad to say that the task is being accomplished in less than 2 years; just as we are doing many other things necessary to the war effort in a surprisingly short time. Our country is equal to any task and any emergency, and I take pleasure in commending everyone who has part in the synthetic rubber program, as well as every other phase of our war effort.

Within a month following Pearl Harbor, the President, at my suggestion, approved a construction program for the manufacture of 400,000 tons of synthetic rubber annually, at an estimated cost of $400,000,000. After the fall of Singapore and the loss of the Dutch East Indies, the program, with his approval, was increased to 900,000 tons.

The synthetic rubber program is going forward as originally planned. The Rubber Director, Rubber Reserve Company, Defense Plant Corporation, and others connected with the development of this industry are doing an excellent job. I cannot speak too highly of William Jeffers' devotion to his responsibilities and his determination that construction of these facilities be carried through with all possible dispatch.

While fortunately we had accumulated a very large reserve supply of natural rubber, starting in July 1940, it has been necessary to conserve its use, just as we are having to ration and conserve many other things to which we are accustomed.

The demands of war are drastic, but we will be well repaid for all sacrifices and temporary inconveniences if we make certain that our fighting men have the weapons and supplies they must have to win the war.

I have a letter from President Roosevelt, which I will read to you:

THE WHITE HOUSE,
Washington, June 11, 1943.

The honorable the SECRETARY OF COMMERCE.

DEAR MR. SECRETARY: As you know, I have never had any doubt but that we could successfully manufacture synthetic rubber in any reasonable quantities if it became necessary, and I am glad to see the production getting under way.

I am advised that the plant you are inspecting at Institute, W. Va., today, is but 1 of 40 throughout the country that will be completed during the year. The establishment of an industry of this magnitude, in so short a period, is in full keeping with the tradition of our people in meeting any mergency.

All who have part in the manufacture of synthetic rubber have just cause to feel they are making a real contribution to the war effort.

Sincerely,

FRANKLIN D. ROOSEVELT.

Care of Children of Mothers Employed in War Areas

EXTENSION OF REMARKS
OF
HON. DAVID I. WALSH
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Saturday, June 12 (legislative day of Monday, May 24), 1943

Mr. WALSH. Mr. President, I request that the text of a statement made by Mr. William F. Montavon, director of the legal department of the National Catholic Welfare Conference, on June 8, before the Senate Committee on Education and Labor, be printed in the Appendix of the RECORD.

This statement was made with respect to Senate bill 1130, introduced by the Senator from Utah [Mr. THOMAS], which provides for care of children of mothers employed in war areas in the United States.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The administrative board of archbishops and bishops of the National Catholic Welfare Conference has among its functions that of coordinating and promoting social service and educational service by the Catholic people of the United States. This board has a profound and conscientious interest in the legislative proposals before this committee at this time.

These bills, through Federal grants-in-aid to the States and through the cooperation of Federal agencies with corresponding State agencies, seek to provide adequate care for children whose mothers are employed in industry and, in this way, "assure the availability of women for employment, where essential to the prosecution of the war."

As stated, the purpose of the bill is to provide day care, not for the children of mothers now employed in war industry, but for children of mothers who, by being spared the obligation of caring for their own children, may in this manner have their availability for employment assured, where their employment is essential to the prosecution of the war.

I find in the bill no definition or other procedure that is to be adhered to in determining in any specific case whether or not the employment of a mother is essential to the prosecution of the war. In its present form the bill seems not to compel any mother to enter employment. It seeks only to assure the availability of mothers for employment. It would make it difficult for the mother to plead the care of her infant children as a reason for not entering industrial employment. It seems to place the unemployed mother in an embarrassing position.

The induction and enlistment of great numbers of men and women into the armed forces and auxiliary services have depleted the manpower available for industrial employment precisely at a time when the vast expansion of industry requires the service of many thousands of additional employees.

The employment of mothers has been inevitable in some industries. In great numbers women have made themselves available by their voluntary action. They have found a means to provide for the care of their children through relatives and neighbors or through neighborhood facilities improvised for this purpose. The need for a Nation-wide program, financed in great part by the Federal Government, is not supported by any statement embodied in the bill.

The War Manpower Commission, entrusted with the high responsibility of administering available manpower, with true wisdom has promulgated, as a national policy, the principle that mothers of young children are not to be encouraged to seek industrial employment. In some instances it has not been practical to hold rigidly to this policy.

Whether or not there exists in the United States today a scarcity of manpower so acute as to justify the employment of mothers in great numbers is debatable.

Whether or not to refuse to employ a woman for no reason other than motherhood would be unfair discrimination may be debatable.

There is no room, however, for debate of the proposition that national interest is served best when the mother and the child remain in the home together.

There is no substitute for the mother or for the home in the life of the child.

Today we have to face a condition which seems to be unavoidable. Mothers of young children are employed in industry and children, as a consequence, are deprived of mother's care in the home.

That condition is a product of war.

The bill before this committee recognizes the fact that war results in a temporary, abnormal condition which will end with the termination of the present war. The bill provides wisely, therefore, that Federal appropriations for State plans for day care and extended school services will cease at the termination of the war. Experience with similar legislation in the past offers little assurance that this statement of policy will be adhered to.

Under the bill the Federal Government would provide substantial financial aid to State governments for services of two distinct kinds to children of working mothers in war areas:

Day care and extended school service.

Day care will be available, it appears, for all children from the cradle to the age of 16.

Extended school services would be available for all children from age 2 to 16.

That the care of the child and the direction of the child's education is the direct responsibility of the child's parents is sound Christian principle. That principle is in complete accord with our national institutions and traditions.

For Government to undertake, as it would under this legislation, to substitute official institutions, agencies, and personnel for the parents and the homes as instrumentalities through which day care and extended school services are to be provided for great numbers of children, would be hard to justify even in a national emergency. The problem which this bill would solve affects the intimate relationships of home and family life and calls for closest scrutiny, and careful examination and demands that adequate practical provisions be made to safeguard these relationships and to protect the enduring interest and welfare of the child.

As our cultural institutions have evolved, when, for any reason, a family is unable to discharge its full responsibility to the child, not the State primarily, but associations of a voluntary character, democratic in form and procedure, social, religious, cooperative in nature, are at hand to strengthen and uphold the distressed family. These voluntary agencies are an admirable product of our popular tradition and find in our political institutions the liberty and encouragement necessary for their successful operation. They are a true manifestation and expression of our American way.

Whatever duty government has in this field, that duty primarily is to uphold and strengthen the family using, in every way practical, these voluntary agencies and associations developed for that purpose.

Only where the family and the nonprofit voluntary agency, with proper aid and encouragement, are unable to meet the situation like that envisioned in this legislation, should government as such and directly undertake to substitute for the home and the family a public agency to provide for the care and training of the child.

An emergency period like the present is not a proper time for experimentation in the field of child care affecting the family and home life.

The problem of children deprived of home care because of the employment of mothers in war and defense industries long has been looked upon as entailing a Federal responsibility. Programs of child care have been developed locally in war areas under the Lanham Act. These programs are expanding.

The Lanham Act respects the principle that government's first entrance should be in the form of aid to agencies, to private agencies as well as to public agencies, already existing.

Until this method of meeting the problem of child care has been effectively and finally demonstrated to be inadequate, the final step of government care should not be taken.

The Lanham Act provides for Federal appropriations and authorizes grants and contributions on equal terms to every eligible agency, private or public, and under the Lanham Act the grant or contribution is paid directly to the operating agency under a contract.

These bills would authorize an appropriation and the making of grants-in-aid to eligible States "for expenditure in accordance with State plans, submitted and approved as provided in this act."

The State plan for day-care services must be submitted by the State public-welfare agency. Under it day-care services must be administered by or through public agencies, other than school systems. Services may be rendered by public or nonprofit private community agencies other than school systems. I emphasize the word "may" be rendered.

The plan for extended school services must be submitted by the State educational agency. The services must be administered by or through the public-school system but may be rendered or conducted by public or nonprofit private-school systems.

Both plans must provide for effective utilization of appropriate facilities and services of State agencies for administrative, advisory, and supervisory services, and of appropriate facilities and services of local public and nonprofit private agencies. Nonprofit private agencies may be paid on a per diem, per capita basis under agreements approved by the State agency.

The day-care plan is to be approved by the Chief of the Children's Bureau. The extended-school-services plan must be approved by the United States Commissioner of Education. Approving officers have authority to promulgate regulations.

We are of the opinion that these provisions, in their present form, do not assert clearly nor protect adequately the right of parents to care for their child and to direct the education of their child.

To be contrasted with these provisions of S. 1130 are the following provisions of the Lanham Act:

The Lanham Act provides for "defense public works." It defines the words "public works" as meaning, among other things, "schools, hospitals, and other places for the care of the sick, recreational facilities," and provides: "The Federal Works Administration is authorized" (sec. 202):

"(c) To make loans or grants, or both, to public and private agencies for public works and equipment therefor, and to make contributions to public or private agencies for the maintenance and operation of public works, upon such terms and in such amounts as the Administrator may consider to be in the public interest. As used in this paragraph, the term 'private agency' means any private agency no part of the net earnings of which inures to the benefit of any private shareholder or individual."

"Section 208:

"(b) No department or agency of the United States shall exercise any supervision or control over any school with respect to which any funds have been or may be expended pursuant to this title, nor shall any term or condition of any agreement under this title relating to any lease, grant, loan, or contribution made under this title to or on behalf of any such school, prescribe or affect its administration, personnel, curriculum, instruction, methods of instruction, or materials for instruction.

"(c) No department or agency of the United States shall exercise any supervision or control over any hospital or other place for the care of the sick (which is not owned by and operated by the United States) with respect to which any funds have been or may be expended under this title relating to, or any lease, grant, loan, or contribution made under this title. Nor shall any terms or condition of any agreement under this title to or on behalf of any such hospital or place, prescribe or affect its administration, personnel, or operation."

The Lanham Act provides for a simple program, obviously temporary in character, designed specifically to assist local communities in meeting the needs forced upon them by the war emergency.

In this law the Congress wisely adhered to the fundamental principle that the Federal Government should respect the autonomy of the local community in working out this problem on the local level.

The Lanham Act further clearly provides that public and nonprofit private agencies already engaged in the care and custody of children stand in a position of complete equality with respect to meeting the needs and providing services.

We respectfully recommend that before any favorable action be taken by this committee looking to the enactment of these bills that the bill be amended so that existing nonprofit private agencies continue to be accorded a status of equality and be not placed in an inferior or secondary position, and that these voluntary nonprofit private agencies be encouraged to continue rendering their services to the community.

This objective, we submit, can be obtained by making the following amendments to Senate bill 1130:

AMENDMENTS PROPOSED

1. Page 2, section 2, line 5, after the words "public authorities", insert the words "or nonprofit private agencies."

2. Page 2, section 3 (a), line 25, before the words "School systems", insert the word "public." This amendment would make it possible for parochial school systems to render welfare services in parochial schools.

3. Page 4, section 4 (b) (2), line 13, after words "supervisory services", insert a semicolon; strike the word "and"; immediately following the semicolon and instead of the word "and" insert the number "(3)"; and after the number "(3)", insert the words "provide for the effective utilization." In line 16, after the semicolon, insert parentheses before the word "such", and close the parenthesis after the semicolon after the word "plan."

4. In line 23 (3) becomes (4) and all subsection paragraphs are numbered accordingly.

5. Page 8, section 7, line 17, after the words "public authorities" and within the parentheses, insert the words "or nonprofit private agencies." In line 24, insert the words "or nonprofit private agencies" after the words "public authorities" within the parentheses.

6. Page 9, line 1, strike the word "public" from the title of section 8. On line 6, after the words "public authorities", insert "or nonprofit private agencies" and in line 10 idem.

In conclusion, Mr. Chairman, may I sum up briefly?

In our American tradition and under our laws the local community does not function through political government alone. It functions through nongovernmental agencies, too—religious, charitable, fraternal, educational, philanthropic—and seeks to maintain proper equilibrium in a spirit of cooperation among all these agencies.

In this manner, private initiative, a quality which characterizes, invigorates, and gives form to the American concept of democracy, is preserved.

Voluntary associations, the chosen agents of the family, whenever necessary, have been organized to meet the social needs of the local community.

This is the true democratic and American way of dealing with community problems.

Government should not disturb these traditional procedures unnecessarily; every effort on the contrary should be made to adhere to and encourage this procedure especially in meeting the child-care problems which communities affected by the war effort are now obliged to face.

Flag Day Address of Hon. James J. Davis, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, June 14 (legislative day of Monday, May 24), 1943

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Flag Day address delivered by me this morning in the auditorium of the Department of Labor under the auspices of the United States Department of Labor Post, No. 42, the American Legion, Department of the District of Columbia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a fitting thing that we should pause here on this, the one hundred and sixty-sixth anniversary of the American flag, to pay homage to that flag and the principles which it symbolizes, for throughout the length and breadth of the world, a terrible wave of aggression is spending its mighty force in a determined drive to destroy those principles for which we stand, and to cast down our flag and trample it into the mire of defeat and derision.

Yes, this very flag, itself born of that noble and determined struggle which was the Revolution, stands imperiled at this very hour. This flag has always moved in the vanguard of those unconquerable legions of freemen who secured the rights of liberty and justice for all men in defiance of the oppressor and the sword. As these stars and these stripes were born in revolution, so, too, has this flag, symbol of eternal union, endured all those storms of doubt and dissidence which have broken on the rocks of this enduring citadel of freedom. Through the mortal pain which was 1812, with the conqueror bivouaced in this our own Capital City, the flag did not falter. Through the hell and fury which was civil war, with this Union of sovereign States threatened by an eternal schism of enmity,

this flag prevailed. In every crisis, foreign or domestic, that has risen up to vex this Nation, this flag and the principles which it symbolizes have always emerged with a newer, more compelling strength.

But all has not been crisis, war, and emergency where this flag has flown. In the years of peace and progress—of which these hours of strife and turmoil were but the more tragic, more activating interruptions—this flag and its people built up a great and enduring civilization. There was established here on this continent and in allegiance to this flag, a political and economic order which was new to the minds of men. Here no altars were raised to almighty kings, here no monarch sat upon exalted throne, here no tyrant rose up to dominate the land. Here, for the first time in the modern age, men—all men—were commissioned to govern themselves. Here in the very shadows of this flag, the most inspiring of all governmental documents, the Constitution of the United States, was inscribed—to establish a government where those who govern derive their just powers from the consent of the governed, where every man is endowed with certain unalienable rights, and where there is a government of laws and not of men.

Here also was born that economic system which has come to be known as the system of free enterprise—whereunder each man is entitled and encouraged to progress to the limits of his capacity; where ingenuity, ability and initiative are given full recognition and incentive, free from the stifling hand of governmental constraint and interference.

The inception of these systems of economic and political freedom marked a new era in the history of man, for they extended to all men an opportunity and a destiny which they had never before beheld. And it was here in these very circumstances that the right and majesty of freemen was forever vindicated—for never in all the history of the world has any people ever achieved so much in so short a time: Vast tracts of land, extending from the Atlantic to the Pacific and from the Gulf of Mexico to the Dominion of Canada, were reclaimed, populated, and developed. Natural resources were tapped, harnessed, and dug from out of the earth. Great and divers industries were created, their vast plants pouring forth the products of the age. Teeming cities, housing thousands upon thousands of people, came forth with amazing rapidity in every quarter of the land. Ribbons of steel and concrete were stretched across the country, and transportation became almost as rapid as the light of day. Yes, this land, America, following after the principles which this flag symbolizes, became at once the power and splendor of the world.

And this growth continues at the present hour. The standards of living attained by the people of this Nation continue to improve; the productivity and skill of our workers continue to increase; the industrial exploits and achievements of our productive genius continue to develop. And all these factors will continue to advance as long as our flag remains unsullied and as long as enterprise in America remains free.

But the growth which has come to America has not all been materialistic. Here, under the shadow of the flag, those freedoms of religion, speech, and press have brought advancements of quite another kind to our people. Over the years, America has become a haven for the troubled and the oppressed. Here all faiths are equally secure. Throughout the country, churches, representing virtually every religious denomination, can be found offering worship and sanctuary to God's people. Here the spirit of inquiry, encouraged by those two bulwarks of constitutional government—freedom of speech and freedom of press—have raised the standards of education in America to heights unrivaled by any other modern nation. And our enlightened public organs, unfettered by governmental restriction and control, have made and kept our people the most fully informed and competent people that the world has ever known.

It is such a nation as this, then, that is represented by the flag which we honor here today. It is such a nation as this, that must now call upon the combined strength of all its people to repel the challenge of those who would conquer and enslave the world. This scourge of aggression and tyranny which has twice been unloosed upon the world in less than a quarter century, now holds vast portions of the earth and countless millions of its people in its callous, galling grip of death. Twice in a quarter century, this flag and the men and women who support it have been called upon to redeem the world and repel the aggressor.

So it is that our flag will once again move across the earth. But it will move not as the symbol of slavery and servitude which identifies the swastika, nor yet as heralding the dawn of the day of eternal darkness as does the banner of the rising sun. The American flag will move across the world tolling out the liberation and the majesty of all men. It will proceed in power and in purpose as it has always done to strike down the tyrant and the usurper, and to restore the vanquished and the betrayed. In all the expanse of the world there is no flag more honored, and more esteemed than this, the American flag—for it bears legend to all men that in every recess where this flag is flown, right, justice, and human decency prevail. All freedom-loving, all right-thinking men the world over pay homage to this flag which stands today as an unfailing beacon of deliverance to a troubled and tormented world.

This flag will again fly over embattled Bataan, over conquered Manila, over bleeding Guam, and over restive Kiska. This flag will fly again over every inch of soil that is American; and no force, no power will ever say it nay. Those gallant men, living and dead, who carried this flag into battle shall see its every bastion restored and its every desecration avenged. This flag now flies in all the ramparts of the world—in Tunisia, in New Guinea, in Palestine, on Midway—and it flies there as a symbol of impending doom for the faltering Axis and all that it entails.

Those brave American men under arms, and those gallant, tireless Americans who labor long hours at home to produce the implements of war, working together in unshakable resolve and unity, shall be the means of carrying this flag on to ultimate, complete, and final victory. Indeed the day is not far distant when our troops shall be quartered and this flag shall be raised in those rotten cores of Axis debauchery—Rome, Tokyo, and Berlin. That shall be a day of deep thanksgiving for the world, for it shall make clear to all men that the principles of right, justice, and eternal progress which are woven into this flag are once again restored to all peoples of the earth.

But when this war is over, this flag should not remain long in foreign lands, for this is no flag of conquest, of imperialism, or plunder. This is a flag of peace, of freedom, and of equality among men. We should not use this flag as a means of ruling or administering the world. We should not permit this flag to become an instrument of international intrigue, no matter in what form such intrigue may be presented. This flag shall always represent us and the principles for which we stand. This flag shall always stand as the living example of just and righteous conduct to all the other nations of the world. They who revere this flag and the principles which it embodies, shall receive every encouragement from us in their struggle to attain unto our standards and our principles. But never should we use this flag as an instrument to dominate, compel, or remake the world. For if ever that course should be resorted to, the luster of this flag shall be forever lost.

And as this flag should never be used in conquest, so, too, should it never be abandoned for any other flag—no matter by what name or what description it may be called. The American people shall always remain free, sovereign, and independent. And they should never proclaim allegiance to any other flag. Down all the years of our history this flag and its principles have served us faithfully and well. The American people ought never to place any other flag before this. And may it ever be, down through all the centuries of our time, that when men inquire after our flag they will always be met with this same, this stirring answer: "'Tis the Star-Spangled Banner and long will it wave, o'er the land of the free and the home of the brave."

Flag Day Address by Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, June 14 (legislative day of Monday, May 24), 1943

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent address delivered by the Hon. James A. Farley at the Flag Day exercises under the auspices of Meriden Lodge, No. 35, Benevolent and Protective Order of Elks, Meriden, Conn., yesterday afternoon, June 13.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To add an occasion like this to the list of pleasant experiences I have enjoyed in my long and happy relationship with the people of Connecticut lends deep pleasure to my visit here today. Not infrequent as the vehicle of our mutual interest has been the Benevolent and Protective Order of Elks, who so kindly invited me to this present ceremony. As an Elk for over 30 years, I find a rich background of happy associations makes each renewal more pleasant than the last. And the prospect of again meeting with my many friends in the city of Meriden, with its 40,000 patriotic, industrious, war-working citizens, is an adequate invitation in itself. One cannot be active in political life without acquiring a supply of friends and acquaintances from Meriden, Conn. When one is desirous of knowing in what part of Connecticut its Governor and Senators reside, one can take a guess on Meriden and be right more often than not. Such is Meriden's contribution to the political life of Connecticut. This town has been a sparkplug of patriotic and political energy throughout the history of the State. Even today both your United States Senators, the Honorable FRANCIS MALONEY, and the Honorable JOHN A. DANAHER, are Meriden contributions. While they are in Washington helping in the plan of action, you people back home are fulfilling those plans in admirable fashion in the busy factories that crowd this community. So, if the

people of Meriden come together for a public dedication of the flag of their country, it is no empty gesture. No more fitting sponsorship could be given our national colors. I appreciate the honor you confer in asking me here today.

The dedication of an American flag in time of war is different from a similar ceremony in time of peace. In years past the dedication of an American flag has often been an occasion for social exhilaration and political oratory. We have all participated in what might be called this patriotic presumption.

But today we are at war. We are fighting it out on the battlefield with our enemy—fighting to make certain that we shall not live out our lives in the dark shadows of his flag but that our own shall forever fly above us in unbroken symbolism of the courage, the honor, the liberty, the opportunity, and the progress that have been America. It is under these circumstances, with a necessary degree of solemn restraint, that we must gather today.

We all thrill with pride at the splendid accomplishments of our armed forces in every theater of war, and every thoughtful and patriotic American must give all assistance possible to the Commander in Chief in our war effort to the end that this terrible conflict can be brought to a close at the earliest possible date.

In these times we cannot dedicate this sacred flag with trite or superficial reference to its meaning. Such a ceremony would be a mockery and our gesture would be better left undone. On this occasion each of us whose heart is genuinely gripped with pride and love for the flag we here display will find his mind filled with sober concern for the preservation of those values it has signalized for more than a century and a half.

We earnestly hope for their preservation, but hope is not enough. The flood of complex problems yet to be faced and the presence in our society of forces which feel that the solution of those problems is flatly incompatible with our constitutional guaranties may yet combine to impose upon our countrymen a test of moral valor more exacting even than the strenuous test of physical valor which we will have just succeeded in meeting with honor.

In such event, as throughout our glorious history, New England and Connecticut will be a prodigious source of that moral stamina that has made and, we trust, will continue to make America America. It was Connecticut, as you must know, that gave birth to the first constitution of an autonomous government ever adopted, when in 1639, your forebears made the so-called Fundamental Orders the basic law of this colony. Today Connecticut, still known as the Constitution State, is contributing more than its share to the struggle to keep the fundamental order of the world. The manufacture of firearms in this country had its beginning in this State. If all Americans can feel proud that this Nation is called the arsenal of democracy, the people of this State have the added commendation that Connecticut has long been recognized as the arsenal of the Nation.

I am told that it is this very spot upon which Connecticut's volunteers were trained and from which they left to join Washington's crusade that won us our liberty.

Let us dedicate this flag today with a humble prayer that from this spot volunteers will always be willing to march forth on behalf of that liberty and on behalf of the free enterprise that grew from it.

Modern history shows that the stifling of freedom of enterprise is a sure approach to the denial of the freedom of persons. Connecticut's interest in the defense of personal freedom is combined with a strong interest in free enterprise, for here you have built a great system of insurance, an industry that is a main artery at the heart of our economic system.

We are all eager to improve the lot of the American worker and to raise the standard of living of Americans generally. It happens to be the weakness of human nature that employees have not been able to obtain their just share of production except through organization. This is not to be lamented. As practical men we should welcome labor organizations as a contribution to a better society. Those persons or groups in this country who refuse to accept organized labor as an established part of our society are doing their fellow citizens a disservice and giving aid and assistance to those who would like to see the entire labor movement under the control of persons who would use it to affect our form of government. Let us be thankful that there are true American labor leaders in our midst who are willing and able to mold the efforts of our workers into that priceless ingredient of a perfect society that can come from labor alone. And let our educational system adjust itself to provide for the preparation of sound labor leadership in the years to come.

America need have no fear of its future if such simple, fundamental concepts are kept in mind. In this connection one cannot fail to notice the uneasiness and concern felt in many quarters over our alliance with Russia. It is contended that certain sections of American labor, as well as various political operators, are under the control of that ally, and interested in subverting the American system.

We should face this situation realistically. We should not hesitate to discuss these fears openly. For my part I do not think it becomes an American to fear that his country is incapable of protecting its interests when dealing with a foreign power, enemy or ally. America cannot, in charity or justice, reject the hand of friendship from any sister state. Indeed, the course of recent history makes the fullest collaboration with Russia a matter of compulsion. Our primary consideration must be the obliteration of the ruthless will to world conquest born of our enemy. That is the first prerequisite to the restoration of world order and peace.

Having accomplished that, we will find little dissent, I am sure, from the persuasion that some minimum arrangement must be made to prevent aggression in the future. It seems unfair to call such a minimum arrangement policing the world. History seems to teach that Europe's war becomes our war. If our military might is to continue to be obligated to put down aggression once indulged, who can logically forbid the threat of its use to prevent aggression prior to the fact?

This is little to ask in the name of our men who are dying in increasing number in the struggle, and indeed if it is not asked they must be said to die in vain. Such an arrangement does not compromise our souls or our way of life, but is a necessary consideration for similar obligations on the part of our allies. Russia will be one of those obligated. And by this simple device both those who have faith in, and those who have fear of, the ultimate aims of our Russion ally should be equally pleased.

It will, with justification, be alleged that this does not remove the internal danger. However, I am sure no group that is alien to our ideals can succeed within our midst without the cooperation, tacit or otherwise, of our own Government. So long as our Government remains subject to the will of the people at the ballot box we can be sure that there can be no such cooperation, for the mass of the American people are sound at heart and pure of motive and hold our constitutional system as precious as did our forefathers who founded it.

With this so-called menace, from without and within removed by the logical course of events, what remains hostile to us except an idea? And since when has America feared an idea? We Americans, without concession, will meet the competition of any new idea or old idea, with complete confidence in the superiority of free enterprise. In such a a spirit, whatever differences exist between nations can disappear in a peaceable solution, and men of courage will lead us to an era of greater accomplishment and prosperity.

We have a right to consider our flag a symbol of prosperity for it is this beautiful land and our great and free Government that have produced a more abundant material wealth for a larger number of persons than has ever before been accomplished by man. Americans in all 48 States, sound, honest, and patriotic Americans are proud of this record. They believe that it can be resumed after peace is restored to the world, and they are determined that their Government shall not inhibit it by the pursuit of policies inimical to that tradition.

There must be no synthetic conflict between political democracy and so-called economic democracy. These are not merely compatible, they are mutually complementary. The more political democracy given to the American worker, the more able will he be to guarantee his own economic rights. Indeed if he should offer up his political rights upon the altar of so-called economic democracy, he is at once bereft of the means to guarantee the latter, and he will one day rise only to find they are both a matter of past history.

If history proves nothing else, all will agree upon the one lesson that society never rushes with favors to him who has lost his political rights. This alone should answer the alleged dilemma. It is surprising that the question should have arisen. We should all know, and I am sure that nearly all of us do know that the success of this joint venture called America could not have been achieved without the hearty initiative, the unfettered adventure, the courage, and the genius of individuals, who began only with and could not have begun without their personal and political liberty.

The history of America is the history of free enterprise, and Flag Day is a fitting time to contemplate that fact, for our flag is as much a lesson in free enterprise as if the words were written across the red, white, and blue. The courage, the honor, and the liberty those colors represent are worth a moment's thought. If we have the courage to defend our own political rights, and the honor to respect our neighbor's political rights, then the liberty of all of us is assured. Just as our courage and our honor will guarantee us our liberty, that liberty will endow us with the economic freedom to earn our bread by the sweat of our brow, as nature has ordained, as our instincts advise, as our history teaches, and as our destiny demands.

Let us fail in this simply duty and the tragic tide will turn against us to deprive us not alone of our bread but in turn of the freedom to earn it and the liberty that is the substance of that right. Then will the courage and honor of which liberty is born slowly sap away, and the flag become a hollow abstraction. May God grant that such a fate shall never darken our shores. May God grant us always to be worthy to hold that flag aloft in full and genuine meaning of what we are and what we mean to be.

Shortage of Supplies for Corn Refineries

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 14 (legislative day of Monday, May 24), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in

the RECORD an article entitled "Corn Refineries Face Shut-Down as Supplies Dip," published in the New York Herald Tribune of June 14, 1943; also an article on the same subject from the Journal of Commerce.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of June 14, 1943]

CORN REFINERIES FACE SHUT-DOWN AS SUPPLIES DIP—INDUSTRY SEES OUTPUT OF STARCH, SIRUP, AND SUGAR IMPERILED BY UNITED STATES POLICY

A sharp decline in corn shipments to the terminal markets of the country has put the corn-refining industry in danger of having to shut down a dozen or more large plants in the Middle West in the next 30 days, it was announced yesterday by the Corn Industries Research Foundation, 5 East Forty-fifth Street.

Two small plants in the Middle West closed in the last few days, it was learned from Pendleton Dudley, executive secretary of the foundation, who called the industry's situation appalling. The industry produces starches, sirups, sugars, and other derivatives of American corn, widely used in industry and for food purposes.

Normally, the industry's requirements are from 10,000,000 to 11,000,000 bushels of corn a month, Mr. Dudley said, but within the last 3 weeks the industry has received not more than 1,500,000 bushels. The decline in shipments began about 6 weeks ago, and has grown progressively worse, he said.

Nothing like this has happened in the 50-year history of the industry, the foundation said, and is the unexpected result of the corn-hog policies initiated by Claude R. Wickard, Secretary of Agriculture, some time ago. Current weather conditions are considered only a minor incident in the situation.

"To stimulate livestock production, the Government guaranteed high selling prices for hogs, price ceilings were set on corn, with the result that the farmers of the Corn Belt plunged on swine production, the marketing of corn in the form of pork proving highly profitable," the foundation said.

Accordingly, the swine census is now almost double the figure of normal years—and there is little or no corn for other users, notably the corn products manufacturer. The industry expected to use only a small fraction of the corn crop, about 130,000,000 bushels of the 3,000,000,000-bushel crop of 1943.

Executives of the 11 companies comprising the corn-refining industry have sent an urgent warning of the shortage to industries such as textile manufacturers, paper makers, aluminum and steel foundries, all of which are among the industries using large amounts of industrial starches in their operations. Warnings also went to the manufacturers of bread, sirups, and other foods, who use much dextrose and corn sirup.

"Since most of the industries using corn derivatives are heavily engaged in handling war orders," the foundation said, "it is believed that the Washington authorities must recognize the emergency that is developing, change certain of their policies, and thus avert what may rapidly become an industrial crisis."

[From the Journal of Commerce]

CORN REFINERY PLANT SHUT-DOWNS FEARED—STOPPAGE WOULD AFFECT MANY INDUSTRIES

With farmers diverting corn supplies to stock feeding, shipments of corn to the refining industry have fallen off to the point where refiners are in immediate danger of having to shut down their dozen or more large plants located at various points in the Middle West within the next 30 days, the Corn Industry Research Foundation revealed here last night.

Corn refiners who are producers of starches, sirups, sugars, and other derivatives of corn widely used in industry and for food purposes, are currently urgently warning such industrial consumers at textile manufacturers, paper makers, aluminum and steel foundries, and manufacturers of bread and sirups, that a serious supply situation is in prospect in the immediate future.

CORN-HOG OUTGROWTH

The cause of the situation, it was explained by industry executives, is the virtually complete stoppage of corn shipments to the Nation's terminal markets. This, of course, makes it impossible for the corn refiners to purchase the chief raw material required for their operations.

This is the first time in the 50-year history of the industry, it was said, that an over-all stoppage of operations has been threatened. The situation, it was added, is the unexpected result of the corn-hog policies developed by the Secretary of Agriculture some time ago, current weather conditions being only a minor influence.

The shortage of corn for refining purposes, industry spokesmen explained, arises directly from the effort to stimulate livestock production. As a part of this program, high selling prices were guaranteed for hogs, with price ceilings set on corn. As a result of these conditions, farmers in the Corn Belt have been concentrating on swine production, due to the fact that the marketing of corn in the form of pork is highly profitable. Accordingly, the swine census is now almost double the figures of normal years, and there is little or no corn remaining on the open market for other corn users, notably the corn-products manufacturers.

Due to the fact that most of the industries normally utilizing corn derivatives are heavily engaged in handling war orders, it is believed in industry circles that Washington must shortly recognize the emergency that is developing in the corn-refining industry, and change certain of the policies which have created this condition and thus avert what many feel may rapidly become an industrial crisis.

WAIT WASHINGTON ACTION

In this connection, it was pointed out that the corn refiners are using only a small fraction of the corn crop—approximately 130,000,000 bushels of the 3,000,000,000-bushel crop of 1943.

In the food field, it was pointed out, manufacturers of confectionery products would be particularly affected by any stoppage of corn refining operations, particularly in view of the current limitations on the use of cane sugar for industrial purposes. Interruption in the supply of corn products would also have important repercussions among commercial bakers, sirup processors and packers, and manufacturers of many other food products into the manufacture of which corn derivatives enter, it was said.

Maj. Gen. Norman T. Kirk

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, no appointment the President has made has pleased me more than that of Maj. Gen. Norman T. Kirk to the position of Surgeon General of the Army. I know of his work at first hand during the war period and after the war period at Walter Reed Hospital. I know of his dynamic personality and of his eminent fitness and ability for the position. I would like to speak of his wide experience and training on this Flag Day, because I join with all the Members in the hope that the men following our flag will have the very best possible medical and surgical care no matter where they serve or in what country they are following the flag. Under General Kirk's supervision, I feel sure our hope will be fulfilled.

I saw General Kirk's successful work daily at the Walter Reed Hospital, when he went there in 1919. He had the confidence and devotion of his patients from the first.

I rejoiced when, on May 28, 1943, the United States Senate confirmed the President's nomination of Norman Thomas Kirk to be the Surgeon General, United States Army, with the rank of major general, for a period of 4 years from date of acceptance. General Kirk accepted on June 1, 1943. I want General Kirk's experience to be a part of our permanent record.

General Kirk was born on January 3, 1888, in Rising Sun, Md. He was graduated from Tome School, Port Deposit, Md., in 1906, and received the M. D. degree from the University of Maryland in 1910. He served as resident physician at the University Hospital, Baltimore, and as clinical assistant at the United States Soldiers' Home Hospital, Washington, D. C., before being commissioned as first lieutenant in the Medical Reserve Corps on May 29, 1912. After a short period of active service, he was appointed to the Regular Army as first lieutenant, Medical Corps, on May 22, 1913.

His first service was at the Soldiers' Home, Washington, D. C., in June 1912. The following September he enrolled in the Army Medical School, Washington D. C., and following graduation was stationed at field hospital No. 3, Texas City, Tex., from June 1913 to July 1915. For 7 months of this period field hospital No. 3 was stationed at Veracruz, Mexico, as part of the Punitive Expedition. He was then assigned to the Cantonment Hospital, Second Division, Galveston, Tex., as operating surgeon.

That same month he went to Fort Grant, Panama Canal Zone, for a brief tour of duty after which he was transferred to Fort Sherman, Panama Canal Zone, in October 1915. He returned to the United States for duty at the base hospital, Brownsville, Tex., in July 1916.

In September 1917 he was assigned to Camp Greenleaf, Ga., serving there until January 1919, when he was ordered to Walter Reed General Hospital, Washington, D. C., for surgical service. After brief tours of duty at the Johns Hopkins University Hospital, Baltimore, Md., and the Massachusetts General Hospital, Boston, Mass., he was assigned to the station hospital, Fort Sam Houston, Tex.—now Brooke General Hospital—in October 1925, as chief of the orthopedic section

and assistant chief and ward officer, surgical service. He became chief of surgical service in July 1927, and in February 1928 he was transferred to the Sternberg General Hospital, Manila, P. I., as chief of surgical service.

Returning to the United States in July 1930, he was assigned to Walter Reed General Hospital, Army Medical Center, Washington, D. C., as chief of the orthopedic section. He entered the Medical Field Service School, Carlisle Barracks, Pa., in October 1931, and following his graduation from the advanced course returned to his duties at the Walter Reed General Hospital.

General Kirk became chief of surgical service at the station hospital, Fort Mills, P. I., in July 1934, and in February 1935 became chief of the surgical service, Sternberg General Hospital, Manila, P. I.

Upon returning to the United States in July 1936, he became chief of surgical service, Letterman General Hospital, San Francisco, Calif., serving in that capacity until January 1941, when he returned to Walter Reed General Hospital, Army Medical Center, Washington, D. C., as chief of surgical service. In July 1942 he was named commanding officer, Percy Jones General Hospital at Battle Creek, Mich.

Promotions in the service brought General Kirk the rank of captain on June 7, 1916, and major on May 15, 1917. On November 6, 1918, he was commissioned lieutenant colonel in the National Army, which rank he held until February 14, 1920. He was commissioned lieutenant colonel in the Regular Army on May 22, 1933, colonel on May 22, 1939, and on March 12, 1943, he was promoted to the temporary rank of brigadier general in the Army of the United States.

General Kirk is recognized as a general surgeon of extremely high capacity, being particularly well known for his work on bone and joint surgery. His volume on Amputations, Operative Technique, which appeared in 1924 and which was the result of large experience following World War No. I, is still a standard textbook. In addition to this book he has written a great many other articles on clinical and operative surgery.

General Kirk has been honored by membership in the most selective surgical societies of the United States, including the American Surgical Association, which limits its active membership to 150. He is a member and governor of the American College of Surgeons, and member of the American Medical Association, the American Orthopedic Association, the American Association for the Surgery of Trauma, the American Academy of Orthopedic Surgeons, and Diplomate of the American Board of Surgery.

A dynamic personality, forceful and aggressive, his surgical skill is paralleled by his surgical judgment. He is looked upon as a man of sound and mature judgment which is based upon experience and which is always tempered with conservatism.

I wish for General Kirk the success I am sure he will achieve as Surgeon General of the United States Army.

Stop Coddling the Japs

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 11, 1943

Mr. RANKIN. Mr. Speaker, when we see the dangerous influences of the Black Dragon Society, camouflaged in "zoot suits," harassing our servicemen, and attempting to stir race riots throughout the country, we become more conscious of the Japanese menace to the future civilization of mankind.

The American Legion, which symbolizes American patriotism in every sense of the word, is awake to this menace and is demanding that Congress act to protect this country from it, now and for all time to come.

Under permission granted me to extend my remarks in the RECORD, I am inserting a letter from the Beppo Arnold American Legion Post, of Greenville, Miss., together with the resolution to which the letter refers.

I also have a similar resolution from the Lee County Post, No. 49, American Legion, of Tupelo, Miss., of which I am a member.

While our boys are fighting and dying all over the world to protect American institutions, the American Legion is determined to see that those institutions are protected at home.

The letter and the resolution referred to follow:

BEPPO ARNOLD POST, No. 32,
AMERICAN LEGION,
Greenville, Miss., June 5, 1943.

Hon. JOHN RANKIN,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN RANKIN: Enclosed herein please find copy of resolutions passed by this post at a special meeting June 4, which are self-explanatory.

We trust that you will agree with the contents of this resolution. If so, we feel confident that we can rely upon your support and influence toward seeing that proper legislation is enacted.

Assuring you of our appreciation for all the noble work you have done in the past, and are doing now, we make this appeal for the future.

Respectfully yours,

B. J. DOTTERY,
Post Adjutant.

Whereas the twenty-fourth annual convention of the American Legion, held in Kansas City, Mo., in September 1942, opposed the releasing of Japanese, both foreign- and American-born, from war relocation centers to attend colleges and universities in the United States and for other reasons, and the national executive committee of the American Legion at its November 1942 meeting reiterated opposition to such plans; and

Whereas the War Relocation Authority, the agency of the Federal Government charged with the responsibility of looking after interned Japanese, is continuing to release Japanese for the purpose of continuing their higher education and for other reasons; and

Whereas this same Federal agency has stated by letter to the office of the National Americanism Commission that all such Japanese now being released are thoroughly investigated by the Federal Bureau of Investigation; and

Whereas J. Edgar Hoover, Director of the Federal Bureau of Investigation, stated in a letter to the office of the National Americanism Commission that such Japanese are not investigated by the Bureau under his supervision: Therefore be it

Resolved by the Beppo Arnold Post, No. 32, of the American Legion in a special meeting June 4, 1943, That the Congress of the United States be urged to enact legislation to immediately return to war relocation centers all those so released; and be it further

Resolved, That all such camps be placed under the control of military authorities; and be it further

Resolved, That the American Legion, both National and State, utilize all avenues of publicity in securing the cooperation of all patriotic Americans to urge Congress to take such action.

Gasoline Restrictions

REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BROWN of Ohio. Mr. Speaker, on last Saturday Members of Congress from the States outside the eastern gasoline shortage area met in the caucus room of the Old House Office Building and organized a committee for the purpose of investigating the gasoline supply situation of the country, and to protect the interests of their constituents in connection therewith.

I have the honor of being named as chairman of this committee, with the gentleman from Iowa, Representative PAUL CUNNINGHAM, as secretary. The executive committee representing this congressional group will consist of one Member from each State, who in turn will keep the membership of his or her State delegation advised as to developments.

Despite a few unwise statements to the contrary, this committee was not organized to fight any other group or to oppose the interests of any other section of the country. Instead its purpose is simply to prevent the imposition of any unnecessary further restrictions in the use of gasoline upon the people of the States represented by the committee membership.

Petroleum Administrator Harold L. Ickes has advised that at the present time there is no need for additional restrictions to be placed on the use of gasoline by the people in the States outside the eastern shortage area. He has stated further that the imposition of such restrictions would not appreciably increase the amount of oil or gasoline reaching the Eastern States.

The people our committee represent are willing and ready to make any sacrifices or accept any hardships that will help win the war, or save the life of even one member of our fighting forces. If these ends can be accomplished by shipping gasoline from our area for use to

better advantage elsewhere, our people will find a way to get along without it. However, they will not be pleased with, nor will they gracefully accept, any unnecessary restrictions in the use of gasoline simply to satisfy the wishes of those who are unfortunate enough to be living in a shortage area and want the rest of the country to suffer on the basis of "misery loves company."

All members of Congress interested in the work of this committee are invited to join. The House group will meet in joint session with a Senate committee in the Caucus Room of the Senate Office Building tomorrow—Tuesday—morning at 11 a. m., at which time Petroleum Administrator Ickes, Mr. O'Leary of the Office of Price Administration, and Mr. Dow of the Office of Defense Tranportation, will be present.

Aviation Legislation

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

AVIATION LEGISLATION

Several good arguments commend the Lea-Bailey bill, now under co. s'deration by a committee of the House of Representatives. Most important, perhaps, is its concentration and control of civilian flying in Federal hands under an independent authority. In addition, the bill recognizes the need of developing air transportation and provides means for doing so. The subcommittee which drafted the measure has adhered to the decision made in 1940, when Congress rejected proposals to follow a policy of attempting to coordinate regulation of air transportation with that of surface transportation. As the recent report of the Office of War Information pointed out, costs are still necessarily high for air transport and will remain so in direct comparison with other means of transportation, even under the hugely expanded programs which may be expected. The types of service and other significant factors bearing upon aviation's place in the transportation system are likely to remain in a state of flux for some time to come. There can well be a period in which civil aviation is encouraged to experiment courageously, devise new methods, and develop its talents before it is integrated, at least from a regulatory point of view, with surface transportation.

In the matter of safety, the proposed bill contains some important provisions. Specifically, it would zone areas about airports and abate such hazards as towers, smokestacks, transmission poles, windmills, and other structures which are a threat to takeoff and landing. Had these zone provisions been in force, the recent fatal crash at Chicago, which cost the lives of 12 members of our military personnel, would not have occurred.

Air transport is entering an era of great expansion. Now is the time for sober and well-considered legislation which will at once aid its growth and protect its services.

Office of Price Administration Policy Will Reduce Livestock and Farm Production

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. CARLSON of Kansas. Mr. Speaker, under leave to extend my remarks, I wish to express my views on what I regard a dangerous policy on the part of the Office of Price Administration as far as food production is concerned. This cheap food policy, if carried to its conclusion, will mean greatly reduced food supplies for our people. This is yet the most serious and absurd move on the part of the O. P. A. The program is dangerous, vicious, and altogether unnecessary. The food producers of our Nation need encouragement instead of more regulations and regimentation from Washington. This is especially true of the livestock industry. I think it is time that our citizens have some facts in regard to what is happening to the livestock producers of our Nation. This present market policy and the roll-back on meat prices is going to greatly curtail production.

The following table was prepared by one of the livestock marketing specialists of Kansas State College and is based on a 100-day feeding period for steers. Certainly no one can expect the livestock producers and cattle feeders to produce increased quotas of beef on this basis. Let us face the facts, and the sooner we meet this problem the better it will be for our people. Food is essential for the winning of this war, and we need more instead of less:

Price risk in feeding cattle 100 days, or from June 1 to Sept. 8, 1943. (Kansas City livestock prices—Manhattan, Kans., feed and other costs.)

Feeder cattle prices, June 1, 1943

Good feeder steers, 735 pounds, at $15.50	$113.92
Interest at 6 percent for 5 months	2.85
Cost per feeder	116.77
FEED AND OTHER COSTS, JUNE 1 TO SEPT. 8 (100 DAYS)	
28.5 bushels of corn, at $1.12	31.92
0.05 tons of cottonseed meal, at $48 [1]	2.40
0.25 tons of alfalfa hay, at $15	3.75
Feed cost per head	38.07
Selling, shipping, and shrinkage costs per head (75 cents per 100 pounds) [2]	7.50
Feeder costs plus feed and marketing costs per head	162.37
Needed price to break even when marketed Nov. 1, 1943, assuming a 2.5-pound average daily gain and grade of good slaughter cattle	16.48
Current price, good slaughter steers	15.75

[1] Estimated local price.

[2] Does not include death losses.

Average price of good slaughter cattle that beef ceilings should reflect at Chicago according to Office of Price Administration	$14.50
Average seasonal price increase (1922-39) from June to September for this grade 10 percent	17.32

NOTE.—An average daily ration of 15 pounds of corn, 1 pound of cottonseed meal, and 5 pounds of alfalfa hay was used in the above calculations. The cattle were assumed to weigh 985 pounds at the end of the period.

I have just received a letter from Mr. Charles Bren, secretary of the Chamber of Commerce of Salina, Kans., in which he encloses a copy of the resolution approved by the board of directors of the Kansas City (Mo.) Chamber of Commerce. Mr. Bren advises me that the Salina organization wholeheartedly endorses this resolution. It reads as follows:

PRICE ROLL-BACK AND SUBSIDIES WILL REDUCE LIVESTOCK AND FARM PRODUCTION

The Chamber of Commerce of Kansas City agrees with farmers and agricultural leaders in this territory in their opposition to roll-back of prices and direct subsidies on meat, butter and other commodities. It also opposes the use of Reconstruction Finance Corporation or Commodity Credit Corporation funds for this purpose. Its position is based on the following reasons:

1. Prices for hogs and sheep last week reached the lowest levels of the year. Price ceilings on corn have virtually stopped movement to central markets. Farm labor is difficult to secure and much of it is inefficient. Scarcity of farm machinery and equipment tends to limit production. The demand for farm labor and machinery is the greatest ever known.

2. Prices of food have advanced 47 percent since 1939, when farm prices and farm incomes were very unsatisfactory, but now require the smallest percentage of wages of industrial workers since records have been kept. Coal miners, railroad employees, steel and other industrial workers have received advances in wages, hence are in position to pay prevailing prices for food.

3. If prices are rolled back and subsidies established, a reduction in production of farm products will follow. Farmers cannot be expected to meet all of their handicaps unless there is some indication that they will not suffer losses due to Government regulations, restrictions or elimination of market support. The ultimate result of a subsidy would be an extreme scarcity of foodstuffs, with even greater advances in cost to consumers or still greater subsidies from the Treasury.

This statement of policy adopted the 8th day of June 1943 by the board of directors of the Chamber of Commerce of Kansas City,

WARD C. GIFFORD,
President.
GEORGE W. CATTS,
Executive Manager.

The following letter was received from one of the large commission firms of the livestock market at Kansas City:

MARTIN, BLOMQUIST & LEE
COMMISSION CO.,
Kansas City, Mo., June 9, 1943.

Hon. FRANK CARLSON,
Congressional Building,
Washington, D. C.

DEAR SIR: The hog market was at a new low today, $13.80. Farmers, 100 percent strong, are bitter at the treatment they are getting. The writer had calls today from Pratt, Liberal, and Larned, Kans., and they are offering 25-pound pigs and thousands of

100-pound shoats at 12 to 13 cents that were bringing 16 to 20 cents 30 days ago. Can't something be done?

With best wishes, I am

Yours very truly,

C. E. BLOMQUIST.

The following two clippings were taken from the Kansas City Drovers Telegram. Mr. Julius Heptig, of Pottawatomie County, Kans., gives an analysis of his feeding operations for the past year, which shows that he suffered a loss of $1,039.60 on the feeding and handling of 113 head of steers. Mr. Heptig has had many years' experience in feeding cattle. His figures show that livestock cannot live on patriotism alone and there must be some prospect of profit to motivate cattle feeders:

Original cost 600 pounds, at $11.50	$69.00
Freight from market	.90
Commission charge	.75
Interest on above investment (6 percent)	2.25
Feed before grass:	
Cottonseed meal	1.25
Ensilage (1,350 pounds, at $4 per ton)	2.70
Hay (500 pounds, at $4 per ton)	1.00
Pasture (summer)	7.50
Total cost, off grass	85.35
(Steers were full fed for 145 days.)	
Hay (1,800 pounds, at $12 per ton)	10.80
Cottonseed meal (290 pounds, at $50 per ton)	7.25
Corn (3,200 pounds, at 93 cents per bushel)	53.00
Grinding of corn at 10 cents per hundredweight	3.20
Trucking (corn, at 4 cents per bushel)	2.28
Interest on investment	2.62
Freight and commission	4.50
Taxes (State and local)	3.10
Death loss	2.10
Equipment cost (not charged).	
Labor cost (not charged).	
Total cost after grass	88.85
Total cost to feed and market	174.20
Selling price 1,100 pounds, at $15	165.00
Net loss (per head)	9.20
Total cost of 113 head, at $174.20	19,684.60
Selling price 113 head, at $165	18,645.00
Total net loss for the year's operation	1,039.60

PROFIT IN HOGS TOO SMALL NOW—UNLESS CONDITIONS CHANGE FOR THE BETTER NEBRASKAN WILL QUIT RAISING PORKERS—MARGINS TOO NARROW TO WARRANT TAKING RISKS OF DISEASE, RISING FEED COSTS, AND POSSIBLE CROP FAILURE

Unless conditions change, Charles Wiggins, of Red Willow County, Nebr., is on his way out of the hog enterprise in which he has been producing more than 500 porkers a year. The reason—too much manipulation by men in Washington who don't know anything about practical hog-producing problems, he charges.

"Sure, there's still money in the hog business, provided everything goes well," Mr. Wiggins admitted. "But let disease get into that herd of more than 500 pigs I am raising this spring, and I could lose five to ten thousand dollars overnight. Such a loss, incidentally, would wipe out whatever profit I have made on hogs in the past 2 years, and I don't think it is fair to ask a hog raiser to take the risk for the small profit he has a chance to get this year if everything goes all right."

Right there is a good place to bring out the fact that Mr. Wiggins is no novice at the business of producing pork on the wholesale basis. When he was a younger man, his father used to raise up to 3,000 hogs a year on a section of land.

Just the Beginning

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. LARCADE. Mr. Speaker, as early as January 12, I have called to the attention of this Congress the seriousness of the labor situation, particularly with respect to farm labor, and time after time pleaded with the selective-service officials to consider the depletion of the farms by inducting experienced and essential farm laborers in the armed forces, as it was clear to me, coming from an agricultural State, that in the call for increased food production for our own armed forces and our allies, if the physically able, experienced, and essential farm labor was taken from the farms, how in the name of common sense could food production be maintained, much less increased? While thousands and thousands of experienced and essential farm and dairy laborers were inducted into the armed forces and additional thousands leaving the farms to take employment in war industries paying high wages, others besides myself warned selective service and our Government officials of what might be expected by the continuance of this short-sighted policy, and notwithstanding all of this protest and warning in regard to this important matter, the policy has been continued. Foremost among those who have been warning to expect a food shortage in the United States has been former President Herbert Hoover, who, everyone knows, is an authority on this subject.

In a recent address before the American Farm Bureau Federation, Mr. Hoover pointed out that in the 7 years, between the harvests of 1932 and 1939, 47,000,000 acres of land were withdrawn from the production of 17 leading crops, while only 9,000,000 acres of that total had been returned to cultivation by 1942. Mr. Hoover concluded that all the withdrawn acreage must be brought back into cultivation to enable us to meet the essential food demands of the armed forces, the civilian population and our allies. If there is no other means of averting a serious food shortage the outlook is grim, since it is altogether unlikely that we can muster the manpower and provide the machinery for the suggested acreage expansion. Shortages of farm labor and equipment are already so acute as to imperil the cultivation and harvesting of the crops now being grown. About the best that we can hope for is that the situation will not grow worse.

Mr. Speaker, while I am not an alarmist nor a pessimist, I am one of those who view this situation with apprehension. Early in the year I inserted in the CONGRESSIONAL RECORD a prediction that unless Selective Service modified the policy of inducting experienced and essential farm laborers, that even with most favorable weather conditions, it was my opinion that nearly all farm products would fall at least 25 percent below the 1942 production, and that opinion is now borne out by recent estimates published by the Agricultural Department.

In an honest effort to make some suggestion or contribution to aid in the solution of this grave problem as far back as April 22, I introduced H. R. 2563, providing for the creation of an Army Agricultural Corps, copy of which was furnished to all of the departments and officials of the Government, and copy of which is available to any and all interested parties. This bill has been referred to the House Military Committee, but I have heard nothing from same. The creation of this Army Agricultural Corps would, in my opinion, go a long way to the solution of this serious situation, by giving our farm boys the same status as a man in combat service, and they would be contributing as much to the winning of the war as the man actually at the front. By making the necessary labor available to grow the food needed for our own armed forces and our civilian population and our allies, and the furnishing of the necessary farm machinery necessary to grow and harvest our food crops, I feel that this is the only way to avert what may be a catastrophe. Not only is our war effort affected but also our civilian population and our morale is affected if food is not available.

In addition, this country is not only concerned in this emergency with respect to our own armed forces and citizens but also we have made certain commitments to our allies and they are expecting us to carry out our obligations not only in the emergency but also when peace comes, and quoting from an editorial in the Washington Post:

> The leadership we have assumed in delivering mankind from want will be undermined, and our fair words will echo mockingly in our ears when the prostrated nations present them for redemption.

In support of my repeated warnings to this Congress and our governmental departments and officials, I beg leave to include the printing in the RECORD of an article published in my State, as follows:

LARGE BEAN CROP IS PLOWED UNDER—FLORIDA PARISHES FARMERS BLAME LABOR SCARCITY

(By Richard H. Tate)

BATON ROUGE, LA., June 9.—With Victory gardens sprouting all over the State to supplement the normal supply of farm produce, farmers in the Florida parishes section of Louisiana are plowing under hundreds of acres of the largest bean crop in the history of the "bean belt."

This ironical development is explained by agricultural experts who have just returned

from the area as being due to several related causes:

A shortage of labor which compelled many farmers in this section to sit helplessly by and watch their bumper bean crop mature, toughen, and dry up before anything could be done to salvage it; a surprisingly weak market which led to a price far below what was expected and on which plans for making and harvesting the current crop were based, and finally a bad break in weather which has been so hot and so dry as to hasten the maturing of the crop at a time when a much longer harvesting season was needed.

The parishes in which the heaviest loss has been taken are described by a United States agricultural inspector just in from a tour of the affected areas as Washington, St. Helena, Tangipahoa, Livingston, and St. Tammany. This observer reports having driven through hundreds of acres that are now being turned under to make way for another crop while additional hundreds of acres still are filled with yellowing bean bushes whose crop is already beyond the stage where any help can be expected.

Department of Agriculture officials state that the unusually heavy planting program this year was due to governmental request in line with crop program increases all over the country. A heavy demand was anticipated, they say, and a strong, unwavering market price was expected. However, neither the demand nor the price has come up to expectations and the result has been a heavy loss of money to the farmers, who in many cases failed to get enough to pay wage demands even where labor was available for picking.

The average price which beans have brought so far in this area is said by Department of Agriculture officials to be from $1 to $1.25 per 30-pound hamper, or approximately 3 to 4 cents a pound. This, in view of rising labor costs, where it happens to be available at all, they say is insufficient to pay the operating costs of the farmers and give them any return on their investment of time and money.

The loss has not been confined to farmers either, for buyers are reported in some instances to have suffered substantial losses on shipments to other parts of the country. One buyer shipped several carloads of prime beans to New York and sold them finally for less than he paid in the field, taking a net loss of approximately $15,000 on the transaction.

A Government agriculturist who has just spent several days in the area reports that most of the farmers who have lost money declare that they will attempt no fall crop as has been the custom in the past unless some definite price scale is guaranteed them. This applies only to the bean crop, however, which for years has been planted in two sections in this area, one in the spring and one in the fall. However, of the two the fall crop is said to be even larger than the earlier one under normal conditions.

Mr. Speaker, not only is the question of stripping labor from the farms involved in this manpower problem, but also many important industries contributing in an important way to the prosecution of the war, and as an evidence of this, I beg further leave to publish in the RECORD one of the many telegrams I have received. The telegram follows:

BASTROP, LA., *June 12, 1943.*

Hon. HENRY D. LARCADE,
Member of Congress,
Washington, D. C.:

This company, and we believe our experience is no different from that of any other paper company in the South, faces immediate shut-down because of critical labor shortage in the procurement of pulpwood. This shortage is the result of several major causes, principal among which are the migration of labor from rural districts to essential war industries and the large number of this rural labor which has been drafted into the armed services. Farm labor which is left is only available for pulpwood production during the intermittent periods in which farm activities are at a standstill. If war prisoner labor can be allocated without delay for use in pulpwood production, this will not only provide relief to a serious situation but will be the means of producing such additional pulpwood as will be sufficient to keep our mills in continuous operation in order to keep our three operations going in your State, we not only beg for your assistance but urge as strongly as possible that you take immediate steps to impress the manpower commission with the importance of this situation and demand their assistance in securing this war prisoner labor relief from the Army or Director of Internal Security who can designate such authority to the internment camp commanders.

INTERNATIONAL PAPER CO.,
J. H. FRIEND, *Vice President.*

Little Soldier, What Now?

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. MILLER of Connecticut. Mr. Speaker, I am incorporating as part of my remarks a very thought provoking editorial which appeared in a recent issue of the Metropolitan News, published in West Hartford, Conn.

This editorial calls our attention to the importance of giving serious thought and study to the problem we will face when this war comes to an end in connection with providing an opportunity of completing the education of those youngsters who have interrupted their education to enter the armed forces. At the present time an effort is being made to control the courses of study to be made available during the war, to youngsters now in high school. Some plan must be worked out that will guarantee that those who have interrupted their education will be given an opportunity to return to school at the end of the war.

This program, I believe, should be separate and apart from the vocational training of those disabled during the war.

The editorial follows:

LITTLE SOLDIER, WHAT NOW?

If last year's graduation figures are any criterion, it can be safely estimated that some four hundred West Hartford students will finish their high school careers this month. To the great majority of these students, if better times were prevailing, this would mean going to college to complete the education so necessary to compete with the rest of the world for a livelihood.

This year's list of graduates will for the most part immediately enter the military service * * * and for most of them it means the end of their education for living and the beginning of their education for death. Most of these young men who have been called out of high school and college classes to the armed forces like to believe that they will continue their educational careers when the war is over. This is hardly likely if the last war is any barometer.

Many factors enter into the picture, chief among them being the fact that a vast majority will not have the means to pay for higher education. A large number will feel that, with jobs growing scarcer and years growing upon them, they must needs seek gainful employment to recoup their lost time and finances.

This problem not only affects West Hartford, but all the cities and hamlets throughout this wealthy Nation, it can be safely assumed that millions of our soldiers will not be released until more than a year after peace has been declared. An armistice can hold a soldier indefinitely and politics on a world-wide scale can disrupt the entire program for a long time.

It behooves both our Government and our people to look into the future and especially see just how our young men are going to regain the education that is part of the heritage they have been fighting for; experience after the last war indicates that those who did not wear the uniform of our fighting services were in a better position to grab all the good jobs, while the soldiers were awaiting the long process of demobilization.

There has been much talk in Washington about the necessity of reeducating the youth of Germany after the victory. It might not be a bad idea if we gave serious thought to educating our own youth, an education so necessary if we are not to repeat the bonus marches on Washington, bread lines, and another world war. Only through knowledge can we prevent world conflicts, and we should start spending our money for knowledge in America first.

The President has requested $100,000,000,000 more for the next year to finance this war. Certainly out of this vast sum, enough could be saved by more careful spending of the country's wealth to set aside a fund of five billion to guarantee the cost of a complete education for every man whose education was interrupted by his admission to the armed forces. The Government could well guarantee the cost of a college career to any one who has sacrificed everything for their country in its hour of trial.

Any citizen who now sits in comfort and comparative safety will not deny the right of the Nation's defenders to their education that has been so abruptly cut off. It behooves all of us to give this problem serious thought right now.

A Toast to the Flag

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. RANKIN. Mr. Speaker, this day is being celebrated throughout the country as Flag Day. I desire to quote a

beautiful tribute or toast to our country's flag by Mr. John Jay Daily, a member of the Press Gallery.

Here's to the red of it,
There's not a thread of it,
No, not a shred of it,
In all the spread of it,
From foot to head,
But heroes bled for it,
Faced steel and lead for it,
Precious blood shed for it,
Bathing in red.

Here's to the white of it,
Thrilled by the sight of it,
Who knows the right of it,
But feels the might of it,
Through day and night?
Womanhood's care for it,
Made manhood dare for it,
Purity's pray'r for it,
Keeps it so white!

Here's to the blue of it,
Beauteous view of it,
Heavenly hue of it,
Star-spangled dew of it,
Constant and true;
Diadems gleam for it,
States stand supreme for it,
Liberty's beam for it,
Brightens the blue.

Here's to the whole of it,
Stars, stripes, and goal of it,
Body and soul of it,
O, and the roll of it,
Sun shining through;
Hearts in accord for it,
Swear by the sword for it,
Thanking the Lord for it,
Red, white, and blue.

Office of War Mobilization

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 14 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, in asking unanimous consent to have an editorial from the most widely circulated newspaper in New England inserted in the RECORD I feel that I am being just as fair to the official who is being criticized as I am to any who may agree with the criticism itself. The question of bureaucracy gone wild is one which must some day come up for discussion in this body. We are entitled to know how all sections of the country feel about it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAR MOBILIZER

It is difficult to understand why it has become necessary to create an Office of War Mobilization, which, in a rather vague description from the White House, appears to have dictatorial powers on the home front.

Former Justice James F. Byrnes, of the Supreme Court, who heads the new Office of War Mobilization, was presumed to have dictatorial powers as Director of Economic Stabilization, and was expected to control the Nation's economy and prevent inflation.

Now he is expected to develop unified programs and policies for use of the Nation's natural and industrial resources for military and civilian needs, effectively use manpower outside the armed forces, maintain and stabilize civilian economy and adjust the economy to wartime needs.

If the new job means that only Mr. Byrnes will tinker with the civilian economy, which includes price controls, rationing, wage controls, supplies of consumer goods, fuel supplies, gasoline and oil, and all the rest of the regulations cooked up by the dizzy Washington troupe of economic acrobats, perhaps some improvement may be effected.

At least the civilians will know where the next blow is coming from. They are today ducking blows from every direction, for they are caught in the middle of a battle royal of bureaucrats who are all trying to strike for victory and landing only on the punch-groggy public.

We have been at war for a year and a half. Aside from the necessary tightening of the belt, which is necessary in war, there has been a great deal of mischief done by poor planning and incompetency.

When Justice Byrnes left the Supreme Court to take the job as economic stabilizer he was hailed as the Mr. Fix-it who would bring order out of confusion. Now he has been moved along into a job which should have been started December 7, 1941.

If, as is promised, Justice Byrnes will exercise complete powers over all home front war efforts, millions of troubled Americans will say a fervent "Amen." But, if it is just another war bureau, from which will come directives setting up controls which neither direct nor control, War Mobilizer Byrnes can join the long procession of promising war czars who have risen to power and subsided in frustration within the space of 18 months.

O. P. A. Acting as Judge and Jury

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the June 2, 1943, issue of the Butchers' Advocate. It is the editorial opinion of the Butchers' Advocate, a journal devoted to America's retail meat market:

OFFICE OF PRICE ADMINISTRATION ACTING AS JUDGE AND JURY

With the national election for President but a trifle over a year away, and the campaign planning of the major parties now in the incipient stage, it would seem that the administration and, more particularly, the National Democratic Committee would look a bit ahead.

It would not suffice in the coming elections to have an international policy to obtain adequate votes to elect the President and a Democratic Congress. The administration can point to an international policy and the conduct of the war generally as an important administration achievement. But, they have to do a great deal better with our domestic planning and policy.

NEW DEAL A DISAPPOINTMENT

The Butchers' Advocate, of course, is concerned with the international policy because we must win the war, but as the representative trade paper for the meat industry and, more particularly, the wholesalers and retailers of meats and poultry in the Nation, it is quite difficult to reconcile the policies of the administration in the handling of our domestic economy, especially as applied to foods.

When the New Deal came into office as the friend of the little fellow in business it was expected that small packers, independent wholesalers, and independent retailers had at last found a friendly administration to solve their many problems. That was the chief topic of the President's campaign speeches before each election. It is therefore difficult to reconcile that policy with subsequent actions of the New Deal agencies, like Office of Price Administration, that sponsor regulatory measures that have driven independent packers, slaughterers, distributors, processors, wholesalers, and retailers of meats and poultry out of business, making it absolutely impossible for many of them to continue in business unless relief is accorded.

Further than this, the administration is alienating the people of the Nation whose incomes have not advanced in proportion to the cost of many necessities they are required to purchase for maintenance. The policy of the Office of Price Administration has curtailed production and dislocated the distribution of foods. They, and they only, can be charged with malfeasance in the handling of Office of Price Administration Act as set forth by Congress. They show on paper that they have rolled prices back, that they have set price standards, and rationed many food items without studying the underlying economic facts, and for this reason meats and poultry are not obtainable in adequate quantities through normal distributive channels. This has caused great losses to legitimate business and will ultimately cause a great loss in taxes to the Government.

It is quite difficult to understand the psychology and the reasoning of many of these New Deal college professors and so-called economists and lawyers who are acting as judge and jury in Office of Price Administration. They evidently are not concerned with the fact that there are approximately 2,700,000 small business units in the United States, and that a large majority have been adversely affected by New Deal Office of Price Administration "advance thinking." All of these people in the small-business category and their countless voter-relatives and dependents will be an important adverse factor in the next national election unless the present administration wakes up.

WORST EVER EXPERIENCED

If the administration wants to win the war quickly and thereafter write the peace, it is necessary that drastic action be taken in the handling of problems concerning our economic home front. The food situation is the worst ever experienced in the history of America. It should not have happened, but now that it has, we can no longer wait for more bungling by the incompetents of Office of Price Administration.

The present Administrator, former United States Senator Prentiss Brown, has inherited too many lame ducks and the situation has become so intolerable that it will be necessary to have our food picture transferred to an entirely different agency. The War Food Administrator, Chester Davis, and the nucleus he has surrounded himself with from a personnel standpoint should be able to do the job.

It has been brought to the attention of the Advocate that many responsible members of the Office of Price Administration have told small businessmen, particularly in the meat and poultry industry, that if they could not operate they should close up, and have inferred that they should let big business carry on. Rulings have been made by the Office of Price Administration, and this is a direct charge, that have favored big business to the detriment of the small independent merchant. These charges have been made from time to time and are too great in number to cite in this limited space.

OFFICE OF PRICE ADMINISTRATION TO BLAME

Much of the difficulty that the Government is now having on the labor front can directly be charged to Office of Price Administration policies, because a large portion of the laboring man's income is spent for food. Prices on food have advanced more than the increase in the income of the average worker, even though Office of Price Administration statistics may not reveal this fact.

Office of Price Administration has set up beautiful price schedules theoretically and these price schedules at wholesale and retail have not forced livestock prices down, but livestock prices have increased. This is the crux of the situation that is bound to have political repercussions when the next national election rolls around.

It is still not too late to repair the bridges. Army engineers under fire have repaired and set up many bridges in Africa and in the Pacific area; the Administration, now under fire, not only from Mr. and Mrs. Average Citizen, must mend its bridges before it is too late if it hopes to regain the confidence of the public.

Thirty-two Lands of the Free—Thirty-two Homes of the Brave

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 14 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, this being Flag Day, June 14, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely, very appropriate, and very sensible editorial entitled "Thirty-two Lands of the Free—Thirty-two Homes of the Brave," appearing in this morning's Washington Times-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIRTY-TWO LANDS OF THE FREE—THIRTY-TWO HOMES OF THE BRAVE

Flag Day—June 14—is a strictly American invention; a day on which we are all supposed to pay some extra measure of respect to the flag of the United States, and, at least in wartime, habitually do so.

The national observance was first proclaimed by President Woodrow Wilson, during the other war, though before we got into that war. June 14, 1916, was the first National Flag Day. The date chosen was an anniversary of June 14, 1777, when the Continental Congress adopted the Stars and Stripes as the official flag of the United States. The American Flag Day Association was incorporated in Illinois in 1894, as an organization dedicated to making June 14 a Nation-wide occasion for renewing loyalty and affection for the Stars and Stripes.

Flag Day this year, however, is supposed to be different.

The President last May 4 issued a Flag Day proclamation in which he urged that the flags of the other 31 Allies be honored in this country on June 14 along with the flag of the United States. This proclamation contained considerable talk about the United Nations, our brothers in arms, and so on and so forth.

Shortly thereafter, the Office of War Information came forward with a pamphlet telling us all how to carry out this suggestion for turning United States Flag Day into United Nations Flag Day.

We quote from the Office of War Information pamphlet:

"In order that the celebration of Monday, June 14, as United Nations Flag Day shall be given point and direction, the following suggestions might well be kept in mind:

"1. Maximum display of United Nations flags.

"2. Use of the term 'United Nations' whenever possible.

"3. Emphasis on the principles set forth in the Atlantic Charter for which the United Nations are fighting.

"4. Emphasis on the importance of teamwork among the United Nations, not only in war but in the peace that follows."

OUR FLAG IS STILL THERE

We agree with George E. Sokolsky, the well-known columnist, when he derides this watering down of United States Flag Day as a perversion of the whole meaning and significance of Flag Day.

Aside from the belittlement of the American flag, there is a phony ring about this entire business of calling today United Nations Flag Day.

There is no such official organization as the United Nations, to which any of us owe allegiance. There is an association of 32 nations, some of which are actively and more of which are passively fighting the Axis. These nations are held together by the perils of the war; and will probably begin coming apart the moment the war ends.

Nor is there any such official treaty or binding agreement as the Atlantic Charter. This piece of paper was put together by Winston Churchill and Franklin D. Roosevelt at a sea conference off Argentia, Newfoundland, in early August 1941. That was before we were even officially in the war. The piece of paper sets forth certain vague ideals which seemed good to these two gentlemen at that time. It has never been ratified by the United States Senate, and is therefore without force or effect as an international agreement on any American—or on anybody else, for that matter.

We have a strong hunch that this denatured Flag Day will not please most Americans. There are still some things which Americans regard as their own private, personal, and beloved property, and the flag of the United States of America is one of those things.

The United Nations Flag Day idea embodies the propositions that there are 32 lands of the free and 32 homes of the brave, that Columbia is not the gem of the ocean, that it takes 32 mandates to make heroes assemble and 32 banners to make tyranny tremble.

Few Americans are prepared to admit these propositions. In most Americans' hearts their flag is still there.

On top.

Forge No Shackles for Aviation

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BOREN. Mr. Speaker, during the last several months there has been a great deal of public interest in the possibilities of post-war air transportation. There have always been enthusiastic disciples of aviation quick to predict that we would soon be a Nation on wings and that even the family automobile would become outmoded within the span of a few years. Recently, however, extravagant predictions have become so general and so popular, and such miracles have been performed by aviation during the last 18 months of war that the average citizen may be pardoned if he regards the most fantastic claims for aviation's future to be altogether reasonable and modest. Indeed, one sometimes wonders whether it is not positively unpatriotic to introduce a note of caution and of realism in connection with discussion of aviation's future.

In our extravagant enthusiasm for the accomplishments of aviation and in our confidence that aviation will open new worlds to be developed by the pioneering, inventive genius of our people, we disclose one of our most distinctive national characteristics. Americans are incurable optimists, never satisfied with anything but the biggest and best, and imbued with supreme confidence that no task is too difficult for our engineers and our business management.

Extravagant optimism can, however, like many other good things, be carried too far. It is never wise to become intoxicated. The trait of temperance which has been strong in our people for a hundred years or more should occasionally be applied to curb our optimism lest we suffer a hang-over of disillusionment which can do no good.

Specifically we must guard against assuming too readily that aviation, and especially the air-transportation phase of aviation, has suddenly reached an established position in our transportation economy enabling us to draw settled conclusions concerning its inherent advantages, its proper relationship to other modes of transportation, and the ultimate stature to which it should be permitted to grow.

Fortunately there have recently been sounded sober warnings against some of the excessively enthusiastic predictions concerning air transportation and its capacities. Practical and hard-headed men of experience in air transportation have warned us not to forget that the industry remains an infant despite all of the miracles being performed on wings on the far-flung airways of the world.

Within the last few days a most revealing survey on American air transport has been made available by the Office of War Information.

Undoubtedly our air lines made a remarkable record prior to the war, a record without any parallel anywhere else in the world. And, as the O. W. I. report states—

> This country is fortunate in having had such a high development of air-line planes and operations at the beginning of the war.

Undoubtedly, too, the air lines have made a most outstanding contribution to the war effort. As the commanding general of the Air Transport Command has many times stated, the accomplishments of that command, past and present, would be utterly impossible without the civil air lines and their organizations. And in continuing their regular commercial operations the air lines have

wrought wonders in the face of the most baffling barriers. The equipment of the domestic air lines in commercial operations was cut by approximately 50 percent within a few months after Pearl Harbor, to say nothing of the equipment they had turned over or released to the Army and our allies theretofore. Yet, as the O. W. I. report reminds us, the air lines were able so to increase the utilization and efficiency of their remaining equipment as to make this cut amount to only 29 percent in the number of schedules flown, and they are currently carrying only a few less passengers than their entire fleet transported prior to the war, and many thousands of pounds more of mail and express. From an average daily mileage of only about 1,000 for domestic air-line planes prior to the war, mileage has been increased to over 1,600 by March of 1943, and the figure is still increasing. This is a miracle of management, maintenance, and operations.

But when transportation by air is compared with transportation by surface means, it is apparent that it remains a "speck in the sky," to borrow the phrase used by the Chairman of the Interstate Commerce Commission in testifying before the Committee on Interstate and Foreign Commerce on the Transportation Act of 1940. Despite all of the increase in the transportation of express on our domestic air lines, air express amounts still to less than 1 percent of rail express alone—without consideration for the tremendous volume of cargo transported by rail freight, by motor-truck, by waterway, and by pipe line. Indeed the sober truth, as the O. W. I. report states, is that this war was begun without a single plane specifically designed for the carrying of air cargo and that even today the first such planes are still in the experimental stage. Not only in our Army and Navy cargo operations but also in such all-cargo commercial flights as are now conducted the planes used were never designed for the purpose. Again to quote the O. W. I. report:

> No planes originally conceived solely for the carrying of air cargo are yet in regular service in the Western Hemisphere. This is true even in Bolivia, Colombia, and Central America where inadequate rail transport resulting from difficult terrain has brought about what is probably the highest development of commercial air cargo transport in the world.

Furthermore the total volume of cargo which can be carried in our present transport equipment, even when augmented by the tremendous production of 1943, will remain insignificant. The O. W. I. report points out that more than one-fourth of all twin-engine and four-engine aircraft manufactured in 1943 will be transports. Yet, if all the cargo planes which will be delivered to the armed services during 1943 could be assembled in a single area, and were all to take off with fuel for a 2,000-mile flight, they could carry a total of only about 20,000 tons of cargo.

Why then, it may be asked, do we place such emphasis today upon air transportation in connection with the prosecution of the war? Why, with such relatively small carrying capacity, should we operate such fleets of aircraft at the tremendous cost which we know is involved? The answer is that in war the job must be done regardless of cost. Speed and mobility are all important in wartime, and when the U-boats make the seas unsafe for shipping, or where ships are nonexistent, a cost of millions of dollars may not be too much in order to assure the transportation of that essential bomb for that essential plane for that decisive battle, without which the war might be lost.

As our Commander in Chief recently said:

> Speed will count. Lost ground can always be regained—lost time never.

But when we look ahead to the return of peace, cost of air transportation and the availability of other means of transport will become extremely important. Here are the sobering comments of the O. W. I. report:

> Availability and expense of fuel are limiting factors in air transport today, and will continue to be so as long as airplanes fly on gasoline. Original investment costs are also still relatively high. Present planes and planes being developed along the lines of present types are not ideally adapted to carry heavy freight long distances. Flights technically possible are often, as a matter of actual performance, still out of the question because of want of navigation facilities along the way or lack of adequate airports and repair shops, as well as refueling facilities.

The report goes on to quote the Administrator of Civil Aeronautics, who points out that even with our great transoceanic air clippers flying from New York to England it takes more than two surface freighter loads of gasoline delivered to Newfoundland and England in order to permit the air delivery of cargo which one 10,000-ton surface freighter could carry across.

This more than doubles the surface vessel cargo tonnage requirements.

And the Administrator goes ahead to comment:

> Even if air cargo costs could be cut from the present average of 40 cents a mile to 10 cents, that would still be enormously higher than those of the railroads and steamships which express their costs per ton-mile in mills, not cents.

Furthermore the O. W. I. report sets forth the general specifications of the principal types of aircraft now being used for transport purposes and at the present under development. Even the layman in examining these specifications will recognize that we have far to go in engineering development and in mastering the secret of cheap, light, and efficient aircraft before we reach a point where, under normal peacetime conditions, the skies will be filled with flying box cars coming anywhere near the cost of our most expensive means of surface transport.

In considering the future of aviation, and especially of air transportation, I have never been one to paint a gloomy picture. No one has a greater faith in the destiny of air transportation than have I. But because of my faith in that destiny and because of my intense concern in our national security and the future commercial strength of this Nation, I am solicitous that this body, in considering problems relating to air transportation, see them in their true light and without being deluded by false expectations that on the day peace comes air transportation will immediately succeed to a vast share of the passenger and cargo transportation now moving by surface means. In fact until there are revolutionary engineering achievements, there is no reason to expect that in the over-all cargo field air transportation costs can seriously compete to any substantial extent with surface means.

In short, there lies ahead for the air-transport industry, for the aircraft manufacturers, and for the Government a period of many years during which there must be intensive development, both technically and commercially, before we can begin to appraise the proper ultimate place of air transportation in our national economy. The air-transport industry is in a stage of such infancy that it will require extraordinary steps and long, hard, arduous work to develop it to the point which it should some day reach if our Nation is to maintain a position of eminence in the world aviation picture.

For these reasons our attitude in connection with pending civil aeronautics legislation must remain, as it has been in the past, one which emphasizes development rather than regulation or restraint or effort to coordinate or tie in with other means of transportation. In 1940 when the Transportation Act was before the Congress, strong representations were made in favor of pursuing a policy of uniting the regulation of air transportation with other modes of transportation under a common transportation policy. But the Congress rejected such a proposal firmly and positively. As the gentleman from California [Mr. LEA], the chairman of the Interstate and Foreign Commerce Committee, had said in 1938 in arguing against a policy of regulation of air transportation on a basis of coordination with other means of transportation:

> If we want real coordination, we must begin with the coordination of rates. The question of rate coordination is not now and for some years to come will not be an acute problem as between air and surface transportation. Air cost prevents that problem for the present.

The situation has not changed in the last few years. Indeed, developments during the war, and the sobering fact that, even with the tremendously accelerated advance of aviation under the stimulus of war, the costs of air transportation remain extraordinarily high, emphasize now as never before the wisdom of the decisions we twice made, once in 1938 and again in 1940.

No administrative agency today, no matter how wise and farsighted, could positively assess the proper place of air transportation in relation to other means of transport. When costs are not stabilized, when types of aircraft are in the midst of revolutionary change, when we have not yet even in the developmental stage a real cargo aircraft, when even the engineering minds in the industry have

not yet settled upon the types of aircraft best adapted for commercial purposes, when we do not yet know what will be the most economical types of service, while debate still rages, as it will for years to come, concerning the relative merits of exclusive cargo as distinguished from a combination passenger-cargo service, when an aircraft such as the helicopter, despite the most intensive developmental work, is not yet able to lift more than a few pounds, when no one has yet been able to demonstrate any truly practical use even for such a well-known device as the glider, when no substitute for weight-consuming gasoline has been conceived—no man can say what the proper place for air transportation should be 5 or 10 or 20 years hence. And with such uncertainty it would invite tragic mistakes to depart, in legislative policy, from concentration upon development or to suggest regulation on a basis of coordination with other means of transportation.

There is now pending a civil aeronautics bill designed to revise our existing civil aeronautics legislation and to prepare Government and industry for post-war aviation development. The bill has been redrafted by the Aviation Subcommittee of the Committee on Interstate and Foreign Commerce, after a long and painstaking consideration, and copies were recently made available to the general public. In this bill the subcommittee has taken care to adhere to the fundamental decision in 1938, reaffirmed in 1940, that, as expressed by the President:

> Aviation is a special problem requiring special treatment.

The emphasis in the bill throughout is upon the need to develop the industry in all its phases. An effort to subject air transportation to some general over-all transportation policy applicable to other means of transport has been sedulously avoided. If the bill is adopted, as I hope it will be at this session, we may look forward with confidence to a continued development of an industry which in a few short years has become essential to our national security and to the future welfare of America's commerce.

Flag Day

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BLACKNEY. Mr. Speaker, today, June 14, is Flag Day, proclaimed by the President of the United States, by the Governors of the 48 States, and by heads of municipalities throughout our great country. It is the final day of a week set apart to reaffirm our faith in our ideals for which the American flag stands, and our loyalty for the Nation, over which it has flown for a century and a half.

Because of the President's proclamation I have received many letters from my constituents throughout the Sixth Congressional District pertaining to Flag Day and its significance. In view of the questions asked, and for the further fact that the flag is more significant today to a liberty-loving people than ever before, I have chosen that subject for today's discussion.

Born of a right to self-rule, after years of oppression by a tyrant king, the Stars and Stripes are the history of a struggle by a determined people to be independent and free.

The Stars and Stripes symbolize 8 years of struggle and sacrifice to form a union of States. Each star is the history of a sovereign State. Their setting on a blue field signals to mankind that here is a Nation dedicated to personal freedom and religious rights, a sanctuary to oppressed men and women the world over, where they might have life and liberty and where they may pursue happiness.

The red stripes represent human sacrifice and the blood spilled by our Nation's heroes in winning the freedom which is ours; the white ones, the purity of purpose of a greater, nobler, and holier America. In the whole is crystallized all the hopes and fears of a Nation established on the righteous principle of freedom of speech, freedom of assembly, and freedom of worship.

During the years of trouble with England, all sorts of queer flags had been designed as standards for the Colonies, first by one colony and then by another, each, however, having a distinctive pattern and design all its own.

But of all the flags and symbols since the world began, there is none other so full of meaning as the flag of our country. That piece of red, white, and blue bunting, represents 5,000 years of struggle upwards: it is the full-grown flower of ages of fighting for liberty; it is the century plant of human hope in bloom.

General Washington, George Ross, the uncle of Betsy Ross, and Robert Morris constituted a committee of three to prepare a suitable design for the new American flag. After some study, they submitted their design to Betsy Ross, a widow, then 24 years of age, living in Philadelphia, conducting the upholstery business which her husband had previously run.

Betsy Ross, an expert seamstress, then drew a draft of the flag with 13 red and white stripes and five pointed white stars in a field of blue, which the committee accepted. They submitted the flag to Congress, but this flag was not approved until many designs were studied and discussed by the Members of the Colonial Congress.

Finally, Congress, on June 14, 1777, adopted for the Nation, the flag designed by Washington, Morris, and Ross, and made by Betsy Ross. The language of the congressional resolution was as follows:

> *Resolved*, That the flag of the 13 united States be 13 stripes, alternate red and white; that the Union be 13 stars, white in a field of blue, representing a new constellation.

In 1794, with the admission of two new States into the Union—Vermont and Kentucky—two additional stars and two additional stripes were added.

The flag flying over Fort McHenry on September 13 and 14, 1814, when Francis Scott Key wrote the Star-Spangled Banner, had 15 stripes and 15 stars.

It was my privilege some time ago to visit the old historic Fort McHenry at Baltimore. As I wandered over that old battleground, it seemed to me that a panorama of my country's history came before me. I could vision Francis Scott Key, confined as a prisoner on one of the boats in the English fleet, waiting patiently during the 25 hours of bombardment, wondering whether at the beginning of dawn, the American flag would be flying; and I could feel the thrill that must have come to him when, with the first appearance of dawn, he found the flag still there. Then he put his whole heart and patriotic soul into the burning words of the Star-Spangled Banner, now our national anthem.

As the Nation grew in size it became impossible to add one new stripe and one new star for each State and still preserve the symmetry of the flag. So Congress in 1818 passed an act providing that the flag should be composed of 13 stripes, and a star to represent the admission of each additional State. Therefore in the flag today the 13 stripes signify the Thirteen Original Colonies and the 48 stars signify the 48 States of the Union.

I want to call your attention, particularly on this day, to the significance of the American flag. Our flag is emblematic of the sovereignty of our Nation.

It represents the ideals, aspirations, and history of our people and engenders a feeling of patriotism and respect.

It flies perpetually over the Nation's Capitol as a sign of national perpetuity.

It flies over the school houses of our Nation, signifying the Nation's endorsement of education and the Nation's protection.

It flies over the capitols of all our States and over our court houses signifying the administration of justice.

It is the symbol of every right enjoyed by the American people.

It represents the Declaration of Independence and the Constitution of the United States.

It reflects the wealth and grandeur and patriotism of this great land of opportunity.

It signifies the law of the land.

It stands for peace and goodwill among the liberty-loving nations of the world.

It believes in tolerance.

It is the badge of the Nation's greatness and the emblem of its destiny.

At a time like this, when European monarchies, kingdoms and republics are constantly changing or crumbling, our American Flag has a greater dignity, a greater significance, a greater purpose than ever before.

Let me call your attention to this paradoxical statement; that the United States is today the youngest of the great nations on earth and at the same time it

is the oldest continuing government on earth. Our Constitution and our Flag for more than 150 years have remained intact, and the principles that they guarded 150 years ago, they are still guarding with greater patriotism than ever before. So, our Flag today represents, in these critical times, our standard of national defense.

It is fitting, therefore, that today every patriotic citizen should give thought and attention to the American Flag. That Flag represents everything that you and I hold dear. It is the symbol of our country. It protects the home, the church, and the school. That Flag at this moment is with our 2,000,000 boys scattered throughout the world in their fight for liberty. Because of our 8,000,000 boys in military service today, and especially because of the 2,000,000 that are abroad, it is our great and patriotic duty to respect the Flag as never before at this crucial time when the destiny of the Nation is at stake.

The Black-out of Fair Play

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 14 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article relating to the WAAC's, entitled "The Black-out of Fair Play," by Mrs. Evalyn Walsh McLean of Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BLACK-OUT OF FAIR PLAY

(By Evalyn Walsh McLean)

What a shocking, horrible, and stupid way we Americans are treating the WAAC's and other women in uniform by this filthy, open persecution now going around the country.

They have given up brothers, husbands, and sweethearts who are willing to die for our country—given up their all—and we are sitting back placidly throwing mud and worse at them. You can wash mud off, but this infamy sticks—once you begin to discuss a woman's virtue, she hasn't any.

Where are justice, tolerance, and fair play in this country of ours we love so dearly? Who would allow such condemnation of our womanhood, if we were stopping to think what it means?

Of course, there are weak girls in uniform, just as there are weak and tragic women everywhere and just as there are weak and worse than weak men scattered all over the world in all walks of life.

But let us not confuse these few with the great army of women who are giving their best for their country. If we true and loyal citizens who read and repeat the filthy condemnations of the women in uniform would only consider the real facts, then the slanders would stop.

Think of the hard and relentless grind these girls must go through to become WAAC's. Think of the classes they must attend, the subjects they must study and learn. Think of the strange cities and new worlds they are thrown into overnight and on their own.

It is a hard life these young women have chosen to live for their country.

They have not chosen it just so they could go to bed with a man. That is just about the easiest thing any woman can do. She doesn't need a uniform for that.

But consider, instead, the long hikes, the hard studies, and the entirely new rules of life the girl must subject herself to when she puts on that uniform and takes the oath of duty to her country as a member of its armed forces.

Now don't think for a moment I believe in, or that I do not condemn, the so-called single standard; that is, equal life for women and men in the physical sense. To me a woman always loses something she can never get back once she takes the jump.

I am not defending here any girl who has misbehaved or gone wrong, no matter whether she is in uniform or not, but I have always said that 99 out of 100 women are fundamentally decent, and I still think that.

I certainly don't think the people who started the false and malicious lies about the women in uniform are themselves decent, and I think that every time these lies are repeated or printed the responsible people should be fined—heavily.

Beauty, truth, and honesty have certainly been in eclipse for the last few years, thanks to that crazy man, Hitler.

And now if we begin to pull down our splendid young women just because a few of them may have been in error, or if we allow anyone else to pull them down, then in my honest opinion we are all of us just as cruel and selfish, just as vicious, as that fiend, Hitler.

I have watched many, many of these girls in uniform. They have dignity, and a serious, even a grim, determination to carry on their duty to their country and not fall down.

I want to say to their parents, wherever they are, that I know too many WAAC's and WAVES and SPARS and women marines to doubt them.

They are using their liberty from parental control like the ladies they are. Let us not worry about that. Let us remember that the way is always hard for crusaders in this world. These girls are blazing a new trail in history—a trail for their daughters and granddaughters to follow.

I want to repeat to the unthinking, these women do not have to go through these hardships just to get men. They could do that easier and simpler just by sitting in a night club or necking in the dark in a parked car with the doors locked.

No; that story is a lie.

I say, God bless all you wonderful WAAC's and you other girls in uniform. Remember, if a few do stumble and fall, just pick yourselves up and keep your courage high and know that God will help you, because He knows and understands and loves you all.

I know, too, that I am going to be criticized for what I have written here. "She's just a crazy old society woman with a double standard," they'll say. But I haven't any double standard in my own life, never have had. I try not to be my brother's keeper when it comes to blaming or condemning the other fellow, that's all.

But I do feel so deeply, sincerely, and honestly about these girls.

I feel they are really so grand, brave, and fine, and above all, so moral, and I have such complete faith in them, that I will take any disagreeable criticism that comes my way.

Girls, don't get discouraged, hurt, or angry, just because some of you must suffer for the very few. Remember, your great country is back of you. It is proud of you, and greatest of all—it needs you.

Japanese Internment

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. ROLPH. Mr. Speaker, pursuant to permission granted to extend my remarks in the RECORD, I submit resolutions adopted June 9, 1943, by the council of the city of Los Angeles:

Whereas certain elements within our country are endeavoring to remove foreign- and American-born Japanese from internment centers and return them to the Pacific coast; and

Whereas the internment of these Japanese was necessitated not only for the protection of our country and its citizens, but also for the safety of the internees themselves; and

Whereas the psychological reaction of our inhabitants after the Japanese slaughter of our American citizens at Pearl Harbor, December 7, 1941, was such as to create a nervous tension held under control only by increased activity of peace officers and by the immediate internment of Japanese by Federal Bureau of Investigation agents and peace officers; and

Whereas the difference in race, religion, color, and thought of the Japanese from our American citizens is such that the ideologies of the Orient are inherently present and predominate to such an extent in the majority of all Japanese in America as to prohibit any Japanese from ever becoming a strictly loyal American; and

Whereas by actual survey it has been ascertained that 80 percent of the internees would, by their own admission, fight for Japan if given the opportunity, and the attitude of the remaining 20 percent is an unknown quantity; and

Whereas the brilliant and intelligent military strategy shown by Lt. Gen. John L. DeWitt would be nullified were the restrictions placed upon the internees lifted; and

Whereas peace officer personnel has been reduced 25 percent through enlistment of members in the armed forces, thereby creating a shortage of officers with which to control the riots, mob violence, and sabotage which release of the Japanese would engender; and

Whereas recognizing the danger to our communities which would be aggravated by lessening of internship orders, the Peace Officers Association of Los Angeles County has appointed a committee consisting of Sheriff Eugene W. Biscailuz, District Attorney Fred N. Howser, John H. Hanson, Superintendent Plant Protection, Lockheed Aircraft Corporation; Los Angeles Police Chief C. B. Horrall and M. G. M. Studio Chief W. P. Hendry to oppose any lessening of internship restriction, and other organizations and associations are actively fighting the release of internees; and

Whereas the citizens of the west coast are strictly and unequivocally opposed to the infiltration of Japanese into their communities; and now, therefore, be it

Resolved, That the City Council of Los Angeles urge continued internment of Japanese, regardless of place of birth and further urge that no organization, group, or individual be permitted to engage in any activity which would tend to lower internment restrictions; and be it further

Resolved, That a copy of this resolution be sent to General DeWitt, to the California Members of Congress, to the Secretaries of War and Navy, and to the President of the United States.

Subsidy on Potatoes

REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. STEWART. Mr. Speaker, the O. P. A. was set up to control profits rather than prices. It provides a ceiling for farm prices and places a floor under the highest wages in history with an escape clause upward revision.

At Bennington, Okla., in the district I represent, the ceiling price on Irish potatoes today is $2.70 per hundredweight on car. In Washington, D. C., where I am residing during this session of Congress, last Saturday Irish potatoes cost me 8 cents a pound or $8 per hundred, a difference in price of $5.30.

In the Bennington Journal appears an open letter from Mr. W. H. Frank, head of the Bryan County Potato Growers Association, advising the potato growers of the ceiling price per car. The price does not mean in any sense that the farmer will receive $2.70 net for his potatoes—he will receive $2.70 gross. He has to make his deduction for seed, which was very high, commercial ferilizer, also high, sprinkling for insects, hoeing and plowing, gathering, loading, and transportation, which cost from 20 to 35 cents per sack of 100 pounds from the potato patch to the railroad car. Then between the cost of production and his investment for seed, fertilizer, spraying compound, sacks, hired labor, and transportation, the farmer receives a net pitiful sum for his long hours and days of labor and sweat. Yet the organized labor journals and press releases are "hollering" from the housetops to roll back the price of farm commodities. Not one word has been heard by me where they have said anything about too big a profit for transportation and distribution.

No criticism has been made about the high wages that will be paid that is chargeable to a sack of these potatoes. Organized labor takes charge at the car and organized labor will be in charge at the point of destination, organized labor will take their toll in delivering the potatoes from the railroad depot to the wholesaler, and organized labor will receive their portion of the sack of potatoes in delivering from the wholesaler to the retailer. Organized labor will receive their share in the industrial centers for putting them in a paper sack and delivering them to the final consumer.

Yet in the face of all of the fixed demands by organized labor and O. P. A. our citizens are patriotic and working upon a 24-hour shift to get these potatoes to the consumer. Mr. Green, Mr. Lewis, and Mr. Murray recommend a subsidy for the farmer. On the other hand, in many vital war plants demands are being made and strikes are being called for higher wages. Where is the point of meeting of minds between the farmer and the organized labor group if the farmer goes broke in his potato adventure and begins to look about for employment in some war industry? In most cases he is compelled to pay an unreasonable initiation fee and join the union and pay dues before he can even interview an employment agency. In at least one instance I know about, the U. S. E. S. said they would refuse to certify to the contractor any nonunion laborer.

I am fearful that too many not in sympathy with the farmer are writing the rules under which he must abide.

We wish to point out to organized labor that the following open letter from Mr. W. H. Frank to the potato growers rings with patriotism, not a threatened strike, but to the contrary appealing to his neighbors "to get your potatoes out and into the money," and he cautions not to expose too many potatoes to sunshine to prevent decay. The high point of his letter, contrary to organized labor's demands and O. P. A. unjust ceiling price in this locality, is wherein he says:

We will be operating for about 10 days, and will work night and day, if necessary, to get the job done.

If this slogan was the spirit of those of us backing up our armed forces, much more would be accomplished in this great global conflict.

The matter referred to is as follows:

POTATO LETTER FROM MR. FRANK

Hello, everybody; the grading and marketing of potatoes will start Wednesday, June 9, except for another lot of heavy rains.

It looks like the price is going to be $2.70 loaded on the cars for No. 1 grade. This is the price set by the Office of Price Administration at this time and will be the price for the whole season, unless the Government officials see fit to make a change. The price set was $2.50 per hundred, but the writer joined others to boost the price to $3.50, with the result of a compromise price of $2.70. I wrote to Prentiss Brown, the Office of Price Administration Administrator, and to Senator ELMER THOMAS, protesting this price of low ceiling, and mine along with thousands of other protests from all over the Southern States has been the reason for the small raise.

It is now the writer's opinion that the best thing to do is to get your potatoes out and into money, as the Government is going to regulate the price, and this is one year that it will be hard to keep potatoes long on account of so much moisture caused by so much rain. Then you must stop and think—this price is fully twice as much as we have been getting in former years, and is above the price that was guaranteed by the Government at planting time in the spring. We all went ahead and planted with the $2.25 price in mind. Of course, the shortage of potatoes right at this time makes us think that the price is too low, but there are many areas producing potatoes that will come on later and this shortage will be overcome, or oversupplied. The Colorado's have planted 75 percent more potatoes than last year, and the North has planted likewise.

I wish to warn you against holding your potatoes until later in the season for higher prices or other reasons. Would like to convey this actual experience to you. On numerous occasions, we have had a number of sacks to stay on the grader platform after the close of the season waiting for a truck, for a week or more, and always we have had to sell on reweights, which proved a loss of an average of 10 pounds per sack, and this year the shrinkage will be more. This amounts to considerable loss in money.

We will use the No. 2 potatoes at a price in line with the price of the No. 1 grade.

Again this year, be careful in gathering your potatoes. Do not plow up too long a row before picking up and getting into the shade, as this year sun scald will be much easier because of the high water content of potatoes due to the wet season.

We will be operating for about 10 days, and will work night and day if necessary to get the job done.

Pass this information along to your neighbor, as he may not get this letter.

Yours very truly,

W. H. FRANK,
For Bryan County Potato Growers Association.

No, Thank You

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. MICHENER. Mr. Speaker, if a man bites a dog, that is news. It is news because it is a natural and frequent occurrence in reverse.

In these days of bigger and better subsidies flowing from the Federal Treasury to favored groups, blocs, and individuals, all the way from the cradle to the grave, it is refreshing to meet up with one of these proposed beneficiaries who realizes that all money in the Federal Treasury must come out of the pockets of the taxpayers, and that this bootstrap lifting of those benefited is fundamentally wrong and, if pursued far enough, will ruin not only the Government but the economy of our people.

Mr. Speaker, the thought I have in mind is well illustrated by an editorial appearing in the Adrian (Mich.) Daily Telegram of June 12, 1943, which I am sure is well worth reading. It is as follows:

NO, THANK YOU

A bill has been introduced by Senator Bankhead, and a companion bill in the House, providing that the Government shall spend twenty-five or thirty-five millions a year in advertising in newspapers, to be divided equally between daily and weekly papers.

We do not believe that this is an attempt to bribe or control the press. We do not charge any bad motives to the authors of the bill, nor to those who favor it. But nevertheless the bill is bad—absolutely bad—and for a number of reasons.

In the first place it would have some of the effects of a subsidy, even if that is not its purpose. A newspaper publisher on the Government pay roll cannot possibly be quite as disinterested as he otherwise would be.

In the second place it is patently a handout. The equal division between daily and weekly papers is proof of that. Daily newspaper circulation is enormously greater than weekly, and daily advertising rates are higher. If the advertising were put out on a business basis a much larger share would naturally go to dailies. Can you imagine General Motors or Ford using all newspapers and dividing a million dollars equally between dailies and others? It would be just as absurd for the Government to do so. It would not be business. It would be politics, or something.

A third reason against the measure is that it is absolutely needless. What would the

millions of advertising be for—for bonds? for salvage? for rationing rules? The press furnishes all that advertising free. It has furnished ten times more than the twenty-five or thirty millions proposed. It has done it not only willingly but enthusiastically—getting behind every drive, and printing all information that could be desired. It will continue to do so. They do not need to be hired to perform that duty to their readers and to their nation. They ought not to want to be.

Important newspapers and newspaper organizations oppose the bill, some violently. Some organizations made up of smaller newspapers are reported to favor it. We think these publishers are in error, and that they will regret it if the bill ever becomes a law. The press of the country would suffer lasting harm.

Japanese Problem on the Pacific Coast

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. ANGELL. Mr. Speaker, more than 100,000 Japanese have been removed from the Pacific coast areas and are held in relocation centers. Recently a good many of these Japanese have been released. People of the Pacific-coast areas are very much concerned over this problem and are opposed to any of these Japanese being released and allowed to return to the Pacific coast.

It is a well-known fact that many of the Japanese, even though born in America, believe in dual citizenship and owe allegiance and loyalty to the Emperor of Japan. There is no place in America for divided loyalty in this critical hour when our own men in our fighting forces are giving their lives for the protection of our country. The dastardly attack of the Japanese upon Pearl Harbor should be a lesson to us not to lessen our vigilance, particularly on the Pacific coast.

It is well-known that the Japanese have as a part of their plan to attack the Pacific coast, and if these Japanese who are loyal to Japan are permitted to remain in that territory they will be in a position to further the plans and schemes of our enemies.

I include as a part of my remarks a resolution adopted by the Gresham Chamber of Commerce on May 29, 1943, which is in my congressional district:

Whereas the people of the United States are engaged in a death struggle with the Japanese Imperial Government, and are engaged in a war to defend American homes and Christian ideals against Japanese agression; and

Whereas the experience of Oregon citizens with Japanese nationals and those persons who by accident of birth became vested with American citizenship, has provan that the Japanese people do not and cannot assimilate with the white Americans; and

Whereas it is impossible to determine which citizens of Japanese descent are loyal and which are disloyal to the United States and hold dual citizenship; and

Whereas it is significant that no citizen of Japanese descent warned the officials of the Nation of the preparation which preceded the infamous attack upon Pearl Harbor, with resultant massacre of innocent American citizens; and

Whereas the Japanese people have proven to be barbaric savages in war and are masters of deception in time of peace; and

Whereas in the past the Japanese have taken over small farm holdings and have gradually increased their holding until previous to December 7 they were or had about driven out all of the other growers of vegetables in this section and were, in various underhand methods, through births, buying up the best farms in this section. On farms that were rented they were run down to such an extent that it was impossible for others to make a living and were then bought up and rehabilitated. Living conditions were of the lowest and this brought the standard of living to such a point that they were able to corner this part of the country as a vegetable center.

Whereas the above chamber of commerce in session asked that a resolution be drafted that they never be permitted to return to this section; that the Congress of the United States take the necessary steps both for this country and their own well-being in that they never be permitted to return to this section. While here they mere given the best of education, and one member of their band became the biggest spy for the Japanese and he graduated from our local high school. Out of respect for the boys from this section who have been slaughtered, we insist that the necessary steps be taken for their removal from this section, as well as the United States.

The above action was taken by the Chamber of Commerce of the City of Gresham and of Multnomah County, one of the sections that had more of this class of people to contend with, and their action was unanimous. Copies to be sent to the Oregon delegation in Congress, the Portland Chamber of Commerce, Walter Winchell, and to the Honorable Harold Ickes.

The Sweet Sweat of Honest Toil

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Aeronautics for June 1943:

THE SWEET SWEAT OF HONEST TOIL

Sound legislation, like any other creative work, is one-tenth inspiration and nine-tenths perspiration. The revised H. R. 1012 is to the original fuzzy draft of the bill as sunlight is to canned heat. The latest edition shows the character of the work which the committee put on the bill.

The legislation first declares the sovereignty of the Federal Government over the air spaces of the United States and its Territories. All will recognize that this is essential before the Government can consummate those international air treaties which will form a part of the stability of world society in the air age.

The legislation next assures uniformity of regulations within the Nation and provides for reciprocal privileges for American aviators in foreign skies. Also, the bill directs the Commission and Administrator to cooperate with the States in their development problems and recognizes that the States of the Union each have a place and an inherent interest in the broad field of aeronautics.

The bill moves on into the subject of economic regulation where it provides for stabilization of air commerce as free enterprise, guards against interlocking interests of the trust variety, acknowledges the value of competition, suggests that even direct subsidy may be necessary upon occasion and limits control of air commerce to the capital directly invested in such commerce.

In numerous provisos the Commission is directed to perform essential promotional services such as research, education, airway and airport development, study of aviation insurance and reinsurance, cooperation with the Weather Bureau, establishment of qualifications for administrative personnel, and the furnishing of information to Congress and the public.

The administrative machinery of the Government is straightened out so that confusion should be eliminated. A director of accidents (really the good old safety board idea) is reestablished.

Not alone in the actual provisions of the legislation is H. R. 1012 now an admirable work but in the attitude and in the clarity of the wording. Weasel clauses are few and far between. The Commission is given that freedom of judgment which does not stifle the public interest behind red tape. The zoning provision has teeth enough to bite into any problem, and hold on.

The National Aeronautic Association has followed this bill with the keenest interest. We have sought to preserve the pattern of American Government, as we understand it, for American skies. We have sought an attitude of sympathetic understanding and cooperation between Federal and State interests. We have sought emphasis on promotion and development rather than regulation and red tape. We have tried to represent the best interests of the thousands of pilots and airmen who are essentially silent because in the armed forces. We believe the legislation as it now stands (committee draft 2) is constructive, sound in principle and expression, comprehensive in viewpoint.

Our conferences with the committee have been a pleasure. We found the Congress to be sympathetic to all problems, open-minded, and willing to listen to the stories of all. We want the personnel of aviation to know this for we pulled no punches in presenting the cause of the "little people."

Our warm appreciation goes to the members of the Interstate and Foreign Commerce Committee of which the Honorable CLARENCE LEA is chairman, and the Honorable ALFRED BULWINKLE, chairman of the Subcommittee on Aviation. To the Civil Aeronautics Administration for staying away from the hill both in fact and upon principle, we also wish to comment with high approval.

H. R. 1012 is not perfect, but it is an honest effort and it reflects mental integrity on the part of the committee.

War Bond Sales in Hawaii

EXTENSION OF REMARKS

OF

HON. JOSEPH RIDER FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following press release:

TREASURY DEPARTMENT,
WAR SAVINGS STAFF,
Washington, D. C., June 9, 1943.

Hawaii stands at the top of the list of all the States and Territories with an uninterrupted record of exceeding its monthly quota of War bond sales, Secretary Morgenthau announced today.

Citing statistics just compiled, Mr. Morgenthau pointed out that the people of Hawaii have headed the quota performance record in every month since the quota system was established in May 1942, and on a monthly per capita basis have bought War bonds at a rate from two to nearly four times above the average for the Nation as a whole.

"It is worth noting," the Secretary commented, "that the best record made anywhere in the United States in consistently exceeding War bond quotas has been made in Hawaii, where the people have suffered attack, have cheerfully undergone severe restrictions in their normal way of life, and have made an outstanding contribution to the war effort in every way.

"In the purchase of War bonds, Hawaii has set a record in which she can take great pride; her people have set an example for all of us."

In May 1942 War bond sales in Hawaii were 603 percent of quota. In subsequent months, with increased quotas, sales have ranged from 102.9 percent to 354 percent of the assigned figure.

Per capita sales in Hawaii last December were $20.16, as compared with $5.43 for the Nation as a whole, according to data prepared by the research staff of the Treasury's War Savings Staff.

Flag Day

REMARKS
OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. SPRINGER. Mr. Speaker, this is Flag Day in our country. The day has a deep and peculiar significance this year. We are engaged in a terrible war, and our flag is now on many battle fronts throughout the world. Our flag was born in the very midst of our struggle for freedom, when our Thirteen Original Colonies were struggling to throw off the yoke of oppression and gain their liberty; our flag was designed to denote the union of those Colonies in that great crisis. We were victorious in that titanic struggle, and our flag has endured throughout the years, and through every war, until it stands today as the emblem of liberty and freedom before the world.

Mr. Speaker, when this present war is over, and when our soldiers, sailors, and marines bring our flag back to us—still freedom's flag—millions of Americans will then have a new and unforgotten conception of the flag. In the military conception, the flag has almost a mystic significance—it flies from the flagstaff in the devout conception of duty to country and of sacrifice for our Nation and the preservation of our American way of life—and with the sense that we are willing to sacrifice our lives in order to aid in the preservation and perpetuation of our country.

To every American, our flag will hold the sympathetic touch of those great sacrifices which have been made throughout the years to make our flag respected by every Nation in the world—it will cause us to remember the valor and the sacrifices which have been made by our soldiers, sailors, and marines that our country may survive, and that our people may hereafter tread their way in paths of peace—it will cause a keener reverence for our national emblem by all the peoples of the world.

When we see our flag unfurled we will realize that sacrifice, suffering, and anguish have played their full part in making our flag—our country—the greatest upon the face of this ancient and kindly earth.

Long may our flag wave as freedom's flag. May we march forward through the ages, following our flag—the flag of liberty and freedom—the flag we love!

Fishery Problems in War

EXTENSION OF REMARKS
OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BLAND. Mr. Speaker, I ask unanimous consent to extend in the Appendix of the RECORD a speech prepared by me and read for me at the convention of the Oyster Institute of North America, held in Philadelphia. I was prevented by business in the House from delivering it in person.

The speech follows:

In an unguarded moment, without complete realization of the congestion in my office and without knowing the matters to be considered in the House on June 2, I accepted the invitation of Dr. Radcliffe to speak on this occasion. I was impelled to accept for three reasons, first, my warm friendship for, and close cooperation with, Dr. Radcliffe, running through the 24 years and 11 months I have been in Congress; second, my appreciation of the splendid work he is doing, and the great assistance he has rendered, and is rendering, me in fishery matters; and third, my desire to render all the help I can to all branches of the fishery industry in these trying, perplexing, and confusing times.

WORK OF THE COMMITTEE ON MERCHANT MARINE AND FISHERIES

For the past 20 years I have been a member of the Committee on Merchant Marine and Fisheries of the House of Representatives. During the last half of this period I have been chairman of that committee. I was born in Tidewater, Va., and, except while in Washington, I have spent all of my life there. Fishing has always been, and is, one of the principal industries of that section. I have known from my earliest days the trials, hardships, difficulties, handicaps, risks, and burdens of the fisherman and of the men engaged in the related industries. I have heard the calls and signals of those lost in the fogs, and I have stood by the bodies of those who died in the storms. I know the risks they take and the uncertainties they face. Some of my closest relatives, and my warmest friends, were oyster planters, oystermen, and fishermen. I think I know something of their hazards. I wish I knew definite answers to all of their problems. I do not. They do not. No one does. But one thing is as true as life itself and that is that we shall never know, and we shall never find solutions until there is more complete organization of all branches of the industry, more united approach to a proper solution of the industry's many problems, greater harmony among all groups, closer cooperation between all sections, and less disposition to blame others for those burdens for which we alone by our united efforts must find answers. An awakening consciousness to the existence of the fishery problems, and a greater determination to find appropriate answers, is evident. I welcome the present spirit of unrest, of criticism, of dissatisfaction, of inquiry, and of change. That spirit augurs well for the industry, I believe, and I hope it means the dawn of a new day. I should like to do my part in making tomorrow better than yesterday or today.

The efforts of the House Committee on the Merchant Marine and Fisheries found expression in some legislative proposals in recent years. I mention first H. R. 7147, which was a bill to extend to the seafood industry all benefits, privileges, aids, loans, or other advantages provided in laws enacted by Congress for the relief of persons engaged in the agricultural industry.

The bill was not enacted into law, but the hearings we held, the study we made, and the facts we obtained, laid the groundwork for various amendments to other existing laws which brought some benefits to the fishery industry. I wish to emphasize that all efforts to benefit the fishery industry had then, has had since, and has now, the sympathetic and intelligent support of the Federal fishery agencies. I refer to the Bureau of Fisheries and the present Fish and Wildlife Service.

Following the hearings on H. R. 7147, we secured amendments (1) to the act establishing the Reconstruction Finance Corporation to authorize loans to the fishery industry; (2) to the Farm Credit Act to authorize loans to oyster planters; and (3) to the Merchant Marine Act to authorize construction of various types of fishing vessels. There was enacted a separate law authorizing associations of producers of aquatic products, and recently a law was passed authorizing the War Shipping Administration to dispose of requisitioned vessels, no longer needed for defense purposes, with preference to their original owners. Appropriations were secured for the fishery market news service which has also proved of increasing advantage to the fishery industry and should prove of greater future help in that the service assures reliable, unbiased information. Improvement in that service will be provided if, as, and when the necessary appropriations can be provided.

In addition, other bills to purchase fishery products were enacted and proved beneficial at a time when markets were difficult to find. Very small appropriations have been one of our greatest handicaps.

Other measures might be cited, and among other measures undertaken but which failed of passage there should be mentioned, bills (1) to provide for the inspection and grading of fishery products, (2) for the replacement of fishing vessels, and (3) on the Americanization of the fishing industry.

PRESENT CONDITIONS

The maze of legislation and regulation confusing the industry today far exceeds anything in the past and neither the fishery committees of Congress nor the Fish and

Wildlife Service are responsible for those conditions. The result is confusion worse confounded, but the same condition is incident to every other industry and to every individual. The cause is war and war is chaos. You recall the famous saying of General Sherman, "War is hell." With all reverence we must confess it is nothing less. There are and can be no blueprints for the work we now must do—no charts for the course we now must sail. We must coordinate our efforts with all other efforts and all must be directed to one objective—victory as speedily as possible. Regulations and restrictions apply to phases of the industry—production, processing, marketing, distribution, manpower, operations, and consumption. They transcend sometimes the limitations of State laws, and there is not a person in the industry, ashore or afloat, who is not directly affected by them, with no stability in their operation but always subject to rapid change. Every fishing boat, every fish-packing plant, and all persons in the industry are in the front-line trenches.

One example will suffice to illustrate what I mean. A directive issued from the War Production Board limiting the use of tinplate. It affected all canners of fishery products, all packers of fresh oyster, crab meat and other shellfish products, and all packers of fresh and frozen fish fillets in every part of the Nation.

Lost in this labyrinth of regulations and directives you ask "What can I do?" I cannot answer. There is no exact answer. However, by intelligent approach, by patient study, by diligent research, by careful discrimination, we may seek to adjust our differences, to coordinate our activities, to organize all branches of the industry even when apparently in hopeless conflict, and by our united and sympathetic cooperation seek on the part of each to promote the welfare of all. Each of us must give and take.

To this end the Bureau of Fish and Wildlife Service, the Department of the Interior, the House Committee on Merchant Marine and Fisheries, and others interested in the fisheries united to secure, and did secure, appointment by the President of a Coordinator of Fisheries who has done, and is doing, a great work for the industry. You must help. You must work with the Coordinator and his staff if the greatest good is to be obtained for all. We must use the agencies at hand for there is no time now to make drastic changes. The Coordinator and his staff must serve, as a trouble-shooter, and as a liaison agency between you and the other agencies fighting to win this war. I am assured of their desire to help.

REQUISITIONED VESSELS

Necessarily, your boats have been requisitioned, but that is not without precedent, for it is our proud boast, and an established fact, that such craft have helped to win every war waged by this Nation since our earliest colonial days.

Necessity is not only the mother of invention, but also of new practices, new economies, new policies, and new instrumentalities. The vessels not requisitioned, so far as possible, must be adapted to new uses. Vessels must be used more efficiently, and craft such as oyster boats, designed for particular needs, must, in slack seasons, if humanly possible, be turned to other purposes, and used for capture of other kinds of fish. I am told that there are probably hundreds of schooners, sloops, and other types of craft used in the oyster industry which are tied to docks today and which might with minor alterations be turned to other purposes.

I am told that in order to assist the fishery industry in the orderly construction and repair of fishing vessels, the Office of the Coordinator of Fisheries, under an arrangement with the War Production Board, now has in operation a program which is designed to maintain the fishing effort. Under this program an allotment of controlled materials (steel, copper, and aluminum) has been allocated to the fishery industry, and the construction of fishing vessels and engines is being scheduled. Tentative schedules provide for the construction of new vessels in every important fishery.

PRICE CONTROLS

The United States is trying to control prices and for this purpose has created the Office of Price Administration. This is a problem which requires detailed discussion, thoughtful consideration, and close cooperation. All must work together to save the Nation from this peril.

CRITICAL MATERIALS

Stock piles of many materials of which, in calmer days, we had practically unlimited quantities, both from our own production and from abroad have been consumed. It is necessary to conserve, allocate, and limit the use of many commodities, such as tin, iron, steel, copper, aluminum, rubber, cordage, and gasoline. Noncritical substitutes must be found. To this end funds have been appropriated, and the Fish and Wildlife Service is conducting technical studies to find substitutes. I am informed that this work is progressing and that already suitable fiberboard packages have been found to replace tin containers formerly used in shipping various fresh and frozen fishery products. Numerous tests under practical fishing operations have shown that nets and cordage made from certain types of substitute fibers are satisfactory and gels from domestic plants have been extracted. These gels will be available to industrial users as an alternate for imported agar. These studies are being continued to test newly developed products.

Experiments are in progress to determine the suitability of certain nontinned plate and lacquers to decrease the need for heavily tinned plate. These tests will determine if further economies in tin utilization are permissible insofar as wholesomeness of the food is concerned.

DEHYDRATION

Considerable progress has been made on the development of dehydrated fishery products. Surveys are being conducted to determine sources of fishery products suitable for dehydration, and recommendations for methods of commercial production are available to interested firms. If these products can be produced commercially it will greatly simplify the container problem since the finished product is susceptible of packaging in containers made of noncritical materials.

USE COORDINATOR'S OFFICE

I have found the Office of the Coordinator of Fisheries most useful to our committee. Some of the problems you face today came before our committee at their very inception. In most of them we have consulted with this agency and it has supplied us with the facts gathered by its field force and from its files of fishery facts. Moreover, we have had the benefit of advice emanating from this agency and the Fish and Wildlife Service which combines the experience of many investigators and practical workers extending over some 75 years.

I urge you to submit your problems to this agency. With its contacts with the 22 other Government agencies concerned with problems of the fishery industry and with its personnel of various knowledge and experience it is usually in a position to advise and guide you.

Use the Office of the Coordinator of Fisheries as a clearing house for your perplexities, and give it first opportunity to help on your problems. Those in the office may not have a solution to all your problems, they may not know all the answers since they are only human, but they at least have the broadest range of activities and contacts in the field and are the best sources of all-round help.

Write to the Coordinator of Fisheries, and, if no attention is paid your letters, then write your Member of Congress or Senator to find out why.

Many problems are susceptible of cure only by official action of some kind. Regulations may need changing or new legislation be required. For the former, go to them; for the latter, write me. An individual difficulty often receives scant consideration in a busy emergency agency, for it is often thought that the situation is unique and concerns only a few people. If, however, complaints can be cleared through one agency, such as the Office of the Coordinator of Fisheries, that agency is able to accumulate a mass of evidence that is uncontrovertible. Then the agency of final jurisdiction can be approached with a well-substantiated demand for relief. In many instances such relief has been obtained. For an example from my personal experience, the owner of a country store in my district was unable to obtain the gasoline with which he customarily supplied small fishing boats in his area. As a result, fishing would have come to a standstill in that area had not his complaint and others from as far north as Maine been centralized in the Coordinator's Office, so that they could make representations to the Petroleum Administrator for War on the basis of which arrangements were made for satisfying these needs. Similarly, in my own district fishing vessels had difficulties arising from the rationing of certain foods. These and other problems connected with obtaining fuel oil for the operation of trawlers were alleviated by the prompt intervention of the Fishery Coordinator with the governmental agencies involved.

There are many other subjects appropriate for this occasion, but there is a limit to your patience. I thank you very much and I wish you godspeed in all of your work.

Our first duty now is to win this war, and that we will do. We, too, must play our part in this great struggle. We must be brave. We must work, conscious as never before that—

"Every brave and strong endeavor
Helps heroic souls to rise
Unto higher heights of triumph
Nearer to the smiling skies."

How Servicemen Are Taxed

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BENNETT of Missouri. Mr. Speaker, on June 1, 1943, I inserted in the CONGRESSIONAL RECORD a summary of legislation giving special benefits to citizens in the armed services and to their dependents. Since that date a new tax law has been enacted. Under leave to extend my remarks further I submit the following supplement to my statement of June 1 to show how this law affects these people:

HOW SERVICEMEN ARE TAXED

DOES A SERVICEMAN OWE ANY INCOME TAX FOR 1942?

The new law, in effect, wipes out the tax on income for the year 1942 for persons in active military service. Thus, as a rule, they

will not have to pay the equivalent of 25 percent on their 1942 income, in addition to a tax on 1943 income, that is required of many civilians in bringing them up to date on back taxes. However, this abatement for servicemen and women applies only to the tax on earned income, and income over $14,000 is considered for tax purposes as unearned. The abatement also applies to members of the military services of other United Nations who are subject to United States income taxes.

If you are a man or woman in military service and have paid more on your 1942 income than is needed to cover your 1943 tax, you will be entitled to a refund or tax credit next March. The abatement of the 1942 tax also applies to a man who is in active service for only part of 1942 or 1943. Thus it would apply to a man who does not enter active service until next December, but this man would be liable for a tax on his civilian earnings in 1943 up to the time he entered the service. If he finds that his ability to pay the tax has been impaired materially by his being in the service, he can ask for postponement of payment until after his discharge.

WHAT IS THE FIRST STEP THAT A MAN IN THE SERVICE MUST TAKE?

If you are serving with the armed forces within the United States, you are supposed to file with the collector of internal revenue for your district on or before September 15 an estimate of your income for 1943. If you are in the higher-pay brackets and your tax liability is above your exemptions, after you have paid quarterly installments on 1943 income on March 15 and June 15, 1943, you are supposed to pay by September 15 one-half of the tax still due for 1943. There is no withholding of taxes from pay of servicemen and women.

Persons in the armed services of the United States and of other United Nations get, in addition to their personal exemptions, an exemption allowance on $1,500 of their service pay. For a single man, this means $1,500 plus $624 for personal exemption, or $2,124, for a married man without dependent children it is $1,500 plus $1,248, a total exemption of $2,748. Thus, most enlisted men and lowest-ranking officers with no outside income would have no tax to pay for either 1942 or 1943.

MUST AN ARMY OR NAVY MAN WHO OWES NO TAX FILE AN INCOME TAX RETURN?

Technically, he is supposed to file by September 15 an estimate of his 1943 income, even though he is in the lowest grade. But the penalty for failure to do so is a 10 percent addition to the tax that is due. Where no tax is due, there could be no 10 percent addition to it. But Treasury spokesmen say it is important to file these declarations if a refund or tax credit is to be claimed later because of overpayment of taxes already made. Members of the armed forces serving overseas can wait till after their return home before filing returns and paying taxes on their incomes.

SUPPOSE THE WIFE OF A SERVICEMAN WORKS, WHAT MUST SHE DO ABOUT INCOME TAX?

She must follow the same rules as any other woman in filing returns and paying taxes on income. She and her husband can file a joint return; or they can divide the family exemption of $1,248 or either can take all of the exemption if the other claims none. A wife can claim exemption on the basis of dependent children if she provides their main support. But she cannot claim exemption from income tax on any of the additional $1,500 exemption that her husband in the service is allowed; that exemption applies only to his service pay and not to any income from civilian sources. No tax is collected on a serviceman's dependents' allowance.

IF A MAN DIES IN THE SERVICE, DOES HIS ESTATE HAVE TO PAY HIS INCOME TAX?

The new law provides that, in the case of any member of the armed forces of the United States or of other United Nations who dies while in active service, the income tax for the year in which he dies is canceled. There also is cancellation of all income taxes owing at the time of his death. Any taxes that are collected after his death are to be credited or refunded to the man's estate as an overpayment of tax.

The Late Robert W. Burns

EXTENSION OF REMARKS

OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. BENNETT of Michigan. Mr. Speaker, Robert W. Burns, one of the outstanding young men in the city of Ironwood, Mich., lost his life in the armed forces last week. The high regard in which this young man was held by his townspeople is very well expressed by my friend, H. O. Sonnesyn, the able editor of the Ironwood Times, as follows:

ROBERT W. BURNS KILLED MONDAY

DEAR BOB: It just doesn't seem possible that today—1 week to the day from the time when we sat at the same table with you in the St. James Hotel and heard you talk about your work with gliders that we should be writing a story telling about the fact you were killed in flying service at Maxton, N. C., last Monday morning.

Your father with whom you were such a pal was at the Ironwood Association of Commerce meeting when he received the news which struck home with such vengeance in Ironwood because of the fact you were so well known in the city.

You received your education at the Luther L. Wright high school from where you were graduated in 1939 and continued at the Gogebic Junior College until you went away to prepare yourself for a career you were planning.

As we now look backward and review the many wonderful associations we had with you during the short time we knew you the thought comes to us that during the 10-day furlough you spent here that you celebrated your twenty-second birthday on May 31. You were born in the Lower Peninsula.

You were the type of boy who made friends easily. There was something about you that left an indelible impression on anyone you met. You looked like a soldier from the very first time you put your uniform on. You had a peculiar way of wearing your cap, but on you it looked just right.

Although we had known you casually, it was not until last summer when we rode to Stevens Point with you and your dad, so you could catch your train, that we really got to know you.

On every one of your trips home after that we seemed to become better acquainted with you until now it seems as if we had known you all your life.

You were looking forward to the time when you would be returning home to take over the Robert Burns Furniture Co. Although you were young in years, you were rich in mature judgment.

Ironwood rejoiced in your promotions and was glad when you became a Flying Officer, a rank equivalent to lieutenant. We remember you explaining last Tuesday that you were surprised that so few people really knew what that meant.

We remember, too, that you took time out to explain about gliders at that meeting last Tuesday. It seemed like fate that 6 days later a man should be talking about war from the very same table from practically the same spot as you stood when you gave your last talk. It seemed like fate, too, that the information about your death should come to your father in that very same room.

It's tough to get such news. Last week it was Bob Dunstan, killed in action in north Africa. A few days before it was Wayne Maki, killed in Texas. Dunstan's memorial services were held Sunday, and Monday the news about your death was received. The telegram stated briefly that you had died in flying service 10 miles northwest of Fort Bragg, N. C.

It's tough to offer consolation to your parents; your two sisters, Jean and Margaret, and your brother, Dorr.

You had so much to look forward to. In your brief 22 years you had accomplished much. There was every reason to believe that you would accomplish much more.

War is cruel and it is when it strikes home as close as this that we begin to realize things just a little more.

Last week you were home enjoying your furlough. One week ago today (Wednesday) you returned to your camp full of enthusiasm for the work you were doing, convinced that you could accomplish something for your country in this division.

Within a few days your remains will be returned to your home town. There will be memorial service as there was for Bob Dunstan.

Over at that home on 302 Arch street your memory will never be forgotten. There will always be a void there that will never be filled.

It's tough to say goodbye to a fellow like you, Bob. It's tough to realize that never again will that winning smile, so characteristic of your daily life, again be seen. It's tough to even think that a boy as fine as you were is gone.

Somehow or other we believe you know these expressions are sincere and that they summarize the feelings of your many thousands of friends on the Gogebic range.

So it's happy flying, soldier. You were loved and honored here, where your home folks knew you best. Your memory will help carry on. So long, soldier.

The Power of Harry Hopkins

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an interesting and timely article which appeared in the Sunday Star, Washington, D. C., June 13, 1943:

THE POWER OF HARRY HOPKINS

(By Owen L. Scott)

The President is finding that he must delegate to others more of the responsibility

for running the civilian side of the war. This delegation of power is made necessary by the growing volume of strictly war and post-war problems that now must be dealt with.

Mr. Roosevelt has chosen two men to act for him on many domestic issues. Those two men are Justice James F. Byrnes, as head of the new Office of War Mobilization, and Judge Fred Vinson, as head of the Office of Economic Stabilization. The job of Mr. Byrnes and of Mr. Vinson is to keep the various war agency "czars" in line on matters of policy.

Some of these "czars," however, are noting what they regard as strange signs. They find that important national policies are being decided, in which they have a very direct interest, without consultation with them. In other words, an official who must execute a program under great difficulties discovers that he simply is told that this program is decided upon without being given a chance to give his opinion concerning whether that program is feasible or desirable, or even possible.

Then the "czars," who have very direct relations with Justice Byrnes, have discovered that he was simply carrying out orders in announcing, among other things, a price roll-back on meats and butter, or a broad program of food-price subsidies without consultation with the men who must finance and execute those difficult policies. Pursuing the matter further, some of the "czars" now have concluded that the real power in domestic-policy matters is traceable to Harry Hopkins and to a little group of officials associated with him at the White House.

Mr. Hopkins, as the most intimate aide to the President and as a result of his many years of experience at the White House, is better able than Justice Byrnes to know exactly what it is that the President wants. Then Mr. Hopkins has very close ties, directly and through his associates, that range all through the Government, while Justice Byrnes and Judge Vinson have very small organizations.

Ben Cohen, who is right-hand man to Justice Byrnes, has been a coworker of Mr. Hopkins for many years. Judge Samuel Rosenman, who handles matters of Government organization, writing orders that shift powers from one official to another, also is closely associated with Mr. Hopkins. Then there are many lawyers and other officials in key positions all through the Government who were selected by Justice Felix Frankfurter and who maintain their contact at the White House. Among them is Edward Prichard, who is to be right-hand man to Judge Vinson as Economic Stabilizer.

Then, Mr. Hopkins personally keeps a close watch on the War Production Board and he works with the Joint Chiefs of Staff. Probably no person in the Government, not even the President, is so intimately acquainted right now with the functioning of the civilian war machinery through the various "czars" and their agencies.

Harry Hopkins and the group of top officials around him are taking a direct interest in several situations.

It is this group that has most to do with policies designed to combat inflation. Some of the decisions of greatest importance were made without any consultation either with the czars who must carry out those decisions or with the industries affected by them. Matters of wage policy and of farm price policy also are determined by this top group, with Justice Byrnes then acting to carry out the policies.

Likewise, Mr. Hopkins and the group he heads make the major decisions affecting the division of materials between civilians and the military. When there is a clash of interests that calls for decision by the White House instead of by Donald Nelson's War Production Board the decision is shaped often by Mr. Hopkins or his associates. The Army and Navy have been pleased by the trend of White House decisions in this regard.

More and more of Harry Hopkins' attention now is turning to fourth-term problems. It is from this group that the things are being dropped that Henry Wallace will not be second man on the 1944 Democratic ticket and that the field is open to other hopeful candidates. The purpose of this maneuver can be to win back support of some party politicians who have been straying but who are willing to come back if there is hope of reward. The President himself never has indicated that he would seek a different running mate in the event of a fourth-term candidacy.

The Hopkins group at the White House is being severely criticized at this time by many old-line New Dealers who have not been among those in the most exclusive inner circle. That criticism grows from the fact that the White House has been willing to sacrifice New Deal officials without standing back of them. Very many new dealers have been forced out of office lately under the fire of Congress.

Members of the Hopkins group explain, however, that war is not a time in which the White House can be expected to fight for individual officials who are not able to look out for themselves. It is a time, too, when new reforms have to be sacrificed in order to concentrate attention on strictly war issues. They point out that new dealers now being forced out may have their turn again when peace comes back.

Justice Byrnes, with no big organization of his own, is expected to direct the civilian side of the war. The men who must do the actual operating of civilian programs doubt that he can do that except in cooperation with Harry Hopkins, who has the organization and the contacts.

Gov. Earl Warren, of California

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. ROLPH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I attach two articles from the San Francisco Examiner of June 7, 1943. These articles refer to California's Governor, Hon. Earl Warren. The Nation is very much interested in Governor Warren's administration. These articles are particularly timely:

CALIFORNIA'S GOVERNOR EARL WARREN SINCERE, COURAGEOUS LEADER

Gov. Earl Warren, of California, has been in office but a short time, but long enough to organize an efficient, practical, and economical state government—which is a matter of definite national interest.

The war has made California very important to the Nation.

Billions of dollars are invested in its war industries, particularly in aircraft and maritime construction.

Thousands of American fighting men are being trained in its camps and cantonments, and millions of them will ultimately embark from its ports to the Pacific war zones where finally the fate of America must be decided.

So California, which was always more important to the Nation industrially and productively than as a playground, is now the grim spearhead of an armored and winged nation at war.

Its vast enterprises are vital national enterprises.

Consequently, the war has made it very important to the nation that California be well governed, in order that these vital national enterprises and vast national investments be made secure.

Otherwise, there would be unnecessary confusion and probably chaos, waste, and futility in the entire war program. And in even more sinister reality, there would be great national danger—because a chaotic and badly governed California would be vulnerable to enemy assault and an easy prey to enemy invasion and occupation.

Unfortunately, California was not a well-governed State in the early part of the war. It had an inept State administration, to speak charitably. The civilian defense organization and the State guard establishment were inadequate and virtually ineffective. Political and administrative inefficiency were rampant, and disaster was inherent in the situation—not ordinary peacetime economic disaster, but real and utter national disaster.

But most fortunately, the people of California corrected that situation by the election of Governor Warren.

Hence, there is Nation-wide gratification over the improved situation in California and Nation-wide interest in his views about government, and especially in his views about the policies of the national Government.

Governor Warren is deeply concerned and profoundly disturbed by many of the Nation's policies.

Addressing the Los Angeles Bar Association recently, he said:

"War times always breed centralization of power and sometimes, even in mortal combat, we are likely to imitate some of the techniques of a powerful opponent in an attempt to beat him at his own game and with his own weapons.

"There is danger in this national crisis that we, too, may make a fetish of centralized power. If we succumb to the temptation, however, it will be because we have wholly lost sight of the fact that there are but two ways of obtaining the compliance of people with governmental necessity.

"One is through the compulsion of totalitarianism. The other is through the voluntarism of democracy. * * *

"As I read history, democracy is the advanced result of man's struggle to find a method of staving off outside enemies and building needed protection with a minimum of sacrifice in personal liberty. Nowhere in history do I find that it is achieved by copying totalitarian methods or through compulsion. * * *

"We have witnessed many evidences of dislocations in war and domestic effort caused by attempts to regulate activities from a distance of 3,000 miles. * * * Either we cling to voluntarism or we yield to the force of a trend that can carry us first into a maze of bureaus which will insist upon further centralization of power and then into a strongly personalized government."

Obviously, California has not only a great Governor in Earl Warren, but a great American. The people of California will benefit from his sound administration of their affairs, during the war and long after. All of the American people will profit from his sincere Americanism in the augmented California war production which has already resulted from it, and in the security and welfare of millions of American fighting men and workers which cannot fail to result from it.

GENIAL GOVERNOR WARREN, AN ARDENT FAMILY MAN

Gov. Earl Warren, of California, has his natural attributes to thank for a greater portion of his political success.

These include hard work, tenacity, sincerity of purpose, unwavering honesty and integrity, and intestinal fortitude.

He won his present office as a nonpartisan.

And it was no easy task to convince voters that he, a lifelong Republican, and one of that party's outstanding leaders in California, would conduct a nonpartisan administration.

But he did it, mostly by converting skeptics. Warren is a convincing speaker.

No group in any city, hamlet, or crossroads was considered by Warren as too small for him to stop and give them a talk. He followed this practice in over 50 of the State's 58 counties.

Despite a 2-to-1 Democratic vote registration against his own Republican Party, when the ballots were tabulated Warren was the winner over his Democratic opponent, Culbert L. Olson, the incumbent, by more than 375,000.

Transforming campaign pledges into action comes easy to Warren, principally because he refuses steadfastly to make a promise he does not intend to keep, or which is improbable of fulfillment.

He never sets any vote traps.

What Earl Warren says he will do, he does. His enviable record as a public servant since 1919 bears out that observation.

During the recent gubernatorial campaign he promised to take old-age pension matters out of the realm of politics and place them in the hands of experts, to the intended benefit of the recipients.

He pledged the appointment of a nonpartisan committee to study the State's tax structure, the purpose being to learn which, if any, tax levies could be lowered or eliminated entirely.

In selecting appointees for administrative State posts, Warren promised that the best person for the job would be chosen, regardless of political affiliation.

Earl Warren already has made good on these promises.

On the subject of labor, Warren has expressed himself openly as being in sympathy with gains made in recent years by the rank and file of workers, but vigorously opposes racketeering labor leaders.

"I hope the time comes when every working man and woman has a collective bargaining agent," he said in a campaign address.

Such an arrangement, he explained, would eliminate most labor racketeering by dues-greedy leaders.

Earl Warren's graduation into a State-wide political figure—and it is likely to spread nationally—came the hard way.

That is how he likes things to come to him.

He established himself as a fearless prosecutor, while district attorney of Alameda County (Oakland), for 13 difficult years.

Unlike most district attorneys in metropolitan centers, Warren took on the tough cases, personally.

Convictions he won put an end to "bodies floating down San Francisco Bay," as the result of bitter water-front struggles between rival labor groups and radical organizations.

Coupled with his recognized political ability, Warren enjoys the good luck that usually marks the activities of a left-handed person, of which he is one.

Elected State attorney general in 1938, Warren went after the big league gamblers with characteristic vigor. He drove the palatial gambling ships off the southern California coast. He closed up scores of bookie joints. He put hundreds of slot machines out of operation.

But Earl Warren admittedly is not a crusader.

He dislikes illegal gambling because it leads to graft, bribery, and general corruption of public officials.

Born in Los Angeles on March 19, 1891, to the late Mathias and Crystal Warren, California's Governor served as a railroad callboy and sold newspapers while attending public school in Bakersfield.

There, he organized an orchestra, in which he played the clarinet, and of this unit formed one of the first American Federation of Labor musicians' unions in southern California.

Saving his earnings, Earl Warren put himself through the Berkeley campus of the University of California, from which he was graduated in 1912—though he had to cram for 3 days and nights on a previously unstudied algebra course, which he passed.

Admitted to the practice of law in 1914, Warren took time out to serve in the United States Army in World War No. 1.

He was honorably discharged as a first lieutenant of infantry.

His rise—and political start—came with the appointment in 1919 to the position of clerk of the judiciary committee of the California State Legislature.

From there he went to Oakland, in the city attorney's office, then into the district attorney's service.

By the narrow margin of one supervisor's vote, he was appointed district attorney in 1925, and served in that capacity, through successive elections, until 1938, when he won the State attorney generalship, which office he occupied when he was elected Governor.

In the meantime he had become chairman of the Republican State Central Committee in 1934, and later Republican national committeeman.

He led California Republican groups opposed to a delegation instructed to support Alf Landon for the Presidency in 1936, and won.

During that hectic struggle Warren became potentially a candidate for President.

The handsome, genial Governor is an ardent family man, and deeply sympathetic by nature.

And he has a sizable family—his charming wife, Nina, and six children, ranging in the order born from James, now in the Army; Virginia, Earl, Jr., Dorothy, Nina, and Bobby.

At one time the Warrens had a child in each of the six elementary grades at an Oakland public school.

Judge S. M. B. Coulling, Scholar, Lawyer, Philosopher, and Humorist

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. FLANNAGAN. Mr. Speaker, a few years ago our section sustained an irreparable loss in the death of Judge S. M. B. Coulling of Tazewell, Va. He was really and truly a great personage.

Born in an age when individuality had time to develop, he had none of the sameness about him that we see in so many men today. In this machine age of hustle and bustle so many men reflect such a sameness that at times we wonder if they did not all come off of the same assembly line and bear the stamp of the same model. And because his life extended over into this age of models, his individuality, of course, became more pronounced and sparkling and refreshing.

Known far and wide for his deep learning in the law, his philosophical mind, his scintilating humor, his bigness of heart, and his innate urbanity, he was a Blackstone, a Plato, a Will Rogers, a Russell Sage, and a Lord Chesterfield all in one; and in addition, at times, gave evidence of having been at least remotely related to Bacchus.

His deep knowledge of the law commanded a clientele that numbered the wealthiest men in our section; and his bigness of heart brought to his office door the cases of the downtrodden, the destitute, and the helpless. And he gave to the cases of this latter class, few of whom could pay, if anything, but a pittance, the same painstaking care, the same conscientious consideration, that the more fortunate could purchase with their substance.

A lawyer friend sent me a few days ago a copy of an answer to a bill for divorce that was prepared by Judge Coulling years ago, which, in my opinion, is a legal classic. The parties to the litigation were Negroes; and the bill of complaint charged adultery on the part of the defendant some 20 years prior to the institution of the suit. Considered from either the standpoint of diction, legal lore, logic, or humor, the answer will rank high among the legal productions of man.

During these days of stress when we are all, more or less, working under tension, I believe it will do us all good to sit down and read a real legal literary gem; and so, Mr. Speaker, under unanimous consent, I incorporate the answer in my remarks:

To the Honorable W. J. HENSON,
Judge of the Circuit Court of Tazewell County, Va.:

The demurrer and answer of Anderson Taylor, to a bill in chancery exhibited against him in Tazewell Circuit Court by Agnes Taylor.

For demurrer he says that said bill is not sufficient in law. That the charges therein are not made and alleged with that certainty to a certain intent as in law required.

That condonement, laches and lack of equity on complainant's part despite the skilled manner in which her case is presented are apparent from the statement thereof.

For answer thereto, or so much thereof, as your respondent is advised that it is necessary for him to answer, he answers and says:

That the grievances complained of are so stale and musty that they are revolting even to the taste and ears of a village gossip. That they are long ago barred by the statute of limitations, or if not so barred, they are barred by good taste and come under the ban of sound public policy. Even if they were true, to lay down a precedent that equity and good conscience sanctions the resurrection either publicly or privately by the wife of errors buried more than 20 years ago, would be worse than to turn loose upon the body politic to haunt it, hundreds of ghosts, not one of whom would down at any man's bidding.

For the continuance of the holy state of wedlock, treaties of peace and general amnesty proclamations are frequently absolutely essential, and they are recognized and respected by courts of equity as shown by

relief being refused where the offense has been condoned.

The doctrine of presumption of condonement and treaties of peace and amnesty proclamations is here pro bono publico, invoked.

Without waiving the defense hereinbefore made, but relying and insisting upon the sufficiency thereof, your respondent for further answer denies each and every allegation of bill of complaint incriminating, censuring or reflecting upon his conduct as a man or a husband, and to show the injustice and erroneousness thereof he makes the following plain, concise, and unvarnished statement of facts.

Your respondent, by reason of the success of Federal Arms, Lincoln's proclamation, and the fourteenth amendment, had just become a free man, when he became a voluntary slave to complainant's charms and cheerfully placed upon himself the bonds of matrimony.

Your respondent here says that he does not deny that in his young days he has at times embraced license in the definition of freedom, but he denies that he ever had any monopoly or trust upon this definition of the word.

It is true that your respondent is not as dignified and sedate as became the husband of complainant and the father of sundry of her children, but respondent denies that he was ever in thought or act unfaithful to her.

There was no unpleasant friction or disturbance between your respondent and complainant until the children were reared to an age that they could be of financial benefit, and their house and lot was paid for and the legal title vested in complainant. And then, but not until then, did complainant realize that your respondent was uncongenial and altogether unreconcilable with her ideas of a good and true man.

Respondent does not charge or insinuate that any dormant mercenary instinct in complainant produced this change.

Frequently some object in common, to the accomplishment of which both husband and wife are working, produces such a true imitation of love, that it cannot be distinguished by the most learned alchemists from the real gem.

From other than mercenary reasons complainant's charge can be accounted for.

Since the marriage between complainant and respondent the world or the sun has moved on and respondent has been unable to keep in touch with advanced ideas to the extent complainant has.

After the absorbing thought of rearing their children and paying for their property was ended by the children coming to an age that they could be of financial aid and the property being paid for, it was found that there were some ideas and views of life they did not hold in common. About this time the pastor in charge of the church of which complainant was an honored and influential member, and complainant were, in church affairs, thrown together and found that their views of life assimilated and they became fast friends and joint workers in the moral vineyard without thought or intention, your respondent believes, of evil, but your respondent knew that platonic friendship with all its barriers and fortifications of solid philosophy had occasionally theretofore been scaled and taken by warmer if not stronger emotions, and therefore when, during the existence of these friendly relations between complainant and the Reverend Mr. Pettis, a child was born unto complainant respondent was not surprised at its marked resemblance to Mr. Pettis.

Children take, your respondent has heard, their appearance from environment as well as from heredity, but for more than a year complainant has required the relations between her and respondent to be so distant and formal that this theory your respondent did not consider applicable.

This offense, or at least violation of the conventionalities of life by complainant, respondent has long ago condoned theoretically, and would have practically done so, but complainant has persistently refused to allow any such condonement.

Respondent worked and labored with complainant to acquire a home and to rear their children, and in that home and with complainant, he now and ever has desired to live. He never abandoned her and her home, but was driven therefrom by complainant. Once when ill, she at the solicitation of others allowed him to return and stay until he had partially recovered, and then again she drove him away, but although away from home he has made frequent gifts of money and goods to his and her children. His heart and purse are now and have ever been open to them. He has not contributed to the extent he would have liked to their comfort, solely because he has not been allowed so to do. He made frequent efforts to help supply the table, but by complainant's orders the foods purchased and sent by him were returned.

Complainant has the love, aid, and assistance of her and respondent's children; has the modest home, the result of her and respondent's labor. She has all. Respondent has only the memory of past happiness. He is now old and feeble, his days are numbered, and his end fast approaching, and he humbly begs and prays that to his sadness there be not added the bitterness of seeing another enjoying the affections of his wife and the fruits of his labor.

And now having fully answered he prays to be hence dismissed, etc.

Mr. Speaker, the divorce was not granted.

Bombing Germany Out of the War

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 15 (legislative day of Monday, May 24), 1943

Mr. BYRD. Mr. President, an exceedingly able article has been written by Francis Vivian Drake, who is an authority on aviation. The article is entitled "Why Don't We Really Try To Bomb Germany Out of the War?", and was published in the Reader's Digest. It is one of the best and most authentic statements which have been made on the subject, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY DON'T WE REALLY TRY TO BOMB GERMANY OUT OF THE WAR?—BRITISH FIGURES SHOW THAT IT MIGHT BE DONE THIS YEAR, IF WE FREED AIR POWER NOW FOR OFFENSIVE ACTION IN ITS OWN RIGHT

(By Francis Vivian Drake)

Recent information from England discloses details of the actual damage inflicted on Germany by the Royal Air Force Bomber Command in 1942. This information provides for the first time an integrated picture of air power used as a primary offensive weapon against a whole nation over a given period.

The punishment dealt to Germany in 1942 was serious. And it was achieved by a very small bombing force, compared with America's present production.

Last year not a single United States Air Force bomber flew over Germany. The Royal Air Force Bomber Command did the whole job, although it comprised only 10 percent of total Royal Air Force strength. In order to pull off one of its rare 1,000-plane raids it had to scrape its hangars bare of everything that could fly, and borrow planes and pilots from reserve squadrons and bomber training schools. Nevertheless, the facts now released indicate that if the Royal Air Force had been able to sustain its 1,000-plane raids from June on, Germany might have been industrially paralyzed by last Christmas. They indicate that Germany could be knocked out before next Christmas, if the right steps were taken now.

The plan of destroying Germany from the air does not come from armchair strategists. It is the conviction of high air officers, and of the professionals who look at Germany night after night through their bombsights, analyze photographs after every raid, study Intelligence reports, assess actual destruction.

Air Marshal Sir Arthur T. Harris, chief of the Royal Air Force Bomber Command, has said: "If I could send a thousand bombers over Germany every night, Germany would not be in the war by autumn."

Maj. Gen. Ira C. Eaker, commanding the United States Eighth Air Force in Britain, summarized his view as follows:

"There are enough airdromes in the British Isles, now built and building, to accommodate the air forces needed for the destruction of Germany. By destroying the enemy's aircraft factories you can put an end to his air force. By destroying his munitions plants and communications you can bring his armies to a halt. By destroying his shipyards you can make it impossible for him to build submarines. There is nothing that can be destroyed by gunfire that cannot be destroyed by bombs."

These are the findings of British and American air chiefs. But little attention has been paid to them by top military authorities. There are still only a handful of United States bombers in England, and the Royal Air Force Bomber Command, far from being increased this year, has actually been reduced to support operations elsewhere.

Both Harris and Eaker are plugging the new military principle of vertical assault, which is based on the premise that modern mechanized war is best won by attack against the industrial generator that supplies the enemy front lines. The air commanders believe it is more effective—and cheaper and quicker—to eradicate the enemy by going after his heart with bombs than after his feet with gunfire.

In the vertical attack on Britain it was a beginner's mistake that barred the Luftwaffe from victory. The Nazis first exposed slow, relatively unarmed, small-load bombers in daylight to the full fury of British fighters. Their losses were so great that they then could not mount mass night attacks on a decisive scale. The Royal Air Force quickly learned from the Luftwaffe performance that decisive vertical assault depends on the ability to drop huge tonnages in concentrated areas without prohibitive loss. They revised their bombers and techniques accordingly, and Royal Air Force performance in 1942 demonstrated the tremendous potentialities of the new system.

A glaring example of the cost of lateral attack is the Russian conflict. Regardless of millions of casualties, the opposing sides are still locked in combat over approximately the same territory in which they were operating 16 months ago. Again, a successful north African campaign can represent only the first step toward German citadels. The southwest Pacific campaign has been necessary to kill off a Japanese offensive against Australia, but as an offensive itself it can be only the first of a series of stepping stones on the long road to Tokyo.

None of these fronts can hurt the essential war production of the enemy. On the other hand, the following table shows how the infinitely smaller and cheaper vertical bombing campaign of 1942 has already seriously impaired the German war plant:

Raids against Germany	221
Tons of bombs dropped on Germany	37,000
Estimated number of plants destroyed	2,000
Estimated number of houses destroyed or seriously damaged	558,000
Estimated number of people evacuated	750,000
Estimated portion of German war industry wrecked (percent)	7

This damage was inflicted by a handful of fighting men—fewer than participated in the Dieppe commando raid. They operated with less bombers at any one time than the United States now produces in a month. If this underpowered unit could destroy 7 percent of industrial Germany, what would it take to step up the destruction until Germany could no longer keep her front lines supplied?

Intelligence reports reveal that the 7 percent destruction caused by 37,000 tons of bombs has put terrific pressure on Nazi war plants already burdened with the strain of maintaining the Russian and north African fronts. Experts believe that with 40 percent destruction—the bomb equivalent of 225,000 tons—Germany probably could not continue the war. Some British authorities estimate that 33 percent destruction, or 180,000 tons of bombs, would suffice.

Airmen check these findings another way. Plotting the entire area of German war industry, about 1,000 square miles, they find that the critical parts occupy only about 400 square miles. About 600 tons of mixed block-busters and incendiaries demolish a square mile. This implies that 240,000 tons will smash the entire critical area by the Royal Air Force method of night bombing.

The American program of precision bombing by day, with its very high degree of accuracy, is presumably capable of inflicting greater industrial damage with less waste than the Royal Air Force method of area bombing at night. Should the American plan prove workable, the quantity of bombs required to demolish German war industry might be considerably reduced.

However, since the American method requires daylight and good visibility, our bombers are hampered by fighter attack and cannot penetrate the heart of Germany, as the Royal Air Force has been doing night after night, unless they are sent in sufficient force to overcome successive waves of German fighters.

With the tremendous armament carried by our Fortresses and Liberators, a force of several hundred could probably take care of itself. But so far the United States has not had enough bombers in Britain for such heavy raids. The large-scale precision bombing of Germany therefore remains untried.

It may well be that British and American methods can be combined. In any event, the real point at issue is the concentration of enough bombers, day or night, to drop whatever tonnage is necessary to paralyze German industry.

Bomb loads carried by American and British bombers range from 2½ to 8 tons. The average load is 4 tons at mean radius. Thus, to drop the 240,000 tons of bombs believed sufficient to cripple Germany, 1,000 bombers must fly over the targets 60 times. Because of weather conditions, an average of 10 raids a month is the best that can be counted on. It would take, then, a series of 1,000-plane raids a maximum of 6 months to deliver the decisive blow to Germany's heart.

Such continuous bombing requires a backlog of 2 planes on the ground for every 1 in the air, to allow for servicing and repairs. Thus, maintenance of 1,000-plane raids involves a permanent force of 3,000 bombers. The Royal Air Force 1,000-plane raids on Cologne, Essen, and so on, provided an encouraging figure on replacement costs. Prior to these raids the loss rate inflicted by the enemy averaged about 10 percent. The 1,000-plane raids, however, showed a combat loss rate of only 4 percent, due to the wholesale disorganization of enemy ground defenses.

Night bombing involves a probable additional write-off of 2 percent in take-off and landing accidents. This brings the total loss to 6 percent; with 1,000-plane raids it means 600 planes a mission or 600 a month.

Summarizing the evidence so far, it would require a maximum of 240,000 tons of bombs, delivered by a total force of 3,000 heavy bombers, with maximum replacements of 600 bombers a month, to smash German industry in 6 months.

Have we sufficient bombers for such a campaign?

United States and British production of heavy and medium bombers, complete with crews, armaments, and all essentials, now exceeds 1,000 per month. It will rise as the year advances. All of these planes are suitable for bombing any target in industrial Germany.

But this fact does not mean that enough bombers will be assigned this spring, this summer, or even this year to do the job. At present both the United States and British bomber commands are starved for planes. General Eaker described his outfit, in March 1943, as only "a token force." Allied air power is still being used as a defensive weapon, to prop up other fronts, instead of a great decisive weapon in its own right. It is dissipated throughout the world in lesser campaigns, none of which in itself can conceivably end the war.

This is because our military habits of mind are governed by the traditions of naval engagements and marching men. Victory is anticipated only in these terms, and air power is seen only as a weapon of support for great fleets and armies. If this mental approach can only be changed, a bombing force can readily be assembled—as the Allied air commanders wish—to go to work on the direct destruction of Germany. Without reducing allocation of long-range bombers necessary to maintain our other fronts, the following United States-British joint task force can be set up:

Total force (bombers)	3,000
Average force per night (bombers)	1,000
Replacements per month (bombers)	600
Percentage of joint production for period involved (percent)	60
Average flying nights per month	10
Average tons of bombs per night, depending on distance of target	4,000
(Coventry raid, worst night (tons))	210
Average tons of bombs per month	40,000
Tons of bombs per year	480,000
(Blitz on London, total for 11 months (tons))	7,500

Operating bases in the British Isles are already available. Ample fuel supplies are also ready, and task force consumption would be less than two tankers a month. Other surface-borne equipment is only a fraction of that required for a big land offensive, and can be moved through our shortest supply artery—that to Britain.

The whole operation would require less than half the total 1943 bomber production, and would leave many more bombers for China and Africa and other fronts than they have ever had. And let it be remembered that with such a task force we might win not just outlying campaigns—with it we might win the European part of the war before the end of 1943.

Early this year we read such headlines as: "United States Blasts Wilhelmshaven" or Royal Air Force Hammers Ruhr," or "Round-the-clock Bombing" of Germany. These headlines were entirely misleading in their implications of scale. The bombers took advantage of an unusual stretch of good weather to put in a series of savage attacks; but the individual raids were actually smaller than many undertaken in 1942, and mere continuity of bombing should not be casually confused with continuity of heavy bombing. Until we read "1,000 Allied Bombers Attack Reich," and read it several times a week, we shall know that no decisive air offensive is under way.

The plan of the Allied air commanders to smash Germany's war industries is more practical than any other possible program. Except for some miracle, some internal Nazi collapse, we dare not count on, there is no alternative for early victory. A vertical assault is the only great offensive that would not impose a dangerous strain on our already difficult shipping situation. The north African expedition, a minor campaign compared with the invasion of Europe, required 8,000,000 tons of ships. Shipping losses last year were 8,000,000 tons against our total production of 8,000,000 tons. This year our program calls for 16,000,000 tons, but Nazi submarines are being launched much faster than we can sink them, and the menace increases every day.

Compared with the enormous losses we should suffer in any great surface offensive, an all-out air attack would be cheap. The 1,000-plane Cologne raid, which cost the British 257 men, killed over 30,000 of the enemy. A 6 months' air campaign to bring about the end of German resistance would cost a maximum of only 30,000 men even if every man were killed in every bomber lost.

As things now stand, here are the military prospects for 1943: The President and the Secretary of War have prepared us for heavy losses in north Africa. Mr. Hoover has warned us that the war will last 3 years. Justice Byrnes has said, "We face an invasion of Europe which will involve casualties such as this Nation has never endured."

But do we have to resign ourselves to the heartaches of great land offensives? There is an alternative, and 1942 has proved it sound. The air commanders who have produced the proof and the public which must produce the lives have the right to ask that the air alternative be tried now—no matter how far the land-offensive plans have gone.

The Congressional War Parents Association

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 15 (legislative day of Monday, May 24), 1943

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD a list of the officers and directors of the recently organized association called the Congressional War Parents Association; and I also ask to have printed in the RECORD a list of the Members of both branches of Congress and their sons and daughters who are serving in the armed forces of the Na-

tion. Many of these sons and daughters are serving in the active battle areas of the world; some of them have already given their lives for the cause of freedom; others have been wounded in action. It is an impressive list of fighting sons and daughters.

There being no objection, the lists were ordered to be printed in the RECORD, as follows:

Name: The Congressional War Parents Association.

Officers: President, Congressman FRANCES P. BOLTON, of Ohio; vice presidents, Senator W. LEE O'DANIEL, of Texas; Congressman JAMES W. WADSWORTH, of New York; Congressman PAUL BROWN, of Georgia; Congressman JOHN R. MURDOCK, of Arizona.

Secretary: Senator STYLES BRIDGES, of New Hampshire.

Directors: Senator HATTIE W. CARAWAY, of Arkansas; Senator HARRY FLOOD BYRD, of Virginia; Senator ARTHUR H. VANDENBERG, of Michigan; Senator CHAN GURNEY, of South Dakota; Congressman GEORGE J. BATES of Massachusetts; Congressman MICHAEL J. BRADLEY of Pennsylvania; Congressman J. BAYARD CLARK, of North Carolina; Congressman JOSEPH P. O'HARA, of Minnesota; Congressman WRIGHT PATMAN, of Texas; Congressman JOHN PHILLIPS, of California.

Members of Senate and House, with members of their families serving in the Armed Forces

	Name of son (otherwise relationship noted)	Service	Rank	State
SENATORS				
Aiken, George D	Harry L. Cleverly (son-in-law)	Navy	Lieutenant (junior grade)	Vermont.

Our War Aims

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 15 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Are Our War Aims?", which appeared in the Washington Times-Herald of last Sunday, June 13, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT ARE OUR WAR AIMS?

In his recent House of Commons speech reporting on his American and north African trip, Prime Minister Winston Churchill stressed the warm personal friendship which now exists between himself and President Roosevelt. He also expressed the hope that any world organization growing out of this war may be based on the fraternal relations and the deep understanding now existing between the United States and the British Empire.

The first of these two points must be agreeable, we think, to all Americans. Certainly this Churchill-Roosevelt friendship should persist to the end of the war, since our prime war aim must be to defeat Germany, Italy, and Japan.

About the second proposition—a world organization largely based on United States-British foundations—we feel as dubious as ever, which is pretty dubious.

It is at this point that the question of our longer range war aims rears its head. After the defeat of the Axis, what do we want to get out of this war for ourselves and our descendants?

WORLD STATE—FACTS OF LIFE

Senator CLAUDE PEPPER (Democrat, Florida), frequent Roosevelt spokesman and trial balloon navigator, says his ambition is to nominate Mr. Roosevelt for the presidency of the United States of the World.

From this and other signs it is fair to assume that the Roosevelt war aim is to bring one world super state to birth out of this war, all the nations sinking their sovereignties in one pulsating pool of globaloney.

There are a few facts of life in today's world which stand in the way of this dream's coming true.

One of these facts is Stalinist Russia. Mr. Churchill in that same speech intimated that Mr. Stalin is still being coy about the Roosevelt - Churchill - Stalin - Chiang conference which Mr. Roosevelt so ardently desires. It seems a safe bet to us that Stalin, after an allied victory which he will have done so much to bring about, will come as far west into Europe as he pleases, and who can stop him? He'll probably want to come as far as the old Czarist boundaries.

Nor can Stalin be expected to surrender up any Russian sovereignty to some superstate. Russia's Bolshevik government since its birth has suspected all democratic governments of designs against communism. We can't imagine the Bolsheviks scrapping that suspicion and falling in love with democracy simply because a war has forced them into a wartime alliance with a couple of democratic nations.

Mr. Churchill, too, says that "we mean to hold our own," and that "I have not become the King's First Minister in order to preside over the liquidation of the British Empire." That does not sound as if the British people were all afire with desire to give over their independence to a world state.

REGIONAL FEDERATIONS

It looks to us as if post-war regional federations are the biggest international setups the world-staters can reasonably hope for.

There will be difficulties even there, especially in Europe. Europe's small nations are all intensely nationalistic, and want to be restored with full independence after the Axis heel is blasted off their necks. Some of them are so small that an airplane can fly across them in 5 or 10 minutes, meaning they

are too small to keep full sovereignty intact in a barbaric and mechanized twentieth-century world. But try to sell that to a Belgian, Dutchman, Norwegian, Finn, Lithuanian, Estonian, or Latvian.

However, it does seem feasible for the big nations—Russia, China, and the United States—to be dominant in their parts of the world, and to protect their weaker neighbors. Britain and France between them might arrange somehow to run Europe west of Russia, with Germany somehow made militarily and politically impotent.

Of one thing we're convinced: That for mutual defense the United States and Canada should have a military alliance, going at least to the extent of a joint general staff and as far beyond that as the two nations might wish.

It is time, we think for the Allied war aims to be definitely stated. Just what are we fighting for?

We only hope the United States is not fighting to impoverish itself after the war in order to lift Chinese or Hottentot living standards an inch while dropping our own a yard. And we're sure that if we insist on meddling in other nations' affairs after the war, other nations will insist on meddling in our affairs—and how can we tell them to mind their own business?

Flag Day Address by Hon. James A. Farley at Cambridge, Mass.

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 15 (legislative day of Monday, May 24), 1943

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. James A. Farley at the Flag Day exercises at Cambridge, Mass., June 12, 1943, under the auspices of Cambridge Lodge, No. 839, Benevolent and Protective Order of Elks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On this birthday of our flag we are gathered here to renew our dedication to the cause of freedom for which it stands, and to draw from it strength and courage to conquer the totalitarian hordes which have treacherously attacked and would tear down these Stars and Stripes.

On this birthday it is fitting to observe that during this last year our flag has grown in recognition, power, and influence. We have carried it to new and strange beach heads and battlefields. In the Pacific, in north Africa, and in the Aleutians, brave men worthy of the finest traditions of this flag have by force of arms brought this Nation past another momentous turning point in its history—from stubborn defense to a world-wide attack upon our enemies.

The past year was not unlike the year 1777, which marked the turning point in our struggle for independence, and during which this flag, of red and white stripes, with pure white stars on a field of blue, was first carried by our forefathers in the pivotal victory at Saratoga.

We share this hour of honor to our flag with millions of strong and stout-hearted men and women who have followed it to far-away posts. There it floats over jungles, deserts, mountain ridges, and foreign cities, quickening courage and devotion to the highest hopes of mankind.

And there are those with whom we can only share this day in our prayers to Almighty God. They have given for the flag and for us their last full measure of devotion.

They, too, shared our heritage of peace and plenty; they, too, dreamed of the finer future that lies beyond this present horror. But when duty called, they answered. And now they are numbered in that magnificent color guard which is forever mobilized in our hearts, marching with us as we press on the fight against tyranny, brutality and godlessness.

Long before the days of trenches, tanks and fighting planes, this flag was carried in battles for freedom, for union, and for liberation. In those earlier battles the flag itself was carried in the charge. We well recall pictures of those actions with the flag-bearer driving forward in a hail of shot and shell. Part of every child's clear vision of heroism is the picture of the flag-bearer's death. He stumbles, wounded; the flag droops; but from the ranks behind another springs forward and catches the colors. He holds them high as the ranks go forward.

The hold that love of country has on men and women seems at times to ebb and then to mount again. But planted well and deeply in the rich soil of childhood is this ineradicable reverence for our flag. Each one of us knows that should that moment come, he, too, would spring forward to catch our flag lest it fall dishonored in the dust. This we would do without thought of self. In that instant the hero in each common man shines out.

No man who serves in khaki or in blue is for a moment forgetful of his duty to be worthy of this flag.

We have learned already that modern war cannot be fought and won by the armed forces alone. Behind these fighting men there must be mobilized all of the power, all of the patriotism, yes, all of the sacrifice of the 130,000,000 people.

Just so surely as we at home fail in any duty to this flag, so surely there will be American boys killed and maimed who, but for our failure, might have survived without injury.

We who are not in uniform must fight this war, too.

If we value our liberties, if we venerate the right to worship our God, if we mean to bring our fighting men safely home with victory at the last, then we, too, must pledge all that we have and all that we are.

Are we worthy of this flag—worthy in sacrifice, in unity, in determination? How are we judged—we who serve behind the lines? By what we have done to speed the mobilizing and equipping of 9,000,000 men? By what we have done to build the greatest Navy on the seas? By producing bigger and more devastating airplanes? These almost incredible accomplishments prove that millions of Americans have been hard at work. That America's practical genius has soared to new peaks. That its great wealth has been poured out unstintingly.

But the massing of these products of our brains and our hands do not alone prove that we here at home are worthy of this flag.

Only in the heart can that proof be found.

And we must ask: Do we find in our hearts unity and singleness of purpose? Do we find there willingness to sacrifice? Do we find there determination to do anything possible to bring victory nearer by even an hour, thus saving the lives that the 1 hour might cost?

He is truly worthy who can answer "Yes" to such a searching of his heart.

I know that he belongs to the overwhelming majority of Americans who are true to this flag and to our men risking all in the acrid smoke and shattering shellfire of battle.

Let me say to you with all of the sincerity of which I am capable, that everything that this flag means, every blessing that it confers upon us as a people, and every right that it protects, arose from one principle—the principle that a free people may choose those who will govern them. But it is equally true that, when the people of these United States have made this free choice, the Government so selected becomes the Government of all of the people and acts with all of the power of all of the people.

When a Congress elected by a majority of our people enacts a law, and that law is approved by the President, it is the law of the land. It is not a law to be respected only by those who voted for that particular Congress or President, but a law which must be respected by all.

When this national leadership, which is a leadership of majority selection, determines upon the course of conduct necessary for the successful prosecution of a war, every individual has a patriotic obligation to support that leadership.

It is true, we have a right to express our disagreement with a course of action which we believe to be wrong, in an effort to secure changes and betterments. But we have no right to weaken the hand of our National Government in the prosecution of the war. We have no right to sabotage the laws which our own Government has enacted in the effort to lead us to victory and to preserve our liberties.

Only a united nation can win in modern warfare. Disunity can lead only to disaster.

It will not do to salve our individual consciences by comparing our course of conduct with that of others less patriotic. It will not do to say that others are seeking gains from the war either through profit or preferment. We cannot excuse any individual failure on our own part by pointing out that mistakes have been made by our leaders. Every such mistake only creates a greater obligation and a greater necessity for individual sacrifice to save this Nation.

This conscience of America is a stronghold that must not be lost. It cannot be defended with guns or planes, nor even such a marvel as radar that "sees" an enemy plane a hundred miles away at night. No brilliant scientist can provide the counter to this blow. If this battle is to be won—and it will be won—the patriotism in the hearts of American men and women must win the victory. In a democracy every single individual is the keeper of the national conscience.

We have no greater challenge to meet. The foundations of our Government rest on the certainty that we who live under the Stars and Stripes know and will respect the laws of our own Government because it is our own Government. This is the genius and glory of this Nation.

No one can witness the petty compromises with the right course of action without fearing for the freedom of the individual which has been won and safeguarded here in the United States by all those who have gone before us.

Our prized personal freedom is circumscribed because compulsion is the only alternative to voluntary support of the steps that must be taken to win this war.

Every American family has felt the impact of some of these steps. Vacant places at the family dinner table are daily reminders. Rationing of scarce materials, a heavier burden of taxation, sacrifices of luxuries, and less-happy living conditions in war-production areas have brought difficult problems.

But there cannot be a point at which any American puts personal interest above the Nation's interest. This war is too big; the need of this entire Nation for the full

measure of cooperation from each individual is too great. These imperatives, I say again, leave only a choice between wholehearted support of our country and our flag, or the heavy hand of unwanted compulsion.

This is the choice for each one of us.

With millions of our men in uniform speeding up the long Victory march, we can see that by the free working of American democracy an incredible job has already been done. At the outset we had the tremendous urge of righteous anger. Through the early months we had not felt the necessity of scraping the bottom of the barrel for manpower, raw materials, and food.

But now, though the foretaste of victory banishes our recollections of the humiliations of Pearl Harbor and Bataan, we are coming into the period of greater personal losses and large and small privations. We must realize that these sacrifices cannot be avoided.

If we listen for the voice of conscience we will know what is the right thing for us to do. In this time of emergency we must not take the easy way of blaming others and excusing ourselves.

Yet unfortunately we are witnessing today the finest flowering of the art of excuse making. It has no place in wartime. Finding a reason for not doing what we do not want to do is one kind of resourcefulness which does no credit to Americans in fighting for their lives against the most ruthless, organized brutality that ever showed itself on this earth.

For men and women of all walks of life to shoulder loyally the sacrifices which are called for is no sign of meek submissiveness but, rather, the proof of the resiliency and determination of free America. If we press forward in this spirit, our institutions of democracy will remain intact. They will not be replaced by hasty tyrannies.

On the other hand, if we unthinkingly permit a lapse here and a break-down there, until at length we jeopardize this Nation's ability to throw its mighty power into the winning of the war, we as individuals will lose and may never again regain our freedom under law.

Today our problems, at the front and in our homes and mines and factories, loom almost too difficult for man's solution. And they will be, if we do not strike at them from solid foundations.

It is useless for us to wish that we were like that white-haired king of Browning's poem who—

"Lived long ago
In the morning of the world
When earth was nearer heaven than now."

In the earlier hours of this world's day, the United States, under this flag, carved a pathway through the wilderness of despotism to the fertile land of reasonable law where men could dwell together and enjoy a richer life. This arrival was not haphazard, and we can see the way we traced, the abysses we avoided, and the markings that helped us on this way.

So we have built here a great Nation and this flag is its symbol. As we look at this flag we can see the blood of those brave men who died to bring this Nation into being and of the myriads more who died to preserve it. We can see the respect that this Nation has won in all lands and from all people through the purity of our national motives. We fight no wars for the lands or treasures of weaker peoples. We fight no wars to impose upon others our creeds or our ideologies. We see in this flag the heavens where dwells a merciful God whom each man may worship after his own belief, and we see the stars that shed the light of peace equally on men and women of every race and creed and color who are privileged to live under this banner.

We, like those who have gone before us in creating and maintaining this privileged place, must be prepared to pay our fair share of the price of all of these blessings. Let us show to all the world that here is a united Nation, a people unswerving in their devotion to this flag and to this Nation. Let us demonstrate to all the world that as we have been equal in privilege and opportunity, so will we be equal in sacrifice and loyalty.

We have set in place here the solid foundations of a great nation. We are proud to have our children know them. In my lifetime of experience, one stands out, which is not mine alone, but which I share with millions of American mothers and fathers.

It is that time when the little boy or girl, with new and unfamiliar dignity, stands tall and straight and speaks these words:

"I pledge allegiance to the flag of the United States and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all."

In that moment we see patriotism as it must be, deep and clear and reverent. The pledge is given wholeheartedly, with no thought of personal reservation. Today in this hour of our Nation's crisis, I pray God that every American, from the highest to the lowliest, will, with the same sincerity and selflessness, reaffirm this pledge to the flag of our United States.

Sam Houston School, Pampa, Tex.

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 14, 1943

Mr. WORLEY. Mr. Speaker, I am glad to bring to the attention of the House a good example of the wholehearted cooperation to win the war which all Texas fervently believes in. The following story carried in the Pampa Daily News is an illustration of how even the Texas youngsters are going all-out to win the war. We are all mighty proud of these youngsters:

SAM HOUSTON SCHOOL CREDIT TO NAMESAKE

(By Brownwood Emerson)

Sam Houston, commander in chief of the Texas Army and first President of the Republic of Texas, would not be ashamed at all of the Pampa School named in his honor.

In fact, he would be as proud of the school if he were alive today as all Texans are of the hero of San Jacinto, for pupils of San Houston School in Pampa, located at 900 North Frost, have set a mark that few schools in the Panhandle will equal.

With true Texas spirit they have responded to the patriotic call to purchase Victory bonds. They started on March 8 to buy enough bonds to buy two jeeps. They wound up their drive on April 21 by coincidence, San Jacinto Day, anniversary of Sam Houston's army defeating the Mexicans, with enough bonds and stamps sold to buy 14 jeeps.

There were 77 students who bought bonds, stamps, and bond sales grand total was $12,284.95. That is not all, either; the Sam Houston pupils are going right ahead and buying more.

All of the bonds bought at the school are in the names of the students.

Since April 12 the school purchased $10,684.95 in bonds and stamps. In the first week of the drive the total was $1,600.

There are 352 pupils enrolled at Sam Houston School, of which Aaron Meek is principal.

The total of $12,284.95, the grand total of all bonds and stamps bought by the students from March 8 to April 12, does not include bonds purchased by the teachers.

Denominations of the bonds purchased by the students and number of students purchasing in that denomination were:

$25 bonds, 40 pupils, total, $1,000; $50 bonds, 10, $500; $100, 16, $1,600; $500, 5, $2,500; $1,000, 6, $6,000.

Amount of stamp sales, by denominations: $5—$65; $1—$3; 50-cent, $10; 25-cent, $301.75; 10-cent, $305.20.

Bond purchasers were:

John Lee Welton, Ann Perkins, John Friauf, Gilbert Berry, Jan Dell Dickey, Donald Burns, Norma Gelson, Marilyn Fitzgerald, Danny Fitzgerald, Betty Fern Wilson, Jane Hampton, Patricia Dunn, Sam Dunn; Bernice Homer, Merdella Roberts, Joyce Harrah, John Lloyd Carruth, Jimmie Don Dorsett, Phoebe Ann Carter.

John Boyd Schoolfield, Dorothy Louise Mackie, Jimmie Howard, Hershel Langley, Eddie Ray Caldwell, Bobbie Porter, James Prichard, Mary Scott Daugherty, Molly Nelson, Jan Roby, Dan Gunn, Harrie Schwartz, Jane Prichard, Hugh F. Greinor, Barbara Maul, Janell Ewing, Don Farmer.

Billy Ed Morrison, Robert Kelly, Hubert G. Greinor, John Lee Bell, June Harvey, J. W. Harvey, Bobby Libby, Iva Libby, Garnet Reeves, Peggy Hukill, Jimmie Baldridge, Scooter Warner, Barbara J. Weidler, Norma Jean Manatt, Bobby Willingham, Jimmie Campbell, Etta Francis Haney.

J. C. Haggerman, Rachell Garcia, Gregory Keys, Greta Miller, J. L. Kaiserman, Janette Ethridge, Sid Mills, Don Hicks, Harry Hanks, John Meek, Laura Nell Berry, Yvonne Carruth, Jimmie Watts, Mary Katherine Jewell, Haldean Suttle, Jan Sanders, Rue Paula Davis, Betty Howard.

Jo Alice Franks, David Engle, Billy Brothers, Doris Mae Libby, Leroy Kretzmeier, Donald Merritt Sweazy, Tom Gries, James Ewing.

War Labor Disputes Act

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. WASIELEWSKI. Mr. Speaker, restrictive laws are invariably written to curb the activities of the vacillating minorities. The vast majority of citizens sense their duties and responsibilities and perform them honorably. The chiselers and obstructionists are the ones who must be kept in line by throwing the fear of penalties into them.

Early in the twentieth century, we found that monopolistic corporations were becoming a plague upon our system of free enterprise and democratic living. Only a few corporations violated our American way of freedom, but Congress adopted trust-busting legislation covering all corporate bodies in order to eliminate these abuses. Early in the depression it was learned that some few corporations defrauded investors by selling bogus or greatly watered stock. Congress created the Securities and Exchange Commission, which brought all corporate financing under scrutiny and control.

In human relations voluntary cooperation brings about the most effective

results. Congress has been most anxious to retain the employer and employee relationship on a voluntary basis, particularly in view of labor's no-strike pledge.

Labor's record in keeping its pledge of no strikes has been remarkable. Labor's war production record surpasses all expectations. Labor and industry in my district have been doing a splendid job. They have been cooperating magnificently in supplying the men behind the guns. I personally believe that more Army and Navy E's have been earned in the Milwaukee metropolitan district than in any other similar area in the country. There have been no serious work stoppages in the Milwaukee industrial region since Pearl Harbor. Both labor and management deserve the highest commendation and recognition for this exemplary record.

In fact, labor and industry in general are not concerned about the War Labor Disputes Act; this legislation will in no way affect those who have cooperated and would and will continue to do their part in speeding the war effort and the day of final victory.

Within the past several weeks certain individuals and minority groups in various parts of the land have been violating labor's no-strike pledge. Most of these strikes were unauthorized and of brief duration, but each, regardless of extent, spelled a gap in the chain of our war production. In several cases it was necessary for our Commander in Chief to divert his attention from his arduous duties to get the strikers back to work. There would be no need for the War Labor Disputes Act if the record of labor and industry relations throughout the country were as good as Milwaukee's.

More recently the difficulty with Mr. Lewis and his mine workers has grown very acute and cast shadows of a real threat to our national security. It is not my purpose to enter into a discussion of the merits of the differences existing between the miners and mine owners. In peacetime we might not grow so perturbed, but today, when we are engaged in a life and death struggle, we cannot allow any one willful man or group of men to jeopardize our war effort or commit any act that would prolong the war for even a moment.

We owe a responsibility to our men in the armed forces to assure them a smooth flow of machines of war with which victory is to be gained. As a Member of Congress, I owe a duty, under my oath of office, to give my Commander in Chief every tool necessary to assure this steady flow of goods.

Mr. Lewis has recklessly challenged the authority of his Government, imperiled the security of its people. If he is allowed to carry on his defiance of the Commander in Chief and of Government authority, the preservation of law and order on the home front, and the successful conduct of the war on the various fighting fronts will be greatly endangered. Undoubtedly, this would also bring about a complete violation of labor's no-strike pledge.

It is unfortunate that a War Labor Disputes Act had to be adopted by Congress under such circumstances. The resulting legislation inevitably is drastic. When this bill was considered in the House it was apparent that it would be rewritten by the conferees. For that reason, on June 4, I voted against it, in the hope that with a substantial number of votes against the measure, the conferees would take notice of some of the objections raised on the floor and revise the drastice provisions of the act. The conferees did make several changes. However, the bill still retains some undesirable features. But there is a crying need for legislation to give the War Labor Board statutory power to function and carry on its purpose. There is need for legislation that will prevent selfish, arrogant leaders, in either labor or industry, from defying their Government in time of war and thereby making more distant the day of victory. We cannot long continue to carry on the war under hair-trigger conditions according to the whim or mood of certain leaders in industry or labor. We must give our men in the front lines definite assurance that we are doing our part, that the goods will be there when needed and in sufficient amount.

For This We Fight

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I include an essay written by Miss Betsy Heagy, of Mechanicsburg, Pa., which appeared in the Mechanicsburg Daily Local News. Miss Heagy is a senior at the Mechanicsburg High School, and she won the district American Legion essay contest with the following article entitled "For This We Fight." As one reward, Miss Heagy won a scholarship to Pennsylvania State College. It seems to me that this essay shows remarkable originality and a great ability to picture clearly those ideals for which we are fighting. I hope that it may be published in Stars and Stripes or the Yank, where it can be read by our men in the armed forces as an indication to them of the lines along which our young people of today are thinking:

FOR THIS WE FIGHT

(By Betsy Heagy)

MacArthur, Tokyo, Casablanca, Stalingrad, Timoshenko, Tunisia, and Bataan are common household words. The world is at war again. For what are we fighting?

I can think of so many things when I write these words, "For this we fight"—incidents that have happened during my lifetime which I can understand more clearly now; happenings, ideas, beliefs, and truths; things I've been told and things I've seen, things I've heard and things I've read. Volumes of closely written pages could never express all the little and big ideals we Americans are fighting for today.

Thomas Jefferson summed it up most ably when he wrote that statement in the heart of every true American: "We hold these truths to be self-evident; that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

Life—our body and soul—that which was given to us at the time of birth, is one of the things for which we are fighting. I've never thought very much about life being a right, and yet it is surely one of the most precious rights Americans possess.

In the Germany of today, children are often denied life by the killing of a woman's capacity to be a mother. In many cases, parents of unborn children are selected by the state, for biological reasons only, thereby destroying the right of all free people to choose the mate they desire. Certainly, even though the enemy may never bomb our cities or shell our shores, we, as a Nation, are fighting for our lives—for our children's lives.

Liberty—this is another right for which we fight. When I think of the word "liberty" I think of soapbox orators and church bells ringing in the evening, of people walking to church on bright Sunday mornings and of the people who prefer to play golf on those mornings; I think of the man who calls Roosevelt a d——— Democrat and of the man who believes the Republicans to be damned too; of my grandfather pounding his fist on the table and declaring that the big interests (monopolies I think he means) will bring this country to rack and ruin. And then, too, I think of bands playing and flags waving in the blue skies, of Churchill's voice when he talks of "blood, sweat, and tears," of smiles on happy children's faces; of those 8 men struggling in rafts on the treacherous waters of the Pacific—of the courageous and gallant Captain Rickenbacker.

Besides all these contemporary symbols, I think of past things when I think of liberty—things that in a sense are not past, but which will live forever in the hearts of men; that never-to-be-forgotten night, for instance, when Paul Revere, the silversmith's son, galloped into the little villages of Concord and Lexington to warn the townfolk of the coming of the British; Washington, tired and heartsick, kneeling to pray for his men in the snow of Valley Forge; Whitman's immortal poetry—the beautiful soul-stirring lines of his Lilacs; that great lonely man, sitting in his stone temple in the City of Government—slavery's emancipator; the heroic bravery of Sergeant York—of the men in the Argonne and Chateau-Thierry. Yes, all these and many more mean liberty to me—liberty for which our forefathers fought and for which we must fight to preserve.

Finally, we Americans have the right to the pursuit of happiness. Happiness is a lovely word. There's something glad and gay even about the way it sounds. I suppose everyone has his own individual ideas about the meaning of happiness. To me, it is an expression of all the best feelings, emotions, and thoughts in life. It's the way you feel when you smile at someone and that person smiles back; it's singing in the choir and watching a football game, playing tennis in the hot sun and walking in the coolness of a spring rain; it's the feeling you get when you've done a piece of work well and know it, and it's the way you feel when you're seated at the supper table and all the family is there—even though the way they are planning and the strategy of the present African campaign is not the way that you would conduct it.

Happiness is the way you feel when taking a long hike in the mountains—the moment supreme, when, after the long, hard climb, you reach the top; it's your first long party dress—the white and silver one, and the high-school prom; it's drinking "cokes" with the drugstore gang and dancing to the nickelodeon; saluting the flag and cheering at a basketball game; it's the smell of leaves

burning. Tchaikovsky's symphonies, Tommy Dorsey's music, and hot dogs with onion, all rolled into one.

Then too, happiness is the completeness of feeling that only one who has done an honest day's work and has received an honest wage for work well done can ever know or achieve.

Happiness is all this and more: it's having a faith and believing in it—not only a faith in God, but a faith in America, in the Allies, in the world. A faith so strong that we believe that no matter how hard the fight, some day, though we may not live to see it, there will be no more of the "blood, sweat and tears" of war. All men will have come to understand that wars have no place in the progress of civilization.

Our American faith and beliefs in "Life, liberty and the pursuit of happiness" is being preserved now by men on all the battlefields of the world—from the blood-stained snows of Russia to the shell-torn jungle of Guadalcanal. It is for these inalienable rights that free men fight today, till they become not only American rights but world rights—monuments to the equality of all men.

Economists Do Not Raise Food

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. DWORSHAK. Mr. Speaker, Congress must soon reflect the will of the American people, which is manifesting itself against the proposed rolling back of prices and the use of Federal funds to pay subsidies for the benefit of consumers. In Idaho, there has been a preponderance of sentiment on the part of processors, retailers, producers, and virtually every group and organization of citizens against the unnecessary expenditure of Federal funds to enforce a price-ceiling program.

The Idaho State Grange represents many thousands of farm families in Idaho, and it is interesting to observe the attitude of Mr. E. T. Taylor, State master, who has consistently pointed out that "to roll back prices onto the farmer in order to sell food to the consumer cheaper has in it the most dangerous possibility of curtailing food production right at a time when the more abundant production of food is considered more urgent than is the increase in the volume of ammunition."

Under leave to extend my remarks, I am including the following editorial on this important subject, which appeared in the June issue of the Idaho Granger, official publication of the Idaho State Grange:

PARITY, INFLATION, SUBSIDIES?

Those who oppose the farmer getting a parity price for his products, have used as their argument that parity would cause inflation.

So if the farmer obtained a just parity price for his products our economic structure would be wrecked.

But this same group of economists turn around and with the next breath say, "we will subsidize" the farmer out of the Federal Treasury, to help make up for the unfair price paid him by the consumer.

By their reasoning they say that if the farmer was treated as all other business and labor is treated and given a fair parity price for his products, that inflation and chaos would sweep the land, but if the same number of dollars were passed out to the farmer from the Treasury under the name of subsidies, prosperity and happiness would reign, and the country be safe.

Such logic would be incomprehensible in any ordered society. But to those who are determined to keep the farmer under their control, it is necessary to subsidize him, right or wrong.

In connection with the question of subsidies it is well to remember that the United States Supreme Court recently rendered an opinion, stating "that the Federal Government has the right to regulate that which it subsidizes."

If the farmer was given a fair parity price for his products in the market place, he would be on the same plane as other walks of life, and he and his family could hold their heads up in honor.

But for subsidies, he must beg of the Government the funds rightfully due him from the consumer in the first place, in order to be able to maintain a reasonable standard of life.

And as a price to pay for subsidies, the Supreme Court says the Government acquires the right to regulate him.

With the financial difference between a dollar of parity money in a farmer's jeans, and a dollar of subsidy money, being just bunkum, the question arises as to whether the advocates of subsidy, instead of parity, do not have as their real purpose the keeping of the farmer under governmental control.

With the farmer getting a smaller proportion of the consumer's dollar than ever before, and with labor's wages and consumer income at the all-time peak, the question arises as to why the consumer should not pay for the food he buys.

Subsidies are not gifts to the farmer. They are payments made by the Treasury, in order to permit him to sell his products to the consumer for less than the cost of production.

Who is being subsidized?

Surely not the farmer.

Yet these selfsame beneficiaries of the subsidy will cry to high heaven that the farmer is robbing the Treasury, when in fact it is the consumer who is doing the plundering.

Let the learned critics of the farmer explain the profound difference in the chaos-making power of a parity dollar and a subsidy dollar.

The farmer is not to blame for inflation, and paying him a fair parity price for his products will not wreck this Nation. The failure to give farmers the same fair treatment given labor and business is one of the outstanding injustices causing farmers to sell out, quit, and leave the farm for the greener pastures, and featherbed jobs of industry.

Economists may supply ration books, but they do not raise food.

The Office of Price Administration

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HILL. Mr. Speaker, the first and most important job facing the people of our country is to do everything within their power to win this war at the earliest possible moment. Any national program that tends toward disunity, creates animosity, or in any manner cripples our productive and distributive machinery should be immediately corrected or entirely eliminated.

The O. P. A. falls in this category. The entire organization needs an overhauling. Now is the proper time to clean the slate. Let this House move to eliminate every man in this organization whose philosophy would destroy our private business, personal initiative, and bring our national economy to complete destruction.

A letter I received this morning expresses in no uncertain language what food distributors are thinking back home. Make no mistake about this, this letter expresses the feeling of thousands of small business firms in our country accounting for more than 60 percent of the ordinary, everyday business activity of the entire Nation:

PIGGLY WIGGLY-WESTERN CO.,
Denver, Colo., June 9, 1943.

The Honorable WILLIAM S. HILL,
House Office Building,
Washington, D. C.

DEAR MR. HILL: Piggly Wiggly-Western Co. has, up to this time, held its peace about the Office of Price Administration. Throughout many weary months of inept and inane administration by this wartime agency we have kept silent, because we recognized that some sort of food control was needed, and we wanted to remain tolerant while the Office of Price Administration was going through its birth pains.

When Leon Henderson was at the helm we disagreed with him frequently, but we did have the feeling that he was trying to do the right thing as well as he could. When Prentiss Brown—a political "lame duck"—took his place we suspected that the Office of Price Administration was being thrown to the political dogs. We still refrained from saying anything, on the outside chance that we were wrong. We were not wrong.

Today the Office of Price Administration is a sorry spectacle that would be comic if it were not so tragic. Undercover moves and countermoves at Washington are made for selfish, political ends, with apparently no thought given to the tragic results of the hit-or-miss rulings issued today, amended tomorrow and killed the week after. Chaos and confusion that can lead to only two things: The demise of the average food retailer and stark hunger for our children next year.

If there were ever a case of fiddling while Rome burns, this is it.

The professors of philosophy, the welfare workers and the others of their long-haired ilk must go. And those in the Office of Price Administration responsible for putting them there must go, too. This is war, and we don't have the time nor the strength to act as guinea pigs for a lot of crackpots. Politics in the Office of Price Administration must go. The Director must be a man with guts and with enough horse sense to pick others like him as subordinates.

We're not going to attempt to list the hundreds of silly rulings that have come out of the Office of Price Administration in the past 2 months. Every businessman, to his sorrow, knows what they are and what they have done. Every housewife knows a few of them, but she would cringe with fear if she knew what they may mean to her for the future.

This is the time to act.

May we request that not another cent be appropriated for the Office of Price Administration until it cleans house.

Please do your duty today. Help win this war, and help safeguard our business economy, so that our boys overseas will have something worth while to come home to.

Very truly yours,

PIGGLY WIGGLY-WESTERN CO.,
E. H. LAMBOTTE, *President.*

Springfield Armory

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. CLASON. Mr. Speaker, I am very proud today to insert in the RECORD the following article from the Springfield Daily News of June 10, 1943. I was present at the exercises held when the Army-Navy E award was presented to the employees of the Government armory at Springfield. This armory is producing nearly all of the Garand rifles used by our armed forces. This rifle has received unstinted praise from soldiers, sailors, and marines alike. It will go down in history as one of the great factors in the success of our fighting men in battle after battle.

Springfield Armory makes many other products which are essential to the winning of the war. Its employees have established record after record for loyalty, efficiency, and industry. They are doing a grand job and will continue to surpass their previous records.

The article follows:

ARMORY GIVEN WHITE STAR BY ARMY AND NAVY—SUPPLEMENT TO E AWARD RECEIVED BY LOCAL FEDERAL FACTORY

The huge garrison flag, reserved for ceremonial occasions, was hoisted atop the old arsenal building at Springfield Armory yesterday afternoon in celebration of the award of a white star for the Army-Navy E pennant that was conferred on the armory last September. The star is indicative of continued excellence in service on the production front in the 8 months since the original award was made. It also gives the right to all workers who were on the pay roll on May 22 to wear the E pin that was won by those of the working force who were accredited to the armory on September 5, 1942.

Word that the historic arsenal on the hill has distinguished itself for the second time in the production of rifles for the armed forces came in a letter from the Honorable Robert P. Patterson, Under Secretary of War, to Col. Earl McFarland, commanding officer at the armory. The letter read:

"I am pleased to inform you that you, your staff, and your civilian employees have won for the second time the Army-Navy production award for meritorious services on the production front. You have continued to maintain the high standard that you set for yourselves and which won you distinction more than 6 months ago. You may all be proud of your achievement.

"The white star, which the renewal adds to your Army-Navy production award flag, is the symbol of appreciation from our armed forces for your continued and determined effort and patriotism."

In contrast to the colorful ceremonies of last September, formal exercises were omitted yesterday in accordance with Army policies governing the star award. A little extra effort on the production line was the chief contribution of the workers to the occasion. But Old Glory in the form of the billowing garrison flag, 20 feet by 38 feet and about 15 times the size of the storm flag ordinarily flown, was run to the top of the masthead with the new pennant and its gleaming white star just beneath.

In observance of the day, each armory worker on all three shifts was given a commemorative folder and a certificate in recognition of efforts contributing to the winning of the star. This folder contained facsimile reproductions of Under Secretary Patterson's award letter, a message to armory men and women from Colonel McFarland and a renewal of the armory pledge to keep the wheels turning night and day to produce the weapons needed for the defense of the Nation.

The commanding officer's message read: "Fellow workers—When the E award came to us last fall we accepted it with a deep appreciation of its meaning. And it at once became a challenge to us. Could we do even better? Our answer was immediate and cleancut: 'We can—and we will.'

"The passing months have justified that answer. * * * Your loyalty, your work, your firm determination that the men on the fighting fronts shall have the finest weapons hands can make has won for you a white star on the E flag. The star * * * becomes the full-measured tribute of fighting men who have looked on the work of your hands and found it good. * * * Set your eyes on higher goals and greater achievements. Let your energy never falter until the day when the American flag will be recognized the world over as the symbol of freedom on the one hand and of overwhelming power on the other."

Cum Privilegio

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Dezauche, himself, publisher and editor, of Opelousas, La.:

I know what you'll say when you see this sheet, "Where in the h— has Dezauche been?"

I haven't been to Atlanta and I haven't been to Leavenworth, but just like all of you other produce fellows that thought you knew how to run your business after 20, 30, 40, or 50 years, I've been night and day looking over, reading and pondering, trying to understand what article P106 up to article PX1,000,000 tells me I must do in order not to be liable. Up to now I simply don't know a d—n thing about what I've been reading.

I did find out, though, after spending several hundred dollars on the phone talking to all parts of the country, why the ceiling price on white potatoes in south Texas and Florida was placed at $3.75 per hundredweight and the same potatoes in north Texas and Louisiana was placed at $2.50—you'd never guess—"historical data," my brother; yes—"historical data." That data that was gathered after spending thousands of dollars and many hours of laborious toil; that data revealed the startling fact that potatoes from those areas always brought more money than those from other points, including Louisiana. But what I tried to get over to these pencil and paper wizards was the fact that history also reveals that when a commodity is scarce and the demand exceeds the supply up goes the price. Oh, history, what crimes have been committed in your name!

I did find, too, an Office of Price Administration regional director that agreed with me that a sack of cabbage in Chicago was a sack of cabbage, no matter what State it came from. For a spell there, brother, they had that red-bird cabbage on a pretty low scale.

They tell me, too, around the country that there is a black market. That ain't nothing new—I've paid $5 per hundredweight for spuds and sold 'em at $3.25, and if that ain't a black market, brother, I don't know what is. Maybe those guys that talk about black market mean something else—just what I see in the press—that's all I know.

Looks like Frank really built himself a Frankenstein. He played with and pampered the Congress of Industrial Organizations and now it's about to argue with him. Course, nobody can help but censure the Congress of Industrial Organizations for walking out on the boys up front—those boys who can't and wouldn't walk out on us—and I'm surprised and shocked that those miners follow such vicious leadership—many of them with boys of their own "over there."

Something's out of gear in this United States of America—too much Washington with rules and regulations that don't help win the war. No manpower on the farm, not enough men to fill draft, but 160,000 folks on the Office of Price Administration payroll—Chester Davis gave me the figures—so must be so. Husky boys, instead of chasing Japs on Attu, chasing me and you as if we were criminals—I resent it and it makes me darn mad—so I'll quit now before I say something.

Oh, yes; shipping tomatoes now.

Sabotage by Rumor

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Shreveport (La.) Times of June 11, 1943:

SABOTAGE BY RUMOR

A wave of rumors and insinuations reflecting on the morality of the WAAC's, the WAVES, the SPARS, and the women marines has gained such impetus throughout the country lately that it finally has been aired in Congress, and high officials of these organizations have had to take much time from their war duties to gather and make public proof that the vast majority of the insinuations are not only malicious gossip, but actual sabotage of the war effort.

These vicious rumors have hampered recruiting in the various women's auxiliary services and they doubtless also have brought much unnecessary worry to fathers, husbands, and brothers of the women in service—often to fathers, brothers, and husbands who are on battle fronts offering their own lives. This is just as much sabotage as if the guns of these men were spiked or the work which the women are doing was destroyed through some underhanded means.

We make no pretense that mere donning of a uniform makes a girl or a woman a saint,

any more than putting on a uniform puts a halo around the head of a man. But neither does changing from civilian work and garb to uniform and patriotic service for the Nation in time of war mean that a girl has turned to the primrose path. The members of these auxiliary services are cross-sections of American girlhood and womanhood just as the male forces of the Army, the Navy, the Coast Guard, and the marines are cross-sections of American youth and American manhood. They are the girls and women of New York, San Francisco, East Waterloo, Iowa, Shreveport, and San Diego, and of all the big cities and little crossroads of the Nation. They are the girls of our own homes and the homes down the street. The characteristics of such a cross-section remain the same whether clothed in evening gown, business clothes, or a uniform.

In Washington newspapermen and newspaperwomen, after investigation, have pointed out in recent days that many specific rumors spread about the WAAC's and other auxiliary organizations have been run down and proven untrue. This refers especially to such charges as the one that great numbers of WAAC's had been shipped back from Africa because of alleged immorality.

To what Washington investigators have brought out we can add some testimony of our own. In recent weeks we have investigated half a dozen reports concerning WAAC's or other similar organizations brought to us as supposedly "absolute truth." These did not all deal with morality, but they are typical of reports the gossip-mongering saboteurs spread. In every instance we were able to go to high and unimpeachable sources for information and in every instance we found the reports unfounded. In every instance where high-ranking generals or other officers were talked with they had nothing but praise and respect for the auxiliary services. That dealt with their efficiency in taking the places of soldiers so the latter cou'd go to the front as well as with the moral side of their conduct.

We know, for example, that in every Louisiana camp where uniformed women are stationed they are held in highest respect by the commanders of the male forces and that as a whole the conduct of the women groups has been of the highest order.

It is time to put an end to spreading of unfounded rumors and insinuations. Most of these rumors started innocently—as wisecracks on the stage, screen, and radio. What was spoken originally in proper language and as good fun often was repeated over and over until it became supposedly indecent fact. This source of rumor can be corrected overnight—and should be.

The Nation needs these young women to win the war. It needs them at posts to relieve men to carry guns. They are offering their services loyally and their desire to serve has brought pride in most cases to their families. They are serving their country at the time of its greatest peril since the first shot of the Revolution was fired.

How many who have been spreading the vulgar and unfounded insinuations are doing half as much?

And the Home of the Brave

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HÉBERT. Mr. Speaker, one of the most powerful and virile editorials of the present World War has just come to my attention.

It is entitled "And the Home of the Brave" and appeared on the front page of the New Orleans Item of Friday, June 11, 1943.

I am particularly interested in this editorial because it has come from the fascile pen of a contemporary of mine before I became a Member of Congress and was an active newspaperman in Louisiana. Herman B. Deutsch, the author of this editorial, is one of New Orleans' ace reporters and enjoys a Nation-wide reputation as author and contributor to many leading periodicals of the country.

At the present time Mr. Deutsch is associate editor of the New Orleans Item. His editorial comes at a timely moment when many of us are wondering just what the whole thing is about and where do we go from here.

This editorial is typically American. It has the force, the understanding, the inspiration, the tenacity, the fighting heart of that which we know as America.

Mr. Speaker, I commend this editorial, "And the Home of the Brave," by Herman B. Deutsch, of the New Orleans Item, to you for perusal and study:

AND THE HOME OF THE BRAVE

Parts of the national picture are not very pretty. That touch of ugly red near the center, for example, shows soak-the-rich politicians clamoring that, despite the implacable demands of war on time, energy, and resources, we must give the dear pee-pul more than they ever enjoyed in piping times of peace. You can also see where black markets have darkened one corner; yet even there the picture is not as black as where industrial chiselers have palmed off defective cable or armor plate on the Government. That sickly pink blotch in the foreground represents gazelle-eyed dogooders, chirping contentedly about abundant milk for Hottentot babies while smoke and dust and flame yet rise where cities are being ripped apart.

An overcast of what appears to be mildew was left on the canvas by strikes. Big strikes and little strikes, a walk-out in a 10-man plant engaged on a defense subcontract over a matter of who should collect union dues; two stoppages of coal production by half a million miners; a strike in one of the most vital rubber fabrication centers—all while a secretary of labor smiles complacently upon the turmoil and objects to enactment of antistrike bills by Congress.

Over and about the scene lies a tangle of administrative confusion, a reluctance to let the chips fall where they may, an apparently sharper awareness that votes will be cast next year than that the Nation confronts a crisis today. Further obscuring it is a snarl of interdepartmental jealousies interl ced with a maze of red tape.

Zoot-suiters brawl with servicemen in some cities. Certain war plant employees demand ever more feather-bedding and absentees wander about shopping districts, querulously complaining that their gas ration won't let them spend the day in the country.

No, sir; not a pretty picture!

Yet highlighting it all is the shining record of a lad named Joe. We've come to call him that in our daily speech. Joe is any boy in the Nation's uniform, and Joe is really doing a job.

Joe is the little marine about whom General Eichelberger told us; the one in a Guadalcanal fox hole over which a Jap tank rolled. So Joe took a hand grenade, pulled the pin, jammed it into the tread of that Jap tank, and ducked as far down into his fox-hole as he could, content to be blown to glory, so long as he also blew the tread off that tank and immobilized it for his buddies. By the high grace of Providence he wasn't torn to shreds. He lived to get his medal and have his mother or sweetheart walk proudly beside him where all the neighbors could see that he really was the most wonderful boy in the world.

Joe is General Eichelberger, too. He is Captain Callaghan on the *San Francisco*, dying amid the shambles of that cruiser's bridge, but gasping: "Get the big ones first." Joe is New Orleans' Commander Gilmore, wounded on the deck of his submarine, directing his men to "Take her down." because that would save their ship and their lives, even at cost of his own. Joe is a pilot named Kelly and a bombardier named Levin, who dropped the bombs down the *Haruna's* stack. Joe is Lieutenant Mason, methodically ticking out "Sighted sub, sank same."

Joe is all the boys who came back at Kasserine Pass and took Long Stop Hill; all the boys who, with inadequate protection against the weather, cleaned the Japs out of Attu. Joe is Captain Foss bagging his twenty-sixth enemy plane and General McNair wounded in Tunisia and Private Doakes sweating through the entanglements of a Ranger course somewhere in the United States, with live machine gun bullets snapping along a few inches above him and umpires throwing sticks of dynamite into the mud beside him just to get him used to the thud and shock of nearby explosions.

Yes, and Joe is all our fighting men who, with their allies, only this morning received word from the Axis fortress of Pantelleria that its garrison could stand no more of the unremitting bombardment that rained destruction upon them from sea and sky for 19 days, while the land forces awaited their turn to close in for the final phase of assault.

Joe is keen and self-reliant and resourceful, and he rises to heights of splendid courage beyond belief. In the field he takes the good with the bad, and if his rations don't reach him he'll keep going without food, and if he's hopelessly outnumbered, as he was on Wake Island, he'll broadcast a message like "Send us more Japs."

He can turn his hand to almost any job, because he's the kid who used to fix his flivver with a bit of baling wire or twine, and in almost any emergency he'll somehow contrive to make strap and buckle meet. He knows how to do practically anything but quit. Not that he's a chest-thumper sounding off about the inferiority of other races and other ideas. He isn't. But what he starts he finishes. You'll never find him asking how to get to the place where you surrender, as did certain others, who had long been taught to sneer at the decadence of democracy.

That's an amazing thing, when you stop to think about it, because when he still wore civvies, Joe wasn't really such a much. Maybe he'd played a bit of sandlot baseball as a kid, but a good part of his interest in life after that lay in jitterbugging, strutting his stuff as a drugstore cowboy, squiring his girl to the movies, and bearing up patiently through the tedium of a Sunday sermon. He ate too many sweets, and he slept too little, and occasionally he drank a lot more than was good for him. He regarded the family car as his personal property and drove it with reckless disregard of all the laws of man and common sense.

As a civilian, therefore, he was often a nuisance and became the subject of many Jeremiads about the younger generation. Remaining a civilian, he might have held up his employer for as much pay as possible in return for as little effort as he could get away with; he might just as blandly have chiseled a couple of gallons of nonhighway

gas to supplement his A card, and he could have lent a ready ear to anyone who whispered: "Psssst! Buddy, I know a place where you can buy a good steak and no coupons asked."

But strip him of his bizarre zoot suit, take him out from behind the ribbon counter, the lathe, or the adding machine, put him into a uniform, and let a harsh-voiced sergeant push him around a bit, and behold: In place of the drugstore cowboy we have Joe. Our Joe. The lad who walked over the Owen Stanley Mountains all the way from Port Moresby to Buna Mission, and God help the Japs that tried to stop him. The lad that landed at Casablanca and wound up at Cape Bon singing the equivocal ballad of Dirty Gertie from Bizerte, and saying the Afrika Korps looked more like an Africa corpse to him. The lad that covered the ocean floor with the wreckage of Jap ships at the Bismarck Sea. The lad, who was severely injured in the crash of his doomed plane after the raid on Tokyo, but who kept his balance even when later he heard at one and the same time a surgeon's saw rasping through the bone of his thigh and the voice of a broadcaster telling the world that "not a plane was lost during the Tokyo raid."

So you see there's a very wonderful side to our national picture, too. And here is a heartening thought for the future. Joe is pretty strong. There will be 10,000,000 or more of him before this thing is over, and whether we like it or not (we, who griped about rationing, and caused stoppages in vital war work by our strikes, and played political ducks and drakes while Joe was fighting and dying; we, who tried to cover it all up by buying a few War bonds and making a lot of tub-thumping speeches) Joe's going to take over the management of this country of ours. From rear-rank buck to 4-star general, from seaman to admiral, Joe's been where he had to get things done quickly and right, whenever and wherever they needed doing. He's had to learn not to fall for booby traps, and he's taken no nonsense from those who tried to stop him, even though they had guns and grenades and ack-ack—and he'll take precious little nonsense when things need doing here at home. Therein lies our hope for the future.

No; the picture is not all dark; only some parts of it. As concerns the rest, Joe is on the job out yonder somewhere. One of these days—and under God's good providence may that be soon—Joe's coming back. When he does, a lot of dusty corners, cobwebbed garrets, and noisome rat holes are due for a cleaning. Having found himself, Joe knows how to get things done by doing them; not by sitting around and whining that somebody ought to do them for him. One of these days Joe, who is now on the job so magnificently out yonder somewhere, will be on the job here at home, and that will be a great day in the morning.—H. B. D.

Two Decisions This Country Must Make

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan of the Washington Post of June 13, 1943:

TWO DECISIONS THIS COUNTRY MUST MAKE

(By Mark Sullivan)

Very earnestly I ask readers to follow what is here set down. It bears doubly on two vital decisions about to be made by this country. I struggle to make it clear—for there is tragic lack of understanding of the principle involved.

We are asked to join some kind of union or federation of nations. The specific proposals vary, but of necessity all are alike in their fundamental structure. For convenience, as one out of many, I take the one proposed by former Gov. Harold E. Stassen, of Minnesota. He calls his federation the United Nations of the World.

In any such union there must be, as a matter of course, a central governmental body—a parliament or congress. As Mr. Stassen puts it, "The key governmental device should be a single-house parliament."

The parliament, in Mr. Stassen's plan or any other, would be made up of representatives from the various nations. There would be representatives from the United States, from Britain, from Russia, from China—from all the nations, big or little, who now or later will make up the United Nation's congress.

HOW CHOSEN?

Then comes the next question, though this is not really a question at all—everybody knows what the answer must be. How shall the members of the United Nation's parliament or congress be selected? How shall the representatives from each nation be chosen?

The answer is, Representatives from each nation must be selected by that nation. We in the United States will select our representatives, Britain will select hers, Russia hers, China hers.

So far everybody is agreed. Each nation will select its own representatives.

But by just what method shall each nation choose its representatives? The answer is each nation would choose its representatives by the method it prefers.

Governor Stassen suggests one method, and undoubtedly this is the method we would follow. He says: "The representation in the parliament would be selected in each nation in general accordance with the means by which the people select the members of their own legislative body." We in America would select our representatives by popular vote, the same as we elect Members of our own Congress at Washington. But other nations might have other ways. Britain, no doubt, would choose her representatives the same way we would, by popular vote, the same as she selects members of her own Parliament.

ABOUT THE OTHERS

But some nations don't have parliaments or congresses and don't have popular votes in our sense—Russia, for example, and China. Russia might want to select her representatives by appointment, or on the basis of trades and occupations. In any event, whatever method Russia chooses for selecting her representatives would be O. K. with us. We would not dream of interfering. And the same as to other nations.

All we insist on—indeed, we don't insist on it, we take it for granted—is that we select our representatives to the United Nations congress in the way we choose here at home, free from interference or dictation by the United Nations congress.

At this point the reader may say I am making much of nothing. The reader may say, of course, we will select our representatives in our own way. Of course, the United Nations congress would never dream of denying us that right.

PARALLEL CASE

Very well, I now turn to a bit of American history, past and immediately before us. Here in America many years ago we set up a Union, a Federation of States, to be called the United States of America.

The founders faced the same problems that must be faced by those who propose a United Nations of the World—including this problem of how representatives from the States to the Congress should be selected. The founders settled this and wrote it into the Constitution in the following words: "The House of Representatives shall be composed of Members chosen * * * by the people of the several States; and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature." That is, each State was given the exclusive function of fixing qualifications for voters.

ATTACK ON STATES

Nevertheless, just last month in Congress was begun an attempt to take this function away from the States. The attempt is made in the form of a bill forbidding States to have a poll-tax qualification. And, of course, if Congress can forbid one qualification it can forbid all.

If this attempt succeeds, it forces us to consider a conclusion: This country ought never to join any United Nations of the World—because the time may come when the congress of that United Nations may tell us what shall be the qualifications of voters within the United States.

The better conclusion is to stop the attempt by our Congress to dictate to States the qualifications of voters. Thus we would respect the principle that every member of any federation—our own United States or the United Nations of the World—should have exclusively the function of fixing qualifications of voters.

There Is a Remedy To Avert Disaster

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HOFFMAN. Mr. Speaker, an administration which insists we can fight a war all over the world and at the same time feed everyone except our enemies, is due for a rude awakening. Unfortunately, we here in America must pay and suffer for the foolish policies and acts of the new dealers. When they are hungry, we shall be hungry.

For 10 years and more, the President and his advisers have been in complete charge of the policy-making executive department, of the legislative department—the Congress—and to a great extent of the judicial department of this Government. He has had all the money and all the power for which he asked.

The farmers were told what and how much of this, that and the other they should grow, how many pigs they should kill, how many they should raise and what price they should charge for various farm products. President Roosevelt and his agents determine how much of this, that, and the other we give and ship to foreign nations. He says we are to free the world from want; that we are to feed the world. But he forgets that, to do that, our workers, our people, must first feed themselves.

A continuation of his policies means a food shortage. About that there is no doubt. Read this wire, which is typical of hundreds of protests:

Congressman CLARE E. HOFFMAN:

We use 1,000 bushels of corn in our two feed plants daily. Have less than 1 week's supply. Unable to purchase any corn. We furnish feed for approximately one-half million laying hens and other livestock. Michigan Elevator Exchange, with many carload orders on hand are unable to purchase any corn. Situation critical. Must have immediate release. Important you make every effort to have Michigan declared an emergency State to receive corn from Commodity Credit Corporation.

THE HAMILTON FARM BUREAU.

Telephoned Commodity Credit Corporation and was told that while there was plenty of corn in the country, they could not do anything for Michigan; that they knew of no way to get us corn. Was then advised that feeders of poultry and stock, including cows, were in no worse situation than were the automobile dealers who were forced out of business. My reply to that was that, while we might be able to do without automobiles as we did not eat them, we must have eggs, poultry, dairy products, and beef. The suggestion got a laugh and a few swear words but no corn.

So whether the Government, which has millions of bushels of corn and wheat, intends to let your poultry starve, create a shortage of eggs and poultry, the cattle of Michigan go without feed, I do not know.

Representatives of canners from all over the country, including many from Michigan, are here today. They are losing employees because higher wages are paid in war industries. They want to pay 15 cents an hour more, but to date have been denied that privilege by this administration.

In some instances, canners are given a ceiling price which does not equal the cost of production. In other cases, the administration refuses to name a ceiling price and the canners, not knowing at what price they may be permitted to sell the finished product, are afraid to enter into contracts to pay a fair price to the grower for his vegetables and fruit.

How much would you pay for, say, asparagus, or, later, cherries, strawberries, pears, or peaches to put into cans if you were told that the price at which you could sell the canned product might be less than what you paid for what went into the cans, to say nothing of the cost of handling it?

Knowing that hundreds of thousands of acres of formerly cultivated land are idle; that farm labor is almost nonexistent; that farm machinery is scarce; that the rains have held back the planting of crops, to me disaster on the home front, which will inevitably affect the fighting forces, is right on our doorstep.

THE REMEDY

But, you say, what can we do about it? This administration can kick out those incompetents who are fixing prices, rules, and regulations for rationing; who are responsible for excessive purchasing and hoarding by various Government agencies, and bring here to Washington and place in control of the Nation's civilian production businessmen and industrialists who have demonstrated—yes, I mean demonstrated—their ability to produce, and who can and will bring production.

Unless the administration gets rid of its professors, its New Deal planners, and returns this Government to representatives of the people who, in the years gone by, have fed and clothed us, our people will be hungry and without the food to satisfy that hunger.

One way to bring about that change is to quit pussyfooting; get rid of the notion that this administration can do no wrong; get the facts and then, on every possible occasion, demand that a change be made. If the protest is loud and insistent enough, you will get action, for even a New Deal planner may be brought to realize that, if the baby chicks cannot be fed, he will not get any eggs from them next December; that, if the cows go dry or are killed for beef, there will be neither butter nor meat at Christmas time, and a new dealer sure likes to eat.

A Letter From Detroit

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by David Lawrence, from the United States News of June 11, 1943:

A LETTER FROM DETROIT—HOW THE STRAIN OF WAR IS AFFECTING MANAGEMENT AND WORKERS—EFFECTS OF BUREAUCRACY ON WAR WORK—THE NEED FOR BETTER UNDERSTANDING AT WASHINGTON AND ALSO FOR NATIONAL RECONCILIATION

(By David Lawrence)

There came to hand last week a letter from a Christian clergyman in Detroit. He has an exceptional opportunity to know at first hand something about the personal or human problems that the war is creating. He knows of the irritations and strain that face management and workers. He looks sympathetically on all classes, and yet he speaks with the compelling urge of truth about the effect that the Washington red tape and bureaucracy is having on the actual day-by-day life of the men who must bear the huge burden of war production set for them. He writes:

"The death of Edsel Ford at the age of 49 is a sign of a danger to the war effort which may already be more serious than the great strikes in his home city Detroit and in Akron. Behind the professionally bare statements of his physicians, it would seem that the stark facts are that this head of the world's greatest industrial empire died of overwork. Pushing himself to high pressure work for 16 and 18 hours a day after a serious operation for ulcers of the stomach and carrying on despite the pleas of his physicians and family to stop was certainly unwise, but his death may bring to light a serious menace to our hope to victory. That threat is the overwork of management.

"I am a clergyman. I bury these men past 45 who literally die at their desks. I have a half-dozen of these executives on my sick list now. They are all men who are pushing themselves beyond human endurance. They all say the same thing: 'How are we going to get the stuff out?' They have forgotten about the normal working day. Nothing is in their minds about how long they should work. They all say another thing, too—'if it was not for the buck-passing and the bungling in Washington perhaps we could get something done.' And too many of these men are going down the valley. They are not saints. And they are not the only people who worry about the war. But their going will make a lot of the rest of us worry because they represent the shrewd, irreplaceable element of management—that hidden factor which is the secret of dynamic Detroit.

"To be sure there are many workers who are also going down from overwork. To these, too, I minister. Strangely enough their complaint is the same: 'How can we get the stuff out, and why doesn't Washington give us a break?'

"These men are usually the old-timers, the men who were brought up in the stern school of hire-and-fire. Strangely enough these men who have the greatest cause for resentment against the management have the least resentment and have the most personal drive for production. These oldsters who went through the seasonal lay-offs, the factory politics, the ruthlessness and uncertainty of the great production days in the auto industry, are the men who today are taking the war effort most seriously for the simple reason that they are the men who know what a priceless asset good management is.

"As for many of the new workers, well, they have not gone through the fire. They are confused not only by the newness and the vastness of life here but by the strange currents flowing about their feet. The recent strikes here are an indication of the thing that upsets a lot of the new workers and robs them of the fight to win.

"It should be noted that the strikes broke out here in Detroit less than 3 weeks after Browder's visit. He was pardoned by the President for the cause of unity but his visit here was certainly followed by anything else than unity. The strikes here are the attempt of the Communists to unseat the present Congress of Industrial Organizations' leadership, which, despite public opinion, is definitely not Red. Though Stalin dissolved the Comintern, the American Communist has definitely made his choice that between even the cause of his spiritual homeland Russia and the cause of world revolution he will be a revolutionist. We have the strange spectacle here of good Catholics pleading with Reds to increase war production and help Russia, and that is a matter of record in the reliable public press. Perhaps the Communists figured that Russia was going along so well that a slight interruption in production of war goods could be risked for the sake of control of the unions.

"What does the average worker think about the whole thing? Well, he is pretty much confused and a bit disgusted, too. You see, the average worker has had a hard time finding out what was cooking. The word was passed along to him that he had better not report to work or else—that the companies were double-crossing him and that there had to be a show-down. So he obeyed orders and went out, only to discover that the union did not want him to go out, after all. So he went down and flipped a few beers and worked in his Victory garden until the thing blew over.

"Confusion is the main strategy of the Communists, and they certainly got the workers confused this time. Hundreds of

union leaders are doing as Edsel Ford did, working day and night to get the men back to work. These leaders, too, find out that as managers of the destiny of labor they must forget the 8-hour day for themselves and must fight 'to get out the stuff.' It is strange to see the union leaders spending 18 hours a day fighting for the 8-hour day.

"So here we are in Detroit. The men in management are war casualties. The men who manage labor are overworked. The average worker is either working under pressure or he is waiting for somebody to make up their mind about some rule or other or to get some stuff to him. Meanwhile, the struggle goes on for the leadership of the labor movement and with it the domination of our Nation.

"Now, why doesn't Washington do something? Well, if you have got about four drinks under your own belt, the drunk will not take you seriously as you tell him the perils of alcohol. The child who knows his parents cheated on ration coupons will not take seriously the lecture of a parent about classroom cribbing. So it is with Washington. Some of the men there seem to be more preoccupied with personal power and privilege and with the advancement of political philosophies than they are with winning the war. So when they come on to Detroit—and they do come on in droves—the worker says 'baloney,' or words to that effect.

"The need is for two things—national honesty and national reconciliation. In this, Washington can lead. Perhaps the leadership will come out of labor. Perhaps it will come from management. But we can all hope that we have come to the high-water mark of confusion and that the forces of personal privilege and corrosive philosophies will be thrown back by Americans who say: 'Let's tell the truth, and let's get along with each other.' For a decade now we have been taught to hate each other, to suspect each other. Now we have got to be honest and work together for victory. America is what matters now, and a new national honesty is our most pressing need."

What a penetrating slogan! National honesty and national reconciliation! There we have in a sentence the crying need of our times.

Honesty is not just an abstract virtue—like a philosophy or dogma. It is a challenge to the individual—a test of his everyday behavior in anything and everything in relation to his fellow man.

Honesty for management is not merely a matter of keeping books straight, or obeying the laws governing fraud. It means appraising truly and fairly the requests and needs of workers. It means a suppression of selfishness and greed for management, directors, stockholders. It means more than that—an examination of conscience. For honesty is not a thing to be searched for outside. Every individual knows within his own heart what is or is not honest.

Honesty for workers and their union leaders is of the same pattern. To what extent is a labor union demand a mere expression of political desire for gain in holding a union office? To what extent is it a rationalized desire for self-aggrandizement at the expense of the public? The standard is not difficult to apply. Each individual knows that standard and can measure his conduct by it—provided he feels the urge.

How shall that urge be stimulated? The church can do much, but laymen within it can do more. In a crisis like the present when human lives are being sacrificed, the duty of all of us is to reexamine our own acts in the light of those sacrifices. Are we who remain at home doing what we should to make this a better world or, to put it more concretely, are we doing anything within even our own small orbit of action to spread the standards of honesty and unselfishness?

National reconciliation—how far-reaching that need is one can learn just by reading the headlines about events inside and outside of Washington. The bickerings of governmental executives with each other, the friction that comes from misuse of power for personal prestige or ambition, the conflicts of people with one another in the field of business and industry—these are all in need of a spirit of reconciliation.

Reconciliation can develop best if there is an atmosphere of spiritual responsibility. This is not simply a matter of ritual or religious observance but primarily a problem of individual regeneration. The goals may seem far distant. Passions and bitterness get the better of us too often. Resentments gnaw within us like cancers just because our precious possession—pride—is hurt. We strive to overcome this. We falter on the way. But it is better to falter, to stumble forward, than never to move at all.

Yes, there is great need for national honesty and national reconciliation. What Detroit needs every city and town in the United States needs, too. The task is up to the individual and his conscience.

Farewell to Liberty

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HOFFMAN. Mr. Speaker, when a writer with the ability, the experience, the unquestioned patriotism of David Lawrence, publisher of the United States News, writes an editorial like the following, there is no need for Republicans or anyone else to offer apology for criticism of the New Deal, to any of the smear artists, the warmongers, or the money changers, who are so determined that we shall surrender our independence, forsake democracy, establish a dictatorship, and become a puppet in a superworld organization, who intend to play world politics at our expense.

Right here at home is a task worthy of the best efforts of every one of us. The editorial is as follows:

Overseas our boys were fighting last week. Some of them were killed. Some of them were wounded. More will be killed and wounded in the months ahead.

They have been told again and again that this is a war to preserve our freedoms—our liberties.

But last week six justices appointed by President Roosevelt, constituting a majority of the Supreme Court of the United States, took away a basic liberty—the right of every citizen to be governed by laws and not by the arbitrary power of a bureaucrat, the right of every citizen to know explicitly what are the punishments incurred for violations of a statute.

Our boys are not fighting to sustain the privilege of officials in any Government agency to fix whatever punishments they please for a violation of law.

Yet the Supreme Court majority decided, in effect, that a Government agency can fix any punishment it desires although not explicitly mentioned in the statute that is broken. The precedent is fixed. The die is cast. Only a constitutional amendment can abrogate a decision of the Supreme Court. Only a change in the membership of the Court over a long period of years can reverse it.

ENCROACHING ON FUNCTIONS OF THE CONGRESS

President Roosevelt didn't like the decisions of the Supreme Court, so in 1937 he openly tried to get rid of a majority of the members of the Court sitting at that time. He didn't succeed that way, but he did succeed another way—he "packed" the Court with administrative zealots when fate gave him the chance. And today those justices are taking away one by one the rights of the citizen. The Constitution today is what the New Deal says it is. Not only has the "packed" Court begun to tell Congress what it meant when it passed legislation, but it has begun to supply missing words to the statutes, as in the Phelps-Dodge case decided April 28, 1941. This is a vicious encroachment on the legislative function. And there is no redress except by explicit prohibitions, if indeed, the Supreme Court will not capriciously rule some day that these, too, are beyond the power of Congress.

The latest case minces no words. It frankly empowers a governmental agency to select whatever punishment it pleases so long as in the judgment of that agency the punishment "effectuates the policies of the act."

Again and again in legislative history Congress has put a paragraph or provision in its statutes giving an executive agency or commission power to write the necessary regulations to carry out the purposes of the law. This has always been inserted in routine fashion, and it has always meant heretofore that clarifying rules or regulations could be promulgated provided they conformed to the meaning of the law itself. Always the penalties, on the other hand, for disobeying a law were specifically stated, and it never was assumed that additional penalties could be created by mere regulations. Indeed, previous Supreme Court decisions, and an opinion of the Attorney General under the Roosevelt administration as late as 1935, persuasively contended that no executive agency has the power to create what is known as administrative penalties.

FIAT OF AGENCIES IS SOLE BASIS FOR PENALTIES

Encouraged, however, by the Supreme Court's recent decisions and precedents, governmental agencies are imposing penalties right and left. A special committee of seven Members of the House of Representatives headed by Representative HOWARD W. SMITH of Virginia, Democrat, is at present making a comprehensive investigation of these bureaucratic penalties, and the record already completed is a startling disclosure of the manner in which the citizen has been robbed of his rights—it is an amazing story of administrative tyranny.

Let us, however, note specifically the latest decision of the Supreme Court majority—Justices Murphy, Frankfurter, Reed, Douglas, Black, and Rutledge.

The case before the Court was that of a Virginia company which was adjudged to have interfered with the rights of collective bargaining of its employees by recognizing a union the formation of which was deemed to have been encouraged by the company itself. A contract with the so-called company union was entered into and the employees received various benefits, including a new wage scale. Dues were collected by check-off, deducted by the company from wages and paid over to the union in the customary way. Not content to disestablish the union, the National Labor Relations Board ordered the dues returned in full by the company to the men without regard to whether they received any wage increases or benefits while members of the union and in the face of the admitted fact that once the union was organized it functioned properly.

The majority opinion of the Court says:

"The instant reimbursement order is not a redress for a private wrong. Like a back-pay order it does restore to the employees in some measure what was taken from them because of the company's unfair labor practices. In this, both these types of monetary awards somewhat resemble compensation for private injury, but it must be constantly remembered that both are remedies created by statute—the one explicitly and the other implicitly in the concept of effectuation of the policies of the act * * * they vindicate public, not private, rights.

"For this reason it is erroneous to characterize this reimbursement order as penal or as the adjudication of a mass tort. It is equally wrong to fetter the Board's discretion by compelling it to observe conventional common law or chancery principles in fashioning such an order, or to force it to inquire into the amount of damages actually sustained. Whether and to what extent such matters should be considered is a complex problem for the Board to decide in the light of its administrative experience and knowledge."

IS "GENERAL AUTHORITY" ALL THAT IS NEEDED?

What language is this? Since when does Congress create penalties "implicitly" and let executive agencies determine within their "administrative experience and knowledge" what punishment to inflict on the citizen? Is this America where these things are happening?

Justice Frankfurter, in his concurring opinion, carries the fiction further. He says:

"Needless to say, we have nothing to do with the wisdom of the Board's requirement that the coerced dues be restored to the employees. Our decision can go no further than that, within the framework of the general authority given it by Congress, the Board is empowered to find that when men pay dues to a company-dominated union, upon pain of forfeiting their jobs, it is the company which has in fact commanded the payment of the dues and it is the company which must make restoration."

And what is meant by the words "within the framework of the general authority" given to the Board by Ccngress?

Is it sufficient for the Court to decide cases now on the basis of "general" authority? Wasn't it Hitler who told his courts to decide cases on the basis of the "general sentiment prevailing in the communities" where the victims were tried? Isn't that a system of government by men rather than laws?

Justice Roberts, Justice Jackson, and Chief Justice Stone, in their dissenting opinion last week say in part:

"The National Labor Relations Act gives the Board no power to impose liability for any supposed injury arising out of the compulsion of employees to contribute dues to the union. Nor can the order of restitution be grounded upon any theory that although the unfair labor practice constitutes a public rather than a private wrong, the power granted to effectuate the policies of the act envisages imposition of a penalty for wrongful conduct on the part of the employer. * * *

"All the facts found in this connection relate to a time anterior to the organization of the union. There is no finding, and no facts which would justify a finding, that subsequent to the organization of the union, the employer interfered with it, dominated it, or supported it in any manner."

WORDING OF LAWS SHOULD LIMIT IMPLIED POWER

It is interesting to note that the judges on the circuit courts of appeals from one end of the country to the other in 11 separate cases involving other companies decided the same issue against the National Labor Relations Board.

What can be done about it?

Congress should insert in every statute adopted hereafter involving any grant of punitive power to administrative agencies, and in all appropriation bills passed in the future, a simple clause in language like the following:

"Nothing in this act or in any other law of the United States gives any agency or official the power to impose upon any citizen a penalty, public or private, which is not specifically prescribed in the statutes."

The time has come to play fair with the boys overseas. Instead of worrying, as did our Vice President the other day, whether Russia might be double crossed in the post-war period, let's worry a little during the war about double crossing the American people who are today making the supreme sacrifice in giving the blood of their sons to fight a war so often sloganized as a war to preserve our "four freedoms."

Gleeful Mood of Opponents of Administration Evaporates When They See Result of Acts

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Samuel Grafton:

I'D RATHER BE RIGHT—GLEEFUL MOOD OF OPPONENTS OF ADMINISTRATION EVAPORATES WHEN THEY SEE RESULT OF ACTS

(By Samuel Grafton)

A few months ago the opposition in Congress was in a gleeful temper. In fact, it was higher than a kite. During the first weeks of January the opposition fairly bubbled with plans for firing Government agencies, for cutting, dismissing, investigating, probing, blocking, and curbing.

I must report to you that a reaction has set in. In part, this is the opposition's own fault. It overplayed its hand. It hit on the device of tacking riders onto important bills, each one forbidding the use of public funds to pay the salary of a named individual, such as Robert Morss Lovett, Government secretary of the Virgin Islands.

This enabled the opposition, so long as it had a bare majority, to impeach without impeaching, without trial or formal charges. It quickly became obvious to men of good will—and there are many such in both Houses of Congress—that this bill of attainder device was extremely dangerous. If unchecked, it could some time be used even to remove Justices from the Supreme Court, or informally to dismiss a duly elected President. The Senate is making a fight against the practice, and not for love of Lovett alone.

TURNED TO AGENCIES

The opposition also turned its attention to whole agencies, as well as individuals. It led a bitter assault against the Farm Security Administration. For a time it tried to kill this bureau by the ingenious device of having the Appropriations Committee of the House refuse an appropriation, and then having the Rules Committee refuse to allow the House to restore the appropriation on the floor; thus killing the agency without debate or vote, a bill of attainder in spades. Representative LAMBERTSON, of Kansas, was active in this attempted blitz.

But again the hand was overplayed. The House Rules Committee is not exactly a rosebud, but it was shocked and refused the rule. Enough of the Farm Security Administration was saved in the House to permit the Senate to try to save the rest of it, which it is now doing.

THEIR HATE NOT SHARED

Let me once more call attention to the gleeful mood in which these blitzes were planned. These men, of whom LAMBERTSON is only an example, had so sold themselves on the theory that all America shared their hate for everything that has happened in the last 10 years that they passed far beyond the bounds of ordinary caution.

I firmly believe that they never even took a good look at the Farm Security Administration, or quite knew what they were attacking when they sailed into this agency, which helps America's farmers to buy and hold their own farms. Certainly much of Congress seemed dazed when such men as Ralph McGill, editor of the Atlanta Constitution, and such organizations as the National Catholic Rural Life Conference sprang to the agency's defense.

The opposition had talked itself into believing that its own private language, about professors and frankfurters and what not, was the common speech of the country; that the mood of its own tirades was the public mood; that to win a fight it was no longer necessary to prove a case, but only to affix a label.

DIGNITY REAPPEARS

Yet there is a certain higher dignity in handling the affairs of this Republic, which perhaps we lose at intervals, but which has a way of reappearing in moments of genuine necessity. Certainly, the opposition seems to have misread the signs. That is a serious mistake on the part of an opposition. It needs to go back and do some more homework.

The gleefulness of last January is evaporating. Somehow, in the heat of early summer, it no longer seems like a reasonable plan to attack Mr. Roosevelt by taking farms from poor farmers.

There are undoubtedly going to be changes in many of our agencies. But the great congressional discovery of 1943 is that this is going to be serious and responsible work, not to be done by a man swinging a sledge hammer with a look in his eye showing that he is out of this world.

The Political Parade

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. O'NEAL. Mr. Speaker, the Honorable SAM HOBBS of Alabama, a member of the Judiciary Committee of the House, is a deep and intelligent student of our Constitution. His viewpoint is always worthy of consideration. I ask unanimous consent to extend my remarks and include therein an article by George Rothwell Brown relative to Judge HOBBS' attitude toward the recent urgent deficiency bill:

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, June 11.—The House of Representatives has not yet won the war of

nerves against left-wing radicalism in the New Deal bureaucracy

But it has the extreme leftists among these bureaucrats as jittery as Hitler as he tries to figure out where the next blow is to fall.

The lower branch of Congress at least is standing by its guns in the drive to rid the Federal service of the key-place radicals. Quite a number of them have resigned under fire.

DEFICIENCY BILL

When the urgent deficiency bill came back to the House from conference on Tuesday the House with grim determination insisted on its provision to oust from the payroll Goodwin B. Watson and William E. Dodd, Jr., of the Federal Communications Commission staff, and Robert Morss Lovett, of the Interior Department.

This put it squarely up to the Senate to face the issue thus raised on a roll-call vote.

But an incident occurred in the House of very great significance, which will be heard from later.

Representative SAM HOBBS, of Alabama, a member of the Judiciary Committee, offered an amendment to substitute for the House provision ousting these three men by name a provision of nine paragraphs designed to accomplish the same purpose without specifically mentioning any individual.

POINT OF ORDER

Speaker RAYBURN sustained a point of order against the substitute on the ground that it was not germane. But Mr. HOBBS had the satisfaction of having his amendment read in full to the House.

It was so sound and so strongly drawn that many of Mr. HOBBS' colleagues urged him to offer his proposal as a separate bill. As Representative JOHN TABER, of New York, said:

"That is a good thing and it ought to be on the statute books."

Mr. HOBBS said he would introduce his proposition as a separate bill and, in the opinion of this writer, when he does so the House of Representatives, in its present mood, will vote to enact it into law.

While the House is going after the radicals piecemeal it realizes that the process is not a perfect one. It is like trying to pick the eggs one by one out of a shad roe.

POLICY MAKERS

If the suggestion made to the House on Tuesday by Mr. HOBBS should become law, it would drive the New Deal left-wing policy makers, who are trying to destroy the American economic system under cover of the war, into wholesale flight from Washington.

Under the Hobbs plan it would be made unlawful for anybody in the Government service to employ any person known to have been engaged in activities subversive of the United States, or who entertained a philosophy that would be destructive of the American system.

But it goes a significant step farther. It would make it unlawful for any person who has been engaged in subversive activities or who subscribes to a philosophy destructive of the American system to accept employment in the Government service.

HIGH CRIMES

The last provision of the Hobbs bill, as outlined to the House this week, expressly provides that the offenses designated would be specifically made high crimes and misdemeanors within the meaning of the Constitution.

In other words offenders in the Government service, employers as well as employees, could be dealt with by Congress in impeachment proceedings.

If this plan should become the law of this land, New Deal left wingers who have been members of Communist organizations or associates of front groups or fellow travelers would accept places in the Government service in the Washington bureaucracy at their peril.

This would nip radicalism in the bud.

Mr. HOBBS has made a constructive contribution to the burning question of the day in Washington: how to save the American political and economic systems from those in high places who are trying to destroy them.

Where Does the Reconstruction Finance Corporation Get the Money?

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. CURTIS. Mr. Speaker, many Americans have been comforted in the thought that the Congress of the United States still had the power to appropriate money. However, we find that this power of the purse is not entirely retained by Congress. The vast delegation of power to the Executive in the years gone by has carried with it this constitutional power of the Congress and it is now being exercised by others.

The Congress of the United States has not authorized the program of roll-back of prices and the payment of subsidies. Neither have we appropriated money for that purpose. Yet the program proceeds.

Mr. Speaker, the people of the United States can change the Congress. Congressmen are elected by the people and defeated by the people. Consequently, that power which is exercised by the Congress is, in effect, being exercised by the people because the people have control of the Congress. That system of government is liberalism in the truest sense. A government by boards, bureaus, and agencies which are beyond the reach of the people and which issue regulations, edicts, and directives is despotism, and is a step backward in the science of government.

Mr. Speaker, under leave to extend my remarks, I include a letter which I have written to Mr. Jesse H. Jones, of the Reconstruction Finance Corporation:

JUNE 14, 1943.

Mr. JESSE H. JONES,
Reconstruction Finance Corporation,
Washington, D. C.

DEAR MR. JONES: I am writing to ask you several questions in reference to the subsidies being paid in connection with the roll-back of prices of food products, such as butter and meat.

If I understand this subsidy business correctly, it is a sales tax in reverse. The plan in reference to butter calls for lowering the ceiling from 46 cents to 41 cents per pound. The maker of butter is to be paid the 5 cents represented by the roll-back by the United States Government. It is estimated that there will only be 12 pounds of butter per person available in 1943, so this plan can only save an individual 60 cents per year. It is not doing anything substantial for any consumer. The direct cost in subsidies will be about $90,000,000, but the cost in paying the subsidies, both to the Government and to the butter industry, will be terrific. I have not mentioned the meat subsidy plan, but the same principles are involved.

This subsidy plan is inflationary. At a time when the national income is at an all-time high and when the highest wages are being paid, this plan requires the Government to pay 5 cents of the cost on the butter that the consumer buys. This leaves more money in the consumers' hands and is definitely inflationary. To finance the plan, we must increase the national debt. That again is inflationary. Surely it was never intended that the funds of the Reconstruction Finance Corporation were to be used to finance those things which the Congress would not approve.

The Congress has not appropriated any money for this purpose, yet these subsidy programs are initiated. Does the Reconstruction Finance Corporation or any of its subsidiary corporations furnish any money, funds, or credit for the carrying on of this subsidy program? If so, from what source do you get the money? What specific laws grant you the authority to provide funds for this purpose, if funds are being provided?

As I recall, about 6 months ago, a bill passed the House which would raise the borrowing authority of the Reconstruction Finance Corporation an additional $5,000,000,000, which has never been reported out by the Senate committee. The impression was clearly given in the hearings and in the debate on the floor of the House that this was urgent; that all of the borrowing authority that the Reconstruction Finance Corporation had had been used up or obligated. It was stated that you must have this $5,000,000,000 authorization immediately. This additional authorization was not given by Congress and in view of the statement that all of your previously granted borrowing authority had been used or obligated, I am wondering where you are getting the money for the operations you have been carrying on the past 6 months and anticipate to carry on in this subsidy program.

Thanking you for an early reply to the specific questions I have raised herein, and with personal greetings, I am

Yours truly,

CARL T. CURTIS.

Peace Pattern—Western Style

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HORAN. Mr. Speaker, peace is more than a theory—or a beautiful dream. It is a darned practical problem that you have to live with. Out West last week there developed a war between the States over water rights, and to the hearing held at Kalispell, Mont., went Rufus Woods, of Wenatchee, Wash. Woods is one of the Nation's well-known editors and publishers and a member of Washington State's progressive Columbia Basin Commission. He went to the meeting inspired with a determination to work some order out of chaos, to bring good will where division had been effected. He went, convinced that no man or peoples should exploit another.

He said:

We unite with you in the general policy that neither Idaho nor Montana should be despoiled in any way in the interests of those farther down the river.

Here is his colorful report, run in his own column in the Wenatchee Daily World:

THE CONFERENCE AT KALISPELL

(By Rufus Woods)

KALISPELL.—Here we are at the Kalispell conference called by the Bonneville administration and the United States Army engineers, to discuss the raising of the waters of Flathead Lake. I have never been in any meeting like it. The people of this community have been churned to a frenzy. I came over as a representative of the Columbia Basin Commission and so far as I know, I am the only man from the State of Washington.

I had just gotten here, and I went down to get a little something to eat, when two of the men turned on me savagely, as though every person downstream were an enemy.

I just heard in the hotel one man say: "You just as well get your guns ready." I thought he was joking, but I find now that some are ready to go to that extreme. Every man from downstream is looked upon as an enemy. The report has been put out that the Grand Coulee Dam is a flat failure. The Daily Missoulian is in this morning with an editorial entitled, "The Fight Begins." It says: "The Federal Power Commission, backed by the Bonneville authorities, has told us jus what price it expects Montana to pay to make good a tremendous engineering mistake."

There has been no engineering mistake on Grand Coulee Dam, but that report has been put around most assiduously. The charge is made here, too, to the newspapers, that the proposed storage is in behalf of a gang of speculators downstream.

What those of us in the State of Washington are most vitally concerned over is the attitude of the people of western Montana. Charges were made on the floor that the people downstream are trying to loot the Montana country in behalf of the country downstream.

The whole picture as it presents itself so far seems to have been an attempt to set the people of Montana against the people downstream and a successful job has been done in that regard. I do not know of anybody wishing to take anything away from Montana nor Idaho, for the benefit of the State of Washington.

All the business houses of the city are closed today, Thursday, and delegates are here from every important point in western Montana. Some of the bitterest words were hurled at Spokane. In order to be helpful to the people of Kalispell, a report was sent for the record that the raising of the water in Kalispell would befoul the domestic water supply of the Columbia. Instead of accepting it as an effort to be helpful, Winkler, chairman of the local committee, declared that they were cutting off Spokane as a wholesale point.

In 40 years of newspaper experience, I have seen some towns stirred up from time to time, but never anything compared to this.

Back of it all there is a tremendous battle against the Bonneville Administration. The Montana Power Co., which covers all this section of the State, is doing most of the engineering from outside points, as far as this conference is concerned. From an outside observer, I see little likelihood of the Army engineers raising the waters of the lake—at least not very much.

In fact, it is a real field day for the Montana Power Co. This company has taken a legitimate local issue, viz, that of opposing the raising of the waters of the lake, and organized all of western Montana against it into a blast that is being bannered in streaming headlines of the newspapers of Montana.

And Grand Coulee and the people of the States of Washington and Oregon are coming for their measure of castigation—none of which is deserved.

There isn't a ghost of show that the waters of Flathead Lake will be raised the 17 feet asked for, in the face of local opposition.

The idea of having a storage along the headwaters of the Columbia is to let that flow out in the winter time and level off the flow of the Columbia. The Grand Coulee is built with a knowledge and plan of development, approximately 1,000,000 kilowatts of firm or continuous and 1,000,000 kilowatts of summer or secondary power, due to high water in the summertime. The excessive demands for power, especially for electrometallurgical processing, has created an unusual demand for the firm power. Then there is another factor which enters the situation. This is the load factor. For example, the Wenatchee World uses 50 to 60 horsepower to run its big press, but this runs less than 2 hours a day, so the load factor is low, but for electro metallurgical processes, the load factor is 100 percent—day and night, month in and month out.

KALISPELL AND CENTRAL WASHINGTON

We have many things in common with Kalispell, Mont. They have the Rockies as their background—and the rivers run westerly to the Columbia.

We have the Cascades and our rivers run easterly to the Columbia.

They have a rich background in those Rockies, as we have a rich background in those Cascades of ours.

They have 60 lakes—and so have we, 200 of them in Chelan and Okanogan Counties.

They have irrigated land and nonirrigated land. So have we.

They have lumber. So have we.

They have livestock—cattle and sheep. So have we.

But most important for the future is this power of the Columbia and its tributaries.

The Columbia is the wildest big stream of the civilized world. It is the greatest asset of them all if we handle it right.

The power of the Columbia is one asset that we don't want to see mutilated. And when I say mutilated, I mean just that. For we have the most profligate nation in the history of the world.

We had heard of the prospective storage site in Montana, in Idaho, and in British Columbia—but we felt that the time for storage was a long time in the future.

Now we find that the power of Grand Coulee and Bonneville is being used at a rapid rate.

What is the proper relationship between these communities along the Columbia and those making up the upper branches of the stream? That is one of the questions which came out at the Kalispell hearing.

While not being authorized to testify at the Kalispell hearing, I did give out a statement to the Kalispell Interlake which was given prominent space. The editor had asked me to give a statement on the situation. This is what I gave the Daily Interlake:

"We unite with you on the broad policy that each of our northwest States should have some say regarding the development and subsequent control of their respective resources.

"We unite with you on the general policy that the States of Montana, Idaho, Oregon, and Washington should develop and control its dams and reservoirs. We have a marvelous region in this Northwest of ours if we properly handle these resources.

"We unite with you in the general policy that neither Idaho nor Montana should be despoiled in any way in the interests of those farther down the river.

"We challenge the report that the engineers made a monumental mistake in Grand Coulee. They didn't. Grand Coulee is something all of us may be proud of for the next 10,000 years. Under the comprehensive report by the United States Army engineers, Grand Coulee has approximately 1,000,000 kilowatts of prime or continuous power, and 1,000,000 of secondary or summer power. That has been borne out by actual experience. The demand for power in the Northwest has grown far beyond what could have been expected.

"We unite with you from Montana, Idaho, and Oregon on a general policy of decentralization. Not only should these dams be built back up in these mountains but there should be developed industrial plants to go with them."

While all the rest of the newspaper men of the Northwest have been sleeping on their arms, Ashley E. Holden in the Spokesman Review has gone gunning for the post-war capital of the world. And he is going to locate it in Spokane. And has he some good arguments for it? In the first place the post-war capital should be in the United States. In the next place China is to be a place of increasing importance.

But the trump card which he pulls from out of his accoutrement bag is the air map of the world, which shows that Spokane is right where it ought to be. Then the problems of tomorrow are going to be in the Pacific primarily. And Spokane is larger than Geneva.

Blast my britches, if Ashley Holden hasn't pulled a whopper this time! But remember that anything is possible in this amazing age. More fantastic things have happened than dreaming a world capital out of Spokane. I hereby enlist as a private under Ashley, commander in chief. We invite the balance of the newspaper gang to fall in.

Verily "your old men shall dream dreams, your young men shall see visions."

John F. Stevens, the man who found Stevens Pass, died the other day. He was one of the most interesting characters operating in the Northwest 50 years ago and more. He was one of the interesting men with whom I could never catch up. I wanted to know and talk with John F. Stevens. I tried to trail him down. I found he was in Baltimore and went there in order to have a visit. But I missed him. Now, at the age of 90 he has passed.

The survey for the Great Northern Railway from Montana west was headed up by John F. Stevens. There was no way to get through the Rockies except by going through Canada or through southern Montana where was located the Northern Pacific Railroad. But in 1889 Mr. Stevens discovered Marias Pass.

He was up against a hard proposition when they came to the wall of the Cascades. He covered 45,000 square miles before finding Stevens Pass.

He was chief engineer of Panama Canal for 2 years. It was he who laid out the program of construction for that canal. He was one of the builders of the Canadian Pacific. He was chief engineer for James J. Hill for many years. When the World War came, he headed a railway mission to help rebuild the railroads of Siberia. At the time the Great Northern 8-mile tunnel under Stevens Pass was opened in 1929, he was declared the greatest living engineer.

As I ruminate over the meeting in Kalispell, the whole scene opens out to me. I went to Kalispell the day before the conference over storing the water in Flathead Lake. How some of those men snorted at me as they found I lived down river.

In that Kalispell meeting we had most everything. There was public power and private power; there was anti-New Deal mostly, but some of the other—anti-Washington, D. C.; there was Bonneville, but nearly all anti-Bonneville; there was Montana and Washington State, but mostly anti-Washington and anti-Oregon; there was anti-Grand Coulee aplenty; that anti-Grand Coulee and Bonneville promoted by Montana power interests backlashed against the power companies while the folks cheered for reservoir sites back in the mountains and power sites to go with them.

As I say, in that meeting was just about everything. In it was the love of the folks for their beautiful lake and the thought that it might be taken from them.

In that meeting, too, was the call to leave that lake alone and go back up into the mountains and create a storage at Hungry Horse, or back up to some of the other creeks or to the lakes in the mountains and store the waters there, and the call to produce the power back in those canyons; they don't want Grand Coulee Dam power or Bonneville; they want their own power—to own and control it.

Then back behind the scenes was the Montana Power Co., and the men in that concern don't want any power except that produced by private money. But the owner of the radio in Kalispell got the most riproaring applause of any, and prolonged, when he called for the development of these water powers and these storages back in these mountains.

But the program was organized to lambast the Bonneville Administration and the downstream folks "who wanted to steal the water of Montana and Idaho" and use it to develop a power empire in Washington and Oregon.

Then that attack on Grand Coulee Dam—but the day before the meeting was opened, in came the Saturday Evening Post with that enlightening article about Grand Coulee Dam and Bonneville power, taking the wind out of the sails of those who had expected to demolish the big power plants below.

Over at Kalispell they have a man whom they call "Hungry Horse" Kelly. He is editor of the Kalispell Monitor, and he certainly does have the kind of a mouthpiece which every community needs. He has been hammering away on the Hungry Horse Reservoir and Dam now for years. Someday he will get it, but the building of these dams and reservoirs in the high country will come with cooperation between Montana, Idaho, Washington, and Oregon.

Food Subsidies

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ECHO FARMS,
St. Joseph, Mo., June 8, 1943.

Hon. WILLIAM C. COLE,
House Office Building, Washington, D. C.

DEAR SIR: The recently announced rollback price proposition under the subsidy payment procedure affecting meats and certain other products will be a great handicap to the food part of our war effort. That idea is just simply another imported "ism" and is strictly foreign to the American way of life.

I charge that those who instigated it are not even sincere about it. Instead of trying to prevent inflation by a procedure of common sense, they are putting into effect a plan that simply will not work.

The subsidy feature is a procedure whereby they pay the producer less for his production and then tax the taxpayer on a higher basis to raise funds with which to reimburse the producer. This increased activity merely increases pay rolls in its final result.

Indeed, these dream sisters are favorable to a system of subsidy payment because of its regimentation and communistic features. They prefer a system whereby, for example, in order for a farmer or the packer to exist, he must cooperate with their ideas and go to them technically on his knees in order to get the subsidy.

I am writing you as farmer-producer. I have a son and a son-in-law in the service. I am convinced that they will have plenty to eat. I am not convinced that the home public will have plenty. I am, in fact, convinced that with a few more subsidy propositions, home-front supplies, including those available to pampered racketeer union leaders that throw down their spades and shovels while our soldiers plead for supplies, will be inadequate.

As an example, I recently bought a carload of steers to grass through the summer and feed in the fall. This subsidy maneuvering will cramp the packers to the extent that they can't pay the prices for beef which they would otherwise pay. They will, therefore, be forced to lower the price to the feeder. We can't trust these outfits. They encourage us to increase production, then they come along with a fool ruling that wipes away any anticipated profit and, in fact, in many cases, subjects us to losses.

We farmers went along for years during the depression through drought and insect pestilence, low prices, pig slaughter, etc. Now when there is a chance to get back a small portion of these losses and at the same time patriotically service our war-food effort and our allies, why mess up everything with ill-connected, mischievous edicts which do great harm?

Washington, sooner or later, is going to find out that the only way to bring about the desired food production goals is to let the producer make a little money or at least break even.

Yours truly,

CECIL R. MARTIN.

The "Four Freedoms"

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. PLUMLEY. Mr. Speaker, under leave granted, I am inserting by request that portion of the broadcast of Fulton Lewis, Jr., on the evening of June 2, 1943, having reference to the "four freedoms":

Last evening, ladies and gentlemen, I told you that I would have something to say tonight that was far off the beaten track of the usual news on this broadcast, a radical departure from the regular policy of reporting news developments; that it was something that must be said in the best interests of the United States of America, I believe; that it has gone much too long unsaid, and that while some of the high figures in Washington unquestionably will criticize me very loudly for saying it and will be greatly displeased, nevertheless it was going to be said tonight on this broadcast, come what may.

For more than 3 months, now, I have been expressing this thought I am about to present to you from lecture platforms all over the Nation. It has been picked up by political figures in speeches here and there, but with some of the trends in planning in Washington for the post-war period, I feel very, very strongly that the time has come when circumstances and the welfare of the Nation and the preservation of the things that American soldiers and sailors and marines are giving their lives for all over the world, those considerations demand that it have the wider audience of this radio microphone rather than the mere audience of lecture halls, even though it is not news, but rather a matter of personal opinion and editorialization on my part. And I may say that I do not want to shock you with this; I don't want to appear to be trying to be sensational. Just please hear me through with an open mind as good human beings who love this country and everything that it stands for, and then see if you don't agree.

You have heard a great deal about the "four freedoms." They have been advertised and propagandized and ballyhooed to the four corners of the earth, translated into dozens of languages, as the principles for which we are fighting this war, and more particularly they have been advertised to the four corners of the earth as the essence of Americanism and American philosophy. With a very few exceptions, most of us here in this country have swallowed those "four freedoms," hook, line, and sinker. No one has stepped up publicly to analyze them or take them apart or see whether they really do represent American philosophy; no one has challenged them; no one has ever raised so much as a murmur about them. We just let it go on being spread over the world as the spirit of our United States of America, and I frankly don't believe that they are the spirit or the philosophy of America.

Let's take them up one by one. The first two of them, freedom of religion and freedom of speech, certainly, there is no controversy about that. The little clique of master minds who conjure up these ideas behind the scenes and these trick phrases behind the scenes and do it constantly, working for tighter and tighter Government control of everything by Washington, were not the ones who thought of those first two freedoms, freedom of speech and freedom of religion. Those date back hundreds of years to strong, courageous people who came across the ocean and settled this country. Those date back to Thomas Jefferson and the other founding fathers of this American Republic. They are axiomatic now. There is no one of all the millions who are listening to this broadcast who would live in a country that does not have both of them. But what comes, then, after those first two?

What are the other two of the "four freedoms," and the only other two, the complete remainder of American philosophy as expressed in this statement? They are freedom from fear and freedom from want—two very nice luxuries if you are able to afford them. But it wasn't freedom from fear and freedom from want that made this Nation what it is, or what made the American people the strongest people on the face of the earth. On the contrary, it actually was fear and

want themselves and the struggle of individual men to make themselves free of both things; that is what settled New England, settled Virginia, that is what sent men across the flooded lands of Ohio to settle the Northwest country and then cross the plains and the Rocky Mountains in covered wagons to California, and it was the work that they did trying to achieve that freedom from want and freedom from fear that produced strong arms and clear heads, and fine, strong children that carried on after them. It was not given to them by any government. Let me remind you that Joe Louis didn't become the most famous and the most powerful fighter in the world, or in world history, by lying in bed 24 hours a day and having a government of college economists in Washington serve him his meals on a tray.

If you want to consider these "four freedoms" to be a political vote-getting document, perhaps those last two are all right. If you want to represent them as real American principle, I am afraid not. They smack too much of a government pretending to be all things to all people. Frankly, they smack too much of the old Works Progress Administration hand-out system: You support my kind of government and that government will give you this, freedom from want.

That, ladies and gentlemen, is a straight case of selling gold bricks. No government can give its people freedom from want, because the very people themselves are the Government, and the only place the Government can get the materials, the food, and the clothing and the shoes and the whatnot with which to provide that freedom from want which they promise is from the very selfsame people to whom they are promising to give it. That is a humbug game in the most virulent sense of the word, and if any private citizen were to practice a similar game on his neighbors he would be jailed for obtaining money under false pretenses.

But the real tragedy, the really frightening and tragic part of this expression of Americanism as represented by the "four freedoms," is that that is where the statement of American philosophy stops. The tragedy is that the minds in Washington who conjured that very catchy idea, that very catchy phrase, and sold the idea to the President for promulgation to the entire world, those people were not even sufficiently familiar with the true philosophy of this country to include what is the real American freedom, the only thing that has made this Nation what it is, the one thing that must make it what it is in the future if we are to continue to maintain our leadership and our greatness in the world, the fifth freedom, which is freedom of individual enterprise, freedom of initiative, freedom to work a little harder and longer than your neighbor does, and therefore to have a better home than he has; freedom to cut the lawn a little more often and have the lawn look better; freedom to climb up out of the level of the rest of the world and build a better standard of living; freedom to raise your children with more advantages, give them a better education than you yourself had; in other words, freedom to rise in the world if you are willing to do the work to achieve that rise.

And as a corollary, of course, there goes along with that always the obligation of every man to row his own weight in the boat, to do his share in the rebuilding of America, or if he refuses to do so, to drift aimlessly around in the middle of the ocean, washed by the tides.

That is the fifth freedom, ladies and gentlemen, freedom of individual enterprise. That is something that Government can give to its people honestly. Without it there can be no tomorrow for this country as we have known this country in the past. And to me it is shocking and frightening in the extreme that those in Washington who conceived the "four freedoms" didn't have sufficient acquaintanceship with real Americanism to have included in their list the most important and the most vital freedom of all.

We hear a great deal, ladies and gentlemen, recently, about Vice President WALLACE'S idealistic proposal for a quart of milk on every doorstep in Algeria and Morocco and everywhere else after the war is over. That's all very well, but I don't believe in my heart that that is what the 10,000,000 American men who are fighting this war for us are fighting it for. I know very well that that is not what the ones I know are fighting it for. The thing that they are risking their lives for on 10 different fronts throughout every corner of the globe, the thing that they are risking their lives for is the right to have a doorstep of their own right back here in their beloved United States of America after this war is over, with a wife and children that they love behind that doorstep and the right to have a quart of pasteurized milk or any other kind of milk on that doorstep every morning if they are willing to earn the money to pay the milkman.

Crackerland in Washington

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ralph Smith from the Atlanta Journal of June 13, 1943:

[From the Atlanta Journal of June 13, 1943]

CRACKERLAND IN WASHINGTON—CONFEDERATES USED FIRST LAND MINES

(By Ralph Smith)

WASHINGTON, D. C., June 12.—What is past is prologue. The verity of this oft-quoted epigram finds further confirmation in the records of the Union and Confederate Armies, as compiled by the War Department and consulted these days more often than usual—consulted by way of comparing war making 75 years ago with war making today.

A Georgia Congressman, given to research and study, Albert Sidney Camp, cites the records aforesaid in proof that the land mines employed by Rommel in his African retreat were first used by the Confederate Army in its attempt to check Sherman's march through Georgia.

"Yes," says this Cracker Congressman, "Rommel's land mines were but an improvement on the 'subterra shells' of the Confederates, manufactured at the Augusta Arsenal, the employment of which was counseled by President Jefferson Davis and Gen. G. T. Beauregard, on the eve of the resumption of Sherman's march to the sea, after the destruction of Atlanta.

"Let me read to you Gen. G. T. Beauregard's telegram to J. A. Seddon, Secretary of War of the Confederate States of America, filed at Corinth, Miss., at 7 a. m., November 18, 1864:

" 'I have just arrived on my way to Georgia. Please order immediately to General Cobb, at Macon, a large supply of Rains' subterra shells, with competent person to employ them.' "

The subterra shells were as ineffectual of their purpose as were the land mines employed by Rommel against the British Eighth Army. Sherman's army was slowed up by the land mines of those days, but he fulfilled his mission.

DAVIS URGED LAND MINES

It was perhaps on the strength of General Beauregard's telegram to Secretary of War Seddon, at Richmond, that President Jefferson Davis, on the same day—November 18, 1864—wired Gen. Howell Cobb, at Macon as follows:

"In addition to the troops of all kinds you should endeavor to get out every man who can render any service, even for a short period, and employ Negroes in obstructing roads by every means practicable. Colonel Rains, at Augusta, can furnish you with shells prepared to explode by pressure, and these will be effective to check the advance. General Hardee has, I hope, brought some reinforcements, and General Taylor will probably join you with some further aid. You have a difficult task, but will realize the necessity for the greatest exertion.

"JEFFN. DAVIS."

General Cobb was at Macon on the day the telegram was dispatched by President Davis from Richmond. Sherman's Army was at the moment in Atlanta, making preparation to continue its march to the sea.

SOUTHERN LEADERS ALARMED

The alarm revealed by President Davis' message to General Cobb typified the uneasiness of Confederate leaders over Sherman's plans, following his occupancy of Atlanta, which fell more than 2 months after the historic battle in which the Confederates won the initial victory.

The records of the period are enlightening, and are quoted herewith below:

Gen. Joe Wheeler, at Jonesboro, to Gen. John B. Hood, at Tuscumbia, Ala., November 14, 1864:

"Scouts report Fifteenth and Seventeenth Corps marched into Atlanta yesterday. Large fires have been seen in Atlanta for last 3 days. Prisoners say camp rumors are they intend marching to Augusta and Savannah; also, that Sherman is in Atlanta."

General Wheeler to General Hood, same date:

"Sherman, with Fifteenth and Twentieth Corps and Kilpatrick's Cavalry, is in Atlanta. Prisoners and citizens say camp rumors are that they will march to Augusta and Savannah. Scouts and prisoners report Sherman destroying railroad from Atlanta to Allatoona."

General Beauregard, at Tuscumbia, to Gen. S. Cooper, at Richmond, November 16, 1864, 3 p. m.:

BEAUREGARD'S PLANS

"Reports to General Wheeler indicate that Sherman is about to move with three corps from Atlanta to Augusta or Macon; thence probably to Charleston or Savannah, where a junction may be formed with enemy's fleet. The threatened attack on Wilmington in that event must be intended for Charleston. I would advise all available force which can be spared from North and South Carolina be held ready to move to defense of Augusta, or crossing of Savannah River, in conjunction with forces in State of Georgia. Should Sherman take Charleston or reach Atlantic coast, he might then reinforce Grant. General Taylor has been ordered to move with the available forces in Georgia, and assume command of all troops operating against Sherman should he move as reported."

Gen. Joe Wheeler, at Lovejoy's, via Barnesville, to Generals Bragg, Beauregard, Cobb, Hardee, Hood, Smith, Taylor, and Governor Brown, November 16, 11 a. m.:

"Scouts from enemy's rear report that Sherman left Atlanta yesterday morning with Fif-

teenth and Seventeenth Corps, and Twentieth Corps in two columns—one on Jonesborough, one on McDonough Road, cavalry on his flanks. Many houses burned in Rome, Marietta, and Atlanta; railroad bridge over Chattahoochee destroyed by enemy. Enemy advancing this morning."

BEN HILL'S STIRRING APPEAL

Confederate Senator Benjamin Harvey Hill to the people of Georgia from Richmond, Va., November 18, 1864:

"You have now the best opportunity ever yet presented to destroy the enemy. Put everything at the disposal of our generals; remove all provisions from the path of the invader, and put all obstruction in his path. Every citizen with his gun, and every Negro with his spade and ax, can do the work of a soldier. You can destroy the enemy by retarding his march. Georgians, be firm! Act promptly and fear not!"

The telegram bore the endorsement of Secretary of War Seddon.

And on the afternoon of the same day, General Beauregard, from Corinth, issued an appeal to the people of Georgia:

"Arise for the defense of your native soil! Rally round the patriotic Governor and gallant soldiers! Obstruct and destroy all roads in Sherman's front, rear, flank, and his army will soon starve in your midst! Be confident and resolute! Trust in an over-ruling Providence, and success will crown your efforts. I hasten to join you in defense of your homes and firesides."

CONGRESSMEN SPEAK, TOO

And from the members of the Confederate Congress, then in session at Richmond, to the people of Georgia, November 19, 1864:

"We have had a special conference with President Davis and the Secretary of War, and are able to assure you that they have done and are still doing all that can be done to meet the emergency that presses upon you. Let every man fly to arms! Remove your Negroes, horses, cattle, and provisions from Sherman's army, burn what you cannot carry. Burn all the bridges and block up the roads of his route. Assail the invader in front, flank, and rear, by night and by day. Let him have no rest."

The members of the delegation included Julian Hartridge, J. H. Echols, John T. Shewmake, Mark H. Blandford, George N. Lester, and James M. Smith.

Morrison Pays Tribute to Dr. G. H. Faget, Surgeon, Medical Officer in Charge of the National Leprosarium at Carville, La.

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, recently I had the privilege of visiting the Leper Colony at Carville, La., and was shown through by Dr. G. H. Faget. I wish to pay high tribute and praise to Dr. Faget and his competent staff who are in charge of this leprosarium and who are doing everything humanly possible for the comfort and interest of the lepers. They can have their own gardens and entertainment, and it is an institution of which the United States can well be proud. The thing that impressed me most was the cleanliness and efficiency and the remarkable manner in which the institution as a whole was conducted. It is truly all in all one of the great institutions of America. Our people of this great country can certainly point to it with great pride as one of our most cherished achievements for hospitalization of those who are unfortunate and find themselves in need of such care and treatment.

Leprosy is one of the oldest diseases of the human race, its origin lost in antiquity. Yet for centuries it has been one of the most misunderstood and dreaded diseases of mankind. Any person who became afflicted with leprosy was condemned to a hopeless life of isolation. Even to the present day an unjustified fear of leprosy lingers among the general public. It is admitted that the only certain means of eradicating leprosy is by segregation, but today this need not involve the hardships of former times.

The modern leprosarium such as that at Carville is a humane institution where every effort is made to permit the leading of a normal life. In 1894, the State Legislature of Louisiana passed an act creating a board of control, whose function was to provide a home for sufferers of leprosy. This body set up a leper camp on the Mississippi River, 80 miles north of New Orleans, which became the basis of the present-day leprosarium of Carville. Up until 1920, the Louisiana Leper Home was maintained by the State in conjunction with the Sisters of Charity. In 1921, the State property occupied by the leper home was purchased by the Federal Government, and the operation of the home was taken over by the United States Public Health Service. An enlargement program, completed in 1941, has made it possible to consider Carville the finest and most up-to-date leprosarium in the world.

The reservation of 350 acres is a self-sustaining community resembling a small town. A power plant generates electricity, manufactures ice, and operates a central heating system. A sand filtration plant with attached chlorinating apparatus furnishes over 200,000 gallons of drinking water a day, and both hot and cold water are available in all buildings. A large sanitary dairy with pasteurization facilities and cold storage produces 180 gallons of grade A milk a day. Cattle are also raised for beef. A well-equipped fire department is maintained. The sewage system, with its septic tanks and incinerator plant for the disposal of garbage, assures the complete sanitation of the community and protection of the neighboring public. All of the personnel are employees of the Federal Government, and there are 25 residences for doctors, administrative, clerical, mechanical, and other employees.

The hospital is a 2-story concrete building with 65 rooms and contains a first-class operating room, an X-ray department, a dental clinic, a bacteriologic and pathologic laboratory, a physiotherapy department, dressing-room clinics for men and women, offices, and examining rooms. The majority of the patients are domiciled in 16 two-story concrete buildings, each having 15 individual bedrooms on each floor as well as bathrooms, reception rooms, and front and back porches. Visitors are welcome and correspondence is unrestricted, except for the disinfection of all outgoing mail.

Occupational therapy is provided through the use of sewing rooms, music rooms, school rooms, and shops for barbering, tailoring, pressing, carpentering, shoemaking, bicycle repair, radio repair, and printing offices.

There is a spacious two-story recreation building, a motion-picture theater which gives three performances a week and a splendid ball and concert room. In addition there are smoking rooms, a canteen, and a fine library. There are two churches, one Roman Catholic and the other Protestant. Meals are served cafeteria style, with carefully planned menus since nutrition plays an important part in the fight against leprosy.

The medical, surgical, and nursing services are qualified to cope with the disease. The nursing is in the hands of 19 Sisters of Charity who are graduate nurses, some of whom have been retained by the Federal Government from the Louisiana State regime. The medical staff of 5 medical officers, 1 dentist, and 3 consultants maintains a library for research on leprosy and operates laboratories and clinics for research and treatment. The hospital serves as a center for the dissemination of knowledge on the subject of leprosy and as a postgraduate instructional center on leprosy.

During the period of State control, 338 patients were admitted. From February 1, 1921, when the Federal Government took charge, to January 1, 1942, 1,034 patients were admitted, making a total of 1,372 admissions. Of this number, 593 died in the hospital, 53 were deported, and 309 have been discharged as arrested cases and no longer a menace to public health. Fifty-eight of these have relapsed and returned for further treatment.

Patients may be admitted to Leprosarium voluntarily or by apprehension under authority of the United States Quarantine Acts, or they may be consigned to the Leprosarium by health authorities of any State, Territory, or the District of Columbia.

It is felt that there is a need for a more general education of the public in order that the unwarranted popular fear of leprosy may be replaced by a more enlightened attitude. The fact that earlier institutional care and treatment at Carville will give leprosy patients a better chance of arresting the disease must be more widely realized. As achievements in treatment grow more important, the place of the Carville Leprosarium in the history of leprosy therapy will become increasingly evident and a greater source of satisfaction to all who have been in contact with or in the service of this most remarkable and humane enterprise.

Questions and Answers on the Pay-as-You-Go Tax Bill

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 8, 1943

Mr. REED of New York. Mr. Speaker, Members are being flooded with requests for information concerning the new pay-as-you-go tax bill. With a view to offering a general explanation of the bill, I have prepared the following series of questions and answers which I believe will be helpful in replying to inquiries:

QUESTIONS AND ANSWERS ON THE CURRENT TAX PAYMENT ACT OF 1943

PART I. PURPOSE OF ACT

1. Question. What is the objective of the Current Tax Payment Act of 1943?

Answer. Primarily its objective is to set up a new system of collecting the existing individual income tax, and in so doing correct certain defects in the present method.

2. Question. What are these defects which the new law seeks to overcome?

Answer. The two principal defects are: (1) The fact that the individual income tax is now based on the income of the past year, and not on the current income out of which it is in most cases paid, and (2) the fact that the collection of the tax is not timed with the receipt of income by the taxpayer.

Under the present method of collecting the income tax the year after the income on which it is based was earned, the taxpayer is always 1 year in debt for his tax, and if he suffers a reduction in income, or loses his job, or dies, the tax debt from the prior year becomes a serious financial burden. Moreover, under the present system of collecting the tax in a single payment, or in four quarterly installments, the great majority of taxpayers who are accustomed to weekly or monthly budgeting of their income find it difficult to meet the large lump-sum payments as they become due.

3. Question. How are these defects corrected by the new law?

Answer. By providing that the individual income tax shall henceforth be assessed against current income, instead of that of the past year, and by setting up a so-called withholding system for the collection of the income tax out of pay envelopes as the income is earned.

4. Question. Does the new current-collection system apply to corporations as well as to individuals?

Answer. No; it applies only to individuals, which of course includes members of partnerships. Most corporations are already on what might be termed a pay-as-you-go basis, since they generally follow the practice of setting aside a reserve for taxes out of current earnings.

PART II. SUMMARY OF CURRENT TAX PAYMENT ACT

5. Question. What are the principal provisions of the Current Tax Payment Act?

Answer. A detailed explanation of the act is set forth further on in this analysis. In broad outline, the principal provisions are as follows:

(a) Withholding tax

Commencing July 1, employers will be required to withhold from pay envelopes 20 percent of wages and salaries in excess of certain exemptions ($624 annually for single persons, $1,248 for heads of families, and $312 for dependents). The amounts so deducted will be credited against the current income tax and Victory tax liability of those to whom the withholding applies.

(b) June 15 installment on 1942 tax liability

Since the new act does not go into effect until after the June 15 installment on the 1942 tax is due, it must in all cases be paid. (See question 61, regarding application to servicemen.) Amounts paid on the 1942 tax will be credited against the current 1943 liability.

(c) Current payment of tax not withheld at source

Those whose current tax liability will not be fully discharged by the amounts withheld at the source out of their pay envelope during the year, and those to whom the withholding does not apply, must file on September 15 a Declaration of Estimated Tax on 1943 income based on the probable income for the year and the estimated deductions. For purposes of the estimated tax the usual personal exemptions of $500 for single persons, $1,200 for married persons, and $350 for each dependent are used. Credit may be taken against the current tax liability for the amount previously paid on the 1942 tax assessment; for the amount deducted under the Victory tax withholding up to July 1; and for the amount to be deducted under the new 20 percent withholding for the balance of the year. The remaining estimated 1943 current tax liability may be paid in two installments, one-half on September 15 and the balance on December 15, 1943.

For subsequent years, the Declaration of Estimated Tax for the year must be filed on March 15, and any estimated liability over the estimated amount to be withheld at the source during the year may be paid in four quarterly installments (March 15, June 15, September 15, and December 15).

Amended declarations, showing increased or decreased liability over that previously estimated, may be filed on any of the subsequent installment dates during the year.

On March 15, following the close of each taxable year, a final and complete return must be filed, at which time any necessary adjustments will be made. The same return will contain space for the Declaration of Estimated Tax for the ensuing year.

(d) Higher liability of 1942 or 1943 to be basis of final 1943 tax

The new law provides that if the tax on 1942 income was greater than the tax on 1943 income the difference is to be added to the current 1943 tax liability. (This amounts to taxing the higher income of the 2 years, 1942 or 1943, and is one of the two so-called anti-windfall provisions.)

An exception is made in the case of servicemen, insofar as the excess of the 1942 tax over the 1943 tax is attributable to wage or salary income (so-called earned income) up to $14,000. To such extent, the excess of the 1942 tax over the 1943 tax need not be added to the serviceman's 1943 liability.

(e) Abatement of 75 percent of lesser year's tax

In order to prevent an undue doubling up of taxes as a result of the change to a current collection basis 75 percent of 1 year's tax, or the first $50 thereof, whichever amount is greater, is abated. (This results in 100-percent abatement of amounts of $50 or less. On amounts between $50 and $66.67, a flat abatement of $50 is made, since this amount is greater than 75 percent of the tax in such case.) The abatement applies to the lesser tax liability of the 2 years, 1942 or 1943.

The unabated portion of the lesser year's tax is added to the final 1943 liability but may be paid in two installments, the first of which is due March 15, 1944, and the other on March 15, 1945.

(f) Special windfall tax

In order to prevent any abatement of tax on swollen war income, it is provided that there shall be collected as a so-called windfall tax so much of the tax otherwise to be abated as exceeds a hypothetical tax on a normal year's income. The taxpayer is permitted to use as a base for determining normal income the highest income for 1937, 1938, 1939, or 1940, plus $20,000.

The amount due as a windfall tax is payable March 15, 1944, but at the election of the taxpayer may be paid in four annual installments, beginning March 15, 1945, with interest at 4 percent.

(g) Special provisions for members of the armed forces

In addition to the provision exempting them, under certain conditions, from having to pay a 1943 tax based on the higher income of 1942 or 1943, members of the armed forces are extended two other benefits under the new law: (1) All members of the armed forces, regardless of grade or rank, are permitted to exclude from gross income the first $1,500 of their service pay for 1943 and subsequent years. (This exemption is to be in addition to the regular exemption of $500 for single persons, $1,200 for heads of families, and $350 for each dependent); (2) any unpaid income-tax assessment against any member of the armed forces who dies in active service after December 7, 1941, and during the present war, is canceled.

(h) Assistant Commissioners of Internal Revenue

Section 9 of the new law provides for the appointment of two Assistant Commissioners of Internal Revenue.

(i) Extension of time for release of powers of appointment

Section 10 of the law extends until March 1, 1944, the time within which powers of appointment may be released without incurring liability for estate or gift tax.

PART III. WITHHOLDING TAX

To whom it applies

6. Question. To whom does the new withholding tax system apply?

Answer. To all employed persons, except the following:

(a) Members of the military or naval forces;

(b) Agricultural workers;

(c) Domestic servants;

(d) Casual labor not in the course of the employer's regular trade or business;

(e) Citizens or residents of the United States employed by a foreign government;

(f) Nonresident aliens, other than Canadians or Mexicans, who enter and leave the United States at frequent intervals;

(g) Such Canadians and Mexicans who enter and leave the United States at frequent intervals as may be designated under regulations to be prescribed by the Commissioner of Internal Revenue;

(h) Citizens or residents of the United States who are employed outside the United States if the major part of the services performed for the employer during the calendar year is to be performed outside the continental United States, Alaska, and Hawaii;

(i) Ministers of the gospel.

(The covered and exempt classes are substantially the same as under the present Victory tax withholding.)

7. Question. Are self-employed persons, such as small businessmen, farmers, and professional people, subject to the withholding system?

Answer. They are not.

8. Question. Does the withholding system apply to officers of corporations?

Answer. They are treated as employees of the corporation, and hence are subject to withholding.

9. Question. Does the withholding system apply to officers and employees of the Federal, State, and local governments?

Answer. Yes; including elected public officials.

10. Question. How many persons will be subject to withholding?

Answer. Probably 50,000,000 wage earners and salaried persons having income-tax or Victory-tax liability.

Withholding tax merely a collection device

11. Question. Is the 20-percent withholding tax in addition to existing taxes on income?

Answer. No; it is not an additional tax—merely a collection device. Its purpose is to collect at the source, as the income is earned, at least the major part of the current income-tax and Victory-tax liability of most wage earners and salaried persons.

Full liability collected at source in most cases

12. Question. Will the new 20-percent withholding system result in the collection of the entire current tax liability at the source in many instances?

Answer. Yes; in most instances. The 20-percent withholding rate is approximately equivalent to the combined net normal tax, surtax, and Victory tax applicable to the first $2,000 of taxable income. Hence, where the wage or salary income for the year, after all exemptions and deductions, will not exceed $2,000, the 20-percent withholding will result in the collection of the full liability at the source. (This would include gross wage or salary incomes up to approximately $2,700 in the case of single persons, and up to approximately $3,500 in the case of married men without dependents, assuming their deductions for the year are roughly 10 percent of their income.) The Treasury Department estimates that 30,000,000 out of the present 44,000,000 income-tax payers will have their full liability withheld at the source under the new collection system.

Returns

13. Question. Will persons whose full current tax liability is collected at the source have to file any returns?

Answer. They will have to file a final return for the year, which will be due the following March 15. In most instances they will not be required to file a Declaration of Estimated Tax for the current year. (See question 38, as to who must file the Declaration of Estimated Tax). On their March 15 final return they will compute their exact income and Victory-tax liability, and take credit for the amounts withheld by their employer during the year. (For the first year, 1943, they will also take credit for what has been paid toward the 1942 tax.) The liability shown on the return will in most cases vary slightly from the amounts withheld. Where the withholding exceeds the final liability, the taxpayer will be entitled to a refund or credit. If the final liability is greater than the amount withheld, the taxpayer will make up the difference at that time.

14. Question. What must a taxpayer do under the law if his full tax liability is not withheld at the source, or if he is not subject to withholding at all?

Answer. This is discussed under part IV, beginning with question 35.

Portion of total tax liability withheld at source on various incomes

15. Question. Are there any figures showing the portion of the total tax liability which will be withheld at the source in the case of wage or salary incomes of various amounts?

Answer. The following table, prepared by the Treasury Department, gives this information with respect to a married man with no dependents. It shows that in the lower brackets the withholding probably will slightly exceed 100 percent of the liability, and that as the income increases the percentage of total liability withheld at the source under the 20-percent rate decreases, falling to 80 percent at the $10,000 level and 40 percent at the $50,000 level. It is assumed for purposes of the table that the income consists entirely of wages or salary. The table follows:

Income and net Victory tax liability, portion of liability discharged by withholding over a full year under the provisions of the Current Tax Payment Act of 1943, and liability in excess of amounts withheld, for selected levels of net income

MARRIED PERSON—NO DEPENDENTS

Net income before personal exemption [1]	Estimated income tax and net Victory tax liability	Withholding over a full year		Liability in excess of amounts withheld	
		Amount [2]	Percentage of total liability	Amount	Percentage of total liability
$1,200	$21	$21	100		
$1,500	79	84	[3] 106.3	—[3] $5	(3)
$1,800	144	150	[3] 104.2	—[3] 6	(3)
$2,000	188	195	[3] 103.7	—[3] 7	(3)
$2,500	297	306	[3] 103.0	—[3] 9	(3)
$3,000	405	417	[3] 103.0	—[3] 12	(3)
$4,000	647	639	98.8	8	1.2
$5,000	894	862	96.4	32	3.6
$6,000	1,173	1,084	92.4	89	7.6
$8,000	1,780	1,528	85.8	252	14.2
$10,000	2,467	1,973	80.0	494	20.0
$15,000	4,533	3,084	68.0	1,449	32.0
$20,000	7,100	4,195	59.1	2,905	40.9
$25,000	10,035	5,306	52.9	4,729	47.1
$50,000	27,075	10,862	40.1	16,213	59.9
$100,000	68,584	21,973	32.0	46,611	68.0
$500,000	440,747	110,862	25.2	329,885	74.8

[1] Assumed to consist entirely of wages subject to withholding. Gross wages and Victory tax net income assumed to equal ten-ninths of net income, to allow for average deductions.

[2] The precise method of computation of amounts withheld is used, and it is assumed that the wage earner claims all of the personal exemption for withholding.

[3] Amount withheld over a full year exceeds total liability, as a result of the assumption that deductions for purposes of determining net income equal 10 percent of gross income.

NOTE.—For any stated amount of net income the actual deductions for any taxpayer will not necessarily be the same as the average deductions assumed in this table. Consequently, the amounts of liability withheld at source and the liabilities in excess of the amounts withheld will not necessarily be the same as those shown above.

Source: Treasury Department, Division of Tax Research, June 8, 1943.

Amounts exempt under withholding

16. Question. Does the 20 percent withholding rate apply to the total wage or salary?

Answer. No; only to the amount in excess of the special withholding exemption.

17. Question. What is the amount of the special withholding exemption?

Answer. It is $624 annually for single persons, $1,248 annually for married men and heads of families, and $312 for each dependent. However, these exemptions are only for the purpose of the withholding deduction. When a taxpayer files his tax return for the year he will compute his actual liability on the basis of the regular exemptions and deductions applicable in the case of the income tax and Victory tax.

18. Question. If a person is paid weekly, how is his withholding exemption figured?

Answer. The law contains a table of withholding exemptions by pay-roll periods, based on the family status of the employee. This table of exemptions is as follows:

Family status withholding exemption

Pay-roll period	Single person	Married person claiming whole of personal exemption for withholding or head of family	Married person claiming half of personal exemption for withholding	Married person claiming none of personal exemption for withholding	Each dependent, other than the first dependent in the case of the head of a family
Weekly	$12	$24	$12	0	$6
Biweekly	24	48	24	0	12
Semimonthly	26	52	26	0	13
Monthly	52	104	52	0	26
Quarterly	156	312	156	0	78
Semiannual	312	624	312	0	156
Annual	624	1,248	624	0	312
Daily or miscellaneous (per day of such period)	1.70	3.40	1.70	0	.85

The table shows that if a person is paid weekly, his weekly exemption is $12 if single, and $24 if married, plus $6 for each dependent. If he is paid monthly, the exemption is $52 if single, and $104 if married, plus $26 for each dependent.

Exemption of husband and wife

19. Question. Where both husband and wife are employed, what exemption do they get under the withholding system?

Answer. One spouse may claim the whole married exemption, in which event the other spouse may claim none, or they may divide it equally between them, each taking half. No other division of the exemption is permitted for purposes of the withholding tax. (However, this does not preclude the husband and wife from apportioning the regular income-tax exemption on whatever basis they choose when they file their final returns for the year.) The exemption for dependents may be taken only by the spouse who furnishes their chief support.

Provisional allowance for deductions

20. Question. Is any allowance made for deductions, such as interest payments, contributions to charity, etc., in connection with the withholding tax?

Answer. Only in a general way, but on a necessarily arbitrary basis, since it would be impracticable under a withholding system to make exact allowance in advance for the varying deductions to which individual employees might be entitled when they file their final return for the year. The withholding exemptions are in excess of the average of the income-tax exemptions and the Victory-tax exemption, and this excess makes provisional allowance for deductions pending the filing of the final return for the year, at which time the full deductions authorized by law may be taken.

Exemption certificates

21. Question. Must employers make inquiry of each employee regarding his marital status in order to know the amount of his withholding exemption?

Answer. The responsibility is put on each employee to file with his employer a so-called withholding exemption certificate, showing his marital status. Forms for such purpose will be supplied by the Bureau of Internal Revenue and distributed by employers prior to the date the new withholding tax goes into effect. By reference to these withholding exemption certificates, an employer will know how much exemption to allow each employee in computing his withholding tax.

22. Question. What if the employee fails to furnish his employer with one of these

exemption certificates or gives false information thereon?

Answer. If the employee fails to furnish the certificate, the law requires the employer to withhold 20 percent of the entire wage or salary. Therefore it is to the employee's interest to see that the certificate is filed.

Any person who supplies false or fraudulent information on his certificate, or who fails to supply information that would require an increase in the amount to be withheld, is subject to a fine of not more than $500 or imprisonment for not more than 1 year, or both.

Change in marital status

23. Question. What if the employee's marital status changes as a result of marriage, divorce, separation, death, the birth of a child, or a dependent child reaching the age of 18?

Answer. He is required to file a new exemption certificate with his employer within 10 days, showing his changed status. The new certificate takes effect with respect to the first wages paid on or after the first status determination date (January 1 or July 1) which occurs at least 30 days from the date on which the new certificate is furnished to the employer.

Effective date of withholding

24. Question. When does the new 20-percent withholding tax go into effect?

Answer. July 1.

25. Question. Will it apply to wages paid after that date but earned before July 1?

Answer. Under section 2 (d) of the act, the new withholding tax will apply to wages and salaries paid on or after July 1, 1943, even though earned before that date, with the following exception: If wages are paid during the calendar year 1943 with respect to a pay-roll period beginning before July 1, they are not subject to the 20-percent withholding, but remain subject to the 5 percent Victory tax withholding (sec. 2 (c)). Wages paid on Saturday, July 3, for example, covering the regular pay-roll period beginning June 28, would come within the exception.

Present Victory tax withholding absorbed in 20-percent rate

26. Question. What happens to the present 5-percent Victory tax withholding, which has been in effect since January 1, 1943?

Answer. Under the new law, it is discontinued as a separate withholding tax as of July 1 (except with respect to pay-roll periods beginning before July 1), and is absorbed in the new 20-percent withholding.

27. Question. Is the Victory tax liability changed in any way by the new law?

Answer. No; the only difference is that after July 1 the amount to be withheld at the source for purposes of the Victory tax will be 3 percent (the approximate net liability after allowance for the current credit) instead of 5 percent (the gross liability). The balance of the 20-percent withholding (17 percent) is to cover the minimum income-tax liability.

Minimum 3-percent withholding for Victory tax

28. Question. Is any provision made under the new withholding tax to make sure that married men with incomes too small to be subject to the regular income tax, but in excess of $624 annually (the amount of the Victory tax exemption) are subject to withholding to the extent of such Victory tax liability?

Answer. Yes. In order to make sure that the net Victory tax liability is withheld at the source, the law requires employers to withhold whichever of the following amounts are greater:

(a) 20 percent of the excess of the wage or salary over the regular withholding exemptions previously noted ($624 annually for single persons, $1,248 annually for married men, and $312 annually for each dependent); or

(b) 3 percent of the excess of the wage or salary over the Victory tax withholding exemption ($624 annually, whether single or married).

If, for example, a married man had an annual wage of $900, his exemption under the regular withholding would be greater than his salary and no withholding would result. However, his $900 annual wage exceeds the Victory tax exemption ($624) by $276, and 3 percent of this amount would be $8.28. Hence the employer would withhold on the latter basis in this case.

For the purposes of the alternative 3-percent withholding, the following table of Victory tax exemptions by pay-roll periods is used:

Pay-roll period:	*Victory tax withholding exemption*
Weekly	$12.00
Biweekly	24.00
Semimonthly	26.00
Monthly	52.00
Quarterly	156.00
Semiannual	312.00
Annual	624.00
Daily or miscellaneous (per day of such period)	1.70

Optional use of withholding tables by employers in computing wage deduction

29. Question. Are employers required to compute the actual amount of withholding tax for each employee?

Answer. No; they have the option of using the withholding tables which are set forth in the law. These tables show the tax to be deducted in each case, depending upon the pay of the employee and his marital status. There is a separate table for each of the different pay-roll periods.

The withholding tables make full allowance for the withholding exemption, and also automatically take into account the minimum 3-percent withholding in certain cases, referred to in connection with the previous question.

Where the withholding tables are used, the amount deducted may vary slightly from the amount which would be deductible if the exact computation had been made. This is due to the fact that the tax is determined for different wage brackets, and is based on the average wage within the particular bracket. This difference is shown in the following example:

Suppose the employee is a married man without dependents, who earns $50 a week. If the employer computes the withholding tax on an exact basis, he will subtract the employee's weekly exemption ($24) from his weekly pay ($50), and of the $26 difference 20 percent, or $5.20 would be withheld.

If the employer uses the withholding table applicable to weekly wage payments, he will find that the amount to be withheld in the case of a married man without dependents who earns $50 to $60 a week is $6.20. This happens to be $1 more than where the withholding is computed on an exact basis. If the weekly wage had been $55 (the average in the $50 to $60 bracket), the amount withheld would be the same under either method. If the wage had been $58, the amount withheld under the withholding table ($6.20) would be slightly less than if the exact computation were made (in which case the tax would be $6.80). No person is prejudiced by having a slightly greater or less amount withheld under the withholding tables since in any event the amount is credited toward the ultimate liability for the year.

Following are the withholding tables contained in the law, which are for the convenience of employers in performing their duties thereunder:

WITHHOLDING TABLE NO. 1.—*Weekly pay-roll period*

If the pay-roll period with respect to an employee is weekly and the wages are		And, (1) such person is a married person claiming none of personal exemption for withholding and has—									
		No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents	Eight dependents	Nine dependents
		Or, (2) such person is a married person claiming half of personal exemption for withholding and has—									
		No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents		
		Or, (3) such person is a single person and has—									
		No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents		
At least	But less than	Or, (4) such person is a married person claiming all of personal exemption for with holding and has—									
		No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents				
		Or, (5) such person is head of a family and has—									
		No dependents or one dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents				
		The amount of the tax to be withheld shall be—									
$0	$10	$1.00									
10	15	2.50	$1.30	$0.10							
15	20	3.50	2.30	1.10	$0.20	$0.20	$0.20	$0.20	$0.20	$0.20	$0.20
20	25	4.50	3.30	2.10	.90	.30	.30	.30	.30	.30	.30
25	30	5.50	4.30	3.10	1.90	.70	.50	.50	.50	.50	.50
30	40	7.00	5.80	4.60	3.40	2.20	1.00	.70	.70	.70	.70
40	50	9.00	7.80	6.60	5.40	4.20	3.00	1.80	1.00	1.00	1.00
50	60	11.00	9.80	8.60	7.40	6.20	5.00	3.80	2.60	1.40	1.30
60	70	13.00	11.80	10.60	9.40	8.20	7.00	5.80	4.60	3.40	2.20
70	80	15.00	13.80	12.60	11.40	10.20	9.00	7.80	6.60	5.40	4.20
80	90	17.00	15.80	14.60	13.40	12.20	11.00	9.80	8.60	7.40	6.20
90	100	19.00	17.80	16.60	15.40	14.20	13.00	11.80	10.60	9.40	8.20
100	110	21.00	19.80	18.60	17.40	16.20	15.00	13.80	12.60	11.40	10.20
110	120	23.00	21.80	20.60	19.40	18.20	17.00	15.80	14.60	13.40	12.20
120	130	25.00	23.80	22.60	21.40	20.20	19.00	17.80	16.60	15.40	14.20
130	140	27.00	25.80	24.60	23.40	22.20	21.00	19.80	18.60	17.40	16.20
140	150	29.00	27.80	26.60	25.40	24.20	23.00	21.80	20.60	19.40	18.20
150	160	31.00	29.80	28.60	27.40	26.20	25.00	23.80	22.60	21.40	20.20
160	170	33.00	31.80	30.60	29.40	28.20	27.00	25.80	24.60	23.40	22.20
170	180	35.00	33.80	32.60	31.40	30.20	29.00	27.80	26.60	25.40	24.20
180	190	37.00	35.80	34.60	33.40	32.20	31.00	29.80	28.60	27.40	26.20
190	200	39.00	37.80	36.60	35.40	34.20	33.00	31.80	30.60	29.40	28.20
$200 or over		20% of the excess over $200 plus									
		$40.00	$38.80	$37.60	$36.40	$35.20	$34.00	$32.80	$31.60	$30.40	$29.20

If the number of dependents is in excess of the largest number of dependents shown, the amount of tax to be withheld shall be that applicable in the case of the largest number of dependents shown reduced by $1.20 for each dependent over the largest number shown, except that in no event shall the amount to be withheld be less than 3 per centum of the excess of the median wage in the bracket in which the wages fall (or if the wages paid are $200 or over, of the excess of the wages) over $12, computed, in case such amount is not a multiple of $0.10, to the nearest multiple of $0.10.

WITHHOLDING TABLE NO. 2.—*Biweekly pay-roll period*

If the pay-roll period with respect to an employee is biweekly and the wages are		And, (1) such person is a married person claiming none of personal exemption for withholding and has—									
		No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents	Eight dependents	Nine dependents
				Or, (2) such person is a married person claiming half of personal exemption for withholding and has—							
				No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents
				Or, (3) such person is a single person and has—							
				No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents
At least	But less than					Or, (4) such person is a married person claiming all of personal exemption for withholding and has—					
						No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents
						Or, (5) such person is head of a family and has—					
						No dependents or one dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents
		The amount of tax to be withheld shall be—									
$0	$20	$2.00									
20	30	5.00	$2.60	$0.20							
30	40	7.00	4.60	2.20	$0.30	$0.30	$0.30	$0.30	$0.30	$0.30	$0.30
40	50	9.00	6.60	4.20	1.80	.60	.60	.60	.60	.60	.60
50	60	11.00	8.60	6.20	3.80	1.40	.90	.90	.90	.90	.90
60	80	14.00	11.60	9.20	6.80	4.40	2.00	1.40	1.40	1.40	1.40
80	100	18.00	15.60	13.20	10.80	8.40	6.00	3.60	2.00	2.00	2.00
100	120	22.00	19.60	17.20	14.80	12.40	10.00	7.60	5.20	2.80	2.60
120	140	26.00	23.60	21.20	18.80	16.40	14.00	11.60	9.20	6.80	4.40
140	160	30.00	27.60	25.20	22.80	20.40	18.00	15.60	13.20	10.80	8.40
160	180	34.00	31.60	29.20	26.80	24.40	22.00	19.60	17.20	14.80	12.40
180	200	38.00	35.60	33.20	30.80	28.40	26.00	23.60	21.20	18.80	16.40
200	220	42.00	39.60	37.20	34.80	32.40	30.00	27.60	25.20	22.80	20.40
220	240	46.00	43.60	41.20	38.80	36.40	34.00	31.60	29.20	26.80	24.40
240	260	50.00	47.60	45.20	42.80	40.40	38.00	35.60	33.20	30.80	28.40
260	280	54.00	51.60	49.20	46.80	44.40	42.00	39.60	37.20	34.80	32.40
280	300	58.00	55.60	53.20	50.80	48.40	46.00	43.60	41.20	38.80	36.40
300	320	62.00	59.60	57.20	54.80	52.40	50.00	47.60	45.20	42.80	40.40
320	340	66.00	63.60	61.20	58.80	56.40	54.00	51.60	49.20	46.80	44.40
340	360	70.00	67.60	65.20	62.80	60.40	58.00	55.60	53.20	50.80	48.40
360	380	74.00	71.60	69.20	66.80	64.40	62.00	59.60	57.20	54.80	52.40
380	400	78.00	75.60	73.20	70.80	68.40	66.00	63.60	61.20	58.80	56.40
$400 or over		20% of the excess over $400 plus									
		$80.00	$77.60	$75.20	$72.80	$70.40	$68.00	$65.60	$63.20	$60.80	$58.40

If the number of dependents is in excess of the largest number of dependents shown, the amount of tax to be withheld shall be that applicable in the case of the largest number of dependents shown reduced by $2.40 for each dependent over the largest number shown, except that in no event shall the amount to be withheld be less than 3 percent of the excess of the median wage in the bracket in which the wages fall (or if the wages paid are $400 or over, of the excess of the wages) over $24, computed, in case such amount is not a multiple of $0.10, to the nearest multiple of $0.10.

WITHHOLDING TABLE NO. 3.—*Semimonthly pay-roll period*

If the pay-roll period with respect to an employee is semimonthly and the wages are		And, (1) such person is a married person claiming none of personal exemption for withholding and has—									
		No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents	Eight dependents	Nine dependents
				Or, (2) such person is a married person claiming half of personal exemption for withholding and has—							
				No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents
				Or, (3) such person is a single person and has—							
				No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents	Seven dependents
						Or, (4) such person is a married person claiming all of personal exemption for withholding and has—					
						No dependents	One dependent	Two dependents	Three dependents	Four dependents	Five dependents
						Or, (5) such person is head of a family and has—					
						No dependents or one dependent	Two dependents	Three dependents	Four dependents	Five dependents	Six dependents
At least	But less than	The amount of tax to be withheld shall be—									
$0	$20	$2.00									
20	30	5.00	$2.40								
30	40	7.00	4.40	$1.80	$0.30	$0.30	$0.30	$0.30	$0.30	$0.30	$0.30
40	50	9.00	6.40	3.80	1.20	.60	.60	.60	.60	.60	.60

28	30	5.80	5.65	5.45	5.30	5.10	4.95	4.80	4.60	4.45	4.25
$30 or over		20% of the excess over $30 plus									
		$6.00	$5.85	$5.65	$5.50	$5.30	$5.15	$5.00	$4.80	$4.65	$4.45

If the number of dependents is in excess of the largest number of dependent s shown, the amount of tax to be withheld shall be that applicable in the case of the largest number of dependents shown reduced by $0.15 for each dependent over the largest number shown, except that in no event shall the amount to be withheld be less than 3 per centum of the excess of the product of the median wage in the bracket in which the wages fall and the number of days in the period (or if the wages paid are $30 or over, of the excess of the wages) over the product of $1.70 and the number of days in the period, computed, in case such amount is not a multiple of $0.05 to the nearest multiple of $0.05.

Taxpayer who paid 1942 tax in full

30. Question. Suppose a person paid his 1942 tax in full last March 15. In view of the fact that this payment is credited toward his 1943 liability, will the full withholding tax still be collected from him?

Answer. If he is otherwise subject to the withholding tax, it will be collected in full notwithstanding the fact that to do so may result in an overpayment of his tax. In such a case he will be entitled to a refund or credit on March 15, 1944, when his final return for 1943 is filed.

Responsibility of employers under withholding

31. Question. What are the responsibilities of employers under the withholding tax?

Answer. They act as collecting agents for the Government, making the deductions from pay rolls and turning the money over to the Treasury. Collection of the tax under the withholding provisions is mandatory on the employer, and penalties are imposed for failure to do any of the acts required under the law.

"Employer" defined

32. Question. Who constitutes an "employer" for purposes of the withholding provisions?

Answer. The term includes any person or corporation for whom an individual performs any service as an employee, excepting services of the nature referred to in connection with Question 6. An individual is an employee if the relationship between him and the person for whom he performs services is the legal relationship of employer and employee. If an individual is subject to the control or direction of another merely as to the result to be accomplished and not as to the means and methods, he is regarded as an independent contractor and not an employee.

Returns

33. Question. How often will employers be required to file returns and pay the withholding tax over to the Treasury?

Answer. Under regulations prescribed by the Commissioner of Internal Revenue, returns must be filed and amounts withheld paid to the collector on or before the last day of the month following the close of each quarter of the calendar year. However, where the employer withholds more than $100 a month, he is required by regulation issued pursuant to the new law, to pay the money to a bank or trust company which is a depositary or financial agent of the United States within 10 days after the close of each calendar month. (All banks insured by the Federal Deposit Insurance Corporation are eligible to qualify as Federal depositaries and financial agents.) Receipts will be issued by the authorized depositaries for withholding taxes paid to them, and these should be attached to the quarterly return when filed. Withholding funds collected for the last month of the quarter may be paid at the time of filing the return, rather than to the depositary, at the election of the employer. The purpose of the monthly payments to Federal depositaries is to relieve employers of the necessity of holding the withholding taxes for several months pending the filing of quarterly returns. Employers may obtain from their local bank the names and locations of nearby Federal depositaries and financial agents.

Receipts for amounts withheld

34. Question. Are employers required to issue receipts to employees covering the withholding tax?

Answer. Yes, but only one receipt a year. It must be furnished within a month after the close of the year. However, if the employment is terminated during the year, a receipt must be furnished the employee on the day on which the last payment of wages is made. Copies of such annual receipts may be filed with the collector of internal revenue in lieu of the regular information returns covering wage payments.

PART IV. CURRENT PAYMENT OF TAX NOT WITHHELD AT THE SOURCE

35. Question. In case a person's current tax liability is not collected in full through withholding at the source, what does he do about paying the remainder.

Answer. He pays it in quarterly installments during the year.

36. Question. Do persons to whom the withholding tax does not apply at all, such as self-employed persons, agricultural workers, and domestic servants, also pay their current tax in quarterly installments?

Answer. Yes.

Filing of declaration of estimated tax

37. Question. How do these persons ascertain their current tax liability?

Answer. They make an estimate of their probable income and deductions for the year, and compute a tentative tax. This Declaration of Estimated Tax is then filed with the collector of internal revenue.

Who must file

38. Question. Are any definite rules laid down as to who must file a Declaration of Estimated Tax?

Answer. Yes; it is required of the following persons:

(a) Those not subject to the withholding tax whose gross income for the year can reasonably be expected to be such as to require the making of an income-tax return (that is, those anticipating a gross income of $500 or more if single, or $1,200 or more if married).

(b) Those subject to the withholding tax, but whose wage or salary can reasonably be expected to exceed $2,700 if single, or $3,500 if married, or did exceed such amounts for the previous year.

(c) Those subject to the withholding tax, but whose income from sources other than wages or salaries can reasonably be expected to exceed $100 and whose gross income be such as to require the making of an income-tax return, or did exceed $100 in the previous year and an income-tax return was required to be filed, or would have been required if the marital status had been the same.

(d) Those required to make a return for 1942 whose gross wage or salary income in such year was greater than can reasonably be expected to be received from this source in 1943.

39. Question. How many of the 44,000,000 taxpayers will be required to file a Declaration of Estimated Tax?

Answer. Only about 14,000,000, since the remainder will have their full tax liability collected at the source.

When due

40. Question. When must this Declaration of Estimated Tax be filed?

Answer. For the year 1943 it must be filed September 15. For subsequent years it must be filed on March 15 of each taxable year.

Nature of declaration

41. Question. Will the Declaration of Estimated Tax be in the nature of a regular income-tax return?

Answer. No; it will simply state the amount of estimated income tax and net Victory-tax liability for the year, based on the estimated income and deductions and allowing for the current credit against the Victory-tax liability in case the taxpayer elects to take it currently From this amount will be subtracted the estimated amount which has been and is to be withheld at the source during the year, if any, both under the 5-percent Victory tax withholding and the new 20-percent withholding. The remainder constitutes the amount of estimated tax to be paid directly to the collector of internal revenue.

Crediting of payments on 1942 tax

42. Question. Are not the 1942 tax payments made on March 15 and June 15 of this year to be credited on the 1943 liability?

Answer. Yes.

43. Question. When is this credit taken?

Answer. The amounts paid on the 1942 liability are credited when the Declaration of Estimated Tax for 1943 is filed September 15. (Those not required to file the Declaration of Estimated Tax will take credit for these payments on the 1942 tax when their final return for 1943 is filed on March 15, 1944.) Let us assume that John Doe had a 1942 tax of $400 and paid $100 on account March 15, 1943, and another $100 on June 15. Let us assume further that his estimated tax on 1943 income is $600, and that the amount estimated to be withheld at the source during the year under the 5 percent Victory tax withholding and the 20 percent withholding commencing July 1 is $300. This would leave a balance of $300 on the 1943 liability. Against this amount, the $200 paid on the 1942 liability would be credited, leaving $100 to be paid to the collector of internal revenue on account of the estimated 1943 income.

When estimated tax is payable

44. Question. When is the estimated tax payable?

Answer. For 1943 it is payable in two installments, one on September 15 and the other on December 15. For subsequent years it is payable in four installments—March 15, June 15, September 15, and December 15 of each year. (See Question 48 as to special treatment for farmers.)

Amendment of declaration

45. Question. What can a taxpayer do if his income increases or decreases, or his marital status changes, after he has filed a Declaration of Estimated Tax?

Answer. Amendments or revisions of a declaration may be made in any subsequent quarter after the original declaration is filed. Thus, the Declaration of Estimated Tax for 1943, to be filed September 15, could be amended on December 15. The Declaration of Estimated Tax for 1944, to be filed March 15, 1944, could be amended the following June 15, September 15, and December 15. When a revised Declaration of Estimated Tax is filed the remaining installment payments are to be ratably increased or decreased to reflect the increase or decrease in the estimated tax.

Filing of final return for year

46. Question. Is any final accounting made for the year, based on the actual income, actual deductions, etc.?

Answer. Yes; on March 15 following the close of each taxable year a final return is filed, as at present. At that time adjustments are made on account of any difference between the estimated tax and the final tax liability for the year as shown on the return. If the tax liability has been overpaid the taxpayer may get a refund of the excess amount or may credit it toward his estimated tax for the ensuing year. If the final tax liability is greater than the estimated tax paid during the year the difference must be paid in a lump sum March 15. This balance cannot be paid in installments.

Penalty for substantial underpayment

47. Question. Suppose a person estimated his tax for 1943 to be $100 and the final liability as shown on the March 15, 1944, return was $200, would he simply pay the difference in a lump sum on March 15?

Answer. A 6-percent interest penalty is imposed where the taxpayer substantially underestimates his tax, the purpose of which is to induce the making of reasonably accurate Declarations of Estimated Tax. However, a 20-percent tolerance is allowed, which means that the interest penalty does

not apply unless the amounts paid during the year were less than 80 percent of the amount finally shown to be due. The interest is imposed on the total amount of the underpayment, not just the amount below 80 percent. Thus, if the final tax was $200 and the estimated tax paid during the year was $100, the taxpayer would be charged 6 percent interest on the amount by which the $100 estimated tax fell short of the $200 final tax. Hence the taxpayer would have to pay on March 15 the $100 which was still owing, plus 6 percent interest on $100 (the amount of underpayment. As a practical matter, the penalty can be avoided in most cases by the filing of a revised declaration December 15, when the income and deductions for the year can be estimated with substantial accuracy, and by adjusting the final quarterly installment to take account of the change made.

Special provisions for farmers

48. Question. Is not some special provision made in the case of farmers?

Answer. Yes. It is recognized that farmers would have difficulty in estimating in advance their income for the year; also, that in many cases the farmer's income comes chiefly from the marketing of a single crop once a year. Therefore, farmers (at least 80 percent of whose estimated gross income is from farming) are permitted to wait until December 15 before filing a Declaration of Estimated Tax and paying their current liability. Also, they are allowed a 33⅓-percent tolerance on underpayments before the 6-percent interest penalty applies.

Joint declaration by husband and wife

49. Question. Can a husband and wife file a joint Declaration of Estimated Tax?

Answer. Yes; if they are living together. In such case, the liability will be joint and several.

50. Question. Can a husband and wife who file a joint Declaration of Estimated Tax file separate final returns?

Answer. Yes; in which case the estimated tax for the year may be treated as that of either the husband or wife, or may be divided between them on such basis as they may choose.

Extension of time

51. Question. May taxpayers secure extensions of time for filing Declarations of Estimated Tax and for paying the estimated tax?

Answer. Yes; up to 6 months, at the discretion of the Commissioner of Internal Revenue.

52. Question. May an installment of the estimated tax be paid in advance of the due date?

Answer. Yes, if the taxpayer so elects.

Penalties

53. Question. Is there any penalty for failure to file a Declaration of Estimated Tax?

Answer. Yes; for failure to make the declaration and file it on time there is a penalty of 10 percent of the tax.

54. Question. Is there a penalty for failure to pay an installment of estimated tax when due?

Answer. Yes. The law provides that in such case there shall be added to the tax $2.50, or 2½ percent of the tax, whichever is greater, for each installment in arrears.

55. Question. Are there any criminal penalties in connection with the filing of Declarations of Estimated Tax and the payment of the tax?

Answer. Yes, the same criminal penalties apply as in the case of regular returns where there is a willful failure to file the return or pay the tax (fine of not more than $10,000 or imprisonment for not more than 1 year, or both).

Declarations by members of armed forces

56. Question. Are members of the armed forces required to file a Declaration of Estimated Tax?

Answer. As regards the filing of a Declaration of Estimated Tax, they are subject to the same requirements as apply to taxpayers generally, which are referred to under Question 36.

Number of returns required

57. Question. How many returns will a taxpayer be required to file each year under the new pay-as-you-go system?

Answer. Only one return a year will actually be required. The amended declarations, of which there may be as many as three, are filed at the option of the taxpayer to show increased or decreased liability as a result of changed circumstances.

58. Question. Are not two returns due next March 15, namely, a final return for 1943 and a declaration of estimated tax for 1944?

Answer. The final return for the previous year and the tentative return for the ensuing year will actually be made on the same form.

Fiscal year taxpayers

59. Question. When do taxpayers who are on a fiscal-year accounting basis make their returns and pay their tax?

Answer. In the case of a fiscal year beginning in 1943, the date for filing the Declaration of Estimated Tax is left to regulations to be prescribed by the Commissioner of Internal Revenue, and will be announced later. In subsequent years the declaration must be filed on or before the 15th day of the third month of the taxable year.

PART V. JUNE 15 INSTALLMENT

60. Question. Why must the June 15 installment on 1942 taxes be paid if 75 percent or more of the 1942 tax is to be abated?

Answer. The old law remains in effect until September 1, which is after the date for payment of the second installment. Both the March 15 and June 15 installments are credited toward the 1943 liability, and in effect take the place of the two installments which would have been payable on the 1943 tax liability if the new law had been in effect during the first 6 months of this year.

Special rule in case of servicemen

61. Question. If a person will owe no 1943 tax because of being in the service, must the June 15 installment still be paid?

Answer. In accordance with instructions issued by the Army and Navy, with the sanction of the Bureau of Internal Revenue, a member of the armed forces need not make the June 15 installment payment if he will have no 1943 liability for income or Victory tax, provided the collector is supplied with the following information: (a) That the taxpayer is a member of the armed forces; (b) that his estimated tax liability for 1943 will be zero; (c) that the tax liability for 1942, recomputed after excluding earned income not in excess of $14,000, is not in excess of the amounts already paid toward the 1942 tax; and (d) that the taxpayer will file a Declaration of Estimated Tax by September 15, and will at that time make such payment, if any, as may be required.

PART VI. FINAL 1943 TAX BASED ON HIGHER INCOME OF 1942-43

62. Question. Is the 1943 tax liability of individuals based on the 1943 income in all cases?

Answer. No. In order to prevent any advantage accruing to taxpayers by reason of the shift to a current collection basis, it is provided, in effect, that the current 1943 tax liability shall not be less than the 1942 liability. This means that if the tax on 1942 income was $2,500, for example, and the tax on 1943 income is only $1,000, the final 1943 liability shall be $2,500 rather than $1,000. For administrative reasons, what is actually done under the law is to tax the 1943 income in all cases, and then increase the 1943 liability by the excess of the 1942 tax over the tax on 1943 income. Thus in the above example, the final 1943 tax would be $1,000 (the tax on 1943 income) plus $1,500 (the excess of the 1942 tax over the tax on 1943 income), or a total of $2,500.

Higher year's liability included in Declaration of Estimated Tax

63. Question. Must this additional liability for 1943, where the 1942 tax was higher, be taken into consideration in filing the Declaration of Estimated Tax for 1943?

Answer. Yes, it is considered a part of the 1943 liability for purposes of the Declaration of Estimated Tax.

Does not operate after this year

64. Question. It is true, is it not, that this requirement of paying on the higher of the 2 years, 1942 or 1943, will not apply after this year?

Answer. Yes.

Applies regardless of amount of income

65. Question. Does this provision apply to all taxpayers, regardless of the amount of their income, and whether they have any income at all in 1943?

Answer. It applies regardless of the amount of 1943 income, but special treatment is given to members of the armed forces.

Members of armed forces exempt from paying on higher year under certain conditions

66. Question. What is this special treatment for members of the armed forces?

Answer. Members of the armed forces do not have to pay on the higher of the 2 years, 1942 or 1943, with respect to that portion of the 1942 tax which is attributable to "earned" income (i. e. from wages or salary) not in excess of $14,000. Thus, if a soldier earned $3,000 in 1942 as a civilian, incurring a tax liability of say $300, and has no tax liability on his 1943 service pay, he would not be required to increase his 1943 liability by the excess of the 1942 tax over the 1943 tax. In effect, his 1942 liability is completely abated.

On the other hand, if part of the servicemen's 1942 tax was attributable to "earned" income, and part to "unearned" income (i. e., income from investments or wage and salary income in excess of $14,000), the 1943 tax will be increased by the amount by which the tax on the "unearned" portion of the 1942 income exceeds the 1943 tax. For example, suppose a single man had a civilian salary of $15,000 in 1942, and had income from rents, dividends, and interest amounting to $5,000, on which the total tax was $6,800. In 1943 he went into the Army as an officer, and receives a service pay of $2,400. His final 1943 tax liability would be computed as follows: He would figure the tax on his 1943 service pay, after excluding from consideration the first $1,500 thereof under the provisions of the new law. The resulting 1943 tax would be approximately $80. He would then add to his 1943 tax liability the excess of the 1942 tax over the 1943 tax, after deducting from such excess the amount by which the 1942 tax was increased by reason of the inclusion of the first $14,000 of the amount of the "earned" net income in 1942. He finds that the 1942 tax exceeds the 1943 tax by $6,720 ($6,800 minus $80). He recomputes the 1942 tax to see how much of this excess was due to the inclusion of the "earned" income (i. e. from wages or salary) up to $14,000. Subtracting from the 1942 income all salary income not in excess of $14,000 would leave $1,000 of the salary income and the $5,000 of investment income, or a total of $6,000, on which the tax would be approximately $1,200. This shows that the 1942 tax was increased by $5,600 (the excess of $6,800 over $1,200) by reason of the inclusion of the "earned" income up to $14,000. Therefore, the $5,600 is subtracted from the $6,720 excess of the 1942 tax over the 1943 tax, leaving a balance of $1,120, which is the

amount to be added to the tax on 1943 income in computing the final 1943 liability of the serviceman in question. His total 1943 liability, therefore, would be $80 (the tax on his 1943 service income) plus $1,120 (the excess of the 1942 tax attributable to "unearned" income over the 1943 tax), or a total of $1,200. This is the amount he would include in his Declaration of Estimated Tax for 1943. In this instance he still pays on the higher of the 2 years after eliminating from the 1942 income all wage and salary income up to $14,000. (The serviceman in question would also owe the unabated portion of the lesser year's tax, 25 percent of the basic 1943 liability of $80 in this case, or $20. See question 72.)

Special provision covering joint returns of husband and wife

67. Question. Where a man and wife file a joint return for either the taxable year 1942 or 1943, but not for both years, how is it to be determined whether the tax for 1942 was greater than for 1943?

Answer. It is provided in section 6 (d) (2) that for the purpose of this provision, the taxes of the spouses for the taxable year for which a joint return is not made shall be aggregated in such case. Furthermore, if the taxable year for which a joint return is not made is the taxable year 1943, any additional liability because of the higher tax for 1942 is to be joint and several.

PART VII. ABATEMENT OF 75 PERCENT OF LESSER YEAR'S TAX LIABILITY (OR FIRST $50, WHICHEVER IS GREATER)

68. Question. What provision is made under the new law to prevent an undue doubling up of taxes as a result of the change to a current collection basis from the present year-behind collection basis?

Answer. In effect, 75 percent of 1 year's tax, or the first $50 thereof, whichever amount is the greater, is abated or canceled.

68A. Question. What happens to the uncanceled portion?

Answer. The amount not abated is collected in addition to current taxes over the next 2 years, one-half being payable March 15, 1944, and one-half March 15, 1945. To this extent, there is a partial doubling up of tax payments during this period, which is roughly equivalent to a 12½-percent increase in taxes in 1944 and 1945 for most taxpayers.

69. Question. To which year's tax does the abatement apply, 1942 or 1943?

Answer. Since the current tax liability is based on the higher tax of the 2 years, the abatement is based on the lower tax of the 2 years.

70. Question. Suppose a man's 1942 tax was $100 and his 1943 tax will be $200, how does the abatement provision work?

Answer. Seventy-five percent of his 1942 tax (being the lower year) will be abated or canceled. The remaining 25 percent, or $25, continues to be a liability. It is payable as noted above.

When abatement exceeds 75 percent

71. Question. Suppose, in the case just cited, the 1942 tax was $60 instead of $100. How much would be abated and how much would still be payable?

Answer. In such case, $50 of the $60 1942 tax would be abated, since $50 is greater than 75 percent of $60 (which would be only $45). The unabated $10 would be payable as above.

If the 1942 tax had been $50 or less, the whole amount, or 100 percent of the tax, would be abated.

Abatement where 1942 tax exceeds 1943 tax

72. Question. Suppose the taxpayer had a higher tax in 1942 than for 1943, and therefore has to increase his 1943 liability by the excess of the 1942 tax over the 1943 tax. In that event does the abatement provision apply to the tax on 1943 income before being increased by such excess?

Answer. Yes. If the 1942 tax was $400, and the tax on 1943 income $300, the higher 1942 tax in effect becomes the 1943 liability. However, for the purpose of ascertaining the unabated portion of the lower year's tax, the original 1943 liability would be used as a basis. Thus 25 percent of the basic 1943 liability, or $75, would be the unabated amount of the lower year's tax. What actually happens where the 1942 tax is in excess of the 1943 tax is that the 1942 tax assessment is (for administrative reasons) fully canceled, but there is added to the basic 1943 liability (a) the excess of the 1942 tax over the basic 1943 tax plus (b) 25 percent of the basic 1943 tax, or the excess of such tax over $50, whichever is the lesser amount. The latter sum (being the unabated portion of the lower year's tax) is payable in two annual installments as previously noted.

Unabated liability not included in Declaration of Estimated Tax

73. Question. Must the unabated portion of the lower year's tax, one-half of which is payable March 15, 1944, be included in the declaration of estimated tax for 1943?

Answer. No; and it is therefore not reckoned with in determining whether the estimated tax comes within 80 percent of the tax shown on the final return for 1943, filed March 15, 1944.

Application to servicemen

74. Question. How do the abatement provisions apply in the case of a serviceman who is exempted from paying on the higher income of the 2 years?

Answer. In most cases he will, in effect, receive 100 percent abatement of his 1942 tax by reason of not having to increase his 1943 tax by the excess of the 1942 tax over the 1943 tax. The regular abatement provisions still apply to the lower liability of the 2 years, which would generally be 1943. If such lower year's liability was in excess of $50, he would be required to pay 25 percent thereof, or the excess of the 1943 tax over $50, whichever is the lesser amount, as the unabated portion of the lower year's tax.

PART VIII. SPECIAL WINDFALL TAX

75. Question. Is the so-called windfall tax of any concern to most taxpayers?

Answer. No; since it only applies where the lower income in the 2 years, 1942 or 1943, exceeds the pre-war income of the taxpayer by more than $20,000.

76. Question. What is the nature of the windfall tax?

Answer. Its purpose is to prevent the 75-percent abatement of a year's tax from applying to swollen war income. It accomplishes this purpose by limiting the abatement to that portion of the lower year's income representing normal income, and by collecting as a windfall tax the balance of the amount which would otherwise have been abated.

77. Question. What yardstick or base is used in determining so-called normal or pre-war income?

Answer. The taxpayer is permitted to use the highest annual income of the years 1937, 1938, 1939, or 1940, plus $20,000, as a base.

78. Question. How is the windfall tax computed?

Answer. Let us assume that the taxpayer has a 1943 tax of $800,000 and a 1942 tax of $400,000. In such case, the 75 percent abatement would apply to the 1942 tax. The unabated 25 percent, or $100,000, would be payable over the next 2 years in addition to current taxes. The abated 75 percent, or $300,000, would be compared with a hypothetical tax, computed at 1942 rates, on the base year's income plus $20,000. Assuming that the income in the highest base year was $80,000, the addition of the $20,000 would make a total of $100,000 on which the hypothetical tax would be computed. On such an amount, the hypothetical tax would be approximately $64,000. This $64,000 becomes the limit of the amount to be abated, instead of $300,000. The excess of the $300,000 over the $64,000 ($236,000) is collected as a windfall tax. Thus of the total 1942 liability of $400,000, only $64,000, or 16 percent, is finally abated, instead of 75 percent.

79. Question. When is the so-called windfall tax payable?

Answer. It is added to the final 1943 liability, but may be paid in four annual installments, commencing March 15, 1945, with interest at 4 percent.

80. Question. How would this provision apply to a member of a partnership which operated as a corporation during the base period, and which therefore would have no base period income as a partnership?

Answer. Special relief is granted in such cases under section 6 (d) (5). In effect, the partner is permitted to use as a base his share of the corporation earnings.

PART IX. TAXPAYERS DYING IN 1942 OR 1943

81. Question. Suppose the taxpayer died during 1942. Is his tax liability affected by the new law?

Answer. No. In such case, no part of the 1942 tax is abated. It is to be collected in the same manner as if the Current Tax Payment Act had not been enacted.

82. Question. What if the taxpayer dies in 1943 instead of 1942?

Answer. In such case, the situation is different. The decedent's 1942 tax is abated to the same extent as any other taxpayer's. His 1943 return will be for the period up to the date of his death. If the 1942 tax exceeds the 1943 tax for the portion of the year during which he was alive, the excess is added to the 1943 liability. The windfall tax is applicable with respect to the abated year, as in the case of other taxpayers, if it represents swollen war income.

PART X. INCREASED INCOME-TAX EXEMPTION FOR SERVICEMEN

83. Question. When does the increased income-tax exemption for servicemen become effective?

Answer. With respect to taxable years beginning on or after January 1, 1943.

84. Question. How does it change the present special exemption for servicemen?

Answer. Under the old law, servicemen were permitted to exclude from gross income the first $250 of their annual service pay if single, and the first $300 if married. Such exclusion of this part of the service pay was in addition to the regular exemptions. It had the effect of making the exemption of single men $750 instead of $500, and of married men $1,500 instead of $1,200.

Under the new law, servicemen will be permitted to exclude from gross income the first $1,500 of their service pay, and in addition will get the regular exemption of $500 for single persons, $1,200 for married persons, and $350 for each dependent. In effect, the new law raises the exemption of servicemen to $2,000 if single, and $2,700 if married, plus $350 for each dependent.

85. Question. Does the exclusion of the first $1,500 of service pay from gross income apply to servicemen regardless of grade or rank?

Answer. Yes. This is a change over the old law, which only applied to persons below the grade or rank of commissioned officer.

86. Question. Does it apply to an American who is serving with the armed forces of one of the other United Nations?

Answer. Yes, under the new law.

87. Question. Does it also apply to members of women's units serving with the military or naval forces?

Answer. Yes.

PART XI. ABATEMENT OF TAX FOR MEMBERS OF ARMED FORCES UPON DEATH

88. Question. What provision is made under the new law for the cancelation of any tax liability owed by a member of the military or naval forces who dies in active service?

Answer. Any tax liability which is unpaid at the date of his death is canceled.

89. Question. What if death took place before the enactment of the new law?

Answer. This provision is retroactive to December 7, 1941, and continues during the present war.

90. Question. What if the tax which was due at the date of the serviceman's death has since been paid?

Answer. It will be refunded.

91. Question. Does this cancelation of tax liability also apply to the estate tax?

Answer. No; only to income tax. Presumably most deceased servicemen would be exempt from any estate-tax liability because of the $60,000 exemption.

PART XII. HOW THE NEW LAW WILL AFFECT VARIOUS PERSONS

92. Question. How will the new law operate in the case of the average taxpayer?

Answer. This depends upon the amount of his income, the nature of his income, his family status, etc. Following are several hypothetical examples of how the law would work in practice:

(a) *Unmarried wage earner whose income for 1943 will be $2,600 ($50 per week) and who owed $320 tax for 1942*

If he did not pay his 1942 tax in full on March 15, he must at least pay the second installment on June 15. All amounts paid on his 1942 liability will be applied to his 1943 liability.

There will continue to be withheld from his pay envelope up to July 1, the present 5 percent Victory tax withholding.

Beginning July 1, there will be substituted for the Victory tax withholding a new 20 percent withholding for the collection of both Victory tax and income tax. The withholding exemption in his case will be the same as under the Victory tax withholding ($12 a week, or $52 a month), and the amount withheld will be $7.60 a week ($8.60 if the employer uses the withholding tables instead of computing the withholding exactly).

He will not have to file a Declaration of Estimated 1943 Tax on September 15 because his 1943 wage will not exceed $2,700 and he has no other income.

He will not have any installment payment to make September 15 or December 15 because his entire liability will be collected at the source (counting the amounts paid up to June 15 on the 1942 tax, which are applied to the 1943 liability).

On March 15, 1944, he will file a regular income-tax return on 1943 income and compute his 1943 income and Victory tax. He will take credit for amounts withheld at the source during 1943 and amounts paid on his 1942 tax liability. If he finds that the tax shown on the return is in excess of the total of such amounts, he will pay the difference in a lump sum at that time. If he finds that he has overpaid his tax, he will be entitled to a refund of the overpayment.

On March 15, 1944, he will owe 25 percent of his 1942 tax liability (or the excess of the 1942 tax over $50, whichever is the lesser amount). In his case, this would be $80. The remainder of the 1942 liability is canceled. The uncanceled portion may be paid in full March 15, 1944, or in two installments, one-half March 15, 1944, and one-half March 15, 1945.

If his 1944 wage is the same as in 1943, his entire 1944 tax will be collected at the source. His next return, which will be the final return for 1944, will be due March 15, 1945, at which time any adjustments for underpayment or overpayment will be made. On such date, he will pay the balance of the uncanceled portion of his 1942 liability, if it has not been previously paid.

(b) *Married man without dependents whose salary income for 1943 will be $3,000 ($250 a month) and who owed $300 tax for 1942*

His procedure under the new act will be substantially the same as in the prior illustration, but the amounts will of course differ.

His withholding exemption after July 1 will be $24 a week or $104 a month. Thus his withholding tax will be $29.20 per month ($31.20 if the employer uses the withholding tables instead of computing the withholding exactly).

He will not have to file a Declaration of Estimated Tax on September 15, since his salary as a married person does not exceed $3,500 annually and there is no other income.

He will file a final return for 1943 on March 15, 1944, and take credit for the amounts withheld at the source during the year and amounts paid on the 1942 liability. Any necessary adjustments will then be made on account of any overpayment or underpayment.

The uncanceled portion of the 1942 tax liability (25 percent of $300, or $75) would be due March 15, 1944, but could be paid in two installments, as noted under (a).

(c) *Married man without dependents whose salary income for 1943 will be $6,000 ($500 a month) and who owed $800 tax for 1942*

His procedure will be somewhat different than in the previous illustrations, since his full liability for 1943 will not be collected at the source.

Assuming he is paying his 1942 tax in installments, he will pay the regular $200 installment on June 15.

Beginning July 1, he will be subject to the 20-percent withholding on the excess of his monthly salary over $104, which would amount to $79.20 a month (whether computed on an exact basis or under the withholding tables). Up to July 1, he will have been withheld against to the extent of approximately $22.40 a month under the Victory tax withholding.

On September 15, because his income as a married man is expected to exceed $3,500 for the year, he must file a Declaration of Estimated Tax for 1943. In computing his estimated 1943 liability, he takes account of his probable income, and his probable deductions, and arrives at a tentative figure of say $1,100, after electing to take currently his post-war credit against the Victory tax. From this tentative tax liability of $1,100 he deducts (1) the amount withheld at the source under the Victory tax withholding up to July 1 ($134.40); and (2) the amount estimated to be withheld at the source under the 20-percent withholding during the balance of the year ($475.20). This makes a total withholding credit of $609.60, which he deducts from the $1,100 tentative 1943 liability, leaving a balance of $490.40 not collected at the source. Since the amounts paid on the 1942 tax are to be credited against the 1943 liability, the $400 paid up to June 15 is also deducted, leaving a net balance of $90.40. This balance of his estimated 1943 tax is payable in two installments, one-half on September 15 and one-half on December 15.

On March 15, 1944, he files a final return for the year, and arrives at his actual liability, which we will say is $1,150, instead of the $1,100 estimated. Since the estimated tax is within 80 percent of the actual liability, there is no interest penalty for underpayment. The $50 difference would be payable in a lump sum March 15, 1944.

On March 15, 1944, the uncanceled portion of his 1942 tax liability will be payable (25 percent of $800, or $200). As previously noted, he may elect to pay half the amount March 15, 1944, and half March 15, 1945.

The final return for 1943 would also contain his Declaration of Estimated Tax for 1944. After computing his estimated liability, and making allowance for the amount estimated to be withheld at the source during the year, he would pay the remainder of his estimated tax in four equal quarterly installments on March 15, June 15, September 15, and December 15. His final return for 1944 would be filed March 15, 1945, when any adjustments would be made. If during the year 1944 his income decreased or increased, or his family status changed, he could file an amended Declaration of Estimated Tax and adjust his subsequent installment payments accordingly.

(d) *Married man without dependents whose salary income for 1943 will be $3,000 ($250 a month), who has $2,000 of other income from dividends, interest, etc.*

This taxpayer will proceed as under example (c), since his total income as a married man exceeds $3,500 and his tax will not be fully collected at the source.

(e) *Single man who is not subject to withholding (self-employed person, agricultural worker, or other exempt class), who anticipates a 1943 income of $3,000 and who owed a tax for 1942 of $400*

In this case, the taxpayer will pay his second installment on the 1942 tax on June 15 if he has not already paid the 1942 tax in full.

He will not be subject to withholding July 1, being in an exempt class.

September 15 he will be required to file a Declaration of Estimated Tax for 1943, based on his estimated income and deductions for the year. His estimated 1943 tax liability, including Victory tax, will be approximately $575 if he elects to take currently the post-war credit under the Victory tax (25 percent of the Victory tax in the case of single persons). If he has paid only the first two installments of his 1942 tax, totaling $200, he will credit this amount against the estimated 1943 tax. (If he had paid the whole $400 of 1942 tax he would take credit for the entire amount). This leaves $375 of the estimated 1943 tax ($575 less $200) to be paid in quarterly installments, one-half on September 15 and one-half on December 15.

Next March 15, he will file his final return for the year, based on actual income and actual allowable deductions, and will make any necessary adjustment for overpayment or underpayment. If at that time he finds that his actual tax liability for 1943 is $525, instead of the estimated $575, he will be entitled to a refund of $50, or may credit it against his 1944 liability.

At that time, the uncanceled portion of his 1942 tax liability (25 percent of $400, or $100) will be payable. As before noted, he may elect to pay this amount in two annual installments, one on March 15, 1944, and one on March 15, 1945. The $50 overpayment on his 1943 tax could be used to meet one of these installments.

On March 15, 1944, the taxpayer will file a Declaration of Estimated Tax for 1944, and will pay the estimated tax in four equal quarterly installments, on March 15, June 15, September 15, and December 15. His final return for 1944 will be filed March 15, 1945, and any adjustments made as before.

(f) *Married man with no dependents with an estimated business income of $4,000 for 1943 who owed $2,000 tax for 1942*

This man's procedure will be substantially the same as under example (e), since he is not subject to withholding, but with this difference: His Declaration of Estimated Tax, to be filed September 15, will show a 1943

liability of approximately $647 (income tax plus net Victory tax), which is less than his 1942 tax. Accordingly, in making his Declaration of Estimated Tax for 1943, he will increase the amount of tentative tax by the excess of the 1942 tax over the 1943 tax, or by $1,353, making a total liability for 1943 of $2,000 ($647 plus $1,353). In determining the amount of his installment payments to be made September 15 and December 15, he will first take credit for the amounts paid on his 1942 tax. If he paid his $2,000 1942 tax in full, he will have no installment payments to make. If he paid only the first two installments (or a total of $1,000), he will pay the balance ($1,000) in two installments—September 15 and December 15.

His final return for the year, filed March 15, 1944, would show no change in his liability since, in effect, the tax for the year was based on the known higher 1942 income. Any minor increase or decrease in the 1943 income over that previously estimated would not change the result.

On March 15, 1944, however, he would owe 25 percent of the basic 1943 tax (the unabated portion of the lower year's tax). This would be 25 percent of $647 (assuming that there was no change in the amount based on the final return), or $161.75. One-half of this amount could be paid on that date and one-half the following March 15.

On March 15, 1944, he would file his declaration of estimated tax for 1944, and pay the estimated amount in four quarterly installments, making any necessary adjustment on March 15, 1945.

(*g*) *Single man in armed forces whose service compensation for 1943 will be $600, and who owed a 1942 tax of $365 on his $2,500 income from a civilian job.*

As a soldier, he will not be subject to withholding on his service pay.

He will owe no tax on 1943 income because of the liberal exemptions applying to members of the armed forces ($1,500 plus the regular exemptions).

However, on September 15 he will be required to file a declaration of estimated tax for 1943 by reason of having had a gross income from wages in 1942 greater than the gross income which can reasonably be expected to be received from wages in 1943.

In his declaration of estimated tax he will compute his 1943 liability, if any. Since his 1942 tax exceeds the tax on his 1943 service income, the excess of the 1942 tax over the 1943 tax would have to be added to the 1943 liability if he were an ordinary taxpayer. But being a serviceman, he is entitled to take advantage of the special provision allowing him to deduct from such excess of the 1942 tax over the 1943 tax so much of the 1942 tax as is attributable to "earned" income, i. e., wage or salary income not in excess of $14,000. Since all of the 1942 tax was attributable to "earned" income of less than that amount, none of the higher 1942 tax need be added to the 1943 liability in his case.

Thus his Declaration of Estimated Tax will show no 1943 liability. There will, of course, be no September 15 or December 15 installments to pay.

On March 15, 1944, the serviceman will file his final return for 1943 showing no liability, but an actual overpayment, due to the crediting of the amount paid on his 1942 tax toward the 1943 liability. Thus, whatever amount he paid on March 15 and June 15, 1943, on his 1942 tax will be refunded.

There will be no unabated portion of the lower year's tax due March 15, 1944, since there is no liability for the lower year (1943).

(*h*) *Taxpayer who has no 1943 income but who owed a tax of $2,000 for 1942 on income from his business*

The taxpayer would have to pay his June 15 installment if he has not already paid the 1942 tax in full.

On September 15, he will be required to file a declaration of estimated tax for 1943 since he had a 1942 tax liability. His 1943 liability (zero) will be increased by the excess of the 1942 tax over the 1943 tax, or by $2,000. Against the $2,000 liability for 1943, he will take credit for the amount paid on the 1942 tax up to June 15. If only the first two installments were paid, aggregating $1,000, there will be a balance due for 1943 of $1,000, payable one-half on September 15 and one-half December 15. If the full 1942 tax was paid March 15, such payments will completely offset the 1943 tax and no further installments will be required.

On March 15, 1944, the taxpayer will file a final return for 1943, but no adjustments will be required since the 1943 liability was in effect based on the known 1942 tax.

There will be no unabated portion of the lower year's tax due March 15, 1944, since the lower year's basic liability (i. e. for 1943) was zero.

(*i*) *Married man with no dependents, with business income of $1,000,000 in 1943, $500,000 in 1942, and whose highest income in 1937 to 1940 was $80,000*

In this instance, the 1942 tax would have been $414,000, and it is assumed he paid the first two installments through June 15, 1943, or a total of $207,000.

On September 15, he will be required to file a declaration of estimated tax for 1943. On an income of $1,000,000, the 1943 tax would be $899,000. He takes credit for the $207,000 paid on the 1942 tax through June 15, which leaves a balance due for 1943 of $692,000. One-half this amount would be paid September 15 and one-half December 15.

On March 15, 1944, he would file his final return for the year and make any necessary adjustments for overpayment or underpayment.

At that time there would become due the unabated 25 percent of the 1942 tax (1942 being the lower year), and this amount ($103,500) could be paid in two annual installments, one-half on March 15, 1944, and the balance on March 15, 1945.

Since the abated year's income exceeds the highest base year's income by more than $20,000, the windfall tax becomes applicable, and is computed in connection with the final return for 1943. The abated amount of the 1942 tax (75 percent of $414,000, or $310,500) is compared with a hypothetical tax on the highest base year's income plus $20,000 ($80,000 plus $20,000, or $100,000), computed at the 1942 rates. The resulting hypothetical tax, which is supposed to represent (for comparative purposes) the tax on a normal pre-war year's income, would be $64,000. This $64,000 becomes the limit of the amount to be abated, instead of the $310,500 (75 percent of the lower year's tax). The excess of the $310,500 over the $64,000, or $246,500, is collected as a windfall tax. It is due March 15, 1944, but at the option of the taxpayer may be paid in four annual installments. If paid in installments, interest is charged at the rate of 4 percent, and the first installment becomes due March 15, 1945, and the remaining three installments are payable annually thereafter.

In the above case, the taxpayer's 1943 tax payments will be $899,000.

During 1944, he will pay currently his 1944 tax ($899,000 if the income is the same and there is no change in rates), plus the first installment of the unabated quarter of his 1942 tax ($51,750).

During 1945, he will pay currently his 1945 tax ($899,000 if the income is the same and there is no change in rates), plus the second and last installment of the unabated quarter of his 1942 tax ($51,750), plus the first installment of his windfall tax ($61,625), with interest.

During the next 3 years he will pay his current tax liability plus the remaining installments of the windfall tax.

Code of Canon Law

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. LANE. Mr. Speaker, the present code of canon law was promulgated by Pope Benedict XV on May 27, 1917, to become effective May 19, 1918, 25 years ago. It is the latest codification of canon law, the first since the end of the fifteenth century. Many early codes listed the decrees of Popes and the canons of councils in chronological order. Outstanding among them were the collection of Denys the Little—died between 526 and 555—and the collection sent to Charlemagne by Pope Adrian—772–795.

Following the discovery of the digest, Gratian compiled a systematic code, arranging the canons on a plan similar to that of the digest—between 1139 and 1151. Under the auspices of Pope Gregory IX, St. Raymond, of Penyafort, compiled the code known as the Decretals of Gregory IX in 1239. Later, two public and two private collections were added to the Decretals of Gregory IX, and the whole was known as the Corpus Iuris Canonici, closed by the end of the fifteenth century.

In the course of 400 years, numerous decrees issued from the Holy See. A code in which these would be inserted was desired; a code which would reenact all in the old law, whether in the Corpus Iuris Canonici, in the decrees of the general councils, or in the decrees of the Popes, to the extent that it was applicable to the needs of modern ecclesiastical government.

The task was begun under Pope Pius X in 1904, with the cooperation of two colleges of consultors functioning under a commission of cardinals. It was brought to a successful conclusion in 1916. The promulgation followed as already indicated.

I include a discourse delivered by Very Rev. James H. Griffiths, S. T. D., vice chancelor of the Diocese of Brooklyn, at the National Shrine of the Immaculate Conception, Washington, on Sunday, May 16, 1943. This scholarly and significant sermon was delivered during a Pontifical Mass commemorating the twenty-fifth anniversary of the enactment of the Code of Canon Law:

TWENTY-FIFTH ANNIVERSARY OF THE ENACTMENT OF THE CODE OF CANON LAW, WASHINGTON, D. C., MAY 16, 1943

"Hearken unto me, O my people, and give ear to me, O my tribes: for a law shall go forth from me, and my judgment shall rest to be a light of the nations." (Prophecy of Isaiah 51:4.)

On the evening of January 4, 1919, the spirits of Catholic Americans from coast to coast rejoiced with legitimate pride as they read of the visit of Woodrow Wilson, the twenty-eighth President of the United States, to Benedict XV, Vicar of Christ and two hundred and sixtieth successor of Peter the Fisherman. On this occasion, the American statesman's triumphal procession across Eu-

rope had reached a new and unprecedented splendor.

In the Vatican palace where the leader from the New World was received with the medieval magnificance of the age-old papal court, there took place the momentous meeting of two men who during the long, dark months of carnage and devastation had labored incessantly to find the road to peace and to restore order to a world which had been ravished by hatred and lawlessness.

But there was another incident which occurred on the occasion of this visit of President Wilson to the Vatican, which understandably received less publicity. And that was his visit to the Cardinal Secretary of State in fulfillment of the requirements of diplomatic protocol. As Woodrow Wilson and Pietro Gasparri exchanged formal courtesies, the venerable Cardinal who had worked with truly herculean efforts during all these months to implement the Pope's peace plan, founded on the norms of eternal justice; who had been snubbed and slighted and even slandered by European leaders for his pains—gazed into the steel blue eyes of the angular American idealist—and wondered.

Wilson was on his way back to Paris; back to the Conference of world leaders from which the Vicar of Christ, the unselfish exponent of true peace, had been shamefully excluded by a pact hatched in ignoble secrecy. Almost like an "Innocent Abroad" he was on his way back to Paris where this same Gasparri had lived and brilliantly taught law for over 18 years; where Gasparri knew every cosmopolitan crossroad and every cross-current of international opinion and intrigue.

As the President rose to take his leave, the Cardinal-Secretary placed in his hands a token—an ominous token, one might say—of his visit to the house of Peter the Fisherman. It was a book beautifully bound in white parchment, on the cover of which there gleamed in golden letters the title "Codex Iurus Canonici."

Pietro Gasparri had indeed given Woodrow Wilson a significant gift to take back with him to the green baize tables of Paris and to the glittering Hall of Mirrors at Versailles. It was as though a father had given to him the son of his loins; as though Michelangelo had presented to him his Last Judgment, as though Tschaikowsky had offered his Symphonie Pathétique. As he delivered this code which less than a year previously had become the official law of the entire western church, Pietro Gasparri had given his own masterpiece, over which he had labored with countless other churchmen, night and day, during peace and during war, for 13 long years since that hour in 1904 when Pope Pius X had decreed the codification of canon law as an integral element in his sublime program to "restore all things in Christ." Indeed Van Hove says that Papa Sarto, the pious, the peasant, the parish priest Pope who had been providentially catapulted into the papacy through the caesaropapistic meddlings of the Hapsburgs, had enunciated to his familiars on the very night of his election his firm conviction that to restore ecclesiastical discipline in Christ it would be imperative to undertake immediately a redaction of the multiple laws of the church into a systematic, authentic, exclusive legal code adapted to the divine mission of the church in its modern ambient.

It was not to be a collection or even an official compilation, reproducing verbatim ancien' legislation and arranging it in logical order. Nor was it to be a mere unification of existing ecclesiastical laws. For with due consideration for custom, this code would abrogate all particular laws contrary to its content. It would be modeled on the unique legal structure bequeathed to civilization centuries before by the Emperor Justinian, but it would not be a stilted, static mimicry of antiquity.

In reports current at the time it was stated that Mr. Wilson had commented with admiration on the marvelous organic development in this new ecclesiastical legislation and had noted with discerning appreciation the elegantly concise canons, the succinct legal sanctions, and the simple and dignified latinity eminently worthy of the sacred majesty of Roman law.

As he made his way from the audience chambers through the courtyard of San Damaso and down to the bronze doors, Wilson, the historian, must have realized that he carried under his arm not merely a new legal code, aprioristically conceived and arbitrarily elaborated by a group of modern jurisconsults. All about him in those precincts were invisible witnesses to its complex historical and scientific heritage. In the shadow of the columns there was standing the regal spirit of another civil ruler, Charlemagne, who had come to Peter's house a thousand years before and had received from Hadrian the Pontiff the Codex Proprius of the Roman church, compiled by Denys the Little from the fearlessly orthodox conciliar legislation of ancient eastern Christianity. Contemplating the modern American statesman was the cowled figure of a Benedictine monk: The spirit of Gratian whose Decretum had blazed the trail toward systematized legislation and had heralded the glorious juridical renaissance of the twelfth century. He it was who had inaugurated a movement which would bear fruit in the following century in the Magna Carta of England and would thereafter undeniably influence all our modern laws, especially as they concern the fundamental rights of man. In every nook and corner hovered the spirits of those men of yore who had evolved the law of the church and had enriched humanity with their legal genius, now absorbed into the new Codex. Here there appeared the pontifical form of Gregory IX and beside him the white-robed Dominican, Raymond of Peñafort, holding the five Books of the Decretals. There outlined stood the majestic silhouette of the double-crowned Boniface VIII who admits that he passed sleepless nights in planning his "Liber Sextus" to guarantee accuracy and security in ecclesiastical discipline. It was indeed a pageant of Popes with John XXIX exhibiting the Clementinae and Gregory XIII pointing to the new "Corpus Iuris" and Benedict XIV displaying the "Bullarium." Mingling with them were the less renowned but no less able pontiffs and prelates and clerics who had made possible the disciplinary reforms of the Council of Trent and had painstakingly elaborated the jurisprudence of the church in the "Regulae" of the Apostolic Chancery and in the Decrees of the Sacred Congregations and Tribunals.

In very truth the American President was carrying with him in this compact volume the limpid, lucid distillation of 1,900 years of heroic pastoral solicitude, of unswerving infallible teaching, of delicate discerning government and of brilliant juridical genius. John Ruskin has remarked that Gothic architecture is frozen poetry. If this be admitted, then it is scarcely intemperate to declare that nearly every canon in the Codex Iuris Canonici is frozen history. In this monumental work all the ages of ecclesiastical history have given one another rendezvous. Here their various products may be seen all together; not confused but interfused; not heaped one upon another, as Livy had described Roman law, but correlated and integrated into a reasonable organic whole for the sole purpose of attaining more effectively the common good of the church of God.

But the chief purpose of the church in codifying her law was not to focus the attention of the world on its glorious historical background. She was not playing the role of the archeologist or the antiquarian dilettante. The church was not looking backward—she was principally looking forward. She was looking straight ahead at the supernatural goal of restoring all things in Christ. She was looking straight ahead into the eyes of the enemies who were threatening not only the flock of Peter but threatening as well the entire fabric of civilization. She was girding herself with adequate disciplinary legislation to meet the ever-growing challenge of Positivism and Naturalism and Agnosticism and Materialism. By the orderly codification of the legislation of centuries and by the independent promulgation of her law she was making it possible for the clergy and faithful to know the laws which they should obey and she was vindicating the role of lawgiver conferred on her by her Divine Founder when He said "Whatsoever you shall bind upon earth, shall be bound also in heaven; and whatsoever you shall loose upon earth, shall be loosed also in heaven." She was striking fearlessly at the canting Modernists who had denied her juridical personality; who had derived whatever puny power they had left her, not from the Christ, the eternal lawgiver, but from that intangible factor, designated as the collective religious consciousness of the faithful. She was repudiating by vigorous, positive action and not merely by oral confutation, the totalitarian theories of those who were already teaching—and be it noted, not without applause—that all her rights and all her powers are derived solely from the deified State and that consequently all her ministerial, legislative, charitable, and educational activities are circumscribed by and subject to the pleasure and whim of the civil power.

Like the householder in the Gospel parable, she has brought forth from her treasure house a code of law embodying new things and old. The old things emphasize her unique prudence and wisdom through the centuries and cursorily suggest her mysterious powers of endurance. The new things call the attention of the world to her ever-resurgent vitality and her traditional readiness to meet new maladies with new remedies. To those false seers who prophesied her disintegration and doom when the breach was driven at Porta Pia and she was stripped of the trappings of temporal domain, to those who deplored her stubborn refusal to adapt her very dogmas to the intellectual fluctuations of the moment, who jubilantly declared that her condemnation of modernism was punctuated by a death rattle, she held forth the most humiliating refutation in the form of a marvelously modern organic body of concise, unifying laws admirably suited to the efficient, sanctifying government of her millions of modern adherents scattered over the face of the earth. Indeed, it would appear almost too obvious to observe that such firm, wise legislative dynamism is not readily recognized by humanity as characteristic of a corpse.

Then again, it is quite proper to recall that the church courageously brought forth this masterpiece of her law-making genius precisely at an hour when all mankind was convulsed by the most horrible catastrophe which history had thus far recorded. At a time when arrogant nationalism had precipitated this universal desolation and was preparing the way for the more devastating blood myths and fantastic race fables, the church alone had the fortitude to affirm practically her loyalty to the principle of the universal solidarity of the human race. She promulgated a code of discipline which was so detailed that it actually told the individual Catholic what and when he might not eat, but which was at once so international, so supernational in its scope, that it intimately affected the lives and modes not merely of a few million men in western Europe, but of more than 350,000,000 human beings of every racial stock and nationality,

of every social class and condition working out their individual salvation in the throbbing heart of the streamlined metropolis or on the pin points of tropical islands which dot the ample bosom of the sea. This code of laws represented in a sense her profession of faith in the universality of Christ's redemption, in the precious dignity, the eternal value of one human soul, no matter where it might be found. This code was her answer to the dithyrambic ravings of the era regarding the Raubthier, the superman, the man beyond good and evil. It was a practical confutation of the insane hypothesis of ethical relativism which pretended to differentiate the slave morality from the master morality. This code applied with equity and without discrimination to every Catholic of the Latin rite in every corner of the world, constituted her invincible refutation of those astute adversaries who sought to neutralize her magnificent redemptive efforts in the mission field by identifying her with odious imperialism and by European cultural pattern and disciplinary system.

And now, after 5 and 20 years during which we Catholics of the world have lived under the ordered discipline of the code, we might properly inquire as to the manner in which this juridical experiment of the church has acquitted itself during the quarter century; whether this resurgence of juridical activity has made its anticipated contribution to the restoration of all things in Christ. This is a question which suggests itself to all of us this morning. But it is a question which may not be facilely answered. First of all, we are still standing so close to the masterpiece that we cannot properly appraise its grandiose proportions and tapering vistas. Since it has been in force somewhat less than a generation, we should realistically understand that it has barely begun to permeate the complex ecclesiastical structure and to radiate its white light throughout the mystical body. It has encountered the psychological impact of nova et vetera in the established mass of customs and practices, of decrees and resolutions which had grown up and become entrenched in the traditional ecclesiastical ambit during the long centuries since the last official compilation of law made its appearance.

But, on the other hand, though this new code, the vehicle of the church's juridical aspirations, has been in force for scarcely a generation, it has been submitted to a test such as no previous legal instrument of the church has undergone. For it has been a generation during which humanity itself has been uprooted. For at least two centuries society sentimentally and externally preserved some of the old decencies salvaged from supernaturalism. But during this generation the sham was terminated and the issue was joined. The enemies of immutable truth first began to oust God and the supernatural from the field of empirical science. In their laboratories they laid the foundations for the mercilessly efficient blitzkrieg which, with the fiendish accuracy of a dark angel, has seared and scorched and blackened the face of the earth. But, at its worst, all that godless natural science can do is to maim and cripple and ultimately destroy the life of the body. But the godless concept of justice and jurisprudence has proven a far more terrifying menace. For in the name of the even-handed goddess who holds the quivering scales, the godless jurist has blasphemously imposed the slavery of the spirit and has reduced man, made in God's image and likeness, to the status of a brute animal stripped of personal dignity, bereft of basic rights and led by the halter of terrorism to feed at the trough of the benevolent state.

In nations and among peoples who have been the traditional exponents of the juridical order, the reign of law has been perverted, subverted, and destroyed. In this regard, Pope Pius XII in his Christmas allocution warned that outside the church of Christ juridical positivism has reigned supreme, attributing a deceptive majesty to the enactment of purely human laws and effectuating the fatal divorce of law from morality. As civil codes have crumbled and the juridical order has been liquidated in the name of pseudomysticism and legalistic realism, the church of God, which has so often been patronizingly identified with a smug, static, mystical, and unrealistic approach to the problems of life, has labored serenely through her juridical norms in ordering practically the spirits of men to the attainment of true life, true liberty, and the pursuit of true happiness. During this era of turmoil and tyranny when men have so frequently sought to attain their objectives through the bloody instrumentality of the purge and the putsch, she has welded her far-flung organism into a marvelous new unity through the spiritual media and through the orderly process of law. While secular jurists, infected with the virus of naturalism, have striven futilely to isolate the ultimate determinant of justice either in a sentiment of fairness or in the decent fulfillment of decent expectations, or in the satisfactoriness of a thing to all socially tolerable persons, the church of Christ has fearlessly thundered against this perilous subjectivism and has heroically maintained the necessity of a divine sanction for law. In a relentless argumentum ad hominem she has reminded the statesmen and jurists that if there be no God to avenge justice; if the Ten Commandments are to be ridiculed as a collection of Hebrew taboos; if the Sermon on the Mount constitutes no positive, eternally true norm of justice; if the whole New Testament is but the visionary preachments of the effeminate apostles of a pallid Christ—then might is right and Hitler is right and communism is right and the purge is right and the concentration camp is right and sterilization and economic enslavement—all the abominations of totalitarianism are right—and democracy is an unrealistic farce.

While she has ever been the palladium of law and order during these last 25 years, the church has remained stanchly faithful to her guardianship of law. Within her schools and universities, within her administrative offices, in the rank and file of her ministers, there has dawned a glorious renaissance of juridical activity. Through the codification of her law, the study of canon law and of all law has received a new impetus, and interest in the law has percolated down through the masses of her organism, and yet one is constrained to confess with regret that within the very household of the faith there have been occasional figures who looked with misgivings on this quarter century of intense legal development in the church. Some of them have labeled it a period of sterile juridicism which is alleged to have dried up the well springs of piety and devotion and asceticism; to have mechanistically centralized and bureaucratically devitalized fervent Christian life and practice. Others have gone so far as to cry out that the code and legalism have become fetishes. One's prime impulse is to inquire whether these are the same persons who before the promulgation of the code expressed contempt for canon law because of its tortuous labyrinth of unrelated decrees and decretals and compilations and extravagantes. But history will bear unprejudiced testimony to the fact that in every age when the disciplinary law of the church has been clearly enunciated and equitably administered, even in circumscribed spheres, the deep spiritual life of the church has been correlatively enriched. There is nothing mysterious about this. It stands to reason; for, if order is heaven's first law, if the glorious populace of the celestial Jerusalem bow down in adoration before the eternal order contemplated in the beatific vision, then order which in this world is achieved only by law must of necessity constitute a primary requisite for the more effective fulfillment of the sanctifying program of Christ's earthly kingdom.

This morning as we are gathered here in the National Capital, with the glad tidings of desert victory still ringing in our ears, our hearts are yearning for the ultimate victory which will bring peace to all the world. If it is to be a lasting peace, it must be the peace of God; if it is to be a lasting peace, it must be the tranquillity of order; and there can be no international or national order—no social or economic order—unless the leaders of men reestablish the true juridical order. All the blood and sweat and tears will have been shed in vain unless the victorious architects will raise the temple of the "four freedoms" on the infrangible cornerstone of God's eternal law.

Deo Gratias!

F. S. A.

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. J. LEROY JOHNSON. Mr. Speaker, the Sacramento Bee is one of the great newspapers of the country. It has battled for the underdog many years. No matter what one may think of the opinions of this newspaper, I can attest that they are respected by all thinking persons. I respectfully request permission to make a part of my remarks an editorial appearing in the Sacramento Bee under date of April 13, 1943, although I reserve the right to disagree with the Bee, should I be so disposed at the time the legislation regarding the F. S. A. comes up for our consideration.

The editorial referred to is as follows:

SENATE SHOULD RESTORE FUNDS TO SUSTAIN FARM SECURITY ADMINISTRATION

Another sample of the dominant temper in the present House of Representatives was given this week when that body passed the agricultural appropriation bill denuded of any appropriations for the Farm Security Administration and with the sum budgeted for the Rural Electrification Administration drastically reduced.

In one case, the sole agency devoted to the assistance of the so-called little farmer is put out of business, and, in the other, the agency which has done a marvelous work in bringing cheap electricity to the farms is handcuffed financially.

The program of the reactionary Republican-Southern Democratic coalition obviously is to smash everything which had its inception in the New Deal.

Facts and figures presenting the strongest kind of a case for the Farm Security Administration were given during the House debate.

It has extended aid to 917,000 farm families, most of whom otherwise would have lost everything they owned and hence would not be a part of the Army now producing food for victory.

The number of such families still being assisted with loans on easy terms by the Farm Security Administration is 417,000; and the food produced under Farm Security Administration supervision last year and the year

before in nearly every State was an appreciable percentage of the entire output.

Farm Security Administration has relieved a vast amount of depression distress, and that on a sound financial basis.

Representative Plumley, Republican of Vermont, reflected the prevailing sentiment when in a characteristic outburst, in reference to the Farm Security Administration, he declared:

"We have a lot of people in every State who have lived off the New Deal too long. Under the guise of and being classed as Republicans they have played ball with every New Deal team that had a dollar to spend on them. Bloodsuckers!

"And the largest group of bloodsucking barnacles on the ship of state is found in the Department of Agriculture."

But the Farm Security Administration is not dead yet.

Friends in the Senate are prepared to wage a vigorous battle in its behalf. Senator BANKHEAD, of Alabama, and Senator CHAVEZ, of New Mexico, both members of the Senate Agricultural Committee, already have pledged their aid to the agency which has devoted itself to championing the cause of the poor farmer.

Yes, fortunately, the last word has not been spoken either on the Farm Security Administration or the Rural Electrification Administration.

Veterans' Legislation

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. RANKIN. Mr. Speaker, I am going to oppose any adjournment, or recess, of Congress until we straighten out the question of jurisdiction of veterans' legislation as between the various committees.

Today sticks are being thrown into the machinery which are injuring the disabled veterans. Bills are being introduced, for instance, bearing on insurance, which are referred to the Committee on Ways and Means. The Committee on Ways and Means does not want that legislation, it should go to the Committee on World War Veterans' Legislation. The Committee on Ways and Means would be in favor of the passage of the resolution that is now backed by by petition No. 8 on the Speaker's desk, to refer veterans' legislation to the Committee on World War Veterans' Legislation. I hope every Member of Congress will sign that petition.

Let us settle this question now. This resolution is supported by the veterans organizations and it represents the best interests of the disabled veterans of this war. Let us stop this controversy.

If you do not want the Committee on World War Veterans' Legislation of which I am chairman to handle this legislation, say so; but let us stop this wrangling and get this matter straightened out and not let these veterans suffer.

Mr. JOHNSON of Oklahoma. Will the gentleman yield?

Mr. RANKIN. Yes; I yield.

Mr. JOHNSON of Oklahoma. Most of the Members of the House who are veterans have signed this petition. I hope the other Members will sign it.

The SPEAKER pro tempore. The time of the gentleman from Mississippi has expired.

Mr. RANKIN. Under permission to extend my remarks, I am inserting an editorial from the National Tribune, entitled "Committee Jurisdiction," which covers this proposition thoroughly.

It reads as follows:

COMMITTEE JURISDICTION

Needed legislation for war veterans and their dependents is being delayed in the House of Representatives by a difference in opinion over which committee should have jurisdiction. The fight broke out into the open last week when the chairmen of two House committees debated the question briefly. Elsewhere in this issue we are printing the colloquy because the time has come for the National Tribune to discuss the problem. The House is planning to take a 2 months' recess very soon and bills vital to men now being discharged from war service, as well as to veterans and dependents of earlier wars, are being stalemated. This jurisdiction issue must be settled.

Heretofore we have not stood up to be counted. We believed that the respective committee chairmen would reach an agreement or that the Rules Committee would decide for one or the other of the contestants. All signs now indicate a knock-down and drag-out battle which veterans can finish if they will. If they do not, no further legislation for veterans of this war and precious little for those of other wars will be enacted. Because action is essential, we have decided to choose sides. Both committee heads have done a great deal for servicemen and those they leave behind to be cared for by the Government. Both are our friends and veterans everywhere are grateful for their past efforts, but the existing situation is intolerable and a conclusion must be reached.

Let us first review the situation. The original pensions group of the House, formed in 1813, was the Invalid Pensions Committee, of which JOHN LESINSKI, of Michigan, is now chairman; he is contending for the right to oversee World War II legislation. As time passed other committees handling veterans' matters were established, among them the Pensions Committee, formed in 1880, which now controls only bills for the Spanish-American War period; Chairman CHARLES A. BUCKLEY, of New York, is not interested in the present controversy, but the committee fits into the whole picture. Bills relating to World War I benefits went to a half dozen committees until 1924 when the Committee on World War Veterans' Legislation was formed. Its chairman, JOHN E. RANKIN, of Mississippi, was a member from the first, its second chairman and has conducted its meetings for many years; he is also contending for jurisdiction of World War II legislation.

Existing House rules give LESINSKI jurisdiction over Civil War, Indian wars, and peacetime legislation, and RANKIN has supervision over World War I bills. For many years the LESINSKI group controlled Revolutionary War claims and Civil War pensions. After 1880 a change in House rules sent all other war-pension bills to the Pensions Committee, and private claims were distributed. World War I pension legislation went to the Pensions Committee. Adjustments became necessary, so, in 1939, the rules were again clarified. Civil War, Indian wars, and peacetime bills and private claims went to Invalid Pensions; Pensions kept only Spanish War bills; World War Veterans was assigned everything having to do with that war, including hospitalization for all wars.

That is how rules of the House were interpreted, and things went smoothly until 1941. Legislation covering the *Panay* incident of the Sino-Japanese War very properly came from Invalid Pensions because we were not at war with either Japan or China. When the *Reuben James* and *Greer* were attacked by the Nazis and peacetime conscription was in force, relief problems were considered by the same group. We were at peace.

As war approached, that committee very properly wrote a bill granting wartime rates to men injured in service simulating actual warfare and extending benefits in the event of war. That was in November 1941; no other group could have written such a bill because we were not at war. War came to complete action on the bill, both House and Senate passing it by December 15. It is Public Law 359, Seventy-seventh Congress.

On these events, Mr. LESINSKI makes his claim for jurisdiction. That Invalid Pensions was the first House committee of its kind is history, not argument, and it did not control the reference to his group of any World War I pension legislation. That a bill granting the first benefits to World War II veterans and dependents—not all benefits—came from his committee is not the precedent he claims; it is accident. The bill was prepared in peacetime and quickly voted in wartime because it was needed.

From December 12, 1941, both Mr. RANKIN and Mr. LESINSKI have been jockeying for the right to handle the new legislation, and lots of it will be introduced as time goes on. In both the last Congress and this one each has asked for changes in the House rules; action by the House of Representatives is required. The Rules Committee has held hearings but no decision has been reached. The Veterans of Foreign Wars and the American Legion have sided with Mr. RANKIN and have asked their memberships to support the action. We agree that the World War Veterans' Committee should handle the new war veterans' legislation.

Most of it will be patterned after laws covering World War I. Almost exactly the same problems facing the new veterans and dependents followed the last war, and most members of the Rankin committee are thoroughly familiar with them. Their years of study will prompt simple modifications of existing statutes that originated in their midst. Those laws are complex, and intelligent action requires an intimate knowledge of their history and structure. Many thousands of veterans of the last war are serving in this one. Their younger comrades, not yet organized, look to them for leadership. It is logical sequence to follow through with the same group that has already had enacted almost identical measures. The Congress is fully disposed to follow this procedure, and the mere accident of rules that caused the initiation of one applicable law in another committee in time of emergency has no bearing.

There is, of course, the matter of political patronage involved. Assignments to the committee handling a coming mass of bills for the millions of veterans of this war will be sought after. So will the clerkships that are involved in this controversy, but this war was not even contemplated when the last rules giving jurisdiction were made. They do not apply at all to World War II.

As it is, maimed and shell-shocked men are being discharged to jails and poorhouses and are being returned to families unable to care for them. There is no rhyme or reason for playing politics with men disabled in war or with their needy widows and orphans. The veterans' organizations, experienced in such matters, have taken their stand. Every veteran of any war and every potential dependent must help them break this deadlock.

On the Speaker's desk is petition No. 8. It requires 218 signatures of House Members to bring the argument to the floor of the House for final action. So far it has only 119 signers. Write to your Congressman forthwith. Ask him to place his name on that petition if he has not already done so. This whole question must be settled right now, if any group of veterans or widows is to expect relief from this Congress.

We Are Now at War

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Sunday Post of June 6, 1943:

WE ARE NOW AT WAR

The concern which certain groups of our people are showing over the so-called plight of the Japanese interned for the duration, clearly is not the result of agitation on the part of the majority of Americans.

As far as the bulk of our citizens are interested, they feel that the Japs behind barbed wire in our western detention camps are much better off than the Americans in the jungles of Guadalcanal and the snow-mantled mountains of the Aleutians.

Even though the Japanese-Americans may be as loyal as other Americans, numbers of our people are not forgetting Pearl Harbor or the duplicity of the trusted, slant-eyed ambassadors.

The Japs in internment camps are well fed, well clothed, in fact, better off than a lot of Americans, particularly those in the northeast corner of our Nation who are bearing heavy rationing burdens. Maybe the Japs suffer from a loss of freedom of movement. But New Englanders, with gasoline curtailed and under orders to do no unnecessary traveling, are not exactly free as the birds.

This kindness which some of our Americans want to bear to the Japs is the pre-Pearl Harbor brand of sweetness and light that almost left us at the mercy of our oriental enemies. That it still persists, in the face of the execution of American airmen and the sinking of a hospital ship, indicates that Pearl Harbor and what has followed, taught some of us nothing.

One can understand the "goody-goodies" of our land being so bountiful to people of a race which has shown itself to be fundamentally barbarous. In a world in arms and at war to the death, they still believe that if you turn the other cheek, Tojo will not give you a crack on the jaw. The fact that these people are not sticking their jaws above any New Guinea foxholes may account for them still being so benevolent.

But when our Government gets concerned about these people and lets the National Youth Administration start to educate those detained for war work, the average man, with a son fighting in the Pacific, asks himself: "What is this? Is it the heat? Is it me? Who's wrong now?"

He might even go beyond that and ask: "What is the National Youth Administration and the 'goody-goodies' doing about the education or comfort of the children of our fighting men who died in the Pacific to prevent the Japs from invading America?"

Of course, the National Youth Administration can claim that it was just trying to help out the manpower shortage, training idle people to grind out weapons of war to destroy Japan. Such a defense might stand if an outstanding source of manpower in our Nation had not been overlooked, men who need no training, because they have long been experts.

For example, we have just completed a food conference, with world experts attending. Some 99 percent of Americans never heard of these experts, even the American ones. Yet Herbert Hoover, the greatest of all, was left out.

We have come to an impasse in oil. The task of solving it goes to Harold Ickes, who holds down a dozen other Government jobs and has proven that he is no oil expert. But Alf Landon, an oil man, for whom millions of Americans voted and in whom Americans have confidence as a practical man, is ignored.

Shipbuilding and ship manning is one of our greatest problems. Joseph P. Kennedy, outstanding as a shipbuilder and maritime director, sits idly by. Also idle are men of proven organizational caliber like Alfred E. Smith and James A. Farley, while the regimenting of the Nation is in the hands of college professors who still act as if they had a classroom of students, rather than a country of thoughtful and independent adults.

Our Government may have reasons for not making use of the talents of these men. But thoughtful and independent Americans think it should not use tax and bond money to train Japs. They feel that their dollars could be employed in a better way to defeat the fatherland of these Nipponese. This is no time for social experiments. We had a Pearl Harbor, and we are now at war.

Hearing of Congressional Food Study Committee at Philadelphia

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. SCOTT. Mr. Speaker, on last May 17 the Republican Congressional Food Study Committee held a most interesting and informative hearing in Philadelphia. Eleven members of the committee were present, including the Honorable THOMAS A. JENKINS, chairman, and Hon. CHRISTIAN A. HERTER, chairman of the Subcommittee on Distribution and Rationing of Food. Hearings continued all day and approximately 30 witnesses were heard or presented briefs. These witnesses included representatives of consumer groups, housewives, the fishing industry, wholesale and retail meat dealers, processors, wholesale and retail grocers, food brokers, poultrymen, bakers, confectioners, and representatives of trade and businessmen's associations.

Many witnesses testified to their gratification at being given an opportunity to inform the committee of the problems besetting them and a number of these witnesses expressed their full understanding and approval of the purpose for which the committee was formed; that is, as a study committee seeking information upon which to base recommendations for administrative and legislative improvements in matters touching the production, distribution, and consumption of food.

A regrettable feature of the hearing at Philadelphia should be brought to the attention of the House. A careful conspiracy was laid by certain unsavory elements, battened on the New Deal, who saw in the work of this committee threats of exposure of their activities. The Stern machine decided to prevent the hearing at all costs.

This self-constituted Philadelphia gestapo followed a now familiar pattern in seeking to prevent the holding of a full and free hearing. Timed carefully to appear in their New Deal newspaper, the stern "gestapo" instigated the delivery of certain speeches which were immediately published along with unfair and inaccurate editorial comment indicating that Members of Congress had no right whatever to invite the people of Philadelphia to attend a public hearing. This loud and indecent outcry continued for several days; the false charges were meanwhile duly ignored by the reputable newspapers of Philadelphia.

Wild and utterly untrue news was fabricated, including statements tending to indicate that the Food Study Committee had been appointed by me, that its purpose was merely to stir up the people of Philadelphia, that I was the chairman of the committee, and that I was holding the hearings without the approval of the Speaker—the particular implication here being that a minority study committee should have secured such approval; further charges were made that all of the members of the committee were imposters.

The unfortunate postmaster of Philadelphia found himself brought into the controversy by the Stern New Deal gestapo which by this time had lost complete sight of the guaranty in the Bill of Rights of the rights of free public assemblage and of petition for redress of grievances. This unholy gang, aided by sycophants and satellites without scruple, hauled in the postmaster of Philadelphia to clinch their plot for them.

The postmaster is an estimable gentleman, highly regarded as an individual, who found himself reluctantly involved in the middle of a plot to prevent the people of Philadelphia from reciting their grievances against the Stern New Deal "gestapo," who did not want public attention called to the difficulties connected with the rationing of food in Philadelphia or to the discrimination being practiced against Philadelphia citizens.

Permission had been granted by a Federal judge for the use—for the purpose of a public hearing—of a courtroom. This permission had been set down in writing by the Federal judge at the request of the postmaster and—I am reliably informed—had been approved by the postmaster. The Quaker City "gestapo" decided nevertheless to prevent the holding of the hearing.

They did not want Philadelphia housewives, working people, business-

men, to find out why they could not get food, which was available in other areas, and why they had to pay more for the food they did get. Like any gestapo, the Stern-Greenfield gang feared the truth. Their news organ loudly trumpeted that the hearing would not be held and that the postmaster would see that the permission was revoked.

Upon the committee's appearing for the purpose of holding the hearing it was found that the postmaster had finally given in to the gestapo gang, who aspire to complete control of the Philadelphia New Deal organization. Uniformed guards were posted at the doors, and permission was denied to members of the committee to enter the Federal courtroom, which room was available for use and had been set aside for the purpose by the Federal judge and which permission had never been revoked by him; nor had any word been sent by the postmaster or by the gestapo to the committee indicating any intention to revoke the permission granted, either by the Federal judge or by the postmaster.

Notwithstanding the fact that permanent offices in these Federal buildings are occupied by Democratic Members of Congress, the postmaster maintained his refusal to permit temporary use of the space, on the ground that the 11 Congressmen were Republicans, and therefore, in his view, did not appear to be entitled to recognition.

I telephoned him in the presence of a number of representatives of the press and asked whether he had received any instructions from the office of the Postmaster General upon which he based his action. He informed me that he had not, and that action was based upon articles he had read in the Stern paper and upon conversations with two Democratic Members of Congress, one of them an occupant of permanent office space in the same building. Incidentally, this same postmaster, upon the defeat of a Democratic Member of Congress who had occupied permanent space in the building, received and refused a request from his successor, a Republican Member of Congress, for the use of the same or equivalent space. I had never personally made any application to the postmaster for any space in the building, temporary or permanent, and was, therefore, much surprised to note the postmaster's unfortunate partisan attitude.

Members of parliament in Fascist-menaced countries of Europe, immediately prior to the war, frequently found it necessary to select alternative places of meeting when hounded out of their original selection of a meeting place. We, too, found that this was necessary in view of the operation of Philadelphia's budding gestapo; the committee, therefore, arranged to hold its hearings in the ballroom of a nearby hotel. Before doing so, it was discovered that the New Deal "gestapo" had caused notices to be given to every elevator operator in the Federal building that the Food Study Committee hearings were not going to be held at all anywhere, and witnesses were being steadily turned away at each entrance. Upon discovery of this, it was necessary to call upon friends to take positions at different parts of the building to counteract the activity of these Federal employees. Upon my vigorous insistence, the custodian of the building then personally corrected this falsehood, which had been mysteriously passed on to every elevator operator and doorman. The coincidence between the statements of the Federal employees and the information broadcast in the unreliable Stern news organ to the effect that the meeting would not be attended by any witnesses, if indeed it should be held at all, was too close to be a coincidence and was undoubtedly a part of the whole discreditable and shameful conspiracy.

The entire action of these gestapo imitators indicated early training in Germany and in German practices. It is, in fact, true that the principal instigator of the whole conspiracy was once a student at the University of Berlin and must have gotten his Prussian ideas there.

Now what were these conspirators so anxious to conceal? Can it be that some of their friends are interested in protecting the black market? Or, is it that their contempt for the people of Philadelphia is such that they did not think that Philadelphians can be trusted to learn the truth? Certainly their efforts failed miserably and the reputable newspapers of Philadelphia gave the widest possible publicity to the information furnished to the committee by the splendid witnesses who appeared. The plot, conceived in malice and perpetrated in violation of every decent American principle, failed miserably.

A very few people stayed away and some were approached the day of the meeting by representatives of the Gestapo, and asked not to testify. The representatives of hospitals and other public institutions were warned that their Federal aid might be in danger if they appeared, but to the everlasting credit of the people of Philadelphia, nearly all of the witnesses appeared in spite of threats, and the wide publicity attracted additional witnesses.

What, I ask, was it that the New Deal gestapo did not wish to have told?

Could it have been the testimony of two New Jersey witnesses that 10,000 fish per day were being dumped in one area of New Jersey because the ceiling price did not warrant marketing them?

Could it have been testimony as to the 100-percent increase in the cost of certain fish sold in the Philadelphia market?

Could it have been the testimony of a Delaware witness:

The rationing program has been the cause of making cheats, chiselers, and liars of most all businessmen. I say that knowingly. * * *

There was a time when a man was proud to be in business. He was proud to be an American. I think the average businessman feels that if this is America, then what is bolshevism and nazi-ism?

Congressman SCOTT. I think many of us have had some reason for concern on those lines—some of us recently.

Congressman ANDRESEN. According to what you have said, it seems to me that if a man in business wanted to be honest, he wouldn't stay in business very long.

Answer. He just can't.

One of the pinko columnists on the "gestapo gazette" airily dismissed this testimony with the comment that businessmen were "liars, cheats, and chiselers," anyway, and had not been changed by the rationing program. Such is the New Deal's estimate of the American businessman.

Could it have been the evidence of discrimination against Philadelphia in favor of nearby markets, as testified by a representative of the Wholesale Commission Merchants? Note his statements:

We have complained from the inception of the original price ceilings on potatoes and onions whereby competing markets in New York have been allowed—apparently with the sanction and blessings of the Office of Price Administration—to take a larger mark-up than we in Philadelphia have been allowed to take. * * * We are in a region in which the regional director is in New York and it has been a case of the local office—which I don't wish to criticize; who have done all in their power but their power is limited, even though Philadelphia is the third largest city in the United States—they must take these orders which originate in New York, and in most cases, we get them from 42 to 72 hours or a week later, which makes a big difference in the handling of perishable commodities.

So our main complaint, as receivers and buyers of the fruits and vegetables in the Philadelphia area is not that we disapprove of the idea of price ceilings. We do feel as though we are right in our claim that we should be in line with all markets, at least within our area.

We feel as though the city of Philadelphia, rather than work under these conditions, should, at least, have a regional director here, whereby a city of this size and type should have a chance to get rules first-handedly. This we have never been able to accomplish.

Congressman MILLER. I want to send you a regulation that authorizes the 21 percent without limiting it to the area.

Answer. We have not been able to enjoy it in Philadelphia.

Many people in Philadelphia believe, and I think with good reason, that the very people who sought to prevent a public hearing in Philadelphia are the same people who brought about the loss to Philadelphia of a regional office, because the Pennsylvania administrator was not sufficiently amenable to suggestions that appointments be made on the basis of political patronage primarily, and it was found that the regional administrator in New York would be more amenable to the sugegstions of the Philadelphia New Deal politicians. Evidence of this may be found in a letter to the regional administrator at New York from Russell H. Potter, giving the reasons for his resignation as acting district director of the O. P. A. This letter appears in the Appendix of the CONGESSIONAL RECORD on page A2865.

It may be that these apt pupils of Axis methods of suppression did not wish to let Philadelphians learn of the difficulties in obtaining prompt and adequate relief from O. P. A. As witness the testimony of Mr. George A. Casey, of the National Independent Meat Packers Association:

And Office of Price Administration—the trouble is they have assumed judicial powers not administrative powers, because the act

states—a memorandum that the President wrote and attached to the bill—your own bill—he said, "Anyone who wants a quick relief, if they make a petition to Office of Price Administration, substantiated by briefs, that Mr. Henderson, the Administrator, shall grant relief." "Failing to grant relief," the President said, "you have a speedy recovery; a speedy chance for adjustment of your troubles through the Emergency Court of Appeals." And there has never been a case yet before the Emergency Court of Appeals. And this just came in this morning where they deny our petition, and we cannot get into the court of appeals.

And you might tell your brother Congressmen that we took the back way and let them come in and confiscate our stuff, so we are going to be in the Court of Claims anyway.

Perhaps those who fought so hard to prevent witnesses from appearing feared such testimony as that of Charles H. von Tagen, representing the Pennsylvania Grocers Association, who said:

I would like to say first, Mr. Congressman, that the Pennsylvania Grocers Association, which I represent, was very happy to accept the invitation to attend this hearing, because we are and we shall be happy at any time anywhere to confer with either a Congressman or a group of Congressmen on any matters affecting food distribution in the State of Pennsylvania.

I want to say that we are not here under any misapprehension on the status of your committee, because I remember attending a luncheon meeting at the Bellevue-Stratford Hotel on April 30, when you explained thoroughly the status of your committee.

Congressman SCOTT. Was there any question in the mind of any person there so far as you can ascertain that this was anything other than a Republican congressional food study committee?

Answer. Not that I know of, and if it is an unofficial committee, we hope to heavens that we can induce you to accomplish some of the things that we had hoped official committees would do before this, and they failed to accomplish.

It is evident that those who appeared before the committee were not under any misapprehension whatever as to the reason for its appearance in Philadelphia and its desire to be of service, constructively.

The New Deal "gestapo" evidently feared that the committee would receive and welcome constructive suggestions and that it would take steps to do something about the break-down in rationing. Such a constructive suggestion was received from Mr. von Tagen:

It is estimated that anywhere from 30,000 to 50,000 retail grocery stores have gone out of business since price control, rationing, and other governmental regulations became effective. As there are but 384,000 food stores in our country, it is not difficult to envisage the imminence of a complete break-down of the machinery of food distribution if the present pace of store closings continues.

We are now receiving reports that retail food stores are being closed by reason of their proprietors being drafted into the armed services. We recognize that in many instances this may be necessary, but we believe that the selective service law should be applied with more flexibility and with due recognition of the vital necessity to maintain our food distributive machinery.

In addition, the United States Employment Service in many instances has notified the proprietors of retail grocery stores that unless they close their stores and get into essential employment they will be drafted into the Army.

We know that the Employment Service has no authority either by law or otherwise to take such action, but unmistakable directives should be issued immediately prohibiting the practice, and if, as material received from our Government constantly sets forth, the maintenance of the home front, and principally that part of the home front which is engaged in war production, is essential to the maintenance of the fighting front, the business of food distribution should be immediately designated as an essential occupation.

Since rationing has become effective it has been impossible for food distributors to obtain sufficient foods in quite a few categories to supply the civilian occupation in accordance with the rationing regulations. Hence black market and other criminal conspiracies are interfering with orderly distribution.

And this:

Hence all branches of food distribution in the Philadelphia area and throughout the State of Pennsylvania are constantly in a state of flux, turmoil, and confusion, and there never will be an efficient administration of price control in the areas we have mentioned until a regional office is established in Philadelphia with sufficient autonomy to solve the problems arising in the area at first hand, subject, of course, to the jurisdiction of the Office of Price Administration in Washington and its action upon such of the more important problems that demand its attention.

Or was it the testimony of Mrs. Gustav Ketterer, chairman of the war service department, General Federation of Women's Clubs:

We are all fighting inflation, but sometimes the ceiling prices which have been set tend toward inflating the prices of certain articles * * *. The consumers do not want to see the small independent grocer put out of business. Can't some method be used so that he may be encouraged and able to still continue? We are in favor of the chain stores, undoubtedly, but also in favor of the little grocer.

As we depend to a large extent upon the farmer for our food, the consumer is interested in seeing that the farmer may continue to supply essential food products.

Another constructive suggestion was received from Mr. Charles Kingsland, representing the Northeastern Poultry Producers Council, who was asked by the gentleman from Minnesota [Mr. ANDRESEN]:

Question. Do you think it would be feasible to set up a new food agency or put it into the Department of Agriculture to handle production, distribution, price, and rationing?

Answer. I certainly do. I recommend the Department of Agriculture above all. I do not claim to know too much about that part of it, but our relationships with them have always been good and always been instructive, and I don't feel that it should have been put anywhere else in the beginning.

This witness also testified that in his opinion 80 to 85 percent of all poultry in the area covered by his association is now sold through the black market.

Time does not permit the quotation of numerous other sound, carefully thought-out, constructive suggestions received from witnesses, but it should be mentioned that everyone who touched on the subject urged the establishment of a regional office at Philadelphia to avoid discrimination and inexcusable delays. A number of witnesses urged the establishment of a central administrative authority to control the entire food problem in all its phases.

Returning to the efforts to prevent the people's representatives from hearing the people of Philadelphia, some further report would seem to be in order. The postmaster, at my request, sent me a copy of the regulations under which he assigned temporary and permanent space in the Federal Building. In these regulations received from the postmaster it clearly appears that the 11 Members of Congress had every right to use temporary space in the building for holding hearings, and the regulations specifically state that the matter need not be taken up with the Post Office Department. A further letter from the postmaster, under date of May 28, graciously admits that I am a Government official and states that at any time the space is available he would gladly assign it to me. The postmaster's refusal seems to have been based not upon my status as a Government official but upon the fact that since I appeared in company with a number of other Members of Congress we were not, in his view, a congressional committee. In other words, as he now explains it, there seems to have been no objection to my holding the hearing individually, but the objection seems to have been to holding the hearing in company with other Members of Congress. While this does not make sense, it may have had some political reasoning behind it.

A letter from the Federal judge states that the postmaster advised him that, before giving his consent he, the postmaster, would have to take it up with certain officials in Washington. It will be recalled that the postmaster advised me that he had spoken to no one in Washington. The Federal judge goes on to say, "I explained that the Court had no desire to go officially over his head in the matter and I put the request for the use of the room in proper written form and he said he woud get in touch with Washington for its approval by long-distance phone so that there would be no embarrassment on Monday morning when you were scheduled to hold your hearing. Later, as you know, the whole matter took another turn and you know the rest."

By reference to the matter taking "another turn," the only inference is that pressure was put on the postmaster by J. David Stern's "gestapo," who desired not to avoid embarrassment but to create it, and it is significant that in spite of the assurance of the postmaster that request would be made for approval by long-distance telephone, the Postmaster later informed me that he did not make such a request, and not a word was said to me or to any member of the committee of any change of mind or of any decision to refuse the use of the admittedly available courtroom until the committee appeared at the time set for the hearing, to find uniformed guards posted in front of the doors.

In the matter of *In re Lyman* (55 Fed., p. 29) a New York court held that neither the Treasury nor the Post Office Departments had any authority whatsoever, as custodians, to interfere with the use of that part of a Federal building occupied by the Federal courts and that control over such space was under the Federal

courts and not in the postmaster or the Treasury Department.

Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Germantown Courier of May 27, a letter to the Germantown Courier under date of May 28, 1943, and an editorial in the Philadelphia Inquirer under date of June 5, 1943:

[From the Germantown Courier of May 27, 1943]

DONKEY SERENADE

It is too bad that Philadelphia Democrats, particularly certain vocal representatives of the party, find it occasionally necessary to launch into diatribes against the more innocent activities of the rival party. The way these boys laid it on much-beleaguered, hard-working Congressman HUGH SCOTT last week is a typical answer, and makes us all wonder if the Republicans are such a nice group of people that the opposition must scare up false, weak attacks of this nature in the absence of any real faults to criticize.

Though we have some definite Republican leanings ourselves, we hardly believe this true. Surely a little brain-cudgling would reveal some truly fundamental weaknesses in Republicanism more worthy of attack than the presence in the city of an all-Republican unofficial committee investigating the food situation. Regardless of who does it, we do feel that investigating the food situation is in itself a laudable activity.

Looking back a little further at the history of these recently recurring attacks of no importance, another aspect of the situation comes to the fore. Most of the attacks, you may have noted, have centered around Congressman SCOTT. Perhaps the Democratic situation is not merely a paucity of ideas about what's wrong with the Republicans. Perhaps, on the other hand, the Democrats have been forced to pay HUGH SCOTT the grudging compliment of their blows. No smart political organization—we grant the Democrats a degree of smartness—would waste its fury on the weak. It chooses to attack the strong, the focal point of a certain section's faith in the personnel of its party. If we may assume, from the nature and direction of their attacks, that the Democrats consider SCOTT a strong focus of Germantown and Philadelphia Republicanism, we concede the point. We would advise, however, against the futility and waste of such picayune cotton-stuffed clubbing that the Democrats have been dishing out.

Not being too familiar with the details of the internal situation, we hesitate to add this footnote But it seems true, on the surface of things, that Congressman SCOTT and his friends were not free from error themselves in their recent investigation here. The mistake they made was in establishing a partisan committee for the investigation of a nonpartisan situation. Democrats and Republicans both eat. And by failing to include Democrats on their committee—no matter how praiseworthy the committee's job may be—they left themselves open to Democratic pettifogging that took place.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 28, 1943.

GERMANTOWN COURIER,
Germantown, Philadelphia, Pa.

GENTLEMEN: Your very fair editorial entitled "Donkey Serenade," in your issue of May 27 is very much appreciated and I am sure that the Food Study Committee will be glad to know that you took editorial notice of their work.

In expressing regret that the committee did not include members of both parties, it seems to me that your point was well taken, especially as the background incident to the composition of the committee was not explained in the published reports of the hearings.

On May 14 on the floor of the House, I publicly invited the Democratic Members of Congress from Philadelphia to sit with the committee and to take part in the examination of witnesses and in the committee's deliberations. I urged that they do so in the interest of a bipartisan investigation. At the same time, I challenged my Democratic colleagues from Philadelphia to join with me in introducing a resolution for the creation of an official committee, composed of members of both parties, to investigate the entire food problem. Neither invitation was accepted, which is regrettable. If you will refer to the CONGRESSIONAL RECORD, page 4490, you will find the full text of my speech of May 14.

The Food Study Committee expects to continue its work in other cities, the next hearing being set for Minneapolis on June 1. It has received cordial cooperation from consumers' groups, trade associations, housewives, businessmen, and other groups wherever hearings have been held. A concrete result of its deliberations has been the introduction of the Jenkin's bill to consolidate all problems relating to food from production to consumption under a single administrative head. You may have noted the warm approval of this bill expressed by Walter Lippmann in his column of May 26.

The unfortunate discourtesy exhibited by the postmaster is, I am sure, a matter of regret to him since I have subsequently received from the postmaster a copy of the regulations concerning use of the Federal Building from which it clearly appears that his action in excluding 11 Members of Congress from the use of the building was in direct violation of these regulations. As to the political motives behind the attempt to break up the hearing or to destroy its effect, I shall have more to say on another occasion on the floor of the House. The Bill of Rights permits Americans to assemble peaceably and to petition for redress of grievances. The flagrant and inexcusable effort to set aside the Bill of Rights in Philadelphia (of all places) was contemptible. The little group who tried so desperately to perpetrate this wrong should not go unwhipped of justice.

Forgive me, if I have trespassed too long upon your time or space.

Cordially yours,

HUGH D. SCOTT, Jr.

[From the Philadelphia Inquirer of June 5, 1943]

POLITICAL TERMITES IN THE OFFICE OF PRICE ADMINISTRATION

That Democratic politicians have been treating the Office of Price Administration as a grab-bag for jobs is hardly a secret. But the scandalous extent to which this agency has been turned into a giant dispensary of jobs for the faithful has only now been pictured in the explosive charges put out by the former district director of the Office of Price Administration in New York, Russell H. Potter.

Mr. Potter resigned after his displacement as director had been ordered by the Democratic bosses in New York. It is his blunt declaration that the conditions within the Office of Price Administration are "more insidious than the black market."

His testimony points to the conversion of the Office of Price Administration into another and bigger Work Projects Administration as a Government happy hunting ground for political spoilsmen. To say that an Office of Price Administration controlled by party bosses is worse than the black market is putting it lightly. The welfare of every man, woman, and child in the Nation is affected by this agency. If it spreads its administration of food rationing and price ceilings in the gutter of machine politics, it is betraying its trust and condemning itself as an unworthy instrument of government.

Mr. Potter is not chary with facts and figures. He says that Mike Kennedy, the head of Tammany Hall; Ed Flynn, leader of the Bronx; Frank Kelly, boss of Brooklyn; and Senator MEAD ganged up in ordering the regional administrator, Sylvan L. Joseph, to dismiss him to make room for a man of their own choice. He quotes Joseph as telling him that if he did not comply, the Office of Price Administration would not have the support of New York Congressmen when appropriations came up for a vote.

He tells of the incessant turmoil in the Office of Price Administration because of the demands for jobs by party leaders, and of the constant reminders given him as district director to "play ball" with certain Senators and Congressmen.

The maneuvering extended throughout the region, including Pennsylvania and Delaware. Mr. Potter recalls that Administrator Joseph complained of constant annoyance "because Senator JOSEPH F. GUFFEY insisted that his people be given jobs."

This is a noisome mess, and if the Office of Price Administration is not soon extricated from it, the consequences in mismanaged food and price problems and in the sacrifice of public confidence in the agency are bound to be appalling.

The Office of Price Administration is not the Work Projects Administration, no matter how some politicians and their stooges regard it. Food rationing and inflation resistance are not in the same class as leaf raking. Efficiency, not politics, must rule, or the whole program will collapse. The termites now eating it to dust must be driven out.

Meat Ration of Copper Miners at Butte, Mont.

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. MANSFIELD of Montana. Mr. Speaker I wish to bring to the attention of the Congress the serious situation which exists in Butte, Mont., because of the inadequate meat ration allowed to the copper miners there. I wish to assure my colleagues that this matter is of vital importance in connection with the conduct of the war. As a former Butte miner myself I feel I am in a position to speak for the men who work in these mines. I know it is extremely difficult for someone not acquainted with Butte to understand the real need for solid meat rations but I wish to assure the Members of the House that working underground at distances to 4,000 feet, as well as working under conditions of extreme heat and other disadvantages calls for an amount of energy which cannot be supplied by peanut butter and lettuce sandwiches, or other substitutes. The Butte miners are engaged in the hardest kind of manual labor and they need lots of meat to get the "rock in the box." The ration of

2 pounds of meat per week for these soldiers of production is wholly inadequate and as a result of this there is growing discontent and dissatisfaction among the men. I cannot too strongly urge that action to correct this situation be taken at once so that production for the war effort may not be impeded. These men require ample food and this is especially true of miners and craftsmen.

I have taken this matter up with the Honorable Prentiss Brown, Administrator of O. P. A.; Mr. John Madigan, head of the Meat Section, O. P. A.; Dr. Russell Wilder, Chief, Civilian Food Requirements Branch of the Food Distribution Administration; Dr. Roy F. Hendrickson, Director of Food Distribution Administration, and many others, but to date I have been unsuccessful in getting an additional meat allowance for the miners. I feel that some degree of differential rationing of meat can and should be worked out by the O. P. A. Surely if we can ration gas on an A, B, and C basis it appears logical that we could do the same with meat. We cannot depend too much on statements made by the experts of the National Research Council that alternate unrationed foods sufficiently high in protein are available and could be used in place of meat. It should be kept in mind by the Members of Congress and the administrators of O. P. A. that copper is the most important and most needed metal being mined at the present time. It is absolutely necessary that production be maintained at its present level and, if possible, increased, and to do this it will mean that the miners engaged in this dangerous and difficult occupation will have to be given the necessary amount of meat to supply them with the energy to carry on and to produce for our country.

I wish also to call the attention of the Congress to some of the hundreds of communications which I have received from my friends in Butte. I know many of these men and women personally, and I want to assure you that what they say is the truth:

More meat, please.

TONY R. NUGENT.

Can't mine copper on bread and water.

JOHN T. JOHNSON,
Butte, Mont.

More meat for more copper.

RAYMOND JOHNSON,
Butte, Mont.

BUTTE, MONT.,
June 11, 1943.

DEAR CONGRESSMAN: We need more meat for the Butte miners.

Yours truly,

E. EDMUNSON,
Proprietor of Ed's Market.

More meat for my miners.

Mrs. GODBOUT.

BUTTE, MONT.,
June 11, 1943.

DEAR SIR: Not getting enough meat to work on; not enough red stamps.

R. O. SAUNDERS.

We can't work without more meat.

NICK GRMOLJEZ.

Can't eat just bread.

ELI BONORUCH.

BUTTE, MONT.,
June 10, 1943.

Congressman MIKE MANSFIELD:

Please give this serious consideration. More meat needed for copper production. Cannot get work done on substitutes. Meat for hard manual labor; lettuce and peanuts for others.

MARY ORLICH.

We would please like to have more meat for my family.

ANJIE DAICICH,
Butte, Mont.

To Hon. MIKE MANSFIELD:

Do all in your power to get more meat for our Butte miners.

Thanking you in advance.

MAURICE J. KIELY,
Y. M. C. A., Butte, Mont.

BUTTE, MONT., *June 10, 1943.*

HONORABLE SIR: Knowing Butte as you do, and the work of the Butte miners, no one needs to tell you a man working in the mines must have good food, especially meat, so we solicit your support in this drive to secure more meat for the heroes who work the mines.

Thank you.

Mr. and Mrs. WM. MARTIN.

Less starch, more meat. Can't cut the buck on macaroni. I'm Irish, not an Italian or a vegetarian.

DENIS M. LYNCH,
Walkerville, Mont.

DEAR SIR: As I am one of the miners of Butte, Mont., I would be very grateful if our allowance of meat would be enlarged as we need it in the worst way.

FRANK DAVIS,
Walkerville, Mont.

DEAR MIKE: The copper miner has a big job to do in the war effort. Let's keep him in fighting condition by giving him the kind of food he is used to eating.

More meat—more copper production.

OSCAR HILLS,
International Representative,
M. M. & S. W., Butte, Mont.

DEAR SIR: Please allow us miners more meat. I am losing weight.

Yours,

EMIL HERMANSON.

DEAR SIR: Please use your efforts to get us some more meat.

NICK HUBBER,
Butte Miners Union.

BUTTE, MONT., *June 10, 1943.*

DEAR MIKE: No meat in the house. Please do your stuff.

Yours,

KYLE PUGH.

BUTTE, MONT., *June 11, 1943.*

We need more meat to stand the work in the mines. A miner needs plenty of meat daily.

AL BUCKMAN.

As a wife of a miner I know the miners need more meat.

Mrs. GEORGE SWIFT,
Butte, Mont.

In order to avoid absenteeism in the Butte mines, it is necessary that the Butte miners have more meat.

Respectfully,

GEO. SWIFT,
Butte.

Please do all you can to give our miners more meat. I know it is a necessity.

Mrs. ED. MOLTHEN.

BUTTE, MONT., *June 11, 1943.*

DEAR MR. MANSFIELD: Butte's miners need increased rations of meat to stay at their jobs.

Copper production is vital to the war effort. Surely the Office of Price Administration can devise a method for allowing Butte's copper miners the privileges accorded other miners and thus aid the production of a vital mineral.

Respectfully,

M. BAXTER LARSON.

DEAR SIR: I am getting just half enough meat and pay one-third more for it.

Round steak was 8 points. Now it is 12 points per pound.

EMIL CHRISTOFFERSON,
Butte, Mont.

We want more meat for copper production.

WALTER PRATT.

DEAR MR. MANSFIELD: If they want more copper mined in the Butte mines, they will have to give the Butte miner a lot more meat. The boys on the battle front need something to fight with, and the Butte miner has a big responsibility. Give us more meat.

P. MCSHANE,
Butte, Mont.

DEAR MR. MANSFIELD: We would like you to do all you can regarding of getting more meat for the miners. If we wish to get an all-out production, then it is necessary that we have the proper food.

Sincerely yours,

THEO. MURRAY.

CONGRESSMAN MANSFIELD: I am the wife of a miner and think you should put forth all the effort you can to procure more meat for the miners.

Mrs. MAY BRUNELL,
Walkerville, Mont.

DEAR SIR: As I am one of the miners of Butte I would be very grateful if you would do all you could to increase the meat allowance for Butte miners.

AL DAVIS,
Butte, Mont.

DEAR MIKE: Let's have more meat for the miner. The more meat, more copper.

Yours truly,

HENRY REED.

BUTTE, MONT.,
June 10, 1943.

Representative MANSFIELD,
Washington.

DEAR SIR: I am sending this request that you do whatever you can to obtain more meat for the copper miners of Butte, as my husband is one. It is very hard work, and they need all the meat they can get.

Mrs. H. M. VOSS.

More meat for the miners.

Mrs. M. SLOGAR.

I don't think the miners are getting enough meat.

A WELL WISHER.

More meat for the miners.
Mrs. E. LAUSEN.

More meat for the miners.
Mrs. CHAS. LAUSEN.

Meat goes good with bread.
ANTON BANEVICH.

Subsidies

REMARKS
OF
HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. WOLCOTT. Mr. Speaker, it is expected that some time next week the so-called Commodity Credit Corporation bill, H. R. 2869, will be considered by the House. I call attention to section 6 of that bill which proposes to prevent subsidies being paid for the purpose of stabilizing prices to the ultimate consumer. I am placing in the RECORD today a proposed amendment which will strengthen that language and make more definite the intent of Congress in respect to subsidies.

I think it is rather deplorable that we have not given more consideration to the fact that subsidies for the purpose of stabilizing and maintaining prices is probably the most inflationary action which could be taken. I hope you will read this amendment which has been agreed upon by many Members of Congress, in the light of the controversy about subsidies, and in anticipation of it being offered as a substitute for section 6 of the Commodity Credit Corporation bill, H. R. 2869.

SUBSTITUTE FOR SECTION 5 OF S. 1108

SEC. —. Whenever a maximum price or prices shall have been established for any agricultural commodity or any commodity processed or manufactured in whole or substantial part from any agricultural commodity, including milk and its products and livestock, under authority of the Emergency Price Control Act of 1942, as amended by Public Law No. 729, approved October 2, 1942, no subsidy or other payments, other than those which have accrued prior to the effective date hereof, shall be made either directly or indirectly by the Government or any agency thereof, including any Government-owned or Government-controlled corporation, to a producer, processor, manufacturer, or any other person engaged in the production, marketing, distribution, or handling of any such commodity either (1) for any reduction or roll-back of maximum prices so established as may have been or may hereafter be ordered, or (2) as a substitute for or in lieu of increasing maximum prices already or hereafter established, from any funds heretofore or hereafter appropriated to, borrowed under congressional authorization by, or in the custody or control of any governmental agency, including any Government owned or controlled corporation, unless the Congress shall have specifically authorized the use of such funds for such purpose, except that the foregoing prohibition shall not apply until the end of the current crop season to any such commodity, other than milk and livestock and the products thereof, with respect to which the Government or any agency thereof was committed to the payment of such subsidies or other payments on June 15, 1943: *Provided*, That nothing contained in this section shall be construed to prevent the payment of all or any part of the purchase price or adjusted purchase price heretofore or hereafter paid or to be paid for such commodities sold to any governmental agency for governmental use. The definition of the term "person" in section 302 (h) of the Emergency Price Control Act of 1942, shall apply to the term "person" as used herein.

SUESTITUTE FOR SECTIONS 6 AND 7 OF H. R. 2869

SEC. —. Notwithstanding any other provision of law the Price Administrator is hereby authorized and directed to make such modifications of a maximum price or prices established on any agricultural commodity or any commodity processed in whole or substantial part from any agricultural commodity, including milk and its products and livestock, under the authority of the Emergency Price Control Act of 1942, as amended by Public Law No. 729, approved October 2, 1942, as may be determined to be necessary to secure adequate production of such commodity for war purposes.

Pittsburg County (Okla.) Bar Speaks

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. STEWART. Mr. Speaker, the Pittsburg County (Okla.) Bar Association has taken full cognizance of the shameful defiance of the leaders of organized labor in calling strikes during the most devastating global war in history. This association of lawyers in the largest city in the Third Congressional district, assembled together at a regular meeting and passed a resolution that fully reflects their stand against strikes and all other labor interferences.

McAlester, the county seat of Pittsburg County, Okla., and it so happens is the center of the great southeastern Oklahoma coal field, and many of these lawyers' clients are coal miners, but the time with them is ripe to assert themselves against the atrocities of strikes during this war. Many of the lawyers of the Pittsburg County Bar Association answered the call of their country just when conditions began to get tense with the Axis Powers and enlisted in the armed forces—long before Pearl Harbor—but their compeers at home are backing up those that entered the armed forces with their works and patriotism. They have rightly pledged themselves to relegate to private life public officials who do not do their duty in bringing to a close these acts nothing short of treason.

We know of no group of men better equipped to sense a wrong than the legal profession. Many a time during the dark hours of this country there has arisen from their ranks one who has brought us out of chaos, and when they meet in agreement and pledge themselves to such a resolution as did our forefathers in the adoption of the Declaration of Independence the country indeed has a more promising silver lining.

Mr. Speaker, I wish to commend to you these distinguished lawyers that will measure in talent with those in any part of the country and their own resolution bespeaks for their patriotism and determination.

I still have faith that this Congress will redeem this Republic and render unto everyone his just due.

The resolution is as follows:

Whereas the Bar Association of Pittsburg County, Okla., realizing the danger that besets us as a Nation and that especially endangers the lives of our boys in the armed service on land, in the air, and on the waters of the seven seas—because of the shameful conditions that hamper our war efforts through strikes; and

Whereas we feel that those who promote them and participate in them are guilty of nothing less than treason and are traitors to the memory of those who have died, and those who are willing yet to die, to save the country they love from those who would destroy it; and

Whereas we feel that John L. Lewis and his associates are clothed with infamy of deeper dye than blackens the memory of Benedict Arnold, and a guilt greater than him who is condemned to die because he offered aid and comfort to our enemy and his fellow countrymen: therefore, be it

Resolved, That the Bar Association of Pittsburg County, Okla., demand of our Congressmen and Senators and those in authority, that immediate steps be taken to prosecute and suppress the treason now endangering us and to place organizations that have the power to make this condition possible, under the strictest ban of civil and criminal law; subjecting them to the same inquisitorial and visitorial powers that now surround corporations or other like bodies; and be it further

Resolved, That we each pledge ourselves to devote all of our individual energies to relegate to the obscurity of a shameful oblivion, any public servant who, because of political cowardice, is unwilling to urge and support legislation or judicial action, that will end this condition that fills us with shame and humiliation, or that is willing to allow to exist conditions permitting the necrotic egotism or the paranoiac illusions of grandeur possessing any man or set of men to feed upon the dangers and wounds and lives of the youth of our land; and be it further

Resolved, That a copy of this resolution be furnished to our local papers, the Daily Oklahoman and the Tulsa World, with request for their publication; and that copies further be sent to our representatives in the Senate and the Congress of the United States.

Gasoline Rationing

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. McGREGOR. Mr. Speaker, the people I represent are threatened with additional gasoline rationing. If this additional sacrifice is necessary for the war effort, I am sure my people are

ready and willing, but we want to know the facts. We will protest, however, if the facts show that we of the Midwest are going to be penalized because a few Eastern States cannot get all they want—a situation dependent a great deal upon transportation, and not upon a lack of gasoline.

If it will help win the war and save the life of one single member of our fighting units, my people are willing to walk to work. If gasoline being used in my district can be shipped elsewhere and used to better advantage, we will applaud the regulations designed to secure that result. However, Mr. Speaker, I am not going to agree to any program which will subject my people to additional hardship, additional inconvenience in order to make eastern motorists feel better.

What we want, Mr. Speaker, is a decision based on sound economic and military considerations and not on politics.

Gas Rationing in Indiana

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House I submit for printing in the CONGRESSIONAL RECORD a letter I have received from Mr. George A. Kuhn, president of the Indianapolis Chamber of Commerce, in regard to the proposal to place additional restrictions on the rationing of gasoline in Indiana. The Indianapolis Chamber of Commerce is a live and influential organization, composed of the leading businessmen of our city and State, and Mr. Kuhn, its president, is very eminent and outstanding in our business community. Mr. Kuhn's letter expresses, I think, the sentiments of just about 100 percent of our people in regard to reduced gasoline rationing. The citizens of Indiana have genuine sympathy for the people of our eastern seaboard, but with transportation difficulties and other obstacles preventing the transportation of gasoline to the East our people cannot see any reason or justice in reducing gasoline allowances for the Midwest. Such a denial to our citizens without any possibility of commensurate benefits to the East would be deeply resented. Mr. Kuhn's letter is as follows:

INDIANAPOLIS CHAMBER OF COMMERCE,
Indianapolis, June 14, 1943.

Hon. LOUIS LUDLOW,
House Office Building,
Washington, D. C.

DEAR MR. LUDLOW: By action of our board of directors, we desire to be placed on record as opposing any reduction in gasoline ration allowances for the Midwest, unless it is needed on account of military requirements.

The impression prevails in the Midwest that it is being proposed by some eastern interests, primarily because they have been placed under such restrictions. Much as we sympathize with them, we do not believe that any crippling of transportation in the Middle West would be of any benefit to them, unless it actually increased gasoline supplies for them. It seems highly doubtful to us that it would or could do so. Some of those in the East probably need to know that Middle West urban industrial centers do not have the extensive public transportation facilities that prevail in the East. We are much more dependent upon private transportation to keep the wheels of industry and commerce operating than is true in the East.

One point, however, has not been made clear to us. There have been some vague and general statements as to military requirements for gasoline. On this, we wish to make it very clear that if further reductions in the Middle West are needed to send just one more bomber over enemy territory, then we would accept the reduction gladly. We think, however, if such is the fact, we would be entitled to be told so by responsible military leaders, so that we could know that it was not just a part of some governmental department's propaganda to put over a program in another interest.

Very sincerely yours,
GEORGE A. KUHN,
President.

The Voice of Congress

EXTENSION OF REMARKS

OF

HON. WILL ROGERS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. ROGERS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of today:

THE VOICE OF CONGRESS

After studying all of the plans introduced in both branches of Congress on the subject of the post-war foreign policy of the United States, the Foreign Affairs Committee of the House of Representatives decided yesterday in favor of a one-sentence resolution offered by a freshman Representative from Arkansas, Mr. FULBRIGHT. The resolution says:

"Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein."

We congratulate the committee on its decision. The resolution which it has adopted seems to us to be ideal for the purposes for which it has been offered. It is brief. It is clear. It says what needs to be said at this time. It does not attempt to tie the hands of the Senate so far as any details of the forthcoming peace are concerned. It leaves the Senate the freedom of action to which it is entitled under the Constitution. At the same time, it tells the world that the United States recognizes and accepts responsibility for helping to prevent the outbreak of another war. In saying this, it goes straight to the main point—namely, the organization of peace on the basis of adequate power to enforce peace, with the United States sharing both in supplying that power and in exercising responsibility for its use.

This is the essential point on which our allies have been waiting for the voice of the American Congress to be heard. For the great and still unanswered question in the councils of the United Nations, the question which has hovered like a ghost in the background of every decision that is made from day to day, has been the question whether 1918 will repeat itself; whether the United States, having helped once more to win a war for the defense of civilization, will return again to isolation when this war is ended; or whether, this time, the United States will accept and fulfill the responsibilities which fall logically to it as a great world power.

In the answer given to that question every one of the nations now fighting at our side has a direct and inescapable interest. This is the question of which the Russians are thinking when they weigh in their minds which is the safer course for them to follow: Put their faith in a new system of international security or go their own way, relying on the acquisition of new territory to protect their western front. This is the question of which the British are thinking when they consider the two alternatives of counting on American assistance or of creating some new version of the old balance of power on the Continent. This is a question which will deeply concern the Fourth French Republic.

It is of paramount interest to the small nations of Europe, which have paid the full price of the failure to organize peace. It is a question of profound importance to our allies, the Chinese, as they look across a narrow sea toward Japan. It is of direct and major interest to our close neighbors in Latin America.

The resolution to which the Foreign Affairs Committee gave its approval yesterday would speak in the name of Congress, and, because of the very fact that it spoke in the name of Congress, would go far to resolve any doubts in the minds of our allies concerning the part that the United States will play in the post-war world. It is a cause for deep satisfaction that the resolution is supported by a unanimous committee, Democrats and Republicans alike. If it is adopted now by both branches of Congress with the overwhelming support of both parties the effect will be important. An action of this kind, taken now, would strengthen the ties that bind the United Nations. It would help both to shorten the war and to win a better peace.

Lt. Gen. Delos C. Emmons

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. ELLIS. Mr. Speaker, today, with considerable pride, I bring to the attention of my colleagues the fact that one of the great commanders of this war is a native of my home town. Lt. Gen. Delos C. Emmons was born and reared in Huntington, W. Va. His forebears came to that great section of the Ohio Valley shortly after the Civil War and made an important contribution to the development of that section of our State.

General Emmons was placed in command of the Department of Hawaii 10 days after the Japanese attack on Pearl

Harbor. In 17 months he has directed the building of defenses costing millions of dollars. He was recently decorated with the D. S. M. and it is rumored he will be placed in command of the western defense and Fourth Army. If that is true, I want to say to my colleagues of the west coast that you will have to guard your safety a West Virginian and a great soldier.

I submit an editorial by Clyde A. Wellman, editor of the Huntington Advertiser:

FELLOW TOWNSMAN, GENERAL EMMONS

Lt. Gen. Delos C. Emmons, who has just been relieved of his command of the Hawaiian department of the Army for another important military assignment, is Huntington-born and Huntington-bred.

Huntington is proud of the brilliant and distinguished record he has made in fortifying the Hawaiian Islands and restoring order out of chaos after the shattering surprise raid the Japanese made on the great Pacific bastion on that tragic December 7, 1941.

Huntington rejoices that in recognition of his meritorious services in directing the defenses of the strategic island base the President of the United States has seen fit to bestow upon him the Distinguished Service Medal as a mark of appreciation of a grateful Nation for a job well done.

Wherever military duty calls him after his exceptional performance in the Hawaiians, we are confident he will continue to distinguish himself as an able, aggressive, and understanding leader of America's armed forces and rise in the affection and esteem of his countrymen.

The Advertiser salutes General Emmons as Huntington's most distinguished and illustrious son and wishes for him the fullest measure of success and opportunity in the progress of his military career. It is a proud distinction for Huntingtonians to be the fellow townsmen—many of them boyhood chums—of one who ranks among the world's outstanding military leaders of this day.

The Hand of Paralysis Grips Our Oil Supply

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. BOREN. Mr. Speaker, the Nation has exulted of late at the steady gains our fighting men are making in the several zones of combat. Our pride in their achievements is great and we know that whatever measure of high courage and resourcefulness may be demanded, it will be displayed in full keeping with the finest traditions of this great country of ours.

At the same time we, at home, are losing a battle; yes, more than a battle, an entire campaign. I have taken the occasion several times to direct attention to our failing ability to produce the crude petroleum which we now demand and which we will continue to demand in that period when this war will have ended and we shall be faced with the post-war readjustment and restoration of our entire economy.

We are losing that campaign for production because some in positions of emergency control have ignored facts. Intent upon their pursuit of a theory of price control, demonstrably paralyzing in its effects upon production—of petroleum as well as of other critical commodities, including our daily bread—these authorities have allowed an economic condition in the crude oil producing industry to grow steadily worse. I have no way of accounting for such willful disregard of vital necessities.

I recall that Mr. Leon Henderson, in his first report to the Congress, dated April 30, 1942, stated that:

At the time the defense program was launched the petroleum industry was depressed.

Note that he said that the depressed condition existed at the time the defense program was started, away back in the early part of 1940.

There has since been no correction of that depressed condition.

The Petroleum Subcommittee of the House Interstate and Foreign Commerce Committee has heard much testimony on petroleum in recent months. Its latest hearings were completed in May. In the face of the testimony that was given then, by numerous men in the petroleum industry, by State officials who are close to the problem of keeping our oil production adequate to the needs, by men in Government charged with the responsibility of supply for Army and Navy, it is difficult to understand the seeming complacency with which Mr. Prentiss Brown dismissed on May 1 the petition of Petroleum Administrator Ickes. Mr. Ickes had found, on the basis of investigations made by his own staff that a serious situation existed. Mr. Brown seemed to believe that everything was well on the petroleum front and any little thing that might be wrong could easily be fixed with a subsidy or with some scheme yet to be devised. Any way would do except the straightforward way of increasing the price of crude oil—a simple, self-administering method that has always worked to stimulate production.

There are those who plead extenuating circumstances for Mr. Brown. I will not deny the difficulty of the job he undertook when he succeeded Mr. Henderson. But he is still following the advice of the people who guided Mr. Henderson. A few of the names are different, but you may have noted that each time a professor of economics drops out over there, another of the same profession cames in. The successor, judging from results, takes up the philosophy of the one he succeeds. So, the same policy continues. It is a policy that takes no account of the needs of the Nation and it is a policy of inertia and stagnation.

Mr. Brown's acquaintance with what is wrong in the oil industry would be greatly enhanced if he would merely spend a little time with some of the oil producers of his home State of Michigan. I fear that he has paid them no heed, if he knows them at all. I have had occasion, as a member of the petroleum subcommittee, to go rather fully into conditions in Michigan as well as those of all the other oil-producing States. The trouble is the same everywhere. It cannot be cured by trifling nickel and dime adjustments, affecting a few hundred barrels of oil, such as the O. P. A. has granted in a few instances and to which some of their spokesmen have pointed as evidence that they have been keenly alert to conditions.

The longer this condition endures, the greater will be the shock when the day comes for the oil famine on a national scale. The Petroleum Administrator has aptly pointed out—he has said it in his letter of April 7 to Mr. Prentiss Brown—that a reasonable price increase now that will put the oil producers to work finding new fields and improving the productive efficiency of existing ones, will avert the necessity of a huge increase in prices of crude oil and refined products later.

The O. P. A. has cited as basis for its stubbornness—that is my word for it—on crude-oil prices the fact that earnings of oil companies have been at satisfactory levels. It had before it only the earnings records of a few companies—those who have listings on stock exchanges and who are engaged in all phases of the business. As you, Mr. Speaker, so ably pointed out on April 12, when you addressed the House on this question, the large integrated company has 4 principal ways of making money. It can sell crude oil which it produces, earn money by transporting oil and products, refine the crude oil, and sell the products. The producer of oil, confined to that one field—and there are upward of 20,000 of them compared to some 20 of the large integrated companies—the producer has only 1 source of income. That is from the crude oil he produces.

Much has been said about the "stripper" wells of the Nation. That term is, I believe, fairly well understood. It refers to those wells which produce in such small volume that they are either at the break-even point in the relationship of cost to income, or are in the stage where part of the income is used to buy the red ink with which the accounts are kept. The O. P. A. seems to view the situation of these wells as one that constitutes no especial problem, and, indeed, there appears in their statements the implication that it makes no great difference whether such wells are abandoned or not.

Well, let us take a look at them. We have a recent factual statement about them. It was compiled by the Interstate Oil Compact Commission, an organization of petroleum-producing States whose purpose is to promote conservation of oil and gas, and cooperating in the survey of stripper wells was the National Stripper Well Association, whose purpose, broadly, is to try to keep alive this important segment of the Nation's petroleum resources.

The stripper wells of the country in 1942 produced nearly 15 percent of all the crude petroleum that was produced. Is that important? Think for a moment about what it would mean to try

to get along without that 15 percent right now.

In number, there were 293,000 of these stripper wells at the close of 1942, nearly three-fourths of all the wells in the United States. They produced 203,000,000 barrels. That is on an annual basis roughly one-third as much oil as it is expected to be supplied to the Eastern States when the program of increasing transportation methods shall have been completed. Is that amount of oil important?

These wells, though, represented something far greater than the daily amounts they produced in 1942. Underneath them, still to be produced, are many hundreds of millions of barrels of crude oil. The estimate of the authorities who made the survey was that the total reserves underneath these small wells was nearly 4,000,000,000 barrels. That is something near the equivalent of three times the amount the United States produced last year.

But, last year 10,500 of these stripper wells were abandoned. Why? Because they were losing money and the outlook was so discouraging that the owners preferred to sell off the equipment. It brought anywhere from $250 to $4,000 per well, depending upon the depth and the amount of steel and other material that could be salvaged. These wells were industrial soldiers that died because of an economic theory. That theory was that we can go on rationing in ever-smaller quantities and get along with what we had on hand when we went into war. Fortunately, that theory has not been applied to the military needs. If it had been, our soldiers would be trying to walk to Kiska to capture it by throwing rocks.

When the operators junked these 10,500 stripper wells last year, they went away and left 44,000,000 barrels of reserves behind. It is still in the sands and there it will stay forever. It will never be worth while to drill new wells to recover this oil.

It may be worth mentioning that the stripper wells of the Nation use the services of 52,000 workers and that the pay roll for 1942 for the persons engaged in operating stripper wells was in excess of $93,000,000.

I have dwelt at some length on this stripper-well question because the O. P. A. has attempted to treat them as of no importance. They are a part of the whole question of supply. Other parts are the discovery of new fields, the drilling of new wells in existing fields, the installation of methods of stimulating the production of the stripper-well fields, and the maintenance, in full and effective measure, of all the oil wells of the Nation. We will need all these things. We are not getting them. Drilling has declined away below what it was last year and last year was much below the previous year.

We had a backlog of producing capacity when we entered the war. We are burning it up rapidly. We are at an all-time high in production and soon we will start the decline in capacity to produce. We are holding the present rate of production at the expense of the future, for waste is being committed in some areas by flowing wells at a rate far beyond that which the operators and the engineers know is safe. The effect will appear—it is already appearing—in the form of quick exhaustion of pressure in the sands, encroachment of salt water into the producing formations, and a tremenodus addition to the number of stripper wells with serious falling off of the present daily supply of oil. For a quarter century, the industry, State and Federal Governments, have worked to create an effective conservation program. The attitude of one bureau is bringing a destruction of that program.

The producing industry is today more depressed than Mr. Henderson said it was back in 1940. It has been subject to the same economic forces that have advanced the cost of living, the prices of all commodities except crude oil, the sharp rise in operating expenses and the vast increase in taxes. The only factor that has stood still for the oil producer was income and that only in a relative sense, for generally most oil producers have lost in volume and total dollars taken in.

The result is that the producer is retiring from the field, defeated. He cannot pay out more than he takes in. So the large companies buy his best properties, he junks his stripper wells, and he turns to ranching or farming.

Is it to be a consequence of this bureau fiat that, in addition to a shortage of oil, monopoly is to be established? The statement has been made by the Petroleum Administrator that 2 years ago 20 companies owned 60 percent of the oil business and that the same 20 now own 70 percent. The producer who sells is not putting his money back into the search for new oil fields. He sells because he is discouraged and that discouragement immobilizes him in the war effort he is best fitted to exert.

A few days ago an informal committee of the House and Senate, representing the 12 States and the District of Columbia that are most greatly affected by the gasoline shortage, held some meetings. In the course of questioning a representative of O. P. A., they confirmed a point in the rationing policy of which they had heard. It was admitted that it is one of the rules that a man can get gasoline to drive to his summer home—where he owns one—for the purpose of closing that home. He must not stay there, though. He cannot drive there and use the place during the summer. He must drive there to close something that has not been opened, and return at once, thus taking all the gasoline allotment at once from the meager supply, instead of taking out half now and half 2 or 3 months from now.

The policy that has been followed on petroleum prices is as unrealistic as that bit of absurdity I have just recited. It has for 2 years been a policy that has ignored facts and national necessities. Even Administrator Ickes, who is by nature a calm, restrained man, indulged in a small outburst before that voluntary committee of the House when he said that we had been going along on this oil situation like "a lot of cheerfully ignorant children."

It is a policy that has ignored the fact that every barrel of oil that is leaving the wells today does so at less than the cost of replacing it through discovery.

It is a policy that has taken no account of the fact that with relation to other commodities, based upon the 1926 index as 100, crude oil is 62.2, all commodities are 104, bituminous coal is 120, labor cost is 170, and so on through the long list; petroleum has been stationary in the face of advances all along the line.

It is a policy that has ignored the alarmingly low rate of discovery of new fields; the rapid depletion of known reserves; the abandonment of stripper well reserves; the discontinuance of effort to stimulate production from the old fields through tried and proven methods.

It is a policy that has been intent only upon preventing the user of gasoline from paying slightly more, ignoring entirely the fact that such user wants gasoline and will cheerfully pay more for it, just as he is willing to pay more for his food, which he has done, just so he gets the food and the increase in cost is not excessive.

It is, in short, a policy that has put the oil producer into a Chinese boot and, apparently, that boot was made for the oil producer alone.

If the day comes that the spotlight of public wrath is turned upon the petroleum supply situation, I do not want it directed at the producer of oil, nor at the Congress. Both have done their best to correct the crude-oil price freeze; it has also been a freezing of productive effort.

But, Mr. Speaker, we must not wait for that day of public wrath. All the evidence that could possibly be summoned has been presented to the agency which has been given the power to retard or to stimulate production. That agency prefers to remain serenely inert.

The Congress is conscious of the necessities. It is conscious of its own responsibilities. It cannot refrain much longer from taking this petroleum situation into its own hands and repairing, belatedly, the damage that has been done. The inflexibility of bureau edict cannot be permitted to diminish further our fast disappearing capacity to produce.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JAMES M. FITZPATRICK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. FITZPATRICK. Mr. Speaker, under leave to extend my remarks, I include a number of telegrams and communications I have received from various educational institutions throughout the country favoring the continuation of the N. Y. A.

In my estimation the National Youth Administration has been most beneficial and helpful to the youth of our country.

I am, therefore, heartily in favor of its continuation.

ELMIRA, N. Y., *June 15, 1943.*

JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.:

Urge adoption National Youth Administration student program for next year. Extremely desirable in my opinion.

E. LUCILLE LYON,
Assistant Dean, Elmira College.

SYRACUSE UNIVERSITY,
Syracuse, N. Y., June 14, 1943.

The Honorable JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

MY DEAR SIR: The National Youth Administration is needed for students whose families are paying higher taxes and increased living costs, with no increase in salary.

Very sincerely yours,

Mrs. W. E. ALLIS,
Director.

NEW YORK STATE TEACHERS COLLEGE,
Cortland, N. Y., May 4, 1943.

Mr. JAMES M. FITZPATRICK,
Appropriations Committee, House of Representatives,
Washington, D. C.

DEAR MR. FITZPATRICK: I am writing to you to express our need of continued Federal funds to aid a portion of our students to work their way through teachers college in preparation for teaching service.

All students admitted to our State teachers' college are selected on a competitive basis. We have found that approximately 10 percent of these capable students cannot go through college without help from outside their homes. Their college schedules of work are too heavy to permit many of them to go into the community for work, if such work can be found. Work which these students can be given on the college campus or near the college has the advantages of conserving the time of the students, providing increased professional experience for the student, and giving the college and service institutions of the community needed services which they otherwise could not have. Our National Youth Administration students earn their money and they have a wholesome appreciative attitude for having professional types of work provided for them.

It is my conviction that the National Youth Administration service should be continued, and we shall be grateful if you will lend your support to this needed legislation.

Very truly yours,

H. DEWITT DEGROAT,
President.

CANISIUS COLLEGE,
Buffalo, N. Y., June 14, 1943.

Hon. JAMES M. FITZPATRICK,
Member, Appropriations Committee,
House of Representatives,
Washington, D. C.

MY DEAR MR. FITZPATRICK: As president of Canisius College, I write to ask you if you will do what you can to insure the continuation of the college work program of the National Youth Administration. Here at Canisius we find that some students are still in need of financial aid, and their only prospect of continuing their college career is the college-work program.

May I ask that you, as a member of the Appropriations Committee, do what you can to continue the college-work program for the coming year of 1943–44?

Very truly yours,

(Rev.) TIMOTHY J. COUGHLIN, S. J.,
President, Canisius College.

LORAS COLLEGE,
Dubuque, Iowa, June 14, 1943.

Hon. JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

DEAR SIR: It has come to our attention that the Committee on Appropriations might possibly discontinue direct aid to students through such agencies as the National Youth Administration.

We believe that direct aid to the student has been a fine way of equalizing opportunities and that it is more democratic to give it this way than through aid to designated institutions.

This college wants to go on record as being in favor of the assistance to individual students.

Yours very truly,

M. J. MARTIN.

SARAH LAWRENCE COLLEGE,
Bronxville, N. Y., June 1, 1943.

The Honorable JAMES M. FITZPATRICK,
The House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE FITZPATRICK: As the representative at Sarah Lawrence College in charge of administering the funds of the National Youth Administration, I should like to ask you to consider carefully the question of continuing grants of money to colleges for needy students.

It seems to me very important that nothing interfere with the training of able students who will be able to contribute their services in handling the many problems arising out of the war.

The students on our campus who were under National Youth Administration were all intelligent, serious girls consciously preparing themselves to be as useful as possible after they left college. I am sure that the type of students in all colleges concerned are of this kind, and it would be a great pity if, through lack of funds, they were forced to leave school and lose the opportunity of fitting themselves for the most worth-while role in the post-war world.

Sincerely yours,

ALICE M. BOVARD.
Director of Admissions.

HIGH SCHOOL PRINCIPALS ASSOCIATION,
New York City, June 4, 1943.

Hon. JAMES M. FITZPATRICK,
House Committee on Appropriations,
House Office Building,
Washington, D. C.

DEAR SIR: Present information indicates that the subcommittee of the House Appropriations Committee, now holding hearings on National Youth Administration, may not include in its recommendations any budgetary provisions for the continuance of the in-school program of the National Youth Administration in high schools. Will you permit me as chairman of the high-school advisory council for the New York City and Long Island area to submit the following results of a survey made during the past 10 days. The figures referred to are from 157 high schools in this area.

Number of students needing National Youth Administration aid in school year:

Sept. 1940–June 1941	14,302
Sept. 1941–June 1942	9,578
Sept. 1942–June 1943	3,025

Please note that these figures apply on the basis of 16 years as the minimum age for eligibility for National Youth Administration assistance. If students 15 years old were eligible, the number would be more than twice the 3,025 now receiving this assistance.

I am authorized to tell you that it is the practically unanimous conviction of the principals of these high schools that this provision should not be terminated at this time. Let me emphasize that I am pleading for the in-school program, the purpose of which is to enable poor children to get a high-school education. The administration of this program here has been intelligent, honest, and economical. We all know that the post-war need will be greater than now. Therefore, we urge, in the name of the democratic preservation of educational opportunity, that you recommend budgetary provision at least for the maintenance of the present much reduced organization so that it may serve the present need and be in position to help after the war.

The high-school principals in this area will be most grateful for an indication of your attitude toward this petition.

Sincerely yours,

JOHN M. LOUGHRAN,
President.

ST. JOHN'S UNIVERSITY,
Brooklyn, N. Y., May 19, 1943.

Hon. JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FITZPATRICK: I have watched with interest and concern the progress of the National Youth Administration during the last 2 years. The value of the college-work program is to me most manifest and the suggestion that this assistance to needy and worthy students might be withdrawn is very disappointing.

However, I was pleased to learn of the proposal of the National College Work Council of the National Youth Administration to the Chairman of the War Manpower Commission on the war training and work program for college students for 1943–44.

According to a recent survey St. John's University, of Brooklyn, N. Y., has found that without the aid of the National Youth Administration many students would be unable to continue their scholastic studies. The college-work program has enabled many of our students to attain technical knowledge which will relieve certain fields in which there is a shortage of trained workers.

I am convinced that the continuation of the work program of the National Youth Administration will work only for the general interests of the country at large.

We sincerely hope and trust that the proposal of the council may become a part of the training plan of the War Manpower Commission.

Very sincerely yours,

WILLIAM J. MAHONEY, C. M.,
President.

NEW YORK STATE INSTITUTE OF AGRICULTURE AND HOME ECONOMICS,
Cobleskill, N. Y., May 4, 1943.

Hon. JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

DEAR SIR: It has been brought to my attention that a bill is being considered to continue National Youth Administration aid to students in college for the school year 1943–44. I believe this aid to students will be extremely vital to us next year. In view of the fact that this school is an agricultural and home economics technical institute, our graduates, at the present time especially, fill important places in those critical fields.

In this area we must compete for students with many industries which pay high wages to their employees. We believe training in agricultural production, training in management of institutions where food is planned for, prepared, and served, and training for the care of children in nursery schools, are all vital in peacetime but more especially in wartime. This school trains for these vocations.

However, we are not able to compete on even terms with most other training programs, because the financial returns to our graduates, particularly in wartime, are not as great as in many industries. If prospective students see that the public places enough importance on the training for these vocations to give financial aid and encouragement to the boys and girls while they are being trained, we will be better able to provide trained persons for these vital vocations.

I solicit your objective consideration of this proposed measure.

Very truly yours,

E. D. DAY,
Acting Director.

Post-War Rubber Program

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Tribune of June 16, 1943:

JEFFERS URGES RUBBER POLICY TO BENEFIT UNITED STATES—WARNS AGAINST RETURN TO CARTEL SYSTEM

(By Hal Foust)

CHARLESTON, W. VA., June 11.—An America-first post-war rubber program was advocated here tonight by Rubber Director William M. Jeffers in a speech before a chamber of commerce banquet.

"When peace comes," said Jeffers, "let's see to it that we Americans are looking after us Americans. Certainly we should be friendly with our present allies, but this does not mean that we should scrap hundreds of millions of dollars of our money invested in synthetic plants.

"It's up to you," he declared when an applause had subsided, "to tell your Congressman and your Senators how you feel about this."

OTHER PLANS AFOOT

In London is a mission led by the State Department which departed secretly from Washington, D. C., to discuss the future of western Pacific rubber plantations, owned by a British-Dutch cartel, but now held by the Japanese. In South America, Vice President HENRY A. WALLACE has hinted to Latin Americans that we will continue as a market for their wild rubber.

"Next year," said Jeffers, "we'll make 850,000 tons of synthetic, more rubber than was ever imported. It can be manufactured as cheaply as it can be imported, certainly more cheaply than it can be imported from distant Malaya and the Dutch East Indies. And we'll make synthetic as good as natural rubber.

"I've been a shepherd of the Government's rubber program and at times have had to use the crook," he continued, referring to his quarrels with other departments seeking the same materials. "And the use of the shepherd's crook was not in vain. The public doesn't yet understand just how close America came to collapse owing to a rubber shortage. The shortage will be ended by late 1944."

COMMENDED BY BARUCH

Jeffers' victories over military, naval and civilian opposition were commended in a letter from Bernard M. Baruch, read when the rubber director was introduced.

The banquet followed an official inspection of the world's largest synthetic rubber plant, at Institute, W. Va., 12 miles from here. In the group of a hundred industrial leaders and Government officials who came here this morning by special train from Washington were Secretary of Commerce Jesse H. Jones and Senators RAYMOND E. WILLIS, Republican, Indiana, and GEORGE D. AIKEN, Republican of Vermont.

The visitors saw a $56,000,000 investment of Government money in an industrial institution of giant columns, stills, stacks, and towers of steel, brick, and concrete spread over 77 acres. Here Carbide & Carbon Chemical Corporation, as an operator, is making butadiene at a rate of 80,000 tons a year. It will be mixed with styrene in another section of the lay-out by the United States Rubber Co. to make Buna-S rubber, the main type of rubber in the Government's program.

WILL INCREASE PRODUCTION

The visitors saw synthetics coming from the end of a series of chemical operations at a rate of 30,000 tons a year. They saw additional buildings which by the end of the year will boost this production rate to 90,000 long tons a year.

Jeffers, in his banquet address, said the plant was "a magnificent monument to the ingenuity of industry, technological research and progress and Government financing." He said it is "a miraculous congealing of American alertness which the Japanese could not foresee when they took from us our only major source of natural rubber."

At the plant, visitors were told that when the production reaches 90,000 tons a year the alcohol requirements will be 197,000 gallons a day. Made from corn, annual alcohol consumption would require more than 30,000,000 bushels, the average yield from 720,000 acres.

The Chicago Tribune, in a plant nearing completion at Thorold, Ontario, is pioneering an alternate source for alcohol that does not tap the Nation's reserve of foodstuffs. In the first modern plant of its kind in the western hemisphere, alcohol is to be made from sulphite liquor, a waste from wood pulp mills.

Good-Neighbor Policy

EXTENSION OF REMARKS

OF

HON. FRITZ G. LANHAM

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. LANHAM. Mr. Speaker, on May 6, 1943, the Governor of Texas approved House Concurrent Resolution 105 of the Legislature of Texas with reference to the good-neighbor policy. I have been requested to have this resolution placed in the CONGRESSIONAL RECORD for the information of the Members of the Congress and, in accordance with the leave granted to extend my remarks, this resolution is herewith inserted:

House Concurrent Resolution 105

Whereas all nations of the North American and South American Continents are banded together in an effort to stamp out nazi-ism and preserve democracy; and

Whereas our neighbors to the south are cooperating and aiding us in every way possible; and

Whereas the citizens of the great State of Texas are interested in doing all that is humanly possible to aid and assist the national policy of hemispherical solidarity: Therefore be it

Resolved by the House of Representatives of the State of Texas (the senate concurring), That the Forty-eighth Legislature of the State of Texas go on record as declaring the following to be the public policy of this State:

1. All persons of the Caucasian race within the jurisdiction of this State are entitled to the full and equal accommodations, advantages, facilities, and privileges of all public places of business or amusement, subject only to the conditions and limitations established by law and rules and regulations applicable alike to all persons of the Caucasian race.

2. Whoever denies to any person the full advantages, facilities, and privileges enumerated in the preceding paragraph or who aids or incites such denial or whoever makes any discrimination, distinction, or restriction except for good cause applicable alike to all persons of the Caucasian race, respecting accommodations, advantages, facilities, and privileges of all public places of business, or whoever aids or incites such discrimination, distinction, or restriction shall be considered as violating the good-neighbor policy of our State.

Relief From Stringent Naturalization Laws

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. D'ALESANDRO. Mr. Speaker, under leave to revise and extend my remarks, I include copies of H. R. 996, and H. R. 998, together with correspondence I have had with the United States Department of Labor; Congressman DICKSTEIN, chairman of the Committee on Immigration and Naturalization; Judge William Coleman and Judge Calvin Chesnut, judges of the United States District Court in Baltimore; and an editorial in the Baltimore Evening Sun, and also an article in the Baltimore Sun.

Some of these forgotten people, whom I mentioned above, came to this great America in the 1890's, young, honest, industrious people, who never really had the time or the opportunity to learn how to read and write. They married, had large families, and have given their best years in honest labor. Many are property owners and taxpayers. Many had sons and daughters who served our great country in World War No. 1 and are today giving their lives in the great battle in which we are now engaged for the preservation of our free institutions. The sons and daughters of others are today in the vanguard of America's progress. Yet these same clean-living people of America cannot become citizens unless they pass an examination that would probably flunk a high-school graduate or perhaps a college graduate. If the only requirements for citizenship were contributions to national wealth through honest labor and love for democracy, almost all of our noncitizens could easily become citizens.

There are thousands of people in the United States who have made application for their first and second papers,

but who failed to pass the examination. In making application they renounced allegiance to their native countries, and yet they are not citizens of the United States. They love America, they belong to America, they are willing to fight to defend America and keep it democratic and free, so why deny them citizenship?

I might add that the House took favorable action on two of these bills in the Seventy-sixth and Seventy-seventh Congresses and that this legislation is needed more now than ever before. What is needed as well as tanks and planes is a united people, and since the bills before the House today are bills similar to mine, I wish to state that I am heartily in favor of them and urge the Members of the House to act favorably on this legislation.

The matters referred to follow:

H. R. 996

A bill for the admission of citizenship of aliens who came into this country prior to July 1, 1924

Be it enacted, etc., That a new subdivision is hereby added to section 4 of the Naturalization Act of June 29, 1906 (34 Stat. 596), as amended, to read as follows:

"Fifteenth. Any alien eligible for citizenship who is 50 years of age or more, who made a declaration of intention or filed a petition for naturalization prior to the enactment of the Social Security Act of August 14, 1935 (49 Stat. 620; U. S. C., title 42), and who is lawfully admitted to the United States for permanent residence prior to July 1, 1924, and has ever since said lawful entry maintained a bona fide residence in the United States, may be naturalized upon full and complete compliance with all requirements of the naturalization laws, with the following exceptions: Petition for naturalization may be filed without regard for the 7-year limitation on the declaration of intention, and the applicant shall not be required to sign his petition in his own handwriting or to speak the English language and he shall be exempt from all educational requirements. Nothing herein shall be held to waive or in anywise relax the requirement for good moral character."

H. R. 998

A bill permitting the naturalization of certain persons not citizens whose sons or daughters have served with the land or naval forces of the United States

Be it enacted, etc., That the Nationality Act of 1940, as amended, is hereby amended by adding thereto a new title as follows:

"TITLE IV

"SEC. 801. Notwithstanding the provisions of section 326 (a) of this act, any person not a citizen whose son or daughter has served honorably with the land or naval forces of the United States at any time on or after December 7, 1941, and who, if separated from such service, was separated under honorable conditions, may be naturalized upon compliance with all the requirements of the naturalization laws, except that no declaration of intention shall be required.

"SEC. 802. The Commissioner, with the approval of the Attorney General, shall prescribe and furnish such forms, and shall make such rules and regulations, as may be necessary to carry into effect the provisions of this title. No person who may be naturalized under the provisions of this title shall be designated as an 'enemy alien' in any form prescribed under the provisions of this section."

In reference to my inquiry as to the status of this bill, Congressman SAMUEL DICKSTEIN, chairman of the House Committee on Immigration and Naturalization, received the following letter from you:

"Permit me to refer to the letter of the clerk of your committee requesting comment on H. R. 5228.

"The bill was introduced on March 22, 1939, by Mr. D'ALESANDRO and bears the title 'A bill for the admission to citizenship of aliens who came into this country prior to November 11, 1918.'

"It proposes a new subdivision to be included in section 4 of the Naturalization Act of June 29, 1906, as amended. That section which prescribes the naturalization procedure contains 14 subdivisions, several of which authorize a short form of procedure as to particular classes of aliens. Bill H. R. 5228 would provide that any alien who was lawfully admitted to the United States for permanent residence prior to November 11, 1918, and has ever since said entry maintained a bona fide residence in the United States shall be exempt from all educational requirements provided that he has attended citizenship classes for at least 6 months.

"As this bill will expedite the naturalization of aliens who have resided in this country continuously for a period of 20 years and can prove good moral character and attachment to the principles of the Constitution of the United States, I believe that it has considerable merit and may well receive the favorable consideration of the Congress."

In the meantime, while this bill is pending in committee, may I make a personal appeal to you in behalf of these people who reside in Maryland, that you permit Mr. P. J. Phillips, senior examiner, to give oral examinations instead of written ones, to eliminate the present hardship which the written examinations work on them.

I understand that this is permitted in many other States, and I would like to secure the same privilege for the people of Maryland.

Thanking you for your usual kind consideration, I am,

Respectfully yours,
THOMAS D'ALESANDRO, Jr., M. C.,
Third District, Maryland.

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington.

Hon. THOMAS D'ALESANDRO, Jr.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN D'ALESANDRO: I have your letter of October 25, 1939, in which you request me to instruct Mr. P. J. Phillips, of our Immigration and Naturalization Service, to give oral examinations instead of written ones to petitioners for naturalization in the State of Maryland.

I have been advised that the procedure you request is not subject to my control, but is entirely within the discretion of the judges of the United States district court at Baltimore, Md. (34 Stat. 599, U. S. C., title 5, sec. 398). The Federal court judges at Baltimore have expressly ordered written examinations because of their belief that persons who are unable to write the English language should not be naturalized.

Under the circumstances, it will be necessary for you to confer with the United States district court judges at Baltimore to obtain the reform you desire.

Sincerely yours,
FRANCES T. PERKINS.

DECEMBER 29, 1939.

Hon. THOMAS D'ALESANDRO, Jr., M. C.,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN D'ALESANDRO: Further reference is made to your letter of November 13, 1939, concerning the type of educational examination in use in the various field districts of this Service.

An inquiry directed to the field officers of this Service brought reports regarding the practice followed in their respective districts which are summarized as follows:

A written examination is accorded in the United States district courts at Washington, D. C., and Baltimore, Md.; also in the Federal courts at Alexandria, Norfolk, and Richmond, Va.; at Asheville, N. C.; and in the third district court at Salt Lake City.

In the other districts the examination is oral, except in those instances in which the petitioner is unable to speak or hear. Where practicable, a written examination is given to such persons which facilitates understanding on the part of both the applicant and the examiner.

Cordially yours,
JAMES L. HOUGHTELING,
Commissioner.

FEBRUARY 8, 1940.

The Honorable W. CALVIN CHESNUT,
United States District Judge,
Post Office Building, Baltimore, Md.

DEAR JUDGE CHESNUT: As per your request, I am writing to you in reference to modifying the present method of handling examinations for citizenship. I am herewith enclosing a letter I received from Madam Perkins, Secretary of Labor, in this connection, which I would appreciate your returning to me after it has served your purpose.

Those persons who cannot read or write English are now unable to secure their citizenship papers in Maryland, while in other States, with the exception of Washington, D. C.; Alexandria, Norfolk, and Richmond, Va.; Asheville, N. C.; and in the third district court at Salt Lake City, they have the privilege of taking oral examinations.

By this time you will no doubt have received a letter from Congressman DICKSTEIN, chairman of the House Committee on Immigration and Naturalization, in regard to my bill—H. R. 5228. In the meantime, while this legislation is pending, I would certainly appreciate it if you and Judge Coleman would give some consideration to the matter of allowing the people of Maryland the same privilege accorded in other communities.

Sincerely yours,
THOMAS D'ALESANDRO, Jr.,
Member of Congress, Third District, Maryland.

JUDGE'S CHAMBERS,
UNITED STATES DISTRICT COURT,
Baltimore, Md., February 10, 1940.

Hon. THOMAS D'ALESANDRO, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN D'ALESANDRO: I have your letter of February 8, enclosing letter to you of October 31, 1939, from the Secretary of Labor, both relating to the practice in naturalization in this Federal district.

Your suggestion is that the practice of requiring the applicant for naturalization to take a written examination may be too rigid in some cases where the applicant can neither read nor write English. Your thought is that the judge of the court should exercise discretion in permitting an oral examination in cases where the applicant is otherwise shown to be qualified for citizenship, but is unable to read or write English.

As you probably know, the qualifications for admitting an alien to citizenship are prescribed by the act of Congress which is codified now as section 382 of title 8 of the United States Code, the last amendment of which was June 29, 1928 (ch. 819, 52 Stat. 1247). This section, in addition to making certain requirements as to length and place of residence, provides that the applicant must affirmatively show that "during all the periods referred to in this section, he has behaved as a person of good moral character, attached to the principles of the Constitution

of the United States, and well disposed to the good order and happiness of the United States."

The examination of the applicant is for the purpose of determining whether he has the prescribed qualifications. By the acts of Congress of June 8, 1926 (ch. 402, 44 Stat. 709), and June 10, 1933 (Executive Order No. 6166, sec. 14—now codified in title 8 of the United States Code as sec. 399 (a)), provision was made that the senior district judge of a Federal district court is authorized to designate an examiner of the Immigration and Naturalization Service "to conduct preliminary hearings upon petitions for naturalization to such court, and to make findings and recommendations thereon."

For a number of years past in this district the practice in naturalization has been in accordance with this act of Congress. That is to say, the examinations of the applicants are made by an officer of the Immigration and Naturalization Service who makes written recommendations to the court as to the qualifications of the applicant. In general these recommendations are followed by the district judge but it is to be noted that subsection (c) of the last-mentioned statute provides that "the court may, in its discretion, and shall, upon demand of the petitioner, require the examination of the petitioner and witnesses under oath before the court and in the presence of the court."

The number of applicants for naturalization in this district is very large and recently the number has been considerably increasing. By order of court the second Monday in each month, except July and August, is designated as the day for naturalization and on an average there are now about 100 or more applicants each naturalization day. It is, therefore, very important in the ordinary work of the court for the judges to have the advantage of recommendations of the Immigration and Naturalization Service authorized by the act of Congress referred to. Otherwise the work of the court would be very materially hampered by the length of time required for individual oral examination of each applicant in court.

With regard to the practice as to written or oral examinations by the examiner, there is no rigid and inflexible rule either of law or of practice in the district that absolutely and in all cases requires that the preliminary examination be in writing. It has, however, been a fairer and better test of the applicant's qualifications than an oral examination. One reason is that the applicant has more time to answer the questions and is able to give more thought to them if the examination is written than if it is oral. Therefore, in this district some years ago the examiner was informed that the judges of the court thought written examinations preferable.

However, as you will note from the above quotation from the statute itself, if the examiner recommends that the applicant be not admitted to citizenship, the latter, upon request, is entitled to have an examination in court and this may be oral as well as written and probably, in most cases, would be oral. It is not frequently that an applicant who is rejected by the examiner applies to the court for a personal examination in open court, but wherever this has been brought to our attention, the oral examination has been given in court.

I return the letter from the Secretary of Labor enclosed with your letter to me.

Yours very truly,

W. CALVIN CHESNUT,
United States District Judge.

JANUARY 30, 1940.

Hon. WILLIAM COLEMAN,
Judge of the United States
District Court, Baltimore, Md.

DEAR JUDGE COLEMAN: This committee recently had before it for hearing H. R. 5228 (Mr. D'ALESANDRO), for the admission to citizenship of aliens who came into this country prior to November 11, 1918.

H. R. 5228, among other things, would exempt such aliens from all educational requirements, provided said aliens had attended citizenship classes for at least 6 months.

It developed at the hearing that the committee had already reported a similar bill, H. R. 6381 (Mr. LESINSKI). This bill fixed the entry date prior to February 5, 1917; it also embodied the provision for the exemption of the educational test as contained in Mr. D'ALESANDRO's bill. H. R. 6381, having been reported and being now before the House, there would be no object in reporting the similar bill of Congressman D'ALESANDRO.

As the committee is in favor of the legislation contained in these two bills, it is hoped that early and favorable action will be taken by both the House and Senate.

The committee desires to call attention to this pending legislation to the judges of the courts and for that reason is acquainting you with the present status of the proposed legislation.

Very respectfully yours,

SAMUEL DICKSTEIN, *Chairman.*

BALTIMORE, MD., *February 19, 1940.*

Hon. THOMAS D'ALESANDRO, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. D'ALESANDRO: Replying to copy of your letter of February 8 to Judge Chesnut, which you have sent me, I beg to enclose copy of letter which I have today addressed to Hon. SAMUEL DICKSTEIN, chairman, Committee on Immigration and Naturalization, House of Representatives, which I believe fully sets forth my views with respect to the matter referred to in your letter.

Very truly yours,

WILLIAM C. COLEMAN,
United States District Judge.

FEBRUARY 19, 1940.

Hon. SAMUEL DICKSTEIN,
Chairman, Committee on
Immigration and Naturalization,
House of Representatives,
Washington, D. C.

DEAR MR. DICKSTEIN: I acknowledge receipt of your letter of January 30 calling my attention to H. R. 5228, introduced by Mr. D'ALESANDRO, and H. R. 6381, introduced by Mr. LESINSKI, pending legislation, the object of which is to exempt from any educational test persons applying for admission to citizenship who have entered this country prior to a particular date named in the bills.

While you do not expressly ask for an expression of opinion by me with respect to this legislation, I take the liberty of saying that from my experience of some 12 years in the naturalization of aliens, I feel that to make any such exceptions as are proposed by the legislation above referred to would be undesirable, would be an arbitrary discrimination, and would tend to lower the standard of citizenship.

I am in receipt of a letter from Mr. D'ALESANDRO, Congressman from the Third District of Maryland, under date of February 8, in which he refers to the same pending legislation and asks that Judge Chesnut and I give consideration to the matter of allowing applicants for citizenship in Maryland to become naturalized without proving that they are able to read or write English.

I have just written Mr. D'ALESANDRO that I am opposed to any such statutory change as would compel, regardless of the individual case, relaxing of the standards as now maintained in the Maryland district. Mr. D'ALESANDRO calls attention to the fact that the Maryland district is one of the few districts in the country where the privilege of taking oral examinations is not accorded to applicants for naturalization. While I am not conversant with the requirements throughout the country, I think the present standards are not only entirely consistent with the law but impliedly required, because I fail to see how one can indicate that he is "attached to the principles of the Constitution of the United States and well disposed to the good order and happiness of the United States" or is able to understand the meaning of the franchise or to vote intelligently unless he has at least some ability to read and write simple English. The law leaves it to the discretion of the trial judge to determine the fitness of the applicant. In adopting the standards which we have here in Maryland, we believe that they are fair and reasonable, and entirely consistent with the present law. My experience indicates that a large number of applicants for citizenship not only remain in this country for a number of years before applying for citizenship, and preparing themselves to qualify, but as a matter of fact are not really interested in citizenship as such. That is to say, their primary desire is to use their citizenship for the purpose of obtaining exemption, for absent parents or other relatives, from the usual quota requirements before entering this country, or to obtain for themselves the advantage of old-age pensions, etc.

Very truly yours,

WILLIAM C. COLEMAN,
United States District Judge.

[From the Baltimore Sun of June 7, 1940]

A proper exemption and naturalization law is needed at a time when military necessity requires that we keep a close watch on aliens who may be in sympathy with foreign powers. It is reassuring to remember that only a few aliens are an object of suspicion. A bill under which some of these loyal aliens may become citizens passed the House on Wednesday sponsored by Representative D'ALESANDRO, of Baltimore. This measure specifically provides for the naturalization of certain aliens who cannot pass the illiteracy test nor meet the educational requirements for citizenship. The benefits of the bill are limited to aliens 50 years of age or more who came to this country prior to February 5, 1917 (the date the illiteracy test for immigrants was imposed) and who actually applied for naturalization prior to August 14, 1935 (the date the Social Security Act became a law). All other tests required by naturalization laws remain in force and effect even as to these aliens; that is to say they must have entered the country legally and must have a record free from crime and disloyal action. Opponents of the bill charged in the House that its purpose was to permit some 750,000 persons not now eligible for places on the Work Projects Administration and Social Security rolls to qualify for benefits of that character, the same as citizens. Such objections are not particularly persuasive in view of the fact that the bill's benefits are limited to those who sought to become citizens before the social-security law was enacted. If we did not in most of the States have illiteracy tests for voters, whether native or naturalized, the admission of large numbers of would-be citizens incapable of reading or writing might be highly objectionable, but the naturalization law will in general prevent citizens admitted under this law from participating in election and their exploitation from political manipulation will thus be barred.

Illiteracy test is important as to voters, but it ought not to be allowed to stand in the way of citizenship for a large body of foreign-born Americans who came to this country before the illiteracy test for immigrants was introduced and who have shown by their conduct that they are decent, law-abiding, loyal residents of this country.

[From the Baltimore Sun]

ELDERLY MAN WORKS IN VAIN TO BECOME CITIZEN OF UNITED STATES—POLISH IMMIGRANT CAN SAY ONLY "I LOVE AMERICA" WHEN QUERIED ON HIS KNOWLEDGE

For 5 years 78-year-old Zielig Eisen has studied the English language and American history so that he might become an American citizen before he dies.

Yesterday, visibly disappointed, Eisen walked slowly out of the Federal court after he was denied his life's ambition to become a citizen of this country.

Eisen is forgetful, he admits, and he can't write English very well, but he had based his hopes on a special petition he filed with the court, hoping that he could give some reason why he should be allowed to assume citizenship even though he was unable to pass tests.

SAYS HE LOVES AMERICA

"My wife is a citizen, my children are citizens. I love America. I want to be an American citizen before I die," was about all the elderly man could say for his cause. But the court pointed out that precedent would not allow the special plea.

Mrs. Ruth E. Ollendorf, citizenship teacher at Public School No. 1, who has been Eisen's instructor at school and at private classes in his home, put in a good word for the alien from Poland.

TELLS OF EFFORTS

"I can swear to it," she told Judge William C. Coleman. "He certainly has made every effort. More than any student I ever taught."

Mrs. Ollendorf said that Eisen was dressed and ready for the special petition 6 hours before the scheduled hour. "He's been so nervous, just like a little schoolboy," she told the judge.

She said Mrs. Mary Eisen, his wife, also has tried hard to teach the Polish alien. Many times when she went to their home in the 3100 block Chelsea Avenue, Mrs. Ollendorf says she found notebooks filled with American history which the wife had dictated for her husband to write, the teacher said.

READS AND WRITES

Almost deaf, Eisen reads and writes Polish and Hebrew very well, she said.

Judge Coleman explained that he felt very sympathetic, but pointed out that citizenship requires, among other things, that citizens be able to read our laws and regulations and that Eisen would hardly be able to do so.

"We can't make exceptions except in a most unusual case," the judge remarked.

QUESTIONS HIM CLOSELY

The judge queried Eisen closely in an effort to determine the extent of the man's knowledge of English and American history, but Eisen was apparently nervous and could not be made to understand very well.

Eisen has been in this country 14 years. He was in the real estate business in Poland, but is now retired.

Judge Coleman said he would be glad to give Eisen another opportunity to try for citizenship, but said he could not grant the citizenship papers now.

A Doughboy Speaks to John L. Lewis

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. FULMER. Mr. Speaker, some days ago Lt. Col. James B. "Pat" Murphy, one of the best friends I have in South Carolina, now serving somewhere in the jungles, wrote me, enclosing a very timely poem entitled "A Doughboy Speaks to John L. Lewis."

It is my understanding that the men in the Service, those serving in the United States, as well as on various foreign fronts, thoroughly understand the operations of John L. Lewis, and they along with the people of the United States seriously object to his Hitler attitude in telling the wage earners when to sit down and when to stand up, all of which is definitely operating against our war efforts as well as the morale of the men in the Service who are engaged in a life-and-death struggle.

The great majority of the Congress has been deeply concerned about the activities of John L. Lewis, and, regardless of the attitude of those at the head of the War and Navy Departments, the War Production Board, and the President of the United States, who have opposed all along any legislation that would tend to put an end to strikes, have put forth strenuous efforts to do something about it.

The Lower House during the last session of Congress passed a strong anti-strike bill, but because of the strenuous opposition just referred to, the bill died in the Senate.

Many of us have continued our deep interest in doing something about this serious situation, and just a few days ago a bill was passed by both Houses, and is now on the desk of the President awaiting his approval or disapproval.

In the meantime there are many people in the country who would hold Congress responsible and, even an individual Congressman, for the failure to put an end to the Hitler tactics of John L. Lewis.

During this great emergency the President, our Commander in Chief, has the power to put an end to strikes, and during all of the past months he has told the Congress, "Leave it to me."

If the President vetoes this bill that is his responsibility.

If the President signs the bill, perhaps, it could be so administered that we would not get what was intended by the Congress in the passage of the bill. If so, that will not be the responsibility of the Congress, in that Congress does not administer legislation passed by the Congress.

I am sure that this poem will be read with a great deal of interest, not only by Members of Congress, but the readers of the CONGRESSIONAL RECORD, and will meet with their hearty approval:

A DOUGHBOY SPEAKS TO JOHN L. LEWIS

I'm full of damned malaria,
  I shake the whole day long,
The quinine's ringing in my ears,
  I'm anything but strong,
Mosquito bites all over me—
  You'd think I had "the itch,"
My ears are full of 'Guinea mud,
  My bunk—a muddy ditch.

I'm living in a Jungle,
  It's hot as Merry Hell,
C rations is my menu,
  No cooking can I smell.
For this I get two bucks a day,
  And, a chance for a little ground,
That measures four by six by four
  And, a covered grassy mound.

My Pal who came down here with me,
  The lad was just eighteen—
Got him a bed he'll never leave,
  The coverlet is green,
Another one will see no more,
  Another lost an arm,
And hundreds more I do not know
  Are now safe from all harm.

But when I hear a bunch of guys,
  Are safe, and far away,
Refuse to work because they want
  Two dollars more a day,
I only wish we had them here,
  For just a week or two,
To live in 'Guinea junges,
  And there we'd let them stew.

We'd give them all malaria,
  Let mosquitoes have a feast,
We'd make them bury many a lad,
  From North, West, South, and East,
We'd make them sleep in fox holes,
  We'd feed them from a can,
We'd let a hot sun blister them,
  'Twould be "no Palm Beach tan."

We'd let them hear the wounded moan,
  We'd let them see them die,
With snipers' bullets whizzing close,
  With star-shells in the sky.
And then we'd send them home again,
  To their ten bucks every day
To tell the others what they'd seen,
  Way down New Guinea way,
I'll bet this guy would have enough,
  At home he'd gladly stay,
No strikes he'd start right soon again,
  For "two more bucks a day."

General Relief Provisions of the Revenue Act of 1942

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 27, 1943

Mr. GEARHART. Mr. Speaker, because of its timely importance and authoritative character, I ask unanimous consent to extend in the RECORD, as a part of my instant remarks, the text of an address recently delivered at the Waldorf-Astoria in New York, by the Honorable Randolph Evernghim Paul, General Counsel for the Treasury, before the New York Society of Certified Public Accountants.

Dealing, as he does, with the general relief provisions of the Revenue Act of 1942, an act with the writing of which he had a great deal to do, I am quite sure that that which he then had to say will be found not only helpful to those who are of the accountancy profession but highly informative to the membership of this body as well.

Mr. Paul's address follows:

I have been asked to speak to you tonight on the general relief provisions of the Revenue Act of 1942.

I am glad to be able to tell you that the regulations relating to section 722 have recently been issued, and that copies of them will be available within a few days. I know that the delay in their issuance has created difficulties for those of you who have already begun to prepare claims for general relief, and I regret that you have been caused this inconvenience. However, I am sure that you appreciate the difficulties which

confronted us in drafting these regulations, and that you will agree that it has been wise to make haste slowly in their preparation.

I am sure that you will also agree that the success with which the excess-profits tax will achieve the ends it was designed to serve will depend upon the success with which these provisions are administered. As the House Ways and Means Committee stated in its report on the 1941 version of section 722, "The success or failure of legislation of this type depends to a considerable degree upon its intelligent and sympathetic administration." The general intent of Congress in enacting section 722 is reasonably clear, but in providing "for the many unforeseen hardships which may arise under the excess-profits tax law" Congress was forced to express its intent in general, rather than in specific, terms. Hence, the task of interpreting the intent of Congress in those specific cases where the excess-profits tax is claimed to be excessive and discriminatory will devolve upon those whose responsibility it is to administer the tax statutes.

This is a responsibility which cannot be accepted lightly. If the relief which Congress intended to give taxpayers is arbitrarily denied them, the excess-profits tax law can become an instrument for the destruction rather than for the preservation of competitive enterprise. New and growing businesses, as well as businesses which were depressed during the pre-war years, will be deprived of the means with which to reestablish themselves in the post-war economy.

On the other hand, if the relief provisions are permitted to become instruments for widespread tax avoidance, we shall have failed in our efforts to eliminate profiteering and to achieve an equitable distribution of the costs of the war.

The line between eligibility and ineligibility for relief under section 722 will not be an easy one to draw. But "drawing the line is a recurrent difficulty in those fields of the law where differences in degree produce ultimate differences in kind." (*Harrison* v. *Shaffner*, 312 U. S. 579 (1941).)

Responsibility for the successful administration of the general relief provisions must also rest in part upon taxpayers. The greater the number of unreasonable and exorbitant claims filed, the more difficult it will be for the Government to administer relief fairly and fully to those who deserve it. It is, therefore, highly important that businessmen should understand the principles underlying section 722 so that they may better appreciate the character and the extent of the relief which these provisions were designed to afford. For this knowledge and understanding, businessmen will rely heavily on the men of your profession. I am, therefore, very glad to have this opportunity to discuss with you some of the more difficult problems which are likely to arise in the administration of section 722.

II. CLASSES OF TAXPAYERS COVERED UNDER SECTION 722

The general relief provisions, as set forth in section 722 of the Internal Revenue Code, relate primarily to taxpayers which would ordinarily elect to use the average earnings method of computing the excess-profits credit. Under the general rule the average earnings credit is taken as 95 percent of the average earnings for the years 1936–39, with appropriate adjustments for increases or reductions in paid-in capital. For the most businesses these 4 years do provide a reasonably good standard of normal earnings. Taken as a whole, they were years of moderate prosperity; they included one very good year (1937), one poor year (1938), and two moderately good years (1936 and 1939). However, for some businesses the average income of these 4 pre-war years does not provide an adequate standard of normal profits. It was in recognition of this fact that Congress enacted the relief provisions in section 722.

The 1942 version of section 722 may be said to cover three general types of situations. First, there is the situation in which the occurrence of some abnormal event or circumstance has made the base period earnings of the taxpayer an inadequate standard for the measurement of normal profits. Under the 1941 act only physical events were in general recognized as the basis of a claim for relief from base period abnormalities. The 1942 act permits relief to be extended on account of abnormal economic situations as well.

Second, there is the situation in which the base-period earnings are an inadequate standard for the measurement of normal profits because the taxpayer's years of normal profits did not coincide with the years 1936 to 1939, which embrace a period of normal earnings for business in general. One example of this type of situation is found in the case of the industry which in the base period is in the low phase of its profits cycle, with the good years of its profits cycle not adequately represented during the base period. Another is found in the case of the new business or of the business which changed its character or capacity for production during the base period. In most such cases the average earnings of the years 1936 to 1939 could not be expected to reflect the earning capacity of the business after it had passed through its developmental stage.

Third, there is the situation of those taxpayers which commenced business after December 31, 1939. Such taxpayers have no 1936 to 1939 earnings which might reflect their normal profits. They would ordinarily be required to use the invested-capital method of computing the excess-profits credit, but under section 722 (c) certain classes of them are entitled to use a hypothetical base period net income as the excess-profits credit. These are (1) taxpayers with intangible assets not includible in invested capital which make important contributions to income, (2) taxpayers for which invested capital is not an important income-contributing factor, and (3) taxpayers whose capital is abnormally low. Only in these three special cases is relief granted to taxpayers which would otherwise compute the excess-profits credit by the invested-capital method.

III. THE CONCEPT OF NORMAL PROFITS

The fundamental concept underlying section 722 is that of normal profits. The statute makes it clear that no taxpayer entitled to use the average-earnings method of computing the excess-profits credit can obtain relief under section 722 unless it can establish that its average base period net income was not a fair measure of normal profits. Furthermore, once eligibility for relief is established, the relief afforded by the statute is the right to use a constructive average base period net income which justly represents normal profits. It is, therefore, important to know what Congress intended this term to mean.

A. The term "normal profits" is a subjective concept

The base-period approach to the measurement of excess profits refers to the individual experience of each corporate taxpayer, not to the collective experience of all such taxpayers. The 1942 amendments to section 722 have not altered the basic approach in this regard. They merely broaden the scope of the credit to embrace hypothetical, as well as actual, experiences of the particular taxpayer, and extend the credit to taxpayers which had no base-period experience. The constructive average base period net income which must represent normal profits still relates, not to the experience of business as a whole, or to that of any particular industry, but to the experience of the taxpayer claiming relief.

If, for example, it is established that unusual circumstances made the income of the base period years an inappropriate measure of normal profits, the constructive average base period net income must be determined with reference to the profits which the taxpayer in question could reasonably have been expected to earn under happier circumstances. Profits are not to be deemed abnormal merely because they were low. Taxpayers hoping to establish the abnormality of their base period earnings must be prepared to back their claims with an appeal to their own experience and demonstrated business capacity.

However, the essentially subjective character of normal profits does not mean that reference cannot be made to the experience or other taxpayers insofar as such experience throws some light upon conditions within the industry or trade of the taxpayer itself. Evidence of this sort may, indeed, be highly relevant to a determination of the reasonableness of the taxpayer's claim. In special cases, such as those of corporations which have commenced business since January 1, 1940, such evidence is an important factor in the determination of that fair and just amount which represents normal profits. In other words, although the base period experience of similar corporations cannot be freely substituted for the actual experience of a taxpayer claiming abnormally low base period earnings, it might be used in support of the constructive average base period net income claimed by the taxpayer. The taxpayer will, however, be expected to establish the reasonableness of the relationship assumed between its own earning capacity during the base period and that of such similar corporations.

B. When are profits not normal?

The concept of normal profits cannot be subjected to precise quantitative measurement; rather we should think of normal profits as a matter of more or less. When a businessman enters upon a new venture in the expectation of making a profit from it, his expectations will rarely be expressed in terms of an exact sum of money. Instead, he will be inclined to think of them as a range of possibilities. So long as actual profits fall within this range, they can be said to have come up to expectations. Similarly, the actual profits of the base-period years should be regarded as normal if they come within a reasonable range of the average profits which the taxpayer might be expected to earn under normal conditions. Slight deviations from the norm should not provide the basis for relief.

But what is the norm, significant deviations from which may provide the basis for such a claim? Under what circumstances should an event be regarded as an abnormal one? Under what circumstances does the average base period net income of a taxpayer become an inadequate standard of normal earnings? What factors can be taken into account and what factors must be disregarded in reconstructing base-period earnings? I cannot, of course, give you very precise answers to these questions here tonight, but I shall attempt to give you some general views of the Treasury on them. It will, perhaps, be easiest to consider them with reference to each of the three classes of cases covered under section 722.

C. Normal profits of taxpayers with base-period abnormalities

The mere fact that an abnormal event occurred during the base period does not provide the basis of a claim for relief unless it is also established that as a result of this event the average base-period net income is an inadequate standard of normal earnings. Not

only must there be some connection between the event itself and the earning capacity of the taxpayer, but it must also be established that there were no other equally abnormal events or circumstances which affected earnings in the opposite manner. An abnormally warm winter during the base period might well be regarded as an unusual event in the experience of a natural-gas company supplying fuel for domestic heating purposes, but the occurrence of such an event could provide the basis of a claim for relief only if there were no abnormally cold winters during the same period.

The question whether an event should be regarded as normal or abnormal is, of course, one which can be answered only in the light of the experience of particular taxpayers. A flood would generally be regarded as an abnormal event, but in the case of a taxpayer whose operations are usually interrupted by spring floods, it is doubtful if the occurrence of such floods during the base period could be accepted as the basis of a claim for relief under section 722. Whether an event is to be regarded as normal or abnormal is also a matter of time. Over a long enough period of time all events tend to become normal events. Taxpayers will do well to remember that section 722 operates within the framework of a 4-year period.

In the case of taxpayers depressed by reason of unusual temporary economic circumstances, earnings should be reconstructed not on the basis of the actual economic factor affecting the taxpayer's production, costs, and profits for the years in question, but upon the basis of such factors as existed in the taxpayer's industry. Account may be taken of the relationship of the taxpayer's sales, costs, and profits to those of other members of the industry in other periods of normal earnings for the industry.

In abnormality cases of both types the constructive base period net income will usually be arrived at by correcting the taxpayer's actual earnings experience for the year or years in which its earnings were affected by the occurrence of the unusual event or events. It should not be forgotten, however, that relief is limited to a fair and just amount representing normal earnings. Consequently, if adjustments are made in the earnings for particular base-period years affected by abnormally poor circumstances, adjustments must also be made for years affected by abnormally good circumstances to ensure a constructive average base period net income which can fairly represent normal earnings.

D. Normal profits in the cycle cases

One of the most widely discussed provisions of section 722 is that relating to the eligibility of a taxpayer which was depressed during the base period because it was a member of an industry with a profit cycle differing materially in length and amplitude from the general business cycle. A good many taxpayers appear to have the impression that this provision necessitates an excursion into the higher mathematics of business-cycle analysis. I do not believe that any such excursion will, as a rule, be necessary. It is my opinion that in such cases an ounce of common sense will carry more weight than a pound of statistics. It is not always true that "they do things better with logarithms."[1]

In considering the cycle cases, it must be recalled that in selecting the years 1936–39 as the standard of normal profits Congress selected a period of 48 months within which was embraced one complete profits cycle for business in general. For most businesses, therefore, the choice of these years provided a base period of moderate prosperity in which the normal fluctuation of profits which characterizes the general business cycle was averaged out.

However, it was evident that there would be some industries the members of which could not expect to average out good and bad years within these particular 4 years. The construction industry provides an example of an industry with a profits cycle longer than the customary 40 to 50 months' cycle. Not every period of general business prosperity produces a building boom; instead, it appears that such periods of high production and profits occur at intervals of from 12 to 20 years. Taxpayers in industries, the profits cycles of which follow this building cycle, for example, would, presumably, be eligible for relief under subsection 722 (b) (3), if base period earnings inadequately reflected normal earnings.

There are undoubtedly other industries which will attempt to establish eligibility under this subsection. Some of them will be able easily to establish their eligibility on the basis of generally recognized facts. Others may attempt to do so through the use of highly refined statistical techniques. I venture the suggestion that arithmetic will get better results than differential calculus and that if the techniques of the latter are deemed to be essential to the establishment of eligibility under this section, the industry is not one which Congress intended to relieve under this subsection. The mere fact that deviations from some general cycle of business profit can be established for a particular industry will not be accepted as evidence that the average base period net income is not an adequate standard of normal earnings.

The constructive average base period net income of a taxpayer in an abnormal cycle industry may be determined with reference to one or more prior periods in its experience when normal earnings were realized. However, the average income of any one such period will not be regarded as an amount representing normal earnings unless it is established that with respect to the taxpayer and the industry of which it is a member, this period bears the same relationship to the profit cycle of the taxpayer and the industry as the base period bears to the general business cycle.

E. Normal profits in the growth cases

The principal defect of the base-period approach to the measurement of excess profits is the fact that it provides an adequate standard of normal earnings only so long as the character or capacity of the taxpayer's business does not change from what it was during the base period. For the purposes of a war-profits tax this defect would not be serious as regards changes initiated during the war years since no account can be taken of such changes. But there is another difficulty that cannot be handled so easily since it relates to circumstances which prevailed during the base period. This difficulty relates to the new business, which was slowly building up its earning capacity during the base-period years. It also relates to the old business, which changed its products, its methods of production, or its capacity of production during that period and which was therefore in the process of establishing a new earning capacity bearing little or no relation to its previously established level of earnings.

In these situations it is obvious that the average base-period net income will rarely be an adequate measure of the normal profits of the new or changed business. To accept it as such would be to discriminate against the very businessmen who most need encouragement, namely, the newcomers and the innovators. But the determination of a fair and just amount representing the normal profits of such taxpayers presents a difficult problem, especially if the business of the taxpayer has not reached its normal earning capacity by the end of the base period.

In determining the normal profits of such growing taxpayers, it has been provided that a taxpayer shall be deemed to have commenced business or made the change in the character of its business 2 years before it did so. This assumption provides a more liberal allowance for growth than was provided in the 1941 version of section 722, but avoids the necessity of attempting to distinguish between increased earnings attributable to the abnormal influence of the war, and increased earnings which might properly be regarded as the continuation of the normal peacetime growth of the taxpayer into war years. Under the 2-year push-back provision it will be necessary to estimate the level of earnings which the taxpayer would have attained after 2 more years of growth under the general circumstances and conditions prevailing during the pre-war years. The earning capacity reflected in the last year of this extended growth period would then be used as the basis for the reconstruction of base-period earnings.

In some such cases, however, the taxpayer may not have reached its establishel level of normal earnings until after its first excess-profits taxable year. This may also be true of a taxpayer which was committed to a course of action to change its capacity for production or operation prior to January 1, 1940, but which consummated such change in a later year; it will necessarily be true of a taxpayer commencing business after December 31, 1939. In these cases it would appear that a fair and just standard of normal earnings for such taxpayers must be based not upon the full level of normal earnings, but upon the level of earnings which the taxpayer might have been expected to obtain in years prior to the time that it realized its full level of normal earnings.

The reason for this provision is clear. The purpose of relief is to establish a fair and just standard of normal earnings to be used in determining what portion of current earnings constitute excess profits. This standard of normal earnings implies a level or range of profits needed not only to furnish an adequate return on the capital invested in the business, but also to provide reimbursements for deficits or low earnings encountered in the early years of operations. Therefore, any unused excess-profits credit obtained as a result of the difference between constructive normal profits and the subnormal earnings of a taxpayer which had not yet reached its level of normal operations would, in effect, be a form of double relief. Moreover, to permit a taxpayer to compute an unused excess-profits credit in such a case would discriminate unfairly against competitive corporations which had realized normal earnings in comparable excess-profits-tax years since they would have no unused excess-profits credit.

F. Normal profits in the case of taxpayers with no base period earnings experience

Finally, there is the question of normal profits of taxpayers qualifying for relief under subsection 722 (c). Taxpayers of this class were not in existence during the base period; hence no appeal can be made to a pre-war earnings record. On the other hand, obviously, no account can be taken of actual wartime earnings.

In such cases the taxpayer, in establishing a constructive average base period net income, is allowed to refer to the actual earnings experience of comparable taxpayers during the base period. This is not the comparative standard of the First World War. It does not entitle a new business with abnormally low capital to use the average profits of representative firms in the same business. It does no more than give a taxpayer an opportunity to reconstruct an earnings

[1] Cf. Cardozo, The Paradoxes of Legal Science, p. 1 (1927).

experience on the basis of comparatives after he has established the fact that a comparison between his own earning capacity and that of such similar taxpayer is a reasonable one.

IV. RULES FOR THE COMPUTATION OF THE CONSTRUCTIVE AVERAGE BASE PERIOD NET INCOME

I should now like to discuss some of the specific rules which have been prescribed for the computation of the constructive average base period net income.

(a) First, there is the question of the relationship between the general relief provisions of section 722 and the specific relief provisions of section 713, i. e., the elimination of a deficit year, the 75-percent rule, and the growth formula. Briefly, the problem is this: Should a taxpayer be permitted as a matter of right to benefit from the provisions of section 713 if its base period earnings have been reconstructed under the provisions of section 722? For example, take the case of the taxpayer whose operations were interrupted by a fire which occurred during the early part of 1939, with the result that its earnings for that 1 year were abnormally depressed. Assume, further, that after adjusting the 1939 income so as to eliminate the effects of the fire upon base-period earnings it is found that the income for 1938 is less than 75 percent of the income of the other 3 years.

Should this taxpayer be allowed to substitute for its actual 1938 income an amount equal to 75 percent of the income of the other 3 years? Under the particular circumstances of this case it would appear to be inequitable not to permit it to do so. If this taxpayer were not allowed to use the 75 percent rule, it would clearly be placed in a less favorable position than a competitor which, except for the year of the fire, had a similar pattern of income during the base period.

On the other hand, take the case of the taxpayer whose average base period net income is found to be an inadequate standard of normal earnings because it is a member of an industry which is subject to sporadic and intermittent periods of high production and profits, and such periods were not adequately represented in the base period. In such a case, the actual earnings of no one or two specific years can be said to have been abnormally low. The adjustment called for under section 722 is an adjustment in the entire base period earnings, and no importance can be attached to the manner in which the taxpayer may choose to distribute such earnings over the four years comprising this period.

Clearly, this taxpayer should not be permitted to enjoy the benefits of the growth formula merely because it chooses to allocate the larger part of its constructive net income to the last two base period years. If it is established that the taxpayer was, in fact, growing during the base period, this should be taken into account in determining the constructive average. The use of the automatic growth formula would, however, be inappropriate in such a case.

The rule has, therefore, been adopted that the principles of the special relief provisions may be applied in the computation of constructive base period net income if the case warrants their application, but that no taxpayer coming under the provisions of section 722 will be permitted to apply the special relief provisions of section 713 as a matter of right.

If abnormally poor years in the taxpayer's base period are corrected under section 722, it is contemplated that years of abnormally high earnings will likewise be revised and corrected in order to determine the fair and just amount of a taxpayer's earnings. At first glance this position may appear to be inconsistent with the intent of Congress in enacting a general-relief provision. It is true that, taken as a whole, general relief is a one-way proposition. It provides a higher credit for those taxpayers whose earnings were abnormally depressed, but it does not reduce the credits of those taxpayers which were abnormally prosperous during the base period.

However, the relief afforded by section 722 is specifically limited to "a fair and just amount, representing normal earnings." Clearly, no such amount can be reached if account is taken only of those abnormalities in the experience of the taxpayer which had the effect of reducing its income. To ignore those abnormal circumstances which tended to increase actual base-period earnings would be equivalent to allowing a taxpayer an excess-profits credit greater than an amount representing normal earnings.

(b) A somewhat similar relationship exists between the general relief provisions and the specific relief provisions of section 711 (b) (1). In the latter provisions Congress has enacted specific rules to scale down abnormal or abnormally large base period deductions not usually experienced by a taxpayer. These rules are based upon the relationship between deductions in a particular year with such deductions in the preceding 4 years. If the deductions in any one year exceed 125 percent of the average deductions in other years, the deductions in the unusually large year are mechanically reduced to 125 percent of the average. As in the case of the relief provisions of section 713, the application of the relief provisions of section 711 may be unjustifiable if a fair and just amount representing normal earnings presupposes the absence of unusual and peculiar elements. The relief rules in section 711 cannot be used as a matter of right, but may be applied in principle if warranted in determining normal earnings.

(c) In addition to section 722, which is designed to correct the excess-profits credit, the excess-profits tax law contains various relief provisions which mitigate the effect of abnormally large income during the excess-profits tax period. Thus, section 721 levels off abnormally large income in any one year over the years to which such income is actually attributable. Section 736 (a) provides relief for taxpayers on the installment method of accounting which are hit by anti-inflationary regulations tending to bunch in one or two years income which normally would have spread over several years. Section 736 (b) grants a measure of relief to taxpayers which under the complete contract method of accounting must report in one year income from contracts which may have been in progress over a period of years. These sections and section 722 are complementary rather than mutually exclusive. As such, both may be used by the taxpayer. Congress has specifically said, however, that in the case of installment-basis taxpayers the base period shall not be recomputed under the method of relief provided for the excess-profits-tax years; contrariwise, in the case of long-term contract taxpayers Congress has provided that the base period should be recomputed under the accounting method provided as relief for such taxpayers. Although taxpayers using these relief sections may also use section 722 to correct a base period inadequacy, section 722 may not be used as an oblique means of avoiding these provisions to obtain a more favorable method of computation.

(d) The determination of what is excessive and discriminatory excess-profits taxation from which Congress intended to relieve corporations by section 722 is not based upon the consideration that the excess-profits tax consumes too large a portion of the taxpayer's taxable income or upon the consideration that a taxpayer pays a larger percentage of its income as tax than a competitor. It is based upon a finding of inherent inequity in the taxpayer's excess-profits credit. It is a logical consequence, therefore, that relief obtained in the form of a constructive average base period net income may be used in a proper case to compute an unused excess-profits credit for purposes of a carry-over or carry-back, as well as to diminish a tax liability for a particular year.

In this connection, an application for relief need not be filed for the taxable year from which it is desired to carry over an unused excess-profits credit based upon the constructive average base period net income. A timely application filed for the year to which the carry-over is to be applied is sufficient.

(e) Corporations comprising an affiliated group have the privilege of making consolidated income and excess-profits tax returns. The consolidated returns regulations provide certain principles of accounting which view the group, generally, as a business unit. Consequently, any relief requested by the group must depend upon whether such group, as it existed during any excess-profits tax year, satisfied the eligibility requirements of section 722.

(f) It would be a useless burde.. both upon a taxpayer and the Government to compel new applications for relief and reexamination of cases after a constructive average base period net income has finally been determined for the taxpayer. The regulations, therefore, provide, as did the regulations under section 722 prior to its amendment, that in certain instances a constructive average base period net income established for a taxpayer may be used in subsequent years without the necessity of additional applications. This does not mean that any error incurred may not be corrected in a subsequent year through a reexamination. Since the theory of section 722 is to establish a fair standard based upon the current character of a taxpayer in the framework of certain base period conditions, a constructive average base period net income determined with respect to a taxpayer cannot be used if the character of such taxpayer has changed.[2] Thus, if there has been any change in an affiliated group making a consolidated return, the new group must be examined to determine whether it satisfies the requirements for relief. Likewise, if a supplement A transaction has occurred, the nature of the base period experience of the acquiring corporation must be analyzed to ascertain whether it is entitled to relief.

All of you are, most naturally, interested in knowing how section 722 will be applied in the case of particular taxpayers. In the nature of the case, "it is practically impossible in laying down a general rule to anticipate and provide in specific terms for every case."[3] "The process of inclusion and exclusion, so often applied in developing a rule, cannot end with its first enunciation; there must be some resort to the trial-and-error method."[3] I have defined broadly some of the terms in which Congress has expressed its intent to prevent hardships from arising under the excess-profits tax law. To use the language of Justice Cardozo, "Definitions more precise must abide the wisdom of the future."[4]

---

[2] Cf. *Gorieb* v. *Fox* (274 U. S. 603, 607 (1927) (nontax)); *Steward Machine Co.* v. *Davis* (301 U. S. 548, 591 (1937) (social security tax)).

[3] Brandeis, J., dissenting in *Washington* v. *Dawson & Co.* (26[4] U. S. 219, 236 (1924) (nontax)). Cf. Black, J., concurring in *Helvering* v. *Gerhardt* (304 U. S. 405, 425 (1938) (i. t.)).

[4] *Steward Machine Co.* v. *Davis* (301 U. S. 548, 591 (1937)).

In your practice of accounting you are concerned with the interests of particular taxpayers. But the interest of taxpayers can extend beyond the immediate case; indeed, every case has not only its immediate particular aspects, but its long-range general implications. The interest of no particular taxpayer in the specific application of general relief should be placed ahead of its fair administration in the interests of all taxpayers. Abuse of the statute would undoubtedly result in drastic modification. Everyone will remember the abuse of the cognate sections of the 1918 act. Accordingly, I hope that in your preoccupation with the cases of particular taxpayers, you will not lose sight of the principles which must govern the administration of general relief if the excess-profits tax is to function as an effective instrument of war taxation.

Give Retailers Credit, Too

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. GWYNNE. Mr. Speaker, the number of retail food stores declined over 33,000 in the past year. That is according to figures presented by the Progressive Grocer, the national magazine of the food trade. Lack of goods to sell and inability to meet Government regulations are assigned as the principal causes.

The passing from the picture of these independent businessmen is not only a personal tragedy to thousands of people; it constitutes a real menace to our individualistic type of government.

The place of the retailer in our system of economy is well set out in the following editorial from the June 9, 1943, issue of the Wellsburg Herald, published in Wellsburg, Iowa, which I include in this extension of remarks:

GIVE RETAILERS CREDIT, TOO

It would sound strange to hear Mr. Henry Kaiser stand up and argue that ships are essential to the war effort. Fortunately, he doesn't have to. Everyone knows it. But there are industries just as essential as shipbuilding, whose wartime operating difficulties are immensely aggravated because their essentiality has never been recognized.

Such an industry is retail distribution. The clothes on our backs, the shoes we wear, the food we eat, must be put within our reach by the distribution industry. No service is more essential. Speaking for the industry, David R. Craig, president of the American Retail Federation, has this to say of merchandising: "We are essential because we are the industry * * * upon which the public must rely in order to obtain the goods which it must have. We do not know of any other way in which the civilian public can get its goods. The retailer is the quartermaster to the civilian population. * * * The real question is whether the civilian population is essential."

If the civilian population is essential, then the industry which supplies it with necessities must also be essential. Since no reasonable person questions the need for a hard-working, highly productive civilian population in wartime, why should the job which the merchant must carry on be minimized? Why should the merchants, in addition to feeding and clothing us, be forced to argue the obvious—that efficient distribution of necessities is as vital as an adequate supply of necessities?

Address of Hon. Sumner Welles

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable Sumner Welles, Under Secretary of State, at the commencement exercises of the North Carolina College for Negroes, Durham, N. C., May 31, 1943:

I am deeply appreciative of the privilege you have granted me of delivering this commencement address to the North Carolina College for Negroes.

No citizen of the United States, who is afforded the opportunity, in these days, of speaking to a graduating class of one of our universities or colleges, can accept that honor without a very deep sense of gratitude, and without a very profound feeling of humility.

You who are graduating today will in one form or another now enter the service of our country. You will enter that service at a moment when the United States is engaged in the greatest struggle of its history—the struggle to preserve the liberty and independence of the American people, and the battle to make it forever certain that freedom-loving and peace-loving peoples like ourselves can in the world of the future live in happiness and in safety.

We are confronted by the most sinister and the most ruthless forces which our modern world has known. There is no brutality of which they are not capable—no machination, however despicable, to which they will not stoop. The Axis Powers have sought to obliterate from this earth everything which to us makes life worth living, and to reduce all of humanity other than themselves to the status of the slaves of a master race.

There could be nothing more perilous than to underestimate the strength remaining to our adversaries, nor to believe that we have not still before us many desperately sad and anxious days. But we are entitled to derive great hope and encouragement from the magnificent victories which the United Nations have recently inflicted upon their enemies. The beacon light of our war objective, the unconditional surrender of our foes, burns ever brighter as we advance toward it.

Millions of young Americans like yourselves, with a courage and a devotion which have never been surpassed, have dedicated themselves to the great cause for which our country and the other United Nations stand, the cause of human liberty.

Many of them from every section of this land already have laid down their lives for that cause.

Almost a quarter of a century ago Woodrow Wilson spoke these words: "It is our duty to take and maintain the safeguards which will see to it that the mothers of America and the mothers * * * of all the other suffering nations should never be called upon for this sacrifice again. This can be done. It must be done. And it will be done."

For many years these appeared to me to be very deeply tragic words. The failures, and the selfishness, and the criminal shortsightedness of peoples and of governments throughout the world during the decades that spent themselves after the end of the last World War, seemed to make infinitely remote the possibility of achieving the ideal for which President Wilson so valiantly fought, and for which he died. And yet, now that I myself have grown older, I can see clearly that those words were not tragic. They are filled with indomitable faith and with prophetic truth. What many of us perhaps have not realized sufficiently is that no great achievement in human progress has ever yet been realized until the sacrifices of men and women have paved the way for its realization, and until the conscience of mankind has refused to admit the possibility of any other outcome.

So has it been in our own history. We are wont to speak with devotion of our Constitution as the greatest instrument which the human brain has conceived. It is. But we do not so often remember that in the 150 years of our national life our Constitution has been, not a static, but a living thing—continuously adapted by the wisdom of our people to their changing needs as their material evolution and their spiritual growth have advanced.

Time and again in our history progress toward the great objectives set forth in our Declaration of Independence has been checked. Often we have fallen back. But eventually we have moved on, ahead.

And, in the new world of the future, which you, and those of your generation, will join in building, that same process must take its course. My generation has fallen back. Your generation must press forward. Without that vision, what we term modern civilization cannot survive.

The long-range problem which confronts us all is the achievement, through our victory, of permanent peace.

No one of us can afford to be so blind to his own self-interest as to pay any heed to those cynics whose voices we occasionally hear trying to tell the men and women of this country that just because there have always been wars in the past, there will always be wars in the future; that the surest way for us to save our own skins is for the United States to "mind its own business," and after this war is over once more to pretend that what goes on in the rest of the world does not affect every one of us here within the borders of our own country.

The people of this country have seen that policy tried out, and fail—utterly and miserably. The mothers and the fathers of today realize that if the United States had in reality seen clearly what its "business" was during the past 20 years, and had in fact "minded" it, by taking a hand in putting out the first flames which later lighted this world conflagration, their sons would not today be called upon to make the supreme sacrifice in the defense of the liberty and security of their native land.

The taxpayers of the United States also realize today that this crushing burden of taxation imperatively required of them in order that we may win the war, and this staggering debt which will have to be borne by our country to enable the United States to produce the armaments we require to equip our own armed forces and to strengthen the power of our allies, could have been avoided if their government had been empowered to assume its fair share of responsibility in the past for keeping peace in the world, and for seeing to it, together with the governments of other civilized and peace-minded nations, that international disputes

as they arose were promptly settled by pacific means, and that militaristic dictatorships bent on world domination were quashed before they had the chance to run amuck.

The people of the United States realize today, I am convinced, that what we have utterly failed to do in the past was, in the truest and most practical sense, "to mind our own business." They cannot fail to see also that, had we been willing to play our part in keeping the peace of the world since the last World War, the cost to us in life and treasure would have been but an infinitesimal part of the cost required of us today so that we can achieve that victory which we must gain, if the United States is to survive as a free nation.

This long-range problem of post-war policy is fundamentally a question of our own self-interest.

I know that men and women are thinking this problem through in every section of this country. The more opportunity which is given for public discussion of these vital issues, the more light which is thrown upon the specific aspects of the complexities which are involved, the more assurance will there be that the answer to be given by our democracy will be a wise one. It has always seemed to me that if the American people had had more time for study and discussion of the basic policy at stake in 1919, and if the issue itself had not become enmeshed in the web of bitter partisan politics, a more realistic and a more enlightened course would have been followed by this country during the past generation.

It is my individual view that it would be premature at this stage for this Government to attempt to define with precision and in detail any exact plan of international operation upon which the American people would be expected to pass.

We all of us must agree that certain conditions are going inevitably to obtain at the conclusion of the war.

For a number of years, particularly in Europe, social and economic conditions will be in a state of flux. In some of the presently Axis-occupied countries there will be political instability. Both in these countries, as well as in the Axis countries, millions will be starving, and other millions must be repatriated to the homes from which they have been driven. Throughout the world there will be a chaotic, and, in some areas, an anarchic, state of affairs.

During this period—and no one can today estimate how long it may be—order will have to be maintained by those of the United Nations which will have to assume these necessary functions.

It is during that transition period, as well as during the remaining period of the war, that the opportunity may presumably be afforded to the United Nations to undertake the more specific elaboration of the form of international organization upon which they may jointly determine.

We all of us remember that the agreements, which in their entirety comprise the inter-American understanding upon which pan-Americanism rests, and through which the regional solidarity of the American republics has had its being, were not brought into existence in a day. They were not achieved by means of an initial blueprint. On the contrary, the objectives sought were only achieved over a period of many years, and it required an actual act of aggression against one of the American republics, the United States, to bring about the final consummation of the regional understanding of the Western Hemisphere.

It may well be that the surest course for the United Nations to pursue would be the construction of an international organization by the same method of gradual evolution. By permitting sufficient elasticity of operation at the outset of the transition period, the practical experience undergone by the United Nations during the war, as well as after the victory is won, will presumably demonstrate clearly the type of organization which will most efficiently guarantee the securing of the basic objectives which they seek.

It seems clear, though, as a result of the tragic lesson which humanity has learned from the events of the past 25 years, that any form of international organization, in order to function successfully, must be premised upon the recognition of a few cardinal principles:

There must be, through international agreement, a combination of armed forces made available by the powers which are prepared to do so, which may be used regionally or on a broader scale, and which can, and will, prevent aggression, render international conflict impossible, and, in general, see to it that the peace of the world is maintained inviolate;

An international tribunal to which international controversies can be referred, and in which international confidence can be safely placed;

An efficient international method for the outlawing of certain kinds of armaments and for the inspection of all national armaments.

The creation of appropriate and practical technical organizations to deal with economic and financial matters, and to advise the members of the United Nations thereon, so that autarchic commercial and financial policies will not be pursued by individual powers, and so that the post-war period may be an epoch of economic cooperation and of rising living standards, rather than a time of cutthroat competition and of falling living standards for us all.

The recognition—not merely in words but in practice, as in the Western Hemisphere—of the principle of the equal sovereignty of all states, whether great or small. And together with this, the establishment of the principle that the path must be prepared for the freedom and self-government of all peoples who desire their liberty, as soon as they are able to assume that right.

Finally, in the kind of world for which we fight, there must cease to exist any need for the use of that accursed term "racial or religious minority". If the peoples of the earth are fighting, and dying, to preserve, and to secure, the liberty of the individual under law, is it conceivable that the peoples of the United Nations can consent to the re-establishment of any system where human beings will still be regarded as belonging to such "minorities". The equality of individuals, like the equality of peoples, cannot in fact be granted by fiat. Equality depends on their own achievements, and upon their own intrinsic worth. But to equality of human rights, and to equality of opportunity, every human being is by Divine right entitled. That is the essence of our democratic faith. If that cornerstone is laid in the foundation of the new world of the United Nations, the blot of the concept of minorities upon the fabric of our civilization will be erased.

In a cemetery, far from here, there was erected a monument to the memory of a group of American fliers who died in the last World War. On it were written these words of the Prophet Samuel:

"And in their death they were not divided; they were swifter than eagles, they were stronger than lions."

To me these words apply to all of the countless defenders of the faith which we uphold. United in sacrifice for the ideals of freedom for which our country and its allies stand, they constitute a brotherhood which knows no divisions of faith or race. They are joined by the indissoluble bonds of their common love of liberty.

It is to you and to your comrades in arms that this sorely stricken world looks with confident trust for its redemption. If you, of this new generation, in all of the lands where the love of freedom is the supreme value, refuse to permit yourselves to be divided in war or in peace, you can forge that new world of which mankind has so long dreamed, a world which is free from war, and in which men and women can live out their lives in security, in happiness, and in peace.

The Bureau of Reclamation's Contribution to the War Food Production Program

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. GEARHART. Mr. Speaker, under leave to extend my remarks, I desire to insert in the RECORD a news release showing the tremendous contribution to the Nation's food supplies made by Federal reclamation projects in the West.

This is of especial interest at this time since in a few days the Congress will be considering in connection with the Interior Department appropriation bill recommendations for increased appropriations to permit the Bureau of Reclamation to extend its irrigation facilities. The bill is now before the Senate with recommendations that have come to the Capitol since the measure passed the House. I do not believe there is any doubt about what this House will do with these recommendations.

I hope to see within a year or two the great San Joaquin Valley area to be served by the Central Valley project included in the agricultural regions served by the Bureau of Reclamation. The scope of the activities of this great food-producing agency of the Federal Government will be almost doubled by the completion of the Central Valley project. I commend the Bureau of Reclamation and its activities to the attention of the House.

The news release made by Secretary of the Interior Harold L. Ickes, on the basis of a report by Acting Commissioner Harry W. Bashore, is as follows:

Farmers on Bureau of Reclamation irrigation projects in the West are striving to increase the 1943 production of critical war crops over the 1942 record, Secretary of the Interior Harold L. Ickes announced today. The acreage planted to prime foods for the home and fighting fronts—potatoes, beans, and forage for beef and dairy products—indicate record outputs of these commodities.

Preliminary reports of spring plantings on reclamation projects were submitted to Secretary Ickes by Acting Commissioner Harry W. Bashore, who also reviewed the completed reports on 1942 production. The latter also showed the highest gross crop values and the largest acreage irrigated in the history of the Bureau of Reclamation.

Crops from nearly 4,000,000 acres served by reclamation works were valued at more than a quarter of a billion dollars.

"These data show that if irrigation farmers have labor for harvesting, the 1942 production record will be exceeded this year, and that the

food output from these federally operated facilities will again materially aid in feeding the increasing military and civilian population of the West," Secretary Ickes observed. "The output of the reclamation farms relieves the transportation of needed food supplies from agricultural areas eastward and also aids in supplying overseas requirements.

"The projects in 1942 raised enough potatoes to provide yearly rations for more than 13,000,000 people and enough beans for more than 38,000,000. The beef and dairy herds, fed the alfalfa and grains grown on the irrigated land, supplied the equivalent of annual milk rations for more than 3,000,000 people, and beef rations for more than three and one-half million. Potato acreage this year on at least three major projects is double that of last year. The bean yield on all Bureau developments is expected to show an increase of more than 50 percent and the alfalfa production also a substantial gain."

The value of 1942's outstanding crop, made known for the first time, was $268,000,000, a 46-percent increase over the previous high, recorded in 1941, the Secretary said. The figures are based on reports from more than 3,800,000 irrigated acres on 41 projects in 15 Western States.

The reports show that Bureau projects last year produced 62,000,000 bushels of vegetables, including potatoes and beans; 3,000,000 tons of alfalfa and other forage; a billion pounds of fruits and nuts; 26,000,000 bushels of cereals (almost entirely for location consumption); two and one-half million bushels of clover, alfalfa, and other seeds; more than 200,000 bales of cotton, largely long-staple for war purposes; and two and one-fourth million tons of sugar beets—equivalent of an annual supply of sugar, as now rationed, for 21,000,000 people—for 1 out of every 6 people in the United States.

"In the 41 years since the Bureau was organized its projects have produced crops valued at three and one-fourth billion dollars—four times the Government's total investment," the Secretary pointed out. He also drew attention to the power output of Bureau multiple-purpose projects, adding: "Many of the bustling war industries of the West would come to a standstill but for Reclamation energy. In 1942 seven and one-fourth billion kilowatt-hours of electric energy—one-fourth of that generated in the far Western States during the year—came from Bureau projects as a byproduct through the double use of water."

Mr. Bashore informed the Secretary that the outlook for water supplies for irrigation and power production continued good in practically all western drainage basins. The major exception is in Arizona, where the irrigation situation will be protected to a large extent by the large amount of storage held over from 1941 and 1942.

Crop values per acre reached new highs on Bureau projects during 1942 averaging more than $70 an acre—an increase of 30 percent over the preceding year. Of the large developments, the Salt River project in Arizona and the Yakima project in eastern Washington showed greatest returns—more than $128 per acre. Next highest was the Rio Grande project in New Mexico and Texas, with a per-acre value of $116, followed by the Yuma project (Arizona-California), $113, and the Klamath project (Oregon-California), $108 per acre.

Bureau projects in 1942 irrigated a total of 3,972,000 acres in 15 States, of which 1,890,677 acres received a full supply. Of the remainder, 835,691 acres received supplemental supplies from storage works constructed by the Bureau and 1,245,752 acres were supplied under special contracts from regular projects.

Crop returns from the Imperial irrigation district in southern California, which is served by the All-American Canal, are included in the Bureau's annual totals for the first time. The Imperial Valley, which was transformed by irrigation from a desert into a highly productive area, formerly received water from a canal which looped 30 miles through Mexico. Beginning in February 1942, it received its full supply from the All-American Canal, which was constructed and is operated by the Bureau of Reclamation.

Weekly Report to the People of My District

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over station WNBF, Binghamton, N. Y., on June 12, 1943:

Men, women, and young people of Binghamton, Johnson City, Endicott, and the Thirty-fourth Congressional District, it is hard for me to describe the feeling to you of deep satisfaction which comes over me when I think of the last 2 week ends spent at home. It brings, also, a sense of homesickness and nostalgia which often overcomes me. Being in Washington has its advantages. As your Representative, I am close to the scene of action and can thereby get right to the meat of any problem you folks back home may want solved. But being in Washington also has its disadvantages: I am deprived of the daily observations and views which you people would ordinarily submit to me face to face; I miss seeing you and talking with you, which I would be able to do if distance did not separate us.

If any problem seemed uppermost in people's minds when I was home, it was the gasoline situation. There is a smoldering discontent and dissatisfaction at home over the way the East is being discriminated against by bureaucratic agents. I cannot find one argument to support their claim that the Atlantic seaboard should be deprived of gasoline while the rest of the country rides unchecked.

Everybody remembers a few months ago, I introduced a bill in Congress making it unlawful for the Office of Price Administration to take away gas ration cards and automobile licenses and to exact other penalties upon those who were accused of petty offenses in connection with pleasure driving. This bill prohibited the Office of Price Administration from setting up its own tribunal to judge people it accused and from carrying out other steps which it had no right to do.

The bill I introduced was unnecessary, because no executive agency or department of our Government has any right under the Constitution to make its laws, to enforce them, or to sit as a judge and jury over those it accuses. The whole course which the Government is pursuing is absolutely illegal. There is nothing in the Constitution which gives it the right to follow this course. Congress has never sanctioned these outrageous steps. The Supreme Court has never upheld them.

As I have many times pointed out, I believe that rationing of petroleum in America is probably necessary. We are all agreed that Americans should use this vital war material sparingly. But the ridiculous thing to me is, after a few gasoline coupons have been issued, to people, to have an army of snoopers descend upon our citizens and question their right to use that small allotment of gasoline as they see fit. Why give them the gasoline in the first place? What good is it if they dare not use it? I say it is people's own business how they use what little gasoline the Office of Price Administration allots them. They are getting less and less pleasure all the time. Why deprive them of the little that remains? Too much regulation, too much pushing around is going to hurt the war effort.

My remedy is to put the people in the East on the same basis as all the rest. If rationing of gasoline must be extended throughout the Nation in order to win the war, then let's do it. But don't endanger the food-for-victory program here in upstate New York by keeping gas away from farmers who need it for their trucks and tractors. Don't put any more obstacles in the way of defense workers getting to their factories. Give them all the gasoline they need. Then, if there's a shortage, place the rest of the country on the same basis we have had to operate on for the past year. What's fair for 12 Eastern States is fair for all.

May I read to you several recommendations expressed by my good and able friend, Congressman FRED A. HARTLEY, Jr., of New Jersey, who is doing a splendid job as head of a special committee in the House investigating the present gasoline dilemma. Mr. HARTLEY states:

"In order that the present situation in the Northeast States shall be neither dragged out for an unduly long period, nor suddenly occur a third time, we believe that certain steps should be taken at this time in a longer range program which will affect supplies next winter and next year.

"IMMEDIATE PROGRAM—MORE GASOLINE BY RAIL FROM MIDWEST

"In order to deliver to the Northeast the maximum quantities of motor fuel for the next 90 days in available tank cars and inland barges, the Petroleum Administrator should direct the movement of at least 200,000 barrels per day additional from district 2 to district 1.

"Mr. Ickes has already hinted that this move may be necessary. He was reported in the New York Herald Tribune of June 2 as warning that the effects of the shortage might soon extend inland to midwestern and other States, and that if diversion of midwest oil supplies to the East would help ease the crisis, that course would be followed. It should be started without delay.

"By reason of the shorter turn-around from storage tanks and refineries in district 2 (Midwest) as compared to district 3 (Gulf territory) total deliveries by tank car would be increased 50,000 barrels per day by drawing 150,000 barrels more by rail from the Midwest. The same tank cars can deliver 150,000 barrels per day of gasoline from the Midwest on a 12-day turn-around as against 100,000 barrels hauled from the Southwest on an 18- or 20-day turn-around. At present 80 percent of the total movement is from long-haul points in the Gulf territory.

"Gasoline stocks in district 2 are approximately double from those of district 1, even under the present rationing. They could be drawn upon at the rate of 200,000 barrels per day above present shipments from district 2 for 2 or 3 months and still not pull these stocks down below those on the east coast.

"Furthermore, an additional supply out of current production could be made available to the east coast if the restrictions on driving were equalized to a greater extent. At the present time the basic allowance in district 2 are three times those in district 1 and there is no pleasure ban on the use of the gasoline in district 2.

"We believe further that the administration of every phase of the petroleum problems, including rationing, price fixing, and

transportation, should be placed under the jurisdiction of the Office of Petroleum Administration. Furthermore, in view of the fact that the coupon system of gas rationing has proved entirely inadequate, and has in itself contributed largely to the development of a huge black market, we recommend consideration of rationing on the basis of dealer quotas.

"Furthermore, in view of the need for thorough study and the establishment of a long-term program, and in view of public confidence and approval of the study and recommendations of the Baruch committee on synthetic rubber, that that committee be called upon to make a similar study and recommendations in connection with petroleum problems.

"The United States more than any nation in the world is geared to wheels. The failure to be adequately prepared for the distribution of our petroleum products might easily result in the break-down of the war effort on the home front. Our people will make whatever sacrifice they know to be necessitated by the war effort, but it is our obligation as Representatives of the Eastern Seaboard States to make every effort to prevent any hardship which is the result of inadequate planning or inefficient and confused administration."

To my friends in greater Endicott, Vestal, Endwell, Hooper, Oakdale, and environs, I wish to say that I am greatly honored by an invitation from the Federated Men's Bible Classes to give the twelfth annual Flag Day address at Endicott tomorrow at 3 o'clock. I understand this ceremony will be held at the honor plaque on East Main Street. I assure the committee I anticipate being there and meeting with these patriotic citizens for the purpose of paying tribute to the countless hundreds of boys from there, the Endicott and Vestal areas, now serving Uncle Sam in the war. I look forward to this occasion because I greatly admire the lively interest which the people of greater Endicott and Vestal take in their boys in service.

While I am talking about Flag Day, let me remind you of the beautiful flag book I have which as you know is published by the United States Marine Corps. If you desire one or more copies of this attractive history of our flag, do not hesitate to write me in Washington and request me to send it. You will be intensely interested and will enjoy the book a great deal.

Remember that as your hired man in Washington, I expect you will submit to me your suggestions, views, and ideas whenever you see fit. I also hope you will call on me in the event I can be of service in helping you to solve problems which may come up in connection with this awful war. You have the right as Americans to look upon your Government in Washington, not as masters but as your servants.

I hope you will consider me as one who wishes to serve you and who is dedicated to preserving our American form of Government as well as the most glorious flag which ever floated in the winds of time.

Col. John M. Barr

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. FULMER. Mr. Speaker, I read with a great deal of interest some days ago an article carried in the Columbia Record entitled "S. C. Flier Wins 3 Medals Simultaneously in India." This article referred to Col. John M. Barr, originally from Gilbert, S. C., Lexington County. His present home is San Antonio, Tex.

Some years ago I had the privilege of appointing this young man to West Point, where he was able to make a record for himself. He immediately went to Texas for the purpose of entering into training. He is now in the service at New Delhi, India.

This young man, who is now 34 years of age, was awarded three medals—the Distinguished Flying Cross, the Silver Star and the Air Medal—a record in that theater of Allied operations. He has been ordered to return to the United States immediately for a new assignment.

The awards were made by Maj. Gen. Clayton L. Bissell, commander of the Tenth Air Force, who said at the time of making the awards: "His record speaks for itself."

This article states that Colonel Barr received the Silver Star for carrying out 1,000-pound bombing missions in a P-40, the Distinguished Flying Cross for "extraordinary achievement" while participating in more than 50 combat missions, and the Air Medal for "meritorious achievement" while participating in more than 25 missions.

The Silver Star was won by Colonel Barr in making his initial test from an airdrome in upper Assam into enemy territory, each time with a 1,000-pound bomb on his P–40, during that period carrying out, with other members of his command, the development of technique of this type of bombing mission and its actual successful application under fire against the enemy.

These tests, according to the newspaper article, involved the carrying of twice the bomb-load ever before carried by this type of aircraft.

Colonel Barr has been in India since May 1942.

I am justly proud of the record made by this young man, he having made good under my appointment to West Point, being the type of young man that I have always been interested in in making my appointments to West Point and Annapolis, coming from a humble family, living in the country—the type of young man of which we have thousands, who will make good if only you will give them a chance.

Music—A Part of Our War Effort

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Mr. HAGEN. Mr. Speaker, on this Flag Day, June 14, 1943, when we celebrate the anniversary of the adoption of the American flag in 1777, our hearts are filled with highest patriotic emotion. It is fitting on such a day that we should consider the place of patriotic songs in our war effort.

"Give me the making of the songs of a nation and I care not who makes its laws," said Andrew Fletcher, of Saltoun, 200 years ago in his Conversation Concerning a Right Regulation of Government for the Common Good of Mankind.

Mr. Speaker, many men who know the elements that make a strong people in wartime have called for great war songs.

We cannot overestimate the value of music to morale. Community singing is one of the most effective means yet found to build a wholesome, united, fighting spirit into men. This is true in the armed forces, and it is true in the army of the home front. Community singing sets people's spirits free. It stirs men's wills to action. It can rouse the soul of a nation. It can give men a sense of common destiny. It can inspire them to give themselves wholeheartedly to a great cause.

One of our difficulties today on the home front is that we have not yet fully mobilized the all-out will to sacrifice and win. We have not yet fully pictured for the American people the great cause for which we fight and for which we must give ourselves gloriously or die ignominiously.

To do that—to produce such a fighting faith—we need weapons. We need weapons for morale as effective as the General Sherman and the P–38. Just such a weapon is making its appearance today from coast to coast. This is the publication day of a new song book, "Songs From the Victory Revue 'You Can Defend America.'" Between the covers of this illustrated book are 10 lively songs—some catchy, some stirring—all proven morale builders in the barracks and on the assembly lines.

In a southern training base of the Army Air Forces a private last week got an advance copy of this songbook. Since then the songs have spread through the barracks and the camp. An officer said that if the Army and the civilians could all sing songs like these we could shorten the war by 6 months.

Because of the vital necessity to the war effort of such morale-building weapons, I bring this matter to the attention of the House today. I commend this songbook to every Member, and I urge that it be made widely known.

The lyrics and music were written by members of the Moral Rearmament group, which is composed of individuals who are striving to bring greater unity to our Nation during these times of trial.

The introduction to this songbook reads as follows:

America fights two wars: the war of arms and the war of ideas. To win both wars we need the force of arms plus the superforce of an unconquerable spirit.

These songs were written in the heat of world conflict to fire the heart of America to a reawakening of patriotism and sacrifice.

The victory revue in which they are featured has been playing to packed houses from California right across to Maine.

The revue dramatizes in 10 fast-moving scenes America's battle on the home front—the battle for sound homes, teamwork in industry, and a united Nation. It has been produced and played by a cast of 100 citizen volunteers who, long before Pearl Harbor, enlisted to bring about the moral rearmament of the Nation.

These citizen volunteers went on the road for national unity. They were invited to State after State by Governors, defense

councils, labor-management comittees, Army camps.

At every crisis in our history America has found songs to stir men's wills and rouse them to courageous action. Once again we Americans, for the sake of a new world, "with a firm reliance on the protection of Divine Providence, mutually pledge to each other our lives, our fortunes, and our sacred honor."

The spirit of the songs is epitomized in the Voice of America on the final page of the book, as follows:

THE VOICE OF AMERICA

I listened for the voice of America—
I listened at the busy intersection;
I listened to the roar of the machine and the shop,
To the tread of the marching feet,
To the whispered tale at the cocktail hour
And the strident call of the loudspeaker.
I heard a voice, voices that said,
"I am rich. Where can I buy happiness?"
"Strong hands are at the helm; but I have lost my course."
"Others get what they want; why should I sacrifice?"
"I'm so scared; I don't know what to do."
Are these, are these the voices of America?
Out of the darkness a whisper, almost a sob, a cry:
"Where there is no vision the people perish!"
Then the voice of the Past called to me,
Washington, Jefferson, Lincoln, a hundred mighty voices rolled into one and calling:
"O America! We nurtured you, we loved you, we fought for you,
We founded you to be great, to be strong, to be free!
Great because you knew your strength,
Strong that you might be free,
Free to obey God."
I said, "Is this America?"
The voice of the Present answered me:
"We are the millions who work and long to work.
We go to our jobs, we return to our homes;
We long for a destiny, a greatness, a future,
A hope that is more than bread."
And I said, "Is this America?"
The voice of the Future answered me:
"I see an eagle striving, rising, soaring;
I see a Nation waking, stirring, changing,
Rearmed in spirit, humbly triumphant, a Nation united,
Fulfilling the hopes of its founders, the dreams of its people, the plan of its God,
A maker of peace for the nations."
And I said, "Is this America?"
And the mountains said, "Yes!"
And the seas said, "Yes!"
"Yes, yes!" cried the lakes,
And a million million voices from city and farm,
From factory and workshop, from the shore and the plain,
From the far North to the deep South,
Joined in one crashing, resounding, solemn affirmation,
"America!"

Louisiana "Firsts"

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to call attention at this time to some of the contributions being made by the State of Louisiana toward the war effort.

I am particularly proud of my district, the Seventh Louisiana District, which lies in the southwestern portion of the State.

Besides being one of the largest agricultural districts in the United States, producing a major portion of the rice grown in Louisiana, also sugarcane, sweetpotatoes, Irish potatoes, corn, cotton, hay, soybeans, truck, and many other agricultural products to furnish food which is so sorely needed, my district produces salt and sulfur, used extensively in many ways to provide chemicals for materials of war. Lumber and the livestock industry are important. Of the eight parishes in my district, oil is produced in every one. Evangeline Parish is a large producer with large refineries. All fields furnish natural gas for industrial and other uses. The largest production of oil is in and around Calcasieu Parish, of which Lake Charles is the principal city. Situated on a beautiful lake a short distance to the Gulf of Mexico, Lake Charles has a magnificent port and excellent harbor facilities, which are being utilized in the war effort due to its strategic position. The part that Lake Charles is playing in the war effort can best be visualized by pointing out the most important plants manufacturing high-octane gasoline, butadiene, synthetic rubber, alkali, magnesium, ammonia toluene, chlorine, and salt and salt cakes, all located at or near Lake Charles.

Other portions of my district are contributing in many ways in the war effort, as well as the entire State of Louisiana, and, since Louisiana is a large producer of oil from which comes high-octane gasoline and rubber, I am glad to include in the RECORD a copy of an editorial from the New Orleans Times-Picayune entitled "Louisiana Firsts," published on the occasion of the recent inspection trip of Rubber Administrator Jeffers and other Government officials:

LOUISIANA "FIRSTS"

An impressive list of "firsts" in rubber-gasoline efforts is posted on behalf of Standard Oil's Baton Rouge installations in connection with the harmony tour visit of Messrs. Patterson, Jeffers, and other high Federal officials. First in size in 100-octane gasoline production capacity; first in time in full-size buna rubber plant construction, in butyl rubber plant operation, in production of butadiene—these are characteristics of which all Louisiana may be proud.

No mention of aviation gasoline is strictly complete however without a reminder of Louisiana's position as a supply center of that lead-derivative fluid which assertedly brings to perfect punching trim fuels ordinarily relegated to purposes of lesser moment. The natural Louisiana components of this "punch juice," now restricted to war usage, are numerous, and a little bit of Louisiana rides in the tanks every time a new aerial blow hits the enemy.

This is a factor among many that have given American airmen not only the highest number in fuel efficiency but a supply that so far has met the expanding needs of combat operations. The supply, Under Secretary of War Patterson repeats, still isn't enough. As he has explained before, one of the things that expands combat needs is the highly favorable fact that more planes are available than was anticipated, due to smaller losses than were expected. He revealed at Baton Rouge that the consequent fuel deficiency is being taken up, not by restricting strategic bombing operations, but by curtailing pilot training in the United States. This shifting of the trouble spot represents only an emergency recourse.

Against the day when the natural solution—provision of more aviation gasoline plants—can be applied, the authorities must continue their hunt for methods of bottleneck breaking. It would seem that the haystack of gasoline production itself, from available plants, has been pretty thoroughly searched. The same scrutiny doubtless will be applied to synthetic rubber production as soon as it reaches a stage where there is something substantial to scrutinize. Effectiveness of the "punch juice" above mentioned seems, unfortunately, to stop at a certain number of octane points. But the extension of that number by research, so as to bring still lower ranges of octane ratings within its influence, certainly is a goal to be sought with all diligence.

Harry Lane Englebright

MEMORIAL ADDRESS

OF

HON. ALBERT E. CARTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 26, 1943

On the life, character, and public service of Hon. HARRY LANE ENGLEBRIGHT, late a Representative from the State of California.

Mr. CARTER. Mr. Speaker, in the passing of Hon. HARRY LANE ENGLEBRIGHT we have lost a colleague whose record of service to his district, his State, and his Nation, is worthy of emulation.

Mr. ENGLEBRIGHT was born at Nevada City, Calif., January 2, 1884, in the district he was later to serve with distinction. He was of a distinguished California family. His father, the late Honorable William F. Englebright, represented practically the same district in the Fifty-ninth, Sixtieth, and Sixty-first Congresses.

Mr. ENGLEBRIGHT'S education was acquired at the schools of Nevada City and the University of California. By profession he was a mining engineer and was actively connected with various mining enterprises in California. From 1911 to 1914 he was mineral inspector for the field division of the General Land Office, and later engineer for the State conservation commission.

Always active in fraternal affairs, he was a member of the Benevolent and Protective Order of Elks, and from 1925 to 1926 was great sachem of the Improved Order of Red Men for the State of California. He also was a member of the American Mining Congress.

On December 14, 1912, he was married to Miss Marie Grace Jackson, of Nevada City. Their only son, Harry Jackson Englebright, is now a lieutenant in the Navy somewhere in the South Pacific.

The district he represented was the largest, in area, in California, and there

were very few of his constituents who did not know him personally. The esteem in which he was held by them is attested by his uninterrupted service in this body. First elected to the Sixty-ninth Congress, he was reelected to each succeeding Congress by increasing majorities and was reelected to the Seventy-eighth Congress without opposition.

His charming manner and friendliness that won him the unswerving loyalty of his friends at home brought about his selection as Republican whip of the House, and it doubtless will be difficult to find another to perform, with equal facility, the duties of this exacting office.

As a Member of the House he served on the Committees on Flood Control, Mines and Mining, and Public Lands, each of which was intimately concerned with the problems of his district and State, and to each he brought a wealth of information that materially aided the facility of constructive legislation.

One of the great projects of California in recent years has been the Central Valley project, embodying the conservation and use of water that had in earlier years run to waste. Great areas of the State need this water. This project enjoyed the material support of Mr. ENGLEBRIGHT from its inception and I think his last appearance before a congressional committee was when he appeared before a subcommittee of the Committee on Appropriations, of which I am a member, in behalf of this project.

Although he was ill for a long period, very few of his friends were aware of it. He preferred not to burden others with his troubles, but rather to bring happiness to those about him.

He was an able, courageous, and kindly man, always ready to help those who needed assistance, and tireless in doing good.

He spent himself and sacrificed his life for others, and when he passed the shores of the dark river of death he had the faith embodied in Longfellow's lines—

There is no death! What seems so is transition;
This life of mortal breath
Is but a suburb of the life elysian,
Whose portal we call Death.

Lt. John Holmes

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HOBBS. Mr. Speaker, the tail of his Flying Fortress completely shot away on a mission over Pantelleria, Lt. John Holmes, the intrepid and skillful pilot, completed his mission over the island, took his plane safely back to north Africa, and landed without further injury to his ship or crew.

This was his third almost identical experience in battle.

The story of his exploits in his famous plane *Yankee Doodle* reads like a novel and had demonstrated his coolness and gallantry under fire long before he performed this latest impossible feat.

Born and reared in Selma, Ala., all Selma and Alabama rejoice in the history being written and the glory being won by this Selmian. The Nation thrills with each such story. Our pride in these boys who are writing America's epic of the air over the seven seas and in a thousand skies is as grateful and humble as it is profound.

Memorial Day at Magnolia Cemetery, Charleston, S. C.

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. RIVERS. Mr. Speaker, under the great oaks in all the solemnity of Magnolia Cemetery, beneath the festoons of gray moss which waved as the gray battle streamers of the Confederacy, a procession wound its way from the gates of the beautiful old resting place of the dead yesterday afternoon to the Confederate lot. Here 1,100 soldiers of the Confederacy sleep their last sleep in spiritual tents "spread on fame's eternal camping ground."

To the inspiring strains of Beethoven's funeral march, known as Webster's funeral march since it was played at the funeral of Daniel Webster, rendered in great musical effect by the Citadel Band of 100 pieces, the procession made its way forward. Here the Ladies' Memorial Association of Charleston, one of the oldest of the South, presided over by Mrs. Roscoe Gerard Rackley, president, who is also South Carolina State president of the Confederated Southern Memorial Association, took charge of the exercises, which have continuously commemorated Memorial Day for nearly three-quarters of a century. The marshal of the day was Mr. Emmons Welch, and presiding over the exercises was Mr. G. L. Buist Rivers. Following the Citadel Band were the Boy Scouts and the Girl Scouts of Charleston. Under the able direction for years of Mr. Carl Metts, the Citadel Band rendered well the old hymn, Onward, Christian Soldiers, and following this the opening prayer was made by the Reverend Marshall Travers, rector of St. Philip's Protestant Episcopal Church, of Charleston. Again the noted band of the fine old military college of South Carolina made the stretches of woodland and marshland echo with the hymn, How Firm a Foundation. Then the following memorial ode, dedicated to the Charleston generals of the Confederacy and written by Maude Waddell, poet laureate general of the Confederated Southern Memorial Association, was presented by the Reverend Wallace Martin, of Charleston:

FORT SANDERS

(Inscribed to Gen. James Longstreet, C. S. A., and his corps)

Fort Sanders' holy heights,
Hallowed ground of Tennessee,
Like Calvary's hill, lifts heavenward o'er
The South's Gethsemane.
Upon this sacred sod
There died a gallant host
Of shining souls. Their God they loved,
Their God and country most.
As autumn's leaves were falling,
A bleak November day,
And autumn's sadness chilling
These gallant hearts in gray,
The season of the southern cause
Was in its autumn's sere,
And summer's hope was waning,
And death's chill winter near.
But southern souls undaunted dared
The awful charge to make
Upon Fort Sanders' bastioned heights,
These heights, to die, or take.
Nor hunger then, nor bleeding feet,
Nor e'en love's cause a plea,
They nobly offered up their all,
This flower of chivalry.
Three times they charged, nor shot, nor shell,
Nor pain, nor death, nor loss
Were aught, but through their fiery hell
They bore their lonely cross.
As Christ upon His bowed form bore
His cross up Calvary's hill,
Through shrieking shot and shell that tore
Their souls and limbs, they mounted still;
Until upon the parapet,
Within the fearful cannon's mouth,
O'er piles of slain, undaunted yet,
They placed the standard of the South.
On high they placed their country's pride,
To death alone they bowed their heads,
They could not hold the heights, so died,
These glorious, faithful, living dead.
'Tis well, O Daughters, that you raise
A stone to your dear dead on honor's field,
Your heritage, noblesse oblige,
Their life they gave, their trust they did not yield.
O, well these words you write in stone,
They greet the eyes of passers-by,
They lift in true harmonious tone,
They rise like incense to the sky—
"Nor wreck, nor change, nor winter's blight,
"Nor time's remorseless doom,
"Shall dim one ray of glory's light,
"That gilds your glorious tomb."

Following the memorial ode, well rendered by the Reverend Mr. Martin, the Citadel Band played the Bonnie Blue Flag. Then came the chief feature of the afternoon's exercises, the address by Congressman JOSEPH R. BRYSON, of Greenville, S. C., well known for his oratory.

BRYSON PRAISES MOTHERS OF THE CONFEDERATES

Congressman JOSEPH R. BRYSON, of Greenville, at exercises conducted yesterday in Magnolia Cemetery by the Ladies' Memorial Association of Charleston paid tribute to the noble part of the mothers of men, the women of the South, in the War between the States.

To his unending joy, he said their sons, the heroes of the Confederacy, are more and more honored as time goes on. The speaker said he had on two occasions recently taken part in celebrations held by the Federal Government under the dome of the Capitol honoring the Confederate dead. The birthdays of Lee and Jefferson Davis are celebrated in Washington with joy and appreciation, and General Lee is often spoken of in national circles as one of the greatest Americans of all times, he said.

Congressman BRYSON, who has two sons at Citadel, cited the "contribution which the

heritage of courage and adherence to duty of southern men is making in the present World War." This country has now the greatest number of men under arms in its history, and the nobility and valor of the soldiers of today are a credit to the Nation, he said.

Commending the heroism of the mothers and women of America, he praised the inculcation of principle in modern men. Of this city he said: "The whole State looks to Charleston for the charm of culture and refinement."

A memorial ode dedicated to the Charleston generals of the Confederacy, written by Miss Maude Waddell, poet laureate general of the Confederated Southern Memorial Association, was read by the Reverend Wallace Martin, rector of the Protestant Episcopal Church of the Redeemer.

The procession marched from the gates of the cemetery to the Confederate lot, where the 1,100 graves of Confederate soldiers were decorated. There G. L. Buist Rivers presided over the exercises of the association, which has continuously commemorated Memorial Day for nearly three-quarters of a century. Its president is Mrs. Roscoe Gerard Rackley, who is also president of the Confederated Southern Memorial Association. Marshal of the day was Emmons Welch.

The processional, by the Citadel Band, under the direction of Carl Metts, was followed by Onward, Christian Soldiers. The opening prayer was offered by the Reverend Marshall Travers, rector of St. Philip's Protestant Episcopal Church. The band's other numbers were How Firm a Foundation, the Bonnie Blue Flag, Dixie, and Taps.

Congressman BRYSON substituted for Representative L. MENDEL RIVERS, who was unable to address the exercises because of illness in his family. The Reverend St. John Patat, assistant pastor of St. Patrick's Roman Catholic Church, pronounced the benediction. Taps closed the ceremony.

After the inspiring address by Congressman BRYSON the Citadel Band played Dixie. Then the Reverend St. John Patat, assistant pastor of St. Patrick's Roman Catholic Church, pronounced the benediction. After which the exercises, the association's mark of respect for the dead, came to a beautiful close with Taps, sounding far in the distance and echoing sweetly across the river on the farther shore.

CONFEDERATED SOUTHERN
MEMORIAL ASSOCIATION,
Charleston, S. C., May 27, 1943.

Representative JOSEPH R. BRYSON,
Washington, D. C.

MY DEAR MR. BRYSON: I appreciated very much your kind letter of the 22d, and am sending you the information requested. In the name of the Ladies' Memorial Association and myself, I wish to thank you for your splendid address on Memorial Day, and hope that at some other time we may have the pleasure of hearing you again.

With kindest personal regards and best wishes, I am,

Yours sincerely,
PAULINE LIVINGSTON RACKLEY,
President.

OFFICERS OF THE LADIES' MEMORIAL ASSOCIATION

President: Mrs. Roscoe Gerard Rackley.

First vice president: Miss St. Clair Jacques.

Second vice president: Mrs. Emmons Welch.

Recording secretary: Mrs. T. Ritchie Simmons.

Corresponding secretary: Mrs. Fannie M. Muller.

Treasurer: Mrs. J. F. Porcher.

A Son Speaks to His Father

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. LANE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a copy of a letter received by Mr. Daniel J. Murphy, clerk of committees of the City Council of Lynn, Mass., from his son John, who is serving in the United States Marine Corps and is at present stationed in the South Pacific.

Since this letter was written, the boy has seen considerable action at Guadalcanal, an island which has become almost a symbol of marine courage and fighting ability. I wish to direct your attention to this letter because it manifests so well the sentiment which inspires so many of our gallant youths who are in the armed forces. It is an expression of the basic and truest sentiments of faith, hope, and love.

The letter follows:

NEW RIVER, *June 2, 1942.*

DEAR PA: If you remember, I took you aside last Sunday at the airport, and told you I was going to write you a letter, and address it to the city hall. This is it. The reason I didn't send this home is because this is more or less a personal letter.

You know, Pa, the last two times I have been home I intended to have a heart to heart talk with you, and tell you just how much you, auntie, and Ed have meant to me. We may as well get down to brass tacks. We are at war and I am in the Marine Corps. I may come back alive, and then again, I may not. Once you happened to say to me, "It isn't hard to die." I believe you Pa, just as I have believed everything you have ever told me. I shan't be afraid to die, and if I do, Pa, I don't want you to grieve. After all you have had me with you for 24 years, and my mother had me for just a few days. I am sure she is looking forward to seeing me again, and I most surely am looking forward to seeing her. In the event of my death, if you look at it in the way I have just mentioned your heart will be, I might say, even gladdened instead of saddened. It's easy to say thank you for all the material things you have given me—my home, education, up bringing, etc., but it is more difficult to express my love for you in mere words.

I never wanted very much out of life in a wordly sense. I never really got much either, if you looked at it from a materialistic viewpoint. But really I have had a very happy life. I have had the love of you, Ed, and auntie. You three have been my entire world, and I wanted only out of life that we four should have a happy home, and a great love for each other. How many times has auntie said to me, "John, you have a good father, always love him, and be good to him. Sometimes I get impatient with him, but he is better than the average man." Auntie has had a pretty lonely life, she may not be an intellectual giant, a charming hostess, a brilliant conversationalist, nor any other quality that would mark hers as a woman's life successfully lived in the eyes of the world. But you know she has a heart of gold, and more important she has put the love and fear of God in my heart. I think my mother would consider that more important than the quality of clothing she has worn, or the important friends I might have if I was brought up by a more fashionable yet less morally good woman.

As for Ed, I am sure our affection for one another has been very great. We never had that affection lessened by anything that has happened during our lives. As the years have gone by my love for Ed has deepened.

Well, Pa, all I have written, I wanted to say to you in person, but I guess I lacked the courage. Whether I will see you again in this life, is up to God. If not, I am looking forward to that happiest reunion of all.

Love,

JOHN.

The Forgotten Men of Today

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "The Forgotten Men of Today," published in the Cumberland News, Cumberland, Md., June 11, 1943:

THE FORGOTTEN MEN OF TODAY

A Washington dispatch by the Associated Press reports Senator GEORGE, chairman of the Senate Finance Committee, as saying that, although Americans are already taxed as heavily as the British and the Canadians, Congress is ready to go to work on a new tax bill "as soon as President Roosevelt has some suggestions."

Two things may be said as to the word from the White House. One is that neither it nor the Treasury had any positive constructive suggestions as to a tax bill when the present mongrel measure was for months on the fire and cooking. The other is that it is a sad commentary upon the duties and responsibilities of the Congress that it dare not take any step without first consulting the master's voice.

But as for the framing of a new tax measure, which, of course, would mean a further load of taxation, some very pertinent things may be said. Gabriel Heatter, the popular radio commentator, said some of them in one of his talks this week when he wondered whether any consideration is to be given to the citizens of this country who have been outrageously discriminated against in this grave matter of income taxation.

Heatter pointed to the taxpayers who are unjustly penalized by the effort to catch those who have received juicy increases in their incomes through work in war industries and through profits from those industries, for the declared purpose of closing the inflationary gap caused by their increased spendings. In order to reach these swollen incomes, it has been deemed necessary to penalize heavily the millions of taxpayers whose incomes have decreased by reason of the fact that their wages and salaries have remained static for several years while their incomes have at the same time actually been decreased by reason of constantly rising costs of living.

These workers, numbering into the millions, are the forgotten men of the present day. In the households of these millions, Heatter declared, and he was indulging in no fanciful exaggerations when he did so,

the earners are wondering how in the world they will be able to make ends meet after their wages and salaries are cut by 20 percent, beginning July 1, when the new income-tax bill comes into operation on their pocketbooks, and when they will subsequently have to pay part of the taxes based on the income of last year and are asked to contribute not the 10 percent hitherto requested by the 25 percent now urged for War bonds.

These oppressed millions can truly wonder and worry where the money is to be found to pay the rent, clothing, and food bills and the other inescapable bills, such as those for medicines, medical care, interest on debts, insurance premiums, and the like. They know they can reduce on some of these but they also realize, with dismay, that the most of them just can't be cut.

If a new tax bill is attempted, certainly the plight of these perplexed millions, which include thousands of families in the Cumberland area, should have some decent consideration if the tax load is to be shared equitably, as it should be.

Heatter wonders who is to speak for these unorganized, bypassed, forgotten men, and does his earnest bit in giving them some articulation. This newspaper has been trying to do so far some time, at the risk of becoming boresome. It is hoped that others will sense the rank injustice of it all and do likewise. These forgotten men comprise an important segment of the population, on whom the essential strength of the civilian economy, so necessary for supporting the war effort, so largely depends.

War Labor Disputes Act

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Representative FOREST A. HARNESS, Republican, of Indiana on the National Radio Forum, Wednesday, June 16, 1943, over station WMAL, Washington, D. C., on the subject War Labor Disputes Act:

Let me thank the Blue Network, the Washington Star, and you, Mr. Stoddard, for this opportunity to discuss the new War Labor Disputes Act and its significance in this period of wartime labor unrest. I believe this is one of the most important enactments of this Seventy-eighth Congress. I believe that with intelligent administration this act will do much to end wartime strikes and work stoppages, and will greatly help to restore the atmosphere of harmony and cooperation at home, which is so necessary for the successful prosecution of the war on a dozen battle fronts abroad. I am grateful, therefore, for this opportunity to help toward a national understanding of this new act and the purpose which Congress had in mind in its passage.

Calm, careful study of this measure is to be desired for we are here dealing with a highly controversial subject. Any time we start talking about national labor legislation we are prone to generate more heat than light. Witness the recent history of legislation of this type. When the National Labor Relations Act was written, the shock to ownership and management was such that we had an ardent group of legal advisers assuring employers in advance of any court tests that the law was unconstitutitional and could safely be ignored. We saw numerous controversies in which ownership and management gladly followed this injudicious advice.

This, please let me assure you, is not to deny that there were and are grave weaknesses and shortcomings in our recently written labor legislation. The history of labor relations during and since the enactment of this New Deal magna carta of labor proves otherwise all too clearly. The fact that the House of Representatives has repeatedly tried to write remedial legislation is recognition that this new field of law is still imperfect and incomplete. But it is not my purpose here to attack or defend these laws. I merely point out that the reaction they arouse has invariably been highly emotional.

Look what has happened since the enactment of these laws which labor described as its Magna Carta. Whereas ownership and management reacted bitterly to the laws in the first place, labor leadership has even more bitterly and acrimoniously fought every effort to alter these laws, even in the slightest particular. So far as labor leadership and the labor press are concerned, any person in or out of Congress who so much as proposes to dot an "i" or cross a "t" in any existing measure touching the privileges and advantages of labor organizations is flatly denounced as an enemy of labor.

Well, obviously that attitude is as foolish and shortsighted as the position of the Liberty League lawyers who refused to face the realities of those conditions which put this special group of labor laws on the books in the first place. It is just as unrealistic and unwise as the attitude of monopolistic and predatory business and financial interests which unyieldingly fought every effort at regulation.

It is well to remember the inescapable fact that special privileges and special immunities simply cannot exist for long under the American system. Wherever a national monopoly has existed, wherever special powers and priveleges have been vested in private individuals or groups, there invariably has developed a corresponding set of counterbalancing and restricting regulations. Business and finance have learned that lesson. Wherever business or finance became too big and powerful for control by open competition, a greater power—the sovereign power of the American people—has stepped in to impose controls upon it. Wherever special privilege has been vested in private individuals or organizations, it is granted only under special regulatory precautions. It is just taken for granted power and light companies, telephone companies, and transportation systems shall operate under laws which determine rates as well as other terms and conditions of service.

It is not my purpose here to discuss the wisdom or desirability of placing labor organizations in the position of monopoly or special privilege. That is a question which time and experience alone can determine. It is sufficient for this discussion to recognize the fact that American labor unions, or perhaps to state the matter more exactly, American labor leadership has been placed exactly in that position under the new laws and the prevailing policy which this administration has followed. Now, the question is, How shall this special privilege or monopoly be controlled and regulated in the public interest so long as it may exist?

Labor leadership will best serve the millions of common Americans it seeks to represent if it will abandon blind, bitter opposition to any regulation and sit calmly in conciliation on this question. For there is a safe, sane, reasonable middle ground which we must explore and occupy if we ever expect to reach a practical solution of this problem.

Let us examine this new War Labor Disputes Act which now needs only the President's signature to become law. Let us break it down to see actually what Congress has enacted. At the outset let me say that there is nothing new in this act. It merely incorporates proposals which have been repeatedly advanced within the past 4 years and which have been approved previously in either the House or Senate.

Principal Senate contribution to this measure is the provision which validates the seizure of property by the Executive in periods of labor disputes which interfere with, or threaten to interfere with, production essential to the war effort. This merely legalizes the course the President has been following upon questionable authority during the past 2 years when the ordinary machinery for collective bargaining and conciliation failed to settle labor disputes. This is the main provision of the Connally bill of 1941, as well as of the current Connally bill, both approved by large majorities in the Senate.

Of this validation of property seizure, I have had much to say since it was first seriously advanced in 1941. I shall say more of it later here.

In this act Congress has also given legal status and power to the National War Labor Board, an agency which was established by Executive order, and which has been functioning on inexact and inadequate authority delegated by the President from his very great and undefined emergency war powers. Hereafter the Board will have the power of subpena to compel the attendance of witnesses and to secure documents, records, and other material pertinent to the question before it. If anyone should seek to resist this authority, the Board may call upon any Federal court of jurisdiction to enforce its order, and the Federal circuit courts are specifically authorized by this measure to act in enforcement. These provisions put a legal foundation under the National War Labor Board which, in my opinion, will greatly enhance its effectiveness.

Principal contribution by the House and, in my own opinion, the vitally important part of this act, is section 8, which provides for a 30-day period of conciliation before any strike or work stoppage in a war industry may be undertaken; and which provides that there shall be no interruption of production unless the employees so decide by secret ballot in an orderly election supervised by the National Labor Relations Board and held at the end of this 30-day period if conciliation fails to settle the dispute.

I want to say, and with all possible emphasis, that this is the most important provision of this entire act. It ought to be immediately apparent that by this provision Congress has demonstrated its implicit faith in the rank and file of American labor not only to maintain an uninterrupted production for war but to order its own affairs within its own organizations. Violent objection has been raised to this provision, both by labor leadership and by officials within the administration. I shall, therefore, return to this provision later.

A penalty provision has also been made a part of this act. Any person who coerces, influences, or conspires with another person to interfere with the operation of a Government-owned or controlled plant or property, or who aids in any way with an activity interfering with the operation of such a plant or property shall be subject to a fine of not more than $5,000, or to imprisonment for a term not to exceed 1 year, or both. There has been, and will be, considerable confusion and misunderstanding about this penalty provision, due, I might say, in no small measure to deliberate misinterpretation, so I want to make this provision perfectly clear. Please understand that these penalties apply only in case where a plant, a mine, or an industrial property has been seized already and taken over by the Federal Government. It has nothing whatsoever to do with a business or industry which is operating under pri-

vate management, and these penalties do not apply against any person in such a privately managed business or industry. Because this provision might mistakenly be interpreted to mean that an individual will be unable to quit his job if he so desires, let me assure you that there is nothing in this provision, or anywhere else in this act, that could possibly be interpreted to force an individual to work against his will.

Section 9 of this act will prohibit political contributions by labor unions by a very simple amendment of the Federal Corrupt Practices Act of 1925.

This assesses exactly the same penalties for violation by a labor organization now in effect against any national bank or corporation. The justice of this provision will be apparent to any fair-minded person. A labor union, just like a corporation, is made up of individuals of every political faith. The labor union can contribute to a political party only from the dues, fees, and assessments contributed by, and belonging to the membership. That money in a union treasury no more belongs to the union president than the funds of a corporation belong to its general manager; and there is utterly no justice in forcing an individual to contribute, at the whim of the men at the head of his organization, to a political party to which he personally may be opposed in principle.

This is a protection to the man or woman in the ranks of labor which I believe will be opposed only by the labor politicians who are reluctant to relinquish the tremendous power and influence they have wielded in recent years. In fact, no one who agrees with the sound principle of the Corrupt Practices Act itself can consistently object to this provision.

There you have the real meat of this War Labor Disputes Act. There are other important provisions, principally imposing restrictions and limitations upon this authority of the Executive to seize private property. Note, first, that the President shall return to its private owners any property seized under the authority of this act within 60 days after normal production has been resumed.

Note, too, that this act applies for the duration only, and that it shall cease to be in effect not more than 6 months after the end of hostilities in the present war. But if you want to understand how reluctantly Congress validated this practice of property seizure, please notice that Congress reserves to itself the right to kill this whole act by concurrent resolution. For those of you who may not be familiar with this legislative technicality, let me explain that a concurrent resolution, unlike the ordinary act of Congress, does not require the sanction of the President to become effective. If Congress desires to kill the ordinary law, it must have Presidential approval, or muster a two-thirds majority in both Houses exactly as when it passes a law over the President's veto.

In this instance Congress has carefully tied a string to the act by which it can readily withdraw this extraordinary authority any time a majority feels that the authority is being abused.

Much more important, however, than the limit of time, and the right to nullify which Congress has written into this act, is the fact that the principal limitation has been placed squarely in the hands of labor—not labor leadership, please understand, but the real rank and file of labor.

I mentioned at the outset that I would have more to say about the principle of property seizure, and I want to add now that it was who led the fight in the House which killed the original Connally bill, authorizing property seizure, after it had overwhelmingly passed the Senate in 1941. Again it has been my privilege to play an important role in the formulation of this present act; and again I have vigorously opposed this principle of property seizures. I have repeatedly pointed out that the principle is un-American; that it is no real solution of the problems which cause labor disturbances; that it is a serious danger to the American system of free enterprise; and that, above all, it is a direct and immediate threat to labor.

How then, you may properly ask, can I support a measure which specifically validates a principle of which I am so fearful? My answer is that in validating the principle, we have written in effective restraints which ought to insure that this extraordinary authority will never be used destructively.

And let me stress this, I have unlimited faith and confidence in the average man and woman who labors. I am perfectly willing to trust them to cooperate, to prevent interruptions in war production, to preserve American free enterprise, and to protect the right and privileges of the individual. That is, I trust them if they are protected from coercion, intimidation, and undue influence; and if they are given the opportunity to reach their own decisions calmly and judiciously—as they will be if the provisions of this act are fairly and courageously administered.

I have no way of estimating labor's opinion in advance, but I am willing to stake my reputation that the average working man or woman will welcome and applaud this act; and will arise in a way we can all be proud of to this responsibility and this opportunity we are placing in their hands.

We think of this act first in terms of our war effort. We do desperately want to submerge all personal and group interests to the all-important job of winning the war at the least possible cost in blood and treasure, and at the earliest possible date. So the first problem is to deliver our maximum effort to this purpose, no matter whose toes may be trampled in the process.

You can't make me believe that the man or woman in the ranks of labor feels any differently on this score than the farmer, shopkeeper, or banker, for labor's sons, brothers, fathers, and husbands are out there on the fighting fronts just like the kin of every other American group. When it comes to deciding between the things those fighting men need, and the special privileges and advantages and power of that little handful of men who are the labor leadership, you know as well as I do what labor's answer is going to be. There just aren't going to be any strikes or work stoppages if labor is given the positive assurance of a square deal, with an honest chance to write its own answer.

It is too bad that this legislation should have been written in a moment of stress, for high emotion is a poor guide to the solution of national problems. It will be unfortunate, also, if the American people look upon this act as intended to deal with a single situation, or with a single stubborn labor leader. True, it is temporary legislation, designed only for the war period; but I like to think of it as something more than that. I like to think of it as a sound first step toward the formulation of a definite, permanent code of just, fair, and understandable labor laws. When we approach that state of law and order, then we can look for labor statesmanship to replace the hodgepodge of labor politics which is solely responsible for our present problems.

I want to comment just briefly on the strong objections to this act which have been voiced for several sources. Administration officials warn that we are recognizing in this act the right to strike in wartime; or the right to strike against the Government. I would be the last to deny the individual the right to strike any time, in war or in peace, except against the Government. This act does recognize that individual right, as I think we always must, if we are not to descend into slave labor. I want to point out, however, that this act doesn't in any sense of the word alter the obvious fact that there are national rights which always supersede the rights of the individual. There is no private, personal right—and I am sure that every patriotic laboring man and woman agrees with me in this—to strike against our war effort, or to endanger our national security and welfare. I, for one, am willing to trust the average American citizen to recognize and admit these limitations upon every single one of his personal rights; and I am not greatly concerned that this act will set a precedent which any loyal American will seek to employ to the danger of his country.

As to the rights to bargain with, and strike against, the Government attributed to this act, I think they fall in the same category, and dissolve under the same assurances just mentioned. The fact is clearly established that no strike may be undertaken against government.

There is another group which says that this is a labor-coddling Government, which will use the property seizure of this act, not to regulate its political allies, the labor leaders, but to destroy free enterprise and private industry in America. To them I point again to the limitations set forth in this act. I want to say, also, that the rank and file of labor pretty well realize that every concession ever gained from this administration has been in exchange for definite political guarantees which its leadership so far has been willing to give. I think that the men and women in labor also know perfectly well that an all-powerful authority which can grant special privileges and immunities can just as well impose hardships and penalties.

Finally, there is that group of labor leadership which strenuously opposes this whole measure, condemning, among other things, the right of the individuals within the ranks of labor to make their own decisions in elections by secret ballot. Just one fact need be mentioned here to show how inconsistent this leadership is. There has been legislation in every recent session of Congress to outlaw State poll taxes which deprive the individual citizen of the right to vote in national elections. Certainly, a number of our States are guilty of abuses, against which I think labor has been absolutely right in protesting. I, too, have supported these proposals to outlaw poll-tax abuses.

But if labor leaders can cry out against these abuses by the several States which practice them, how can they consistently and reasonably oppose the provisions of this act which would give to every man and woman in labor a full voice in the conduct of his own organization?

There, my friends, may be the key to this whole situation. Possibly much of our labor problem arises from the ambitions for absolute power on the part of labor leadership. Possibly we have a labor problem at all only because the leadership insists that it, not the rank and file membership, shall rule and direct the destinies of labor.

I have steadfastly held that the Americans in the ranks of labor will quickly put an end to any labor problems if we will just give them the opportunity. I think that anyone who opposes this type of legislation either questions the intelligence of the average man and woman in labor, or deliberately tries to deprive them of their American rights merely to cling to his own special privileges and advantages.

Americans and Democracy

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. WEISS. Mr. Speaker, frequently I have alluded to the outstanding patriotism of Americans of Slovak descent. Their contribution as a people to the war effort is an outstanding one deserving of the plaudits of all loyal Americans. As a people they are materially interested in the peace to follow this war. The Slovaks more than any other people were the first to suffer when the Republic of Czechoslovakia was established following World War No. 1. It behooves our Department of State and the liberal-thinking people of America to read the splendid statement of Msgr. F. J. Dubosh, president of the Slovak League of America, entitled "Americans and Democracy," contained in the June 1943 issue of the Slovak Record which I include herein as a part of my remarks:

AMERICANS AND DEMOCRACY

(By Msgr. F. J. Dubosh, president, Slovak League of America)

Approximately 25 years ago the last World War brought into being countries that were to be noted for their democratic spirit. We fought that war for "the preservation of democracy." Among the peoples who were to be beneficiaries of that sacrifice and bloodshed of the last war, we were to find the Slovaks, a little nation, that 10 centuries of persecution by stronger nations could not exterminate. Justice and human rights may be suppressed by a tyrant, but these will not remain suppressed, they will live on. And so the Slovaks, who were destined for extermination have lived on, although they have been walking a "Way of the Cross" to the present day. They have lived on because the Creator intended them to have human and national rights, which are inalienable.

These inalienable rights of the Slovaks were intended to be preserved, fostered, and defended in the Republic of Czechoslovakia, which a certain foreign politician called the "godchild" of this country, the United States of America. As is well known, godchildren do not always assume the character of the godfather: they may be better and they may be worse. In this case the "godchild" failed to measure up to the ideals and the principles of the "godfather." Instead of adopting the principles of democracy which call for "liberty, equality, and fraternity" toward all peoples, the government of Czechoslovakia applied these attributes only to one nation in the republic, whilst it tried to subjugate the others; among them were the Slovaks, of whom this well-known ex-official of Czechoslovakia said: "the Slovaks are Czechs." To this day he is acting on this false assumption, even though he knows that his denial of nationhood to the Slovaks had caused the rift that occasioned and helped in the division of Czechoslovakia by the arch-enemy of democracy, Hitler.

Faith was broken with the Slovaks by the Czechoslovak Government, headed by Thomas G. Masaryk, its first President. This man, dubbed "the great champion of democracy", had made a covenant with the Slovaks and Czechs in the United States, that, when and if the Republic of Czechoslovakia is formed, each national group would be guaranteed its national cultural and political rights; that the Slovaks would have their state rights, as have the States in our Unions. This covenant was written and signed by Thomas G. Masaryk and the representatives of the Czechs and Slovaks in this country. Because it was signed on the 30th of May 1918, in Pittsburgh, Pa., it received the name of the "Pittsburgh Pact."

Due to the nonfulfillment of the "Pittsburgh Pact" by the Government of Czechoslovakia, headed by Thomas G. Masaryk and later by Dr. Edward Benes, peace was not a virtue in that country. The Slovaks never ceased to fight for their national rights. The result being that the Slovaks lost confidence in the undemocratic government and finally opposed it. Hitler knew of this rift. Who of common sense is surprised that he took advantage of the rift?

Again we are warring for the preservation of democracy and freedom for all nations, "no matter how small." We Americans know the blessings of democracy with its concomitant virtues of freedom and equality and fraternity; for are we not all descendants of peoples who had to flee their respective countries to find and to enjoy freedom in the United States? We appreciate that size is not the measure for right. We accord to a child the rights with which it was endowed by the Creator, just because they come from God and not from the state. That is the reason for calling them inalienable: God never takes back what He once gave—only tyrannical governments do such things.

May this war not lead to a victory for stronger nations who will attempt to stifle the smaller nations! If that should occur, then would not democracy become a mockery? Such a subjugation would become a continuation of injustice and a deprivation of human rights. The results could be nothing more nor less than resentment, dissatisfaction, rebellion, and a renewed disturbance of the peace, for the preservation of which we are fighting. Oh, what a waste of blood, lives, property, and anguish!

This statement is presented with a view of guiding the world-leaders to a just peace. We Americans, whose ancestors hail from Czechoslovakia, consider ourselves to be better informed about conditions as existed in that unfortunate country—and naturally so. Hence, we who enjoy the sweet blessings of a true democracy, desire it for all nations as a safeguard for true peace; and especially do we desire it for the people from whom we stem. Our aim is to help to bring peace into this world, to help to prevent future wars, to save the lives of our boys and thus prevent anguish from gripping the hearts of our parents and friends. Let us guard ourselves against foreign politicians posing as representatives of peoples whom they, when in power, deprived of their natural rights.

Lt. Keene Wilson

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. HOBBS. Mr. Speaker, Lt. Keene Wilson, of Selma, Ala., has just been awarded the Purple Heart and an Oak Leaf Cluster in lieu of the second Purple Heart.

He was wounded twice in the bitter fighting in Tunisia before the final victory in that theater was won.

In a letter home he speaks of his first wound thus: "But it was not serious enough to cost me a minute of the action."

As to his second wound he says: "In this action I sustained a slight wound from shrapnel, and again it was only very slight."

So do these gallant flag makers cause its stars to shine in the forefront of every battle for the freedom of the world, while minimizing their wounds.

There is glory enough for all, but thank God for the land that nurtures such heroes.

Poland Crucified

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by Dr. Waclaw Bitner, entitled "Poland Crucified," and printed in the June 1943 issue of The Sign, official national Catholic magazine, with headquarters at Monastery Place, Union City, N. J.

Dr. Bitner is an outstanding writer and thoroughly familiar with the subject matter of his article.

He is a member of a family which for centuries has fought in defense of Poland. Dr. Bitner for many years was a brilliant lawyer in his home city of Warsaw, and prior to the invasion of his country by the Nazis served with distinction in the Polish Parliament for 4 terms—a total of 12 years—and was chairman of the Christian Democratic Party of Poland. Prior to the fall of Poland, Dr. Bitner escaped with his elder son to France where both joined the Polish Army, and from which Dr. Bitner is now on leave.

He has always been very active in Polish Catholic organizations and is at present the director of the Polish Catholic Press Agency, located at 3 East Sixty-fourth Street, New York City.

His military and political backgrounds qualify him to offer in Poland Crucified an informative and authoritative discussion of the Polish-Russian question.

The article follows:

POLAND CRUCIFIED

(By Waclaw Bitner)

A fundamental objective of the Polish people is their profound desire that Russia should become a truly Christian state, and in consistency with this objective the Poles have done everything possible to achieve the friendliest terms with Russia. In spite of all these attempts, the record shows Russia's

participation in three separate partitions of Poland.

The twentieth century finds Russia continuing the same aggressive policy. In 1920 the Red Army invaded Poland, and it was only at the gates of Warsaw that the Polish Army defeated the Bolsheviks. The Battle of the Vistula saved Poland, and perhaps the whole of Europe, from the onrush of communism. Nevertheless, Poland not only signed the Treaty of Riga, but also concluded a pact of nonaggression with Russia. This pact was rendered worthless when, after Hitler's attack on Poland, Russia seized the opportunity to attack from the rear.

Following the occupation of eastern Poland in 1939, Russia deported some 2,000,000 Poles to the desert wastes of Siberia; they were left to their exile in the northern woods and marshlands. Somewhat later Poland demonstrated that she was able to look toward the future, as well as the past, and came to terms with Russia in 1941. It is significant that Russia has taken an early opportunity to abrogate that agreement with Poland.

For any real understanding of Polish-Russian relations, one must first know their historical background, as well as appreciate the cultural and psychical differences which distinguish the two nations.

Poland, as a nation, has been eternally devoted to the principles of freedom, and has always fought in defense of Christian ideals. The freedom of the individual to his rights as a citizen was guaranteed in Poland as early as the year 1430, by a charter which corresponds to the habeas corpus rights as proclaimed in England in 1679.

When religious intolerance in Europe led through persecution and inquisition to the ultimate murder and expulsion of Jews, Poland was practically their sole refuge; she alone enacted laws to establish religious freedom within her territory. In 1269 King Boleslaw the Pious guaranteed to the Jews the protection of their religion. These were later confirmed and clarified in the Code of 1365.

In 1432 King Wladyslaw Warnenczyk—the name was given to him after he had fallen in the Battle of Walna against the Mohammedans—proclaimed an edict in which Poland's Orthodox Church was secured the same rights and privileges the Roman Catholic Church enjoyed.

Politically, Poland's progress followed the same direction. The first parliament was organized in 1462, and this body, in turn, contributed to the first great federation of European states. The memorable union of Poland, Lithuania, and Ruthenia was achieved in 1385, and the original acts signed at Krewo were subsequently strengthened by other agreements until in 1569 the common parliament of the three nations was consummated in the so-called Union of Lublin. The commonwealth thus achieved bears the combined emblems: Poland's white eagle, Lithuania's mounted knight, and the angel Michael of Ruthenia.

Poland's struggle for the preservation of Christian ideals has been demonstrated in her many battles against the onslaught of Asiatic hordes. The Mongols, Tatars, and Turks were almost perpetually attacking Europe under the banner of the Crescent. While the Western powers were able to develop their cultures in peace, to cultivate the arts and sciences, the span of 5 centuries found Poland continually beset by the barbarians, and often provoked to large-scale warfare against the whole Mohammedan world.

Polish historians have estimated that during this period the Tatars accomplished nearly 10,000 separate incursions within Polish boundaries. The first time the Poles managed a really crushing defeat of these enemies was in 1241, at the Battle of Lignica in Silesia. After many subsequent battles, such as those of Chocim, Cecora, and Zorawno, the Poles, under the leadership of King Jan Sobieski, ultimately checked Mohammedan aggression at Vienna in 1683.

These wars, lasting 5 centuries, found the Polish knights going into battle singing the anthem, Mother of God, Holy Virgin. It was they who were profoundly responsible for Poland's great attachment to Christianity. And it was under the spiritual guidance of Christianity that was produced their characteristic veneration for the Blessed Virgin, who was, indeed, proclaimed queen of the Polish Crown by the whole nation. These ideals still inspire Polish fighting forces today—the patriots who fight for freedom and their Christian civilization with a faith comparable to that of the Crusaders.

If I have dwelt at some length on these military aspects of Polish history, it is because they have made such a deep impression on the Polish psychology; it does not mean, however, that the Poles are not profoundly attached to peaceful ideals, or that they do not dream of a long-sought opportunity to enjoy the benefits of peace.

Notwithstanding these violent shocks which have rocked the Polish State, the nation succeeded in producing more than its share of outstanding figures in the arts and sciences; I need only allude to three of them: Kopernik (Copernicus), who revolutionized astronomy; Father Peter Skarga, on of the greatest preachers in the Middle Ages; Jan Kochanowski, acknowledged as one of the greatest poets of the epoch.

While Poland was laboriously repelling invasions and building her own internal system on Christian ideals and the principles of freedom, Russia was completely subjugated by the Tatars. She was held under their yoke for some 200 years, and this bondage made an irreparable impression on the psychology of the Russian people, on their governmental system, and on their whole way of thinking and acting. The Tatars were cruel—the most cruel of Eastern tyrants. The only form of government of which the Tatars were capable was the tyranny exhibited by such chiefs as Tamerlan (Tamerlane) and Dzingishan (Genghis Khan), who could maintain authority only by terrorism and meeting all opposition with physical violence.

The Tatar bondage passed. But during the two centuries, there had been a great admixture of their blood with that of the Russian tribesmen, forming a new physical type and a community vastly different both in the physical and psychical domain from that of the old Slavs. The Russian nation was never entirely able to divest itself of the political forms implanted by the Tatars. Absolutism and tyranny remain as the characteristic patterns of Russian authority. The Czars, Ivan the Terrible and Peter the Great, treated their people in the same manner as the Tatar chieftains; they acknowledged no individual or political rights; trials were unheard of; they met opposition with the death penalty.

There was not the slightest respect for human dignity. The boyars were spat on, or shaken by their beards. There were, indeed, no such persons as citizens in Russia; the Czar recognized only his serfs.

The revolution of 1918 overthrew this absolutism, only to substitute a new kind of tyranny—and the Red masters of the Kremlin continued to govern Russia with the same implements of terror: Firing squads, hangmen, and prisoners. Impartial experts have calculated that during the Bolshevik rule more than 2,000,000 anti-Communist Russians were killed for their differing convictions. These were for the most part social-revolutionaries, social-mensheviks, and democrats. It is well established that the Communists put down the opposition of the peasants only by the bloodiest of measures. Several millions of these Russian peasants were "liquidated"; at least 7,000,000 of the kulaks, the more prosperous peasants, were deprived of their property and deported to the wilderness of northern Russia or to the limitless expanse of Siberia.

These men were literally doomed; they were condemned to painful agony and certain death, that the ideals of communism might be served.

Many millions of Ukrainians who sought independence for their homeland to the south of Russia were persecuted and deported under the same trumped-up charges preferred against the kulaks and all counter-revolutionists. Only in this way was a Ukrainian national aspiration broken.

Those who were won over to the new tyranny saved their lives, but, for the sake of a crumb from the Communist loaf, they had to devote those lives to the exclusive service of the new occupants of the Kremlin. Thus, Russia has never in her entire history known a liberal or democratic form of government. As before, but under a new name, the people's destiny was to be that of all totalitarians.

The present conflict is simply an extension of the same predatory tendencies which Russia has exhibited consistently with regard to her western frontiers.

When Poland asked, through the proper diplomatic channels, for some explanation of the murder of 15,000 Polish officers and noncommissioned officers known to have been taken prisoner by the Russians, the Soviet Government seized this pretext to suspend diplomatic relations. It is only natural for the Polish people to be concerned over the fate of these prisoners. If they have not been murdered, and their remains are not in that mass grave near Smolensk, where are they? It has not been generally publicized that among these missing there were 12 generals, 300 colonels and lieutenant colonels, 5,000 majors, 2,500 captains, and 5,000 first or second lieutenants. Among those generals who, according to Soviet propaganda, must have simply vanished, there are names which are honored in Poland even as Americans honor the names of Eisenhower and MacArthur. There is General Stanislaw Haller, one of the commanders who proved himself against the Bolsheviks in 1920; to say nothing of such other noted generals as Skierski, Lukowski, Billewicz, Bohatyrewicz, Kowalewski, Minkiewicz, Sikorski, Skoratowicz, Smorawinski, and Vice Admiral Czermicki.

Would any other government in the world be asked to keep silent before its people and its army about the unsolved murder of more than 10,000 officers and men, a contingent able to form the command for a new army of half a million Polish soldiers and men? I hardly need add that such a potential army of deportees is still detained in Russia. Any government maintaining silence in such a situation would have been condemned by the nation it served as a government of traitors.

There have been insidious attempts to attach some special significance to the fact that the location of this common grave was disclosed by the German authorities. Such propaganda deliberately ignores the fact known to the Polish Government and all Polish emigrees for over 2 years—that these officers had disappeared in Russia and that repeated demands from General Sikorski himself were carefully left unanswered by the Soviets.

How, then, can it be charged that Poland went out of her way to create disunity between the Allies? One is impressed, on the contrary, by the fact that she maintained difficult, but respectful, silence for 2 whole

years on the suspected character of a terrible tragedy, probably the most grim mass murder known in the history of warfare for a thousand-odd years.

Upon the refusal of the International Red Cross to undertake a suitably impartial investigation, the Polish Government renounced for the time being further inquiry into the matter. It remains, of course, an issue which must be cleared up after the war, and due punishment will certainly be sought for the perpetrators of the crime, be they Germans or Russians, and regardless of their rank. For any and every such unpunished crime would contribute to the moral disintegration of the world, and would constitute an inescapable cause for future political and social dislocations.

With the political relations between Russia and Poland severed, the former now loudly insists that her claims to the eastern part of Poland be acknowledged. The alleged basis for these claims is that this area is inhabited by Ukrainians and Byelo-Ruthenians. For no conceivably relevant reason, the demand is accompanied by an accusation that the Government of General Sikorski is a group of Polish aristocrats and capitalists, who do not have the confidence of the Polish people and who are dealing sub rosa with Hitler and even conducting espionage activity on Russian soil.

These claims and accusations are a calumny, and calumny is a deadly poison for the minds of men. Truth is the only antidote. That is why I should like to examine critically and truthfully these unsubstantiated claims and false accusations.

The Russian claim that Poland ever occupied territory in which she had no ethnic establishment is completely absurd. Ukrainians, Ruthenians, and Byelo-Ruthenians in the disputed area are no more Russian than they are Polish. As is well known, they united with Poland of their own volition in the fourteenth century, and were separated only by the partitioning of Poland in the eighteenth century. It is inconceivable that these people should now seek to be incorporated within Soviet Russia, for they have seen millions of their fellow Ukrainians uprooted from the fertile and sunny lands where they were born to be shipped to barren reaches of Siberia. Moreover, the claims are at variance with the statistical constitution of the disputed population. The latest available records derived from free depositions of the citizens indicate the following national adherence in Eastern Poland:

Poles	5,274,000
Ukrainians and Ruthenians	4,529,000
Byelo-Ruthenians	1,123,000
Jews	1,109,000
Russians	134,000
Germans	89,000
Lithuanians	84,000
Czechs	35,000

It is significant, furthermore, that 90 percent of these 12,000,000 are Christians, deeply attached Christians, who hate the godless Communist ideology. And among these Christians, 90 percent again are of Roman Catholic or Greek Catholic denominations. One hardly expects the Polish Government to deliver over 12,000,000 souls as a sacrifice to the covetousness of imperial Soviet Russia.

To do so would be deliberately to destroy the faith in the hearts of these peoples, and by such an act the Polish Government would be renouncing not only its proper interests but its Christian duty.

Turning now to the accusation that the Sikorski Government consists of reactionary aristocrats, completely lacking the nation's confidence, we find such a charge ridiculous in the extreme. Here are the facts: The Sikorski cabinet includes two workers—Kwapinski, a farm hand, and Stanczyk, a miner. The former had been deported to Siberia by the Czarist regime. There are also, four professors or teachers: Kot, son of a peasant, Kukiel, Komarnicki, and Strasburger. There are two journalists: Popiel, the son of a laborer, and Seyda, the son of an artisan, who was deported by the Germans during the First World War. Then there are Mikolajczyk, known widely in Poland for his activities among poor peasants, and two soldiers, General Sikorski and Haller (not to be confused with the two who disappeared in Russia). The Premier has always been known for his liberal tendencies, and General Haller is equally a man of democratic views. To be exact, there is one aristocrat in the Government—Count Raczynski, the founder of a public library in Poznan, whose career has been one of cultural and philanthropic distinction.

You may be sure Poland will never subscribe to a rigid Communist demagogy which pretends that no one who was not born a peasant or a worker has any right to take part in the public life of his country. The terms of a Christian morality are such as to demand that a man's value be fixed from the personal or human viewpoint, not because of his class. In the Polish Government there will continue to be representative and selective men who do enjoy the confidence of the nation, whether or not it may have been their misfortune to be disliked by Russians, whether or not they have ever owned a country estate.

It is my considered opinion that Premier Sikorski has already made a maximum of concessions in his dealing with the Soviet Government, and I submit that there is no other suitably qualified Polish leader capable of creating a government which in its declared policies and general objectives could be more consistently friendly toward the Russian nation.

On the basis of this opinion I solicit a very careful analysis of the newest bill of particulars broadcast by Deputy Foreign Commissar Vishinsky. These charges that members of the Polish Government indulged in pro-Hitler espionage activities may be amusing to some, but are certainly repulsive to others. I feel sure that it would be a reflection on my readers' judgment if I were to discuss them at length.

It is much more important to see how the conflicts which lie at the root of the present Russo-Polish disagreement reach down to the depth of human relations. This means one must look into his own conscience when he finds himself confronted with an ultimate choice between the ideals of Christian Poland and Communist Russia.

A realistic facing of the future requires making just that decision, and each reader must make this decision in his own conscience. Then he will be better able to appreciate the enormous responsibility weighing on the conscience of political leaders who must make a decision for many others. On their sound judgment and moral sense depends the future of all Christian governments and of civilization itself.

From the political standpoint, the Polish people are naturally anxious to secure peaceful international relations with their Russian neighbors. In spite of all past wrongs, in spite of the renewed injustices of propagandist claims, some modus operandi that will serve their mutual interests must be found. Such a policy is clearly dictated by a realistic national interest. Our boundary with Russia, about 1,000 miles long, divides us from the weight of a power many times stronger. The Polish population of 35,000,000 is numerically no match for a Russia of 170,000,000; reduced to its simplest terms, it means 1 Pole against 5 Russians. The ratio, needless to say, has never intimidated Poland. Events of 1920 proved that the spirit of a nation may compensate to a large extent for the greater material strength of another. But in every such war with her mighty neighbor, Poland must expect to have her lands irrigated with the blood of her sons.

Thus it is folly to suppose that Poland would ever desire to wage war against Russia. This fact, taken together with due consideration of the objectives of our German neighbor—coldly determined to achieve the complete demoralization and eventual extermination of our people—makes it clear that Poland must seek a permanent understanding with Russia.

It is not wise to suppose that even the most realistic government policy to which Poland might adhere precludes any disposition to commit national suicide in Russia's favor, or to submit to any such dismemberment as Soviet expropriation of eastern Poland implies.

Two solutions present themselves:

First. Russia may, in the Lord's infinite wisdom, be brought within the framework of Christian society, and by some miraculous rebirth adopt a democratic form of government. She might thus abandon her struggle against God and become one of the family of Christian nations. This would at least present every prospect of an amicable solution of all controversies with Poland and enable Russia to participate in friendly relations with all other powers.

This, of course, is so improbable as to be hardly worth consideration. One need only realize that Russian youth has now spent 25 years in complete ignorance of the truth of the Christian doctrine. The Communist contention that religion is an opiate for the people may have succeeded in deadening these people's hearts to the love of God. Remember that thousands of churches were closed, bishops murdered, priests tortured. This fate was not visited upon the Catholic Church exclusively. Much the same treatment was meted out to the Orthodox Church; the Metropolitan Tichon was imprisoned and is presumably dead.

For 25 years the materialistic and atheistic philosophy has poured its poison into the souls of Russian youth. Such contamination means that an entire generation of Russians, at least those up to 45 years of age, is devoid of faith.

Just as Mohammedanism has lasted for over 1,000 years in Asia, we must assume that the roots of atheism can hold Russia in their grip for as long a time. It cannot be denied that Asia now has a penetrating anti-Christian culture which, backed by political and military might, could spread itself over a still wider area. The light of the Crescent has dimmed, but we find the Red Star shining in its place.

Second: What alternative is there for the Christian world to consider? It can meet force with equal force. It can forestall the spread of communism, and at least limit it to Russian soil, just as it once stopped the expansion of Mohammedanism. This does not necessarily mean a war with Communist Russia. It means only that Russia must be made to understand that any aggression will provoke the opposition of a united Christian world.

Surely the western nations will not duplicate the blunder they committed in trying to pacify Hitler by throwing sacrifices on his altar—sacrifices in the form of the Rhineland, the Saar, Austria, Czechoslovakia—the rest of the names we know too well.

Will the West adopt another Munich policy on behalf of Soviet Russia? Shall we submit new sacrifices: Finland, Estonia, Lithuania, Latvia, Poland?

Regarded from the standpoint of a Christian conscience, this second alternative is a compelling one. It seems to me to hold the only key to a practical relationship between Russia and the rest of the world. In other words, after we have defeated Hitlerism, Christian nations must create a new world, a world that is a united Christian commonwealth.

Eddie Gilmore

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. HOBBS. Mr. Speaker, Eddie Gilmore is another Selma boy who has made good in a big way.

About a month ago, the Birmingham Age-Herald had on page 1 three signed articles, and only three. Each one of them was written by an Alabama boy covering the news of the world as reflected from the three great war capitals of the United Nations world. Eddie Gilmore was writing from Moscow, Ed Ball from London, and Francis LeMay from Washington. The Nation's hat is off to each of these three men of the fourth estate who have won their spurs and many honors in the newspaper world where it takes much on the ball to succeed.

Eddie Gilmore has just come home for a well-earned vacation, after having covered with great credit to himself and the Associated Press two of the most important assignments that could come to a war correspondent. He was in London throughout the great German air blitzkrieg in 1940. He has been in Moscow since Germany invaded Russia. His news coverage on both these assignments has been excellent. He has served the news "hot," but seasoned with such restraint as to make his dispatches trustworthy without the sacrifice of interest. Selmians the world over have been proud of him and his work.

Born in Selma May 28, 1907, his first newspaper work was as a carrier-boy for the Selma Times-Journal. His writing career began with the Atlanta Journal and continued with the Washington Daily News and the Washington Post before becoming a member of the Associated Press Washington staff in 1936. Before going abroad he made a Nation-wide reputation as a feature writer. Leaving the Washington assignment to tell the world the news of the war from London and Moscow.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. LAMBERTSON. Mr. Speaker, the definition of "acid test" is, what F. D. R. will do with an antistrike bill in his lap. He has had it 4 days.

Processors of corn are frantic because they cannot get the corn. One of them writes, "Why feed it to hogs, they can't vote."

The idea of having a super or centralized food control is hooted, yet super set-ups are as common in this New Deal as fleas.

If the Army and Navy did not know more about their stuff than the O. P. A. seems to know about its stuff, it would be a helluva war.

The long-haired professors and the long-horned steers have locked horns on the roll-back. The steers seem to be successfully bulldogged.

N. Y. A. leaves the House dead, like the other agencies have, but like Lazarus will rise to walk again over there—and we do not mean overseas.

There is one thing the House does not have to endure like the Senate, and that is to hear a Member on a busy day harangue for 4 hours about his own greatness.

It is now June 17 and the new fiscal year begins July 1, and of the 12 big supply bills, only 1 is a law. This situation is in the interest of spending, for hurried conferences never save. Freeze-outs save.

The administration seems determined to roll back Congress on its frequently expressed decisions against subsidies for food like it rolled back the Court a few years ago. Instead of the "three horse team" it is the ox now.

The overstocked or overstacked bureaus remain the unremitting crime of the past 10 years. The Byrd committee asks for a 300,000 reduction, or a cut of 10 percent. Think of the money it would save and how needed manpower would be helped.

The Difficult Meat Situation of the Butte Copper Miners

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 17, 1943

Mr. MANSFIELD of Montana. Mr. Speaker, I am once again calling the attention of the Congress to the serious meat situation which exists in Butte, Mont. I cannot emphasize too strongly the importance of this situation because of its connection with the need for producing more copper. These soldiers of production working in the Butte mines under difficult conditions cannot produce the metal needed on 2 pounds of meat a week. Surely some system can be worked out whereby these men can be given a proper meat allowance to enable them to carry on the arduous task which is theirs. I am not asking for any special privilege for them, but I am asking that this matter be looked at in a sensible manner so that the copper needed for our tanks, guns, planes, and ammunition can continue to be produced in sufficient quantities to keep our armed forces supplied with the materials of war. I am again bringing to the attention of the Congress more of the hundreds of communications which I have received from my friends in Butte about this particular matter, and I sincerely hope that their wishes can be met at the earliest possible moment:

MINING ASSOCIATION OF MONTANA,
Butte, Mont., April 27, 1943.

Hon. MIKE MANSFIELD,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MANSFIELD: I am in receipt of yours on the 21st enclosing copy of a letter from Mr. Prentiss M. Brown, dated April 19, for which I thank you. Also many thanks for your good efforts in our behalf in trying to obtain more meat for the miners.

I note in Mr. Brown's letter that he asked for statistics on normal meat consumption of miners, and we have already sent these to Mr. Julian D. Conover, secretary of the American Mining Congress, Munsey Building, your city, who has presented them to the Government bureaus that have to do with meat rationing. Evidently Mr. Brown has not seen these figures, so I am repeating some of them.

In April I attended a meeting of the women's auxiliary of the Butte Miners' Union, No. 1, and obtained the following information:

CONSUMPTION PER WEEK

Mary Orlich, Meaderville: Cheese and meat for bucket 1½ pounds; 1 pound butter; 1 pint oil; 1½ pounds lard; 10 pounds meat for home consumption. This family consists of three, of which one is a miner.

Mrs. Bartlett, 400 West Park Street, Butte: Three-fourths pound butter; 8 pounds table meat; 1 pound lunch meat and cheese; 1½ pounds Crisco. There are two in this family, of which one is a miner.

Mrs. Anne Metully, 204 Cherry Street, Butte: 1½ pounds butter; 1 pint oil; 14 pounds meat; 2 pounds lunch meat; 1 pound lard; 1½ pounds cheese. There are five in this family, of which one is a miner.

Mrs. W. H. Stubly, 3107 Kennedy Street, Butte: 1 pound lunch meat; 1 pound butter; ½ pint oil; 8 pounds table meat. There are two in this family, one of which is a miner.

The women agreed that 6 pounds of meat a week per miner would be a fair ration.

Mr. Stanley Babcock, president of the Butte Miners' Union, No. 1, on April 2 informed me that the Mullin House at 944 North Main Street, Centerville, has been using 1,550 pounds of meat per month and boards 50 miners. This would be about 7 pounds of meat per man per week. The Mullin House is operated by Mr. P. D. Harrington.

On April 12 Mr. Babcock advised me that the Riipi Boarding House in Butte, the largest miners' boarding house here, in December 1942 used 6,329 pounds of meat and served 23,235 meals. That would be about 0.367 pound of meat per meal; for three meals a day about 1.1 pounds, or about 7.7 pounds per man per week.

Mr. John Hickey, of Philipsburg, president of our association, advises me that the meat consumption of miners in that district is about 7 pounds per man per week. You will find the above figures typical of institutional and personal meat consumption of miners in Montana, and all of these miners are producing much needed war metals.

* * * * *

Again thanking you for your efforts, with best wishes, I am,

Sincerely yours,

CARL J. TRAUERMAN,
Secretary-Treasurer, Mining Association of Montana.

JUNE 11, 1943.

DEAR CONGRESSMAN: We are very much interested in more meat for the miners as the Government looks on the miner as a soldier. We feel that we should get the same consideration as the servicemen.

JAMES BYRNE.

SIRS: I am a citizen of Silver Bow for 25 years, and I must say that my husband is working for 20 years, and have 7 children. He must have more meat for his dinner bucket, and oblige.

Mrs. SULLIVAN.

JUNE 12, 1943.

I believe the Butte miners need more meat for the hard labor they are performing.

ED BRUNELL,
Walkerville, Mont.

DEAR SIR: Men in these deep mines need more meat to eat; the work is heavy and hard, energy expended great, and needs meat to replace it; can't be done on a sandwich for lunch. They are used to heavy food to do heavy work. Do your bit to help.

A FRIEND OF YOURS.

BUTTE, MONT., *June 12, 1943.*

Mr. MANSFIELD: We think the copper miners of Butte should get more meat as they do hard work and have to work in hot places. A miner needs more meat than a baby, and the people with children get more than a miner. There are only my wife and I and we can't get along on the meat stamps as we do not have the points.

Mr. and Mrs. F. P. JAMESON.

BUTTE, MONT., *June 12, 1943.*

Hon. MIKE MANSFIELD: In the effort to secure additional meat rations for our miners who are in vital war production, we will appreciate the aid of yourself and colleagues. Butte miners must have additional allowance in order to produce properly.

Sincerely,

R. E. MURPHY.

JUNE 12, 1943.

Honorable SIR: There is no reason why our miners should not have more meat or substantial food than the rationing cards call for. I also like to have all the Japs moved out of our country.

Yours respectfully,

L. S. NELSON.

BUTTE, MONT.

DEAR MIKE: Do all you can in this meat rationing for our miners as they are the backbone of the war which must have the copper to proceed.

JAMES ROE.

JUNE 12, 1943.

Congressman MIKE MANSFIELD.

DEAR SIR: I am a miner in Butte and the meat is not enough. I require more to handle this heavy timber here, so request your support in obtaining enough meat.

JOSEPH DEAN.

BUTTE, MONT., *June 10, 1943.*

DEAR SIR: You had better get rid of some of the boards or at least get Americans on them. We need more meat. I am taking a bucket today without meat; give us gas to go fishing if you don't want to give us meat.

C. P. LUNTZ.

It is too far to the river or stream and we have no gas or tires to get there. Hunting is out of season; where are we going to get any fish or meat?

WM. RIES,
Walkerville.

BUTTE, MONT., *June 10, 1943.*

DEAR SIR: In regards to the meat situation, we are short each week and have to substitute for Sundays. I feel that the miners are entitled to more meat.

Yours truly,

JOHN MANNINEN.

JUNE 10, 1943.

Congressman MANSFIELD:

I have been a voter in Silver Bow County for the last 20 years and I am one that helped put you in office. Seems you fellows forget us miners pretty soon. I for one am looking for some help about the meat. We miners are not getting enough of meat at all, so not only me, but hundreds more are looking for you to give us a hand.

ROBERT ELLENBURG,
Butte, Mont.

BUTTE.

More meat for the miners and crafts union men in copper production.

J. J. HARRINGTON.

BUTTE, MONT., *June 11, 1943.*

The miners of Butte need more meat to give them the strength and endurance necessary to produce the vitally needed copper.

Mr. James Sullivan, secretary, get out and get us some bacon.

FRANK V. CANNON.

DEAR SIR: We would like to have a little more meat. It is very hard to get along with what we get.

JOE NOVACK,
Butte, Mont.

BUTTE, MONT., *June 11, 1943.*

DEAR SIR: I cannot get along with the meat I get so please see if we can do something about getting some more meat.

Yours truly,

MRS. STELLA J. PAVLOVICK.

More meat for Butte copper miners.

TOM TEASDALE.

DEAR SIR: I am in sympathy with the miners when they say they want more meat. This war requires the increasing efforts of the miners if they are to fulfill the demands of copper.

The men require full meals if they are to work steadily. We of Butte leave it up to you.

LIP PRINTS.

JUNE 12, 1943.

Congressman MIKE MANSFIELD,
House of Representatives.

DEAR SIR: Will you please try to increase the meat ration for the miners; they need extra meat for strength to work in these very bad places, and many of the general foods will not keep in their lunches—being so hot down there.

Sincerely,

MRS ANCELIAC EMINGER,
Butte, Mont.

JUNE 10, 1943.

Would like for you to get us hard-rock miners some meat. For God's sake, am working in a hot-box and can't cut the buck on old fish.

FRED GREEN,
Butte, Mont.

I am a backer of the campaign for "meat for the miners."

S. HOAR.

I agree that men working in Butte mines should have more meat.

FOLKS J. HARRINGTON,
Butte, Mont.

More meat needed for the miners.

FRANK SUTTEY.

BUTTE, MONT., *June 10, 1943.*

DEAR SIR: Please for more stamps so we can have more meat.

K. MIDDLEBROOK.

See that we get our portion of the meat out this way, MIKE.

JOE PRESTON.

BUTTE, MONT., *June 11, 1943.*

DEAR SIR: I am a Butte miner and would like to get more red stamps, as I can't do the work on what I am getting.

Yours truly,

ROBERT MORRIS.

BUTTE, MONT., *June 10, 1943.*

Congressman MIKE MANSFIELD,
Washington, D. C.

DEAR SIR: Butte miners need more meat because the strenuous nature of their work requires plenty of good substantial food. As you know fresh fruits and vegetables are not plentiful here and you can get very little of these canned goods on your ration stamps. A miner's bucket must consist of mostly meat and fruit. Therefore, we think we are entitled to more meat.

HARRY BAIRD.

We want more meat for our miners in Butte.

EDWARD J. LEARY.

DEAR CONGRESSMAN: We miners in the Butte mines feel (due to our greatest speed-up in these critical times) that if we are allowed more meat, production will surely increase.

Sincerely yours,

EDWARD A. MAGUIRE.

More meat.

ALBERT J. STODDER,
Butte, Mont.

My family would like more meat.

Mrs. J. HOLLOND.

More meat for more copper.

EDITH SCOTT,
Butte, Mont.

More meat.

SUNDAY S. ALOISE,
Butte, Mont.

Meat for the miners.

Mrs. G. FACINCAM.

Not enough meat.

Mrs. E. J. ZIMPEL.

BUTTE, *May 10, 1943.*

What can be done to get Office of Price Administration to increase the meat allowance for our miners? Substitutes are not adequate for the protein necessary for miners. Help us to get an increase, won't you?

J. LUNCEY.

More meat for the miners.

FRANCES PHELPS, R. N.

BUTTE, MONT., *June 10, 1943.*

DEAR CONGRESSMAN: Our men who produce copper, a vital war need, require good substantial food in order to do the work required in this production. They should have ample meat in order to carry on. I hope you will do your utmost to see this is accomplished.

WM. T. O'REILLY.

Let's have more meat for copper production.

THOS. MARTIN.

Commander Howard W. Gilmore

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 16, 1943

Mr. HOBBS. Mr. Speaker, another honor has just been deservedly paid to Commander Howard Walter Gilmore, a native of Selma, Ala., whose famous order "Take her down," and his heroism indicated thereby won for him the highest honor within the gift of the Nation—the Congressional Medal of Honor.

He already had had conferred upon him the Navy Cross, the Gold Star in lieu of a second Navy Cross, and the American Defense Service Medal, Fleet Clasp.

Now the Navy announces that the United States submarine tender *Neptune* has been renamed the U. S. S. *Howard W. Gilmore.*

Flag Day Address of Hon. Alben W. Barkley, of Kentucky

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and inspiring address delivered by the distinguished senior Senator from Kentucky [Mr. BARKLEY] at the Flag Day celebration at Hot Springs, Ark., on June 4, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, on June 14, 1777, the Continental Congress formally adopted the Stars and Stripes as the flag of the new Republic, then fighting for its establishment.

Today, therefore, we celebrate the one hundred and sixty-sixth anniversary of the birthday of the American flag, and rededicate ourselves to its silent emphasis as the emblem of our unity and strength.

At the beginning the number of stars and stripes was the same. But as new States were added to the Union, it became obvious that the flag would grow too cumbersome at length. On the 4th of July, 1888, therefore, a resolution of Congress became effective providing that thereafter a new star should be placed in the blue field for each new State admitted and that the number of stripes should remain at 13 as representing the Colonies which had struggled to found the Nation.

Thus it is that we have the flag as we know it today.

But interesting and thrilling as the history of the flag may be, linking as it does the personalities of George Washington and Betsy Ross, and beautiful as it is in the radiant sunshine of this day, we are concerned now more with its deeper significance and its holier mission in defense of our liberty and civilization than in any superficial recital of the steps by which it became our flag.

Today that flag floats above ramparts which we defend, and shall ere long float o'er ramparts which we shall assault and take in more widely scattered places throughout the world than ever before in the 166 years of its glorious history. And we who look upon it now with accelerated heartbeats realize that the great principles for which it speaks are being assaulted on more battle fronts than ever before in its history.

It has been planted on every continent and in every sea and on almost every island of the seas. It has brought to us familiarity with geographical names and places of which we never heard before. And we know that our hearts have followed that flag into all continents and all islands and all seas and into the air above them; and our hopes likewise have followed it. For we know that the profounder significance of that flag stirs other millions just as it stirs us; and we know that when that flag shall have accomplished its mission, not only we but other millions will enjoy a freedom not hitherto known to them.

The great Henry Ward Beecher said this about the flag: "A thoughtful mind, when it sees a nation's flag sees not the flag alone but the nation itself. And whatever may be its symbols, its insignia, he reads chiefly in the flag the government, the principles, the truths, the history that belonged to the nation that sets it forth. The American flag has been a symbol of liberty and men rejoiced in it."

Nearly a quarter of a century ago, influenced by the events of another great war in which he was an illustrious figure, Woodrow Wilson said: "This flag which we honor and under which we serve is an emblem of our unity and our power and thought and purpose as a nation. It has no other character than that which we give it from generation to generation. The choices are ours. It floats in majestic silence above the hosts that execute its choices, whether in peace or war. And yet, though silent, it speaks to us—speaks to us of the people, of the men and women who went before us, and of the records they wrote upon it.

"We celebrate the day of its birth, and from its birth until now it has witnessed a great history, has floated on high the symbols of great events of a great plan of life worked out by a great people.

"Woe to the man or group of men that seek to stand in our way in this day of high resolution, whenever principles we hold dearest are to be vindicated and made secure for the preservation of the Nation. We are ready to plead at the bar of history, and our flag shall wear a new luster. Once more we shall make good with our lives and fortunes the great faith to which we were born, and a new glory shall shine from the face of our people."

Those words are as eternally true today as they were when Woodrow Wilson uttered them. Let us beseech the God of nations that when this even greater and more universal struggle is over, we shall not turn our backs upon the obligations which freedom and world order place upon us.

We must not only win this war to the point of unconditional surrender. We must win the peace to the point of unconditional security for ourselves and our children and the great heart of humanity everywhere that longs for rescue and rest.

Woodrow Wilson referred to the flag as speaking to us of the past, of the men and women who went before us, and of the records they wrote upon it.

But he might have said, and I desire to emphasize, that it speaks also of the present, of the men and women who are now among us and of the records they are writing upon it.

Each day's reports from the distant battle fronts over which our flag flies bring word of new records our men and women are writing upon it. And as we project our minds into the future, we know that the men and women—our children and grandchildren—who will then bear the responsibility of that day will write new records upon that flag.

We are called upon now to give up something of our normal lives in order to facilitate the earliest possible victory for the cause which that emblem symbolizes in this war.

We did not seek this conflict. We sought in every honorable way to avoid it. But it was inevitable. The forces which let it loose upon mankind were not to be dissuaded by persuasion or any sense of justice or Christianity or civilization. If it had not been Pearl Harbor, it would have been some other cowardly attack. And the attack on Pearl Harbor was according to the same pattern as Hitler's attack on Europe, Japan's attack on China, and Mussolini's attack on Ethiopia and France.

Whatever may have been any American's opinion of these nations before, we were forced into the war, there's no point now in arguing about it.

We have put our hand to the plow. We have mobilized our industrial power, our agricultural power, our financial power, our manpower, and our spiritual power and have created the most impressive momentum in their production and distribution which has occurred in the history of the world.

That we should turn back or hesitate or be satisfied with anything less than complete vindication and victory is unthinkable.

That we should permit jealousy or selfishness to divide our people or retard our total was impact is unthinkable.

That we should permit any part of our people to use this war to exploit any other part of our people is unthinkable.

That we should permit political ambition to warp our minds or judgments or the degree of our cooperation is unthinkable.

I recognize that any dislocation in the tenor and methods of our life is inconvenient. But war itself is inconvenient and brutal and ruthless. There is no inconvenience or annoyance or dislocation or hardship that will have to be endured at home by any of us that deserves to be mentioned in the same breath with those which must be borne by those who are to fight our battles in all parts of the world.

I have faith in the American people that fortifies my conviction that regardless of politics, religion, or color; regardless of origin, geography, or economic condition, our people know what produced this war; they know what it is going to take to win it, and they are enlisted in it until unconditional surrender shall be acknowledged by our enemies. Not unconditional surrender by one of them, but unconditional by all of them whether simultaneously or at convenient intervals on the installment plan as exigencies may require.

But what of the victory and what of the peace?

Our first obligation is to win the war by beating our enemies to their knees. Nothing can be allowed to reduce the certainty or the swiftness of that result.

But we cannot close our eyes to the tragic responsibility which will fall to all the United Nations, and to us with peculiar force when the fighting shall have been concluded.

It is not necessary to draw a complete blueprint of plans for the post-war period in order to look the future frankly in the face.

We must not allow ourselves to be as unprepared for peace as we and all the democracies have been for war.

Without attempting to draw a catalog of post-war obligations that are self-evident, I suggest only a few in the following outline.

1. We must demobilize the greatest armed forces ever gotten together in the history of America. We must redistribute the largest industrial force ever mobilized in our history. Both these catalogs include women as well as men. We must help to find jobs for these dislocated millions of men and women. Government and private industry must cooperate in the performance of this task.

2. We must provide for the post-war stabilization of the greatest public debt in the history of our Nation or any nation, and for its reduction and ultimate payment. This will make the reduction of taxation to the basis of pre-war levels impossible within our generation.

3. We must provide for the care and rehabilitation of those who are injured or incapacitated in this war and for their dependents.

4. We must provide for greater security from fear and want among the aged and unemployed not only as a part of a program of economic necessity but of justice and humaniantarism and social obligation.

5. We must aid in the speedy reconversion of our industrial structure from war to peace in order the more promptly to give employment to labor and fair reward to legitimate investment.

6. We must be ready and willing to help provide food and clothing and other essentials to the starved and depressed populations of occupied countries in order to prevent chaos and revolution, and in order that we may help reestablish real self-government among them.

7. We must cooperate in the reestablishment of international trade and international credit on a basis that will afford the necessary outlet for labor and goods and services among the nations of the world.

8. We must not only cooperate in rendering impotent from a military and war-making standpoint the nations which precipitated this cruel war; but we must at once share our full responsibility in bringing about a peace that will contain the germs of permanent justice among nations, and then assume our share of the responsibility of making the breach of that peace impossible.

9. There must be set up a tribunal to which aggrieved nations may bring their grievances with the conviction that justice can be secured from an international organization based upon equal treatment of all nations regardless of size or location.

10. We must convince ourselves that in this complex and highly organized world, nations go up or down together; and we must as soon as practicable let it be known that we shall not attempt to insulate ourselves from any of the burdens or the effects of world events which none can escape, and that in order that these events may be controlled for the welfare of mankind, we shall assume our full share of obligations in that control.

These are but an outline of some of the great human problems that call us to high accomplishment in the game that is played by nations and peoples.

God grant that we may not muff the ball.

St. Lawrence Waterway

REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. KEEFE. Mr. Speaker, the Legislature of the State of Wisconsin just adopted a joint resolution, hereto attached, memorializing the Congress of the United States to enact proper legislation for the procurement and construction of the Great Lakes-St. Lawrence waterway upon the termination of the present war. The resolution very clearly points out the sustained attitude of the State of Wisconsin toward this project, and while Wisconsin bows to the wishes of the President of the United States in the matter of carrying out the war effort, to postpone the completion and building of this waterway until after the war, the State of Wisconsin still insists that it must be ultimately built.

Mr. RANKIN. Mr. Speaker, will the gentleman yield?

Mr. KEEFE. Yes.

Mr. RANKIN. The money that was expended on the Shipshaw project would almost have completed the St. Lawrence project.

Senate Joint Resolution 13

Joint resolution memorializing the Congress of the United States to enact proper legislation for the procurement and construction of the Great Lakes-St. Lawrence waterway upon termination of the war

Whereas the tortuous and hazardous shipment of submarines from Wisconsin to the gulf coast recently symbolized both the stupidity of the selfish interests that have opposed the Great Lakes-St. Lawrence waterway and the tremendous potentialities of the Midwest as an oceangoing seaport; and

Whereas the President has indicated that such program of power and navigation development must be abandoned during the present emergency because of the critical and urgent war needs of raw materials and manpower which necessarily must be utilized in such project; and

Whereas one of the very first projects that should be undertaken upon the termination of the war is the building of the Great Lakes-St. Lawrence waterway in order to ease the burden of readjustment from emergency conditions of the country to a peacetime economy with a full measure of opportunity to the returning soldiers for employment; and

Whereas the complete utilization and development of all inland transportation facilities will reduce shipping costs so as to permit the entire country to cooperate and to participate in the international competition for commerce in the post-war period on more than even terms; and

Whereas the exigencies of the war have imperatively illustrated that such seaway would grant the hydroelectric power necessary to an effective and expansive defensive effort and grant savings to consumers with lower rates and better living standards through a greater use of electricity; and

Whereas this waterway project will add value to the products of industry and agriculture, create new markets and business, and thereby stimulate employment and materially aid economic recovery: Now, therefore, be it

Resolved by the senate (the assembly concurring) That the Legislature of Wisconsin memorializes the Congress of the United States and the President of the United States and especially the Wisconsin Senators and Members of Congress to promulgate and initiate the adoption of such treaties or other necessary legislation for the construction of the Great Lakes-St. Lawrence waterway project upon termination of the war; be it further

Resolved, That properly attested copies of this resolution be transmitted to the President of the United States, to both Houses of the Congress of the United States, and to each Wisconsin Member thereof.

Finland Pays Her Debts

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. PITTENGER. Mr. Speaker, the enclosed article by Frank C. Waldrop in the Times-Herald for June 16, 1943, is informative and interesting and should have careful consideration by every Member of Congress.

As I pointed out in my remarks in the House of Representatives on Thursday, May 27, 1943, the problems of the small countries of Europe are real and vital to those little nations. One of the post-war questions will have to do with the fate of nations all over the world, Greece, Poland, Norway, Holland, Denmark, Czechoslovakia, Finland, and many others.

Now is the time for this country to impress upon its allies the fact that it has sympathy for these countries and that they must be treated fairly and the selfish desires of powerful countries shall not be permitted to deny them justice.

Mr. Waldrop's article is as follows:

IT MUST BE THE HEAT

(By Frank C. Waldrop)

Finland paid the United States $168,945.56 yesterday. Actually, the order to transfer credits was given to Finland's bank in New York on June 14, but the transaction was completed around noon, yesterday, the due date for an installment payment on debts growing out of the World War No. 1, and so Secretary of the Treasury Morgenthau now holds the money.

There are other nations which still owe us for money hired in connection with that war. They did not pay off yesterday any more than they have at any other time in the past 10 years, but of course politeness forbids mentioning that. Was it politeness that kept our Government yesterday from issuing a note of thanks to Finland? Or was it shame?

The Finns, these days, are not permitted to issue any kind of news releases or state their side of any case. Their legation here is on an almost day-to-day basis, and it is generally recognized around Washington that only luck and skill have saved the Finns from being tossed out of here entirely.

But regardless of all that, the debt installment due June 15 was paid. And if the Finns are still around here six months from now the next installment will be paid then, right on the dot.

What's the matter with our Government that nobody in it has courage enough to get up and say a word of thanks to Finland?

Isn't she entitled to a little notice for living up to her obligations in spite of all the nasty treatment we are dealing out to her? This inoffensive nation has never by any stretch of the imagination done us dirt. Except, perhaps, by demonstrating again and again its embarrassing determination to live up to its obligations.

But even so, the decent thing is plainly called for, and it is interesting to note that the silence toward Finland around the Treasury and the State Department is the silence of men who are heartily ashamed of themselves and know the country knows they should be.

Maybe when the hot spell has passed, somebody in authority will find enough courage and fair play in his heart to speak up. The Finns are not our enemies and no false construction of the facts can make them our enemies.

Hunger

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a telegram typical of the scores I have received from my State. This telegram shows that the people are justly alarmed by the President's policies, as carried out through O. P. A. They have good reason to fear hunger and cold next winter, if not sooner, and are demanding Congress assert its authority.

The telegram follows:

KANSAS CITY, MO., *June 18, 1943.*

Hon. MARION BENNETT,
House Office Building,
Washington, D. C.:

Supplies of corn are vital to production of beef, pork, poultry, and dairy products. Unsound regulations of Office of Price Administration have handicapped feed manufacturers, farmers, and feeders now for many months. Feeders and feed manufacturers in this area are now virtually out of corn. Our firm has 205 bushels to get us through today, whereas our daily requirement is about 12,000 bushels. This means a loss in production for today alone of approximately 400 tons animal and poultry feeds, and 60 tons corn meal for human consumption. Office of Price Administration rules and regulations during the past 6 or 8 months have prevented my firm from manufacturing for feeders and consumers in need several trainloads of feed and food. Results of Office of Price Administration have gone from bad to worse. One bad situation corrected by Office of Price Administration usually has created 2 or 3 worse ones. Relief has continuously been promised during the past months but matters have gone from bad to worse further. The rollbacks proposed by the President plus subsidies for which the next generation of voters will pay appears to be merely a political stunt to get votes and to beat John L. Lewis. I have heard much unfavorable comment toward the President for his fight against Lewis. Many are disgusted with the President and most everyone with Lewis. The roll-back will not retard inflation but rather will leave money in the hands of the people to buy more nonessentials. The roll-back-subsidy plan appears as an obvious step toward inflation. How can well-paid workers better spend their wages than for butter, meat, and coffee? Must we continue to ask the next generation to pay for the undeserved ease of our generation? Shouldn't we pay as we go? May I respectfully urge that Congress again accept its responsibilities. Your powers have been delegated too much and too far to the administrative branch of our Government. If you don't get in and pitch some straight balls yourselves, this country is going to face famine, bankruptcy, and general demoralization. Just leave it to the immature bureaucrats, instead of exercising vigorously your own authority, and we shall have as a nation more grief than we have ever known to date. Why should the legislature of the best Nation in the world permit a bureaucracy to wreck us? I have faith in our legislature and its ability, but unused it is of no value. This Nation needs your services now as never before. I hope you will give your best attention and correct the many dangers that confront us here at home.

THOMAS W. STALEY.

The Real Significance to the American People of the United Nations Conference on Food and Agriculture Held at Hot Springs, Va.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article that I wrote for the Hearst newspapers and published by the same Sunday, June 13, 1943. The article I am inserting in the RECORD is substantially the same as that published:

Like many others, when the coming of the United Nations Conference on Food and Agriculture was announced, I was interested in learning what was back of this move and the reason for holding the meeting in secret. The fact that members of the press and of Congress were to be denied the privilege of attending the conference caused apprehension throughout the country. Many Members of Congress without regard to party affiliation were fearful of this procedure.

I was greatly surprised when late in the afternoon on May 20 Congressman FRED BRADLEY, of Michigan, who had just returned from Hot Springs, took the floor in the House of Representatives and stated, "I returned to Washington for the purpose of repeating to my colleagues in the House the warm assurance of Judge Jones (chairman of the conference) that all Members of the Congress were welcome at any time to attend any and all sessions of the conference and that nothing whatever will be kept from them."

In company with Congressman BRADLEY, I proceeded to Hot Springs that same evening, arriving there early the next morning. We were graciously received by Judge Jones and given every assurance that there was nothing secret whatever about the conference, that Congressmen could attend any and all meetings as well as receive the daily journal containing the minutes of all the committee meetings, press and other releases. However, when we mentioned that we would like to attend some of the meetings that day, we were casually informed by Judge Jones that all of the meetings that day were executive and that we could not attend executive sessions but might attend all others. After pressing Judge Jones for a definite reply as to just what meetings we could attend he reluctantly admitted that we could attend only one meeting, the final plenary meeting on the last day of the conference.

The daily journals containing the minutes of the committee meetings were furnished me only to and including May 22, and were then cut off.

Notwithstanding, I remained in Homestead Hotel where all the delegates were staying and all the meetings were held, for 8 days to learn what I could about this unusual conference. I talked with many delegates who always received me cordially. Indeed, many of them were surprised and showed concern that Congressmen were denied admission to the meetings. The opportunity afforded me by mingling with these delegates, attending press conferences, etc., together with the transactions of the conference as reported in the newspapers, and the complete report of the final plenary session, enabled me to obtain much information concerning the work of the conference and the subjects discussed.

One of the first things that exhibited itself to me at the conference was that it was dominated completely by the political planning cult. To the body composing the conference, the Old World was a failure consequent upon man's servility to natural evolutionary, economic and social processes, and the absence of planning. They seemed to lay much of the blame of our planetary woes upon what they called nationalism, and particularly upon the refusal of the United States to enter into some sort of global compact after World War No. 1. They, that is, the delegates from 43 foreign nations and of our own country, were of a mind that this must not happen again, that the United States must forthwith formulate a program of international collaboration and establish an international police force to assure its success.

One could not help but be struck by the faith the body of men assembled at Hot Springs had in their own wisdom and ability to give all the answers, the zealousness with which they pursued their cause, and the authoritarian spirit manifested by them. Illustrative of this attitude of mind was an outburst of emotionalism by one of the leading delegates when he said that the Old World was ruled by matter, but the New World, which the political planners are now creating, would be ruled by spirit.

While at first there seemed to be considerable confusion and indefiniteness in the minds of many of the delegates as to just what they were to consider at this meeting, all of them were dead sure that there should be formed a permanent international body to deal with whatever they were considering or were supposed to consider.

However, it was manifest within a few days after the convening of the conference that the current of thought among the delegates was toward assigning to that body such a vast variety of functions as to include practically all phases of the economy and to vest in it such great powers of control as to constitute what would amount to an authoritarian superstate.

Indeed, it was all too evident to anyone familiar with the work of the political planning cult's far-flung domestic and international scheme of collectivism, as well as the totalitarian thinking of most of the other countries represented at the conference, that consideration of food and agriculture could not have been the prime purpose for the calling of this international conclave. Food, because of its primordial appeal to our whole being was, in my opinion, used as a ruse to cover up the real purpose of the United Nations Conference on Food and Agriculture at Hot Springs.

How did it happen that the leaders of the conference had to make special efforts to keep the delegates from considering the question of immediate food relief, that the latter were greatly confused as to just what they were to consider, and that it was necessary for Dean Acheson, Assistant Secretary of State, to come to Hot Springs and hold a special press conference in order to placate the public and keep it from finding out too much about that situation?

How does it happen that the plans under consideration at Hot Springs fit in so neatly with the schemes of the New Deal political planners as exhibited in the reports of the National Resources Planning Board?

Both sets of plans envision the formation of a collectivist superstate to which our Nation would, of necessity, lose a great part of its sovereignty. Among other radical measures, both schemes propose the arbitrary shifting of millions of farmers from their farms to cities, and to lift bodily en masse town and city dwellers from their homes and transplant them to other regions, thus treating the farmers and wage earners as physical commodities, as mere chattels. Aye, the Hot Springs plan is suggestive even of the possibility of forced migration from one country

to another. It boldly speaks of "the problem of population shifts might be approached either by the method of relying on adjustments arising out of price and market changes or by direct measures such as retraining, transportation, housing, and the like." And this, mind you, from the section presided over by Alexy D. Krutikov, chairman of the Russian delegation.

The New Deal planning cult proposes to continue lend-lease after the war and make it a permanent institution. I did not find anyone at Hot Springs who objected to that. Incidentally, all but one or two of the countries represented at the conference were eligible for lend-lease, and it was significant to note that to most of the delegates "international collaboration" and Uncle Sam as Santa Claus to the rest of the world were largely synonymous expressions.

Both plans comprehend the ultimate liquidation of free enterprise, politically induced full employment with freedom from want, and the reduction of the standard of living of all the peoples of the earth to a common level. Both plans do away with all fellow-being exploitation except, of course, political and bureaucratic exploitation of such, the worst and only exploitation that has ever seriously interfered with the upward progress of the human race.

Much of the program concocted at the Hot Springs conference is patterned closely after the New Deal. It projects the same kind of political controls over the agriculture of the world as is embodied in the triple A and its adjuncts over our domestic agriculture. As now is the case in our domestic economy, there are to be international measures to provide agricultural credit, commodity arrangements, cooperative movements, an ever-normal granary (buffer stocks), price stability, soil conservation, subsidies to farmers, a surplus commodity agency, etc.

There is to be an international bureaucracy to tell our farmers and the farmers in the rest of the world when to sow and when to reap, just as the Agricultural Adjustment Agency bureaucracy now tells the American farmer when to sow and when to reap.

Whereas our farmers are now compelled to go to Washington to be told by the bureaucrats there what their produce is worth, under the Hot Springs scheme they may be forced to go to London or, perchance, to Moscow to be told what it must fetch.

There is to be an international Work Projects Administration and National Youth Administration, as their plan proposes, to "undertake programs of public works, develop sources of employment in public and private services, and recommend that occupational training should be provided."

The plans proposed at Hot Springs also fit in well with the Keynes-Morgenthau international bank scheme. The conference at its final session recommended "That governments and authorities here represented * * * affirm the principle of mutual responsibility and coordinated action * * * to maintain an equilibrium in balances of payments, and achieve the orderly management of currencies and exchange." This is a part of the very heart of the Keynes-Morgenthau plan, which proposal has been examined by numerous authorities in this country, notably Benjamin M. Anderson, and utterly condemned as being against American interests.

In this connection, it is noteworthy that the President in his address to the food parley, aside from including the entire economy in his scheme to plan a new world order, made point of the need of something like the Keynes-Morgenthau scheme, when he said: "Increased food production must be accompanied by increased industrial production and by increased purchasing power. There must be measures for dealing with trade barriers, international exchange stability, and international investment."

Certain it is that if there was a single representative of any nation, not excluding the United States, at the United Nations Conference on Food and Agriculture at Hot Springs who had the least concern for our Constitution or for private enterprise, he failed to indicate as much. Though it is true that the delegates were unanimous in their praise of our splendid achievements, especially those pertaining to the military, and the great help this has been to the nations fighting the Axis Powers, yet none of them seemed to have the least concern in helping us to preserve the institutions and traditions that alone made these things possible. Not a voice did I hear raised by any of them in defense of the great principles that gave us the strength we now possess. On the contrary, I saw at Hot Springs only scorn for the economic processes that were responsible for the American production and might that is right now rolling back the enemy from the very hearths and homes of many of those delegates.

Are we to believe that it was a mere coincidence that Stalin gave his word to the world that he had ordered the dissolution of the Communist International at the precise moment of the convening of the Hot Springs Conference, where mostly collectivist-minded elements representing the governments of 44 nations were assembled for the purpose of planning a new world order, and where his own delegation was playing first fiddle?

Some took this pronouncement at its face value and tried to explain it as indicating a desire on the part of Stalin to bring about closer cooperation between himself and his fighting allies. May it not be possible that the real explanation for this move lies in another direction?

How does it happen the Soviet delegation played such a prominent role at the Hot Springs Conference that it stood head and shoulders above all the other delegations?

Alexy D. Krutikov, chairman of the Russian delegation, was second vice president among four vice presidents present at the conference.

He was a member of the executive committee of the conference.

He was a member of the steering committee of the conference.

He was chairman of section 2 of the conference which dealt with expansion of production and adaptation to consumption needs.

According to press reports, he was chairman of the drafting committee which was responsible for drawing the first outline of what, no doubt, the planning cult hopes will become the authoritarian superstate.

He was accorded the high honor of making the motion at the closing plenary session of the conference for the adoption of its recommendations.

Why was it the committee which was headed by Alexy D. Krutikov, chairman of the Russian delegation, was given such subjects as the following for consideration and to make recommendations relating thereto:

Existing agricultural practices.

Suitable farming systems and practices.

Government and group activities concerning:

(a) Credit or capital developments.

(b) Cooperative services.

(c) Land tenure.

(d) Other similar activities and education?

What kind of consideration would it be expected Stalin's agent would give to these questions as they relate to the United States? Is it thought he would consider our system of private ownership of land and other property good or bad according to American standards or Russian standards? Are we to believe Stalin sent his delegates to Hot Springs to persuade him to institute in his own country a system of private ownership of farms as we have in the United States, or that he sent them over here to persuade us to adopt his system which prohibits the ownership by any person of even a single foot of land?

Was not the answer to this question given when, according to a news dispatch from Hot Springs, Russian influence was detectable in a proposal that was made advocating community farming?

Finally, what of the grand climax of the whole affair when at the closing session of the conference the delegates, in wild excitement and apparently intoxicated with their own achievements, Judge Marvin Jones, chairman of the conference, "rushed over to Alexy Krutikov, head of the Soviet delegation, embraced him in a bearlike hug and thumped him on the back," which "was heralded as symbolizing the conference's great success." (Washington Times-Herald, June 4, 1943.)

President Roosevelt has succeeded in establishing for himself and the successors to the office he holds a crucially dangerous precedent. He has consulted in secret with representatives of foreign governments, not as Commander in Chief of our armed forces on matters pertaining to war, but as our President on matters of policy relating to the peacetime pursuits of our people.

This act of the President goes to the root of our traditional concept of good government. It violates its fundamental principle, common understanding between the people and their elected officials—mutual faith in each other.

In the perpetration of this deed the President has again set himself above the people and the Congress of the United States.

If he can do once what he has done in respect of the Food Conference, what is there to keep him from repeating the same act as often as he likes?

First the President called what was termed a conference of representatives of 43 foreign nations and of our own, ostensibly to consider something about food and agriculture, without consulting the Congress of the United States. The assemblage consisted of 153 delegates from 43 foreign nations, together with 6 from the United States, a proportion of 25 foreigners to 1 United States representative. They met in secret at Hot Springs, Va., from May 18 to June 3.

At that meeting it developed that problems of food and agriculture were not of primary importance. The agenda considered covered the entire economy, of necessity from an international standpoint because of the composition of the delegates there assembled.

Next the 153 foreign delegates and the 6 United States delegates proceeded on their own initiative, ignoring Congress completely, to form a permanent international body of some sort to carry out whatever program they might formulate.

This international body would not be formed at one stroke but would be undertaken step by step. Accordingly the United Nations' Conference on Food and Agriculture was transformed into the United Nations' Interim Commission on Food and Agriculture. This body is to meet in Washington by July 15 to continue its work. Just what the next step will be in completing the international ruling power we must wait and see.

Has not the President in this episode handed over to 43 foreign countries a degree of United States sovereignty? And, as a result of this, have not the 43 foreign countries already exercised a degree of sovereignty and control over our people?

Are any secret understandings involved in this movement? If not, why was this meeting held in such dark secrecy?

What, except an aroused public opinion, can now stop the 43 foreign countries and our President from making the Hot Springs conference into an authoritarian superstate with power to take from our Nation the greater portion of our sovereignty and our right to determine our own destiny?

The Hot Springs conference was a powerful blow to what remains of our Constitution and liberty and a triumph for communism and dictatorship.

The Times Test and Our Public Schools

EXTENSION OF REMARKS

OF

HON. ALBERT B. CHANDLER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. CHANDLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very learned paper written by Mr. Paul B. Boyd, dean of the College of Arts and Sciences of the University of Kentucky. The paper is entitled "The Times Test and Our Public Schools."

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

[From School and Society of May 29, 1943]

THE TIMES TEST AND OUR PUBLIC SCHOOLS

(By Paul P. Boyd, dean, College of Arts and Sciences, University of Kentucky)

Just now the elementary and secondary schools are getting the lambasting. Stand in line patiently, if you do not belong to this group, and you will get yours in due time. The New York Times and Dorothy Thompson have passed sentence of guilty on the poor schoolma'am; and hosts of others who once went to school and so qualify as experts affirm the verdict. Eugene Field, didn't he, told of the man who was skilled in matters military because he had a cousin who married a man by the name of Gunn?

The latest furor is caused by a New York Times test given to 7,000 freshmen in 36 colleges, asking for facts on American people, places, events, legislation, the Constitution, and organizations. Some answers named Garner as World War No. 1 President, Thomas Jefferson as President of the Confederacy and the discoverer of electricity, Washington as President of the United States during the War between the States, Alexander Hamilton a maker of watches, Walt Whitman an orchestra leader, and William James a bandit. Many States were placed among the Thirteen Original ones. Cities were located all over the map. The Constitution was confused with the Declaration of Independence; Lincoln "emaciated" the slaves; the Constitution gave the right to "appease" the President and to "bare" arms.

The outcome of all this is that Congressmen talk about an investigation of history teaching, the Senate orders that the survey be made a public document, and demand is made that American history be required for admission in every college that is under public control.

The whole incident smacks of sensationalism, ignorance of what is being done in the field of American history, the human impulse to settle everything by passing a law, unfamiliarity with the nature of tests and conditions for their validity, bad logic, and lack of appreciation of the fun-loving facetiousness of the college student. The facts in the case are that virtually every secondary-school graduate has studied American history for at least 1 year, that a large majority of college students study the subject, that educators are the ones best fitted to cope with whatever the problem may be, that the Times test is amateurish and the conclusions unsound. The Times should apologize to the great body of freshman students and secondary-school teachers for the commission of libel. Perhaps, however, the Harvard Crimson has struck nearer the truth than the wiseacres who view with alarm and generalize without valid proofs. The Crimson pokes fun at them. Perhaps they have been the victims of a "mass of spontaneous kidding" by freshmen who spotted the superficiality of the test. It may well have been a form of sit-down strike which sometimes happens with the usual placement tests, on the basis of which freshmen are sectioned for the purpose of securing classes homogeneous in ability or attainment. In this connection we are told that many freshmen deliberately make low scores in order to gain placement in the lower, easier sections. Perhaps the gypper has been gypped. Can the reformer be reformed?

Our schools are easy prey to the journalist for various reasons. Everybody has had school experience, good and bad, and, from it, fixed opinions that lead to false generalizations. Many have good or bad, bright or slow, children in school. Papers must have copy of wide interest. They know publicity values and they are commercial enterprises first of all. The have sometimes indulged in propaganda, fair and unfair. They sometimes overemphasize to the point of sensationalism. They like to "stir up the animals." They must sell papers. Also, writers must write.

The schools are easy prey for the prowling journalist because of their admitted imperfections. Like all human institutions devoted to ideals of service and progress, the school is changing with its changing world, and, let it be admitted, lags in its changes behind those of its world. The lag seems to be unavoidable, for no one is wise enough to tell us with authority what the schools should be 10 years from now, or, at this particular moment, what they should be doing 5 years from now. The school is vulnerable also because new ideas and plans naturally lead to their initial overemphasis to the detriment of other phases that may be more fundamental. The schools are run by human beings who are imperfect. Poor and uninspired teachers, young and inexperienced teachers, low salaries and inadequate equipment, inertia, vested interests in the community, inadequate leadership, conditions in home and town, the spirit of the times, and so on, all can turn a potentially efficient school into a dismal caricature. The American school is, moreover, subject to invidious comparison with other systems in other countries where the problems, the setting, the inheritances, the needs are different.

We shall for such reasons always have the uninformed and unsympathetic critic after us to a far greater extent than he is after the doctors, the lawyers, and the members of other learned professions.

But more dangerous than such causes for harmful criticisms are amateurish tests and unsound interpretations of them. Like statistics, which follow from them, these tests are in the third category of liars, the lowest level of the statistical hell. More harm is done by untrained, half-baked educational statisticians than by all the quack doctors in the world. Statistics and Times tests are not foolproof, and they are likely to injure both tester and tested. They require expert handling. When will people refuse to accept conclusions as accurate, valid, and forever proved merely because they follow statistical tabulations?

The Times test is wholly factual in its content. It contains material that is not common to all secondary-school courses in American history, it jumbles into one mass facts that are important and facts that few will remember and few will care to remember. It covers material found usually in political science, American government, literature, and geography. It asks about men who are not yet historical. It measures memory and thus glorifies the World Almanac as the compendium of scholarship par excellence. It asks whether the first college for women was founded before the Boy Scout movement, what was the minimum price per acre of Federal public lands sold at auction before the passage of the Homestead Act, what was the first United States census in which railway mileage could have been reported, and to this last gives the wrong answer. If facts like these were the most important features of a history course, we should indeed need to be reformed.

I was curious to take the test myself, so I filled out the blank. I think I made a passing grade but some astounding skeletons came rattling out of my closet. For example, I wrote down the Thirteen Original States hurriedly, as any freshman would do, and what was my surprise to find that I had omitted the grand old State of Pennsylvania. To what a low level has our teaching of American history sunk when a dean of one of our State universities showed that he did not know Pennsylvania to be one of our Original States! How can we expect the schools to amount to much when the occupant of such a position displays such abysmal ignorance? Is this the outcome of the study of history?

I did not get the right order of the founding of the Boy Scouts and the first women's college. I missed the date of the passage of the Homestead Act. I got the wrong President during the Mexican War. I named the Scandinavians one of the two principal nationalities to migrate to the United States between 1845 and 1860. I missed the exact minimum price per acre of Federal public lands sold at auction before the passage of the Homestead Act.

I must admit that if the Times questions are valid tests of the proper outcomes of a course in American history, I am something of an ignoramus. And so is my friend the judge who presides with distinction over our juvenile court, for he didn't know when the Boy Scout movement started. No Quiz Kids are we. However, my head is bloody but unbowed! The test is not a valid one. It is not worth the time and trouble that it took to prepare and give it.

A valid test must always be based upon the recognized aims and objectives of the course. No one in his senses would say that factual information is one of the most important objects of the study of history. What are encyclopedias for? One of my colleagues, a historian of note, tells me that the three principal objectives should be: first, to give a picture of society as it has developed through the ages; second, to give the individual a sense of his place in society; and third, to open to the student the great storehouse of literature and other intellectual achievements that have come from great historical movements.

You will not be wholly satisfied with this statement of objectives for the teaching of history. You will wish to mention specifically such hard-to-measure outcomes as ideals, loyalties, patriotism, understanding, habits of critical thinking, culture, character. Certainly you will reject the idea that proper teaching consists of fixing in mind dates,

rivers, native States, and so on. Yet that is what the Times test means, and for that reason it is worthless, misleading, and vicious. The imponderables are the lasting valuable outcomes in education and they cannot be reduced to any sort of 1 to 1 correspondence with dates and places.

Does not the performance of our boys in this war strikingly refute the findings of the Times? They have been trained to a greater or less extent in our schools. They have studied American history and have squeezed the juice from the course. They may not know who was prominent in the early woman's suffrage movement but they do know what this war is about and they know what to do about it. They know what America stands for, they have experienced freedom, they abhor from the depths of their souls lack of sportsmanship, treachery, cruelty, slavery, and the unforgivable sins against the dignity of the human spirit. Who dares say that the teaching of American history has not contributed its part to this present magnificent American boy?

The test also fails miserably to make allowance for the natural fading from our minds of those facts, figures, principles, powers of all sorts, that we do not use. An old mathematics professor in one of our State universities was wont to remark in his classes that "the mind is master of that only which it uses." That is a profound fact, which, if learned thoroughly by all critics of education, would save much paper and ink and many hours of test making and so might solve the present labor-shortage problem.

This lost of mastery through disuse explains, or contributes to the explanation of, many apparent failures of our schools. A boy seems to know no algebra when he comes to college. But it has been, in some cases, from 4 to 6 years since he studied or used the subject. Should we be surprised at the small residue of algebra that remains? It has been years since he studied formal geography. Is it strange that he fails to remember whether Portland, Oreg., is on the Pacific Ocean or on the Columbia River? If you have taught school, you may remember how, when you began, you worked harder than any of your pupils to prepare your daily lessons. I recall how I had to study for the examination for a certificate to teach in an elementary school. After graduation from college I secured a country school with the understanding that I could teach for 2 months without salary while preparing for the examination. If I had failed in this examination, I should not have been able to pay my accumulated board bill. I studied. I should not have passed if I had not reviewed thoroughly. My teachers were in no way responsible for my ignorance. "The mind is master of that only which it uses!" But the imponderable outcomes remain because they are the warp and the woof of our daily living and thinking.

The fact of the matter is that in any test designed to rate the worth of a course or of a teacher we face the difficulty of dealing with human material and processes where many hidden conditions and variables are present. There are those already mentioned, aims and objectives that should determine the form of the test, imponderables that escape identification by the means employed. In any such inquiry we must ask whether the test can solve the problem proposed, what are the limits of probable error, what are the individual differences in ability and achievement among those tested, what pitfalls in thinking endanger a reliable conclusion. Insufficient data, hasty generalizations, incorrect casual relationships, conditional hypotheses, unknown variables that may affect the results or should condition the final answer: perils like these lie in wait for the unskilled. The chemist and the physicist know and appreciate the difficulties because they are scientists. May we hope that some day educators and would-be educators, alike, will master the scientific method, and that the public itself may finally attain an understanding of what is involved in a proof?

Our teaching problems have multiplied manyfold in recent times. Formerly, when the population was homogeneous and the aim was wholly academic and the curriculum was simple, the factual test was much more conclusive. But now, knowledge has increased so rapidly, the education of all youth through the secondary school has become such a universally accepted aim, our youth themselves differ so widely in ability and interests, antecedent home life, culture, economic status, and vocational aims that the old school is manifestly inadequate. The newer efforts to relate school life to community activities, to fit the student for happy and useful living in his community, to do for the large majority what is best for their future, rather than to run all through a college-preparatory course, these present a well-nigh impossible problem for the smaller schools. Especially is this the case while the ideas involved, though educationally sound, are still relatively new and undeveloped. Especially is this true when teachers are inexperienced, underpaid with insecure tenure and many of them are using teaching only as a stepping stone to married life or other professions.

Can our schools succeed in the face of these numerous handicaps, within and without? Can they adequately teach necessary facts and tools, prepare for college, and at the same time meet the obvious necessity for an education for citizenship and personal efficiency, and adapt their training to individual differences and needs? Can they solve the problem of the 25-percent rejection of high-school graduates by the Army for physical deficiencies? It is the educator's firm belief that his idea of what the school should be and do is not visionary but a long-term program that can and must be realized. Only with its realization will the American public school play its fruitful role of making Americans who are worthy of the founding fathers and of the freedoms they enjoy and of the opportunities for richer life that will be ever unfolding.

Global Alphabet

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. MONRONEY. Mr. Speaker, I want to take this occasion to call to the attention of the Congress the outstanding work that is being done by Hon. Robert L. Owen, former Senator from Oklahoma, in the formation and utilization of his global alphabet.

Senator Owen, you will remember, was one of Oklahoma's first United States Senators. He was one of the founders of our present Federal Reserve System, for, as chairman of the Senate Banking Committee, he introduced the measure that resulted in the formation of this system. He is a recognized authority on finance, but in addition is one of the Nation's leading scholars.

In devising and perfecting the global alphabet Senator Owen makes a great contribution to international peace and understanding, by making it possible to write any language in the world through the use of his alphabet.

I am submitting to the House a letter from Senator Owen more clearly outlining the details of the alphabet, and also one from Dr. Mario A. Pei of Columbia University, an international authority on languages, commenting upon the use and possibilities of the alphabet:

WASHINGTON, D. C., *June 12, 1943.*

Hon. A. S. MIKE MONRONEY,

United States House of Representatives.

MY DEAR MIKE: Senate Document 49, a compilation explaining the methods and form of printing and writing the global alphabet is sent you by separate cover and for your special information I submit a brief commentary as to its objects and utility with the reasons why.

1. The world has never had an acceptable alphabet by which all languages could be written or printed and immediately read by an intelligent person knowing any particular language.

2. The global alphabet submitted can write any language in the world acceptably and sufficiently to read the context when one knows the alphabet. This means that Chinese, Japanese, or Spanish can be immediately read by a native who knows the language and takes the trouble to learn the 41 symbols, or letters, which comprise the present global alphabet.

3. This global alphabet can be learned by any intelligent person in 1 or 2 days so that within a comparatively few days of practice he can easily read a book or newspaper printed in his own language in this alphabet.

4. Books printed in this global alphabet giving parallel lines of Spanish and English can teach both the Spaniard and the Englishman to learn each other's language for practical conversational purposes within a very short time. At present, the Army is teaching some of our soldiers to converse in Japanese within 3 or 4 months by using a native teacher and phonograph records for pronunciation. This result could be multiplied many times over by using the global alphabet, which could enable the soldiers to teach themselves a desired foreign language because the substantially correct pronunciation can be given to him by the printed word through suitable booklets and because the printed word could be multiplied through modern mass production very cheaply and could reach the individual soldier everywhere. The task of teaching 30 foreign languages could be greatly simplified by furnishing our soldiers and sailors with a self-teaching system right on the ground where the foreign language can be heard every day by natives and by Americans who know the language and who are using the language in the areas where our armies have occasion to operate.

THE PHONETIC SYSTEM OF WRITING A SPOKEN LANGUAGE

When Moses wrote Genesis, he used a smaller number of letters than the global alphabet. These letters were sufficient by sound to make legible and intelligible the words as spoken, although such letters did not reproduce the sound with absolute accuracy but did indicate what the spoken word was and did so with such accuracy that the text of the Book of Genesis has come down to us through many centuries substantially unimpaired in meaning.

When movable types were discovered, as employed in the Gutenberg Bible, the scholars of the world attempted to write words in letters which should give the word greater accuracy in spelling. In doing so they used combinations of letters and vowels making certain letters silent but which have the effect of giving a different sound to other letters which preceded or followed. These

devices privately established by individuals of literary standing produced great confusion in spelling and in learning how to write and read spoken languages. At present, every modern language is compelled to have two systems of spelling; one, the inherited, scholastic spelling of writers long since dead and whose spelling could not be changed either by consent or decree. Webster's Unabridged Dictionary contains over 604,000 words with this scholastic spelling, but he was compelled to invent a simple phonetic alphabet of 41 symbols by which to phonetically spell with substantial accuracy the words of the English language. The words in Webster's Unabridged Dictionary which are unphonetically spelled following the scholastic, etymological, inherited system numbers about 500,000. With these 41 symbols, Webster gives a satisfactory pronunciation for every word in his dictionary. Other modern languages have the same necessity. The Spanish dictionaries require only 30 phonetic letters to spell Spanish words acceptably; the Russian language is now being taught English-speaking people by the use of 30 phonetic letters. The Turkish language is being taught English-speaking people by the use of only 29 phonetic letters, and so it is with other languages. The written text of visible signs can only give the dependable guide in pronunciation by the use of phonetic letters, each one of which has, or should have, an immutable sound. The letters of a phonetic alphabet should never be silent. The letters of a phonetic alphabet should never have more than one sound, although this is permissible where the context will invariably correct the departure from the rule.

It is surprising the extent to which the context of the printed word clarifies and corrects unphonetic spelling. In Webster's Dictionary he spells over 604,000 words with 26 letters, relying with confidence on the context to tell how such words should be pronounced, in spite of their spelling. Educated people in modern languages, in practically all modern languages, have the same experience. The context nearly always corrects the inadequacy of unphonetic spelling.

The global alphabet differs from all other alphabets in the world by using a new form for each and every letter employed. This is done for the reason that all other alphabets, including the English alphabet, employs letters having the same forms as those of the Roman alphabet. The letters of the Roman alphabet have, every one of them, multiple meanings as employed not only in individual languages but in other languages so that a student in using the letters having the form of the Roman alphabet finds himself hopelessly confused by letters having multiple meanings.

Because the new global alphabet can be learned in a single day and thereafter be employed with accuracy in writing any language, the global alphabet as here submitted contains a key to writing, reading, and printing any language and all languages for those who use it.

It has been said by respectable authorities that there is no right way or wrong way in writing words phonetically. What is really meant by this is that there is no right way or wrong way established by a competent authority for pronouncing any word because the common people, and educated people for that matter, pronounce many words of the same identical meaning with slight variations of sound, particularly in dealing with the vowels.

A simple example of this is the word "above." The dictionary makes the first syllable the letter "a" which may be pronounced by any one of the "a" sounds, and Webster gives seven different sounds for the letter "a," but most people pronounce the first syllable of that word as if it were the letter "u" in the word but.

The real point is that the phonetic spelling should correctly express what the spoken word is whether the spoken word be standardized on established authority or not.

However, when phonetic writing becomes established, the scholars of the world will decree what is the best pronunciation employed by the educated people of any country.

The fact that the global alphabet can be learned thoroughly within a day or two and immediately used as a means of writing, reading, and printing any language will save the children of the world untold billions of hours of labor in learning to read and write the languages of the world.

It will do more; it will open immediately the doors of knowledge printed in suitable books so as to make available to all mankind improved methods of production, the arts and sciences, and the comforts, conveniences, and luxuries of life. It can immediately make available to them the highest moral and ethical standards and the most serviceable methods of government and of social intercourse. It opens the door to a new world where all men will know at least one language which would be common to those they meet.

While there are literally thousands of languages and dialects, it is also true that only 30 or 40 languages are important and of these a half a dozen might compete for general acceptance.

One of the incalculable services which could be rendered to the United States and to the United Nations by the global alphabet is to immediately enable the citizens of each of the United Nations to understand, in addition to their own native tongue, several other of the great languages, including English as a matter of better international cooperative understanding and appreciation.

Few people realize how easy it is and how quickly a conversational knowledge of other languages may be achieved.

It only takes about 1,200 words with their derivatives to speak another language so as to be understood and so as to understand the foreign language. The Reader's Digest of May 1943, page 40, shows how ordinary soldiers of the United States can be taught to converse in and understand Japanese within 3 or 4 months. In a self-teaching book such as I have above described, a foreign language could be still more rapidly learned.

It is inconceivable that the intelligence of mankind should fail to utilize the global alphabet and the principles upon which it is founded, since it could and would immediately open the doors of knowledge to God's little messengers everywhere on the face of the earth and bring more abundant food and clothing and shelter and happiness to the people everywhere in the whole world.

With kindest regards believe me, as ever my dear friend,

Yours faithfully,

ROBERT L. OWEN.

COLUMBIA UNIVERSITY,
New York, June 11, 1943.

Hon. ROBERT L. OWEN,
Washington, D. C.

DEAR MR. OWEN: Yesterday I received the single copy of Senate Document 49 which you sent me under separate cover from the others. I imagine I shall find these today when I go down to Columbia.

Just as soon as the Coordinator of Inter-American Affairs approves the method followed in the 2 sample lessons which I submitted to them yesterday, I shall go to work on the 52 English lessons. It will be a simple matter indeed to send you carbon copies of them as they are prepared. You may also be sure that you will receive copies of the replies of all my experts as they come in. In the case of some of them it may take months, as they are now away for the summer. The project, however, is a great and important undertaking, and its application to the world's 40 or 50 leading languages may be expected to take a full year.

It is possible that by this time you may have received the material from my forthcoming book, which my publishers sent you 2 days ago. As you go over this at your own leisure, it will be interesting for you to visualize the application of your alphabet to each individual language from the description of the sounds of that language, which I have approximated to English sounds insofar as it was possible to do so. It may be that after we succeed, with the help of experts in each tongue, in applying your alphabet to the languages I describe in my book, you will be interested in collaborating in the production of a second edition of that book, in which the individual characters of the various languages are discarded, and the language is presented throughout in global alphabet characters.

I should like to ask you whether you have any objection to newspaper or magazine publicity in connection with your alphabet. My work has attracted a good deal of publicity of that nature within the past year, and some editors have inquired whether I had any plans for an international language in mind. I had to tell them frankly that I had not; there are several auxiliary artificial languages already in existence, but they present grave difficulties of application. Your global alphabet, on the other hand, presents attractive possibilities of making the study of existing national tongues infinitely easier than it is at present; it also removes what has hitherto been by far the most serious handicap to the spreading of English as an international auxiliary language.

English, as you undoubtedly know, is an ideal international tongue in all respects but one, the tremendous spread between its spelling and its pronunciation. With this difficulty removed by the use of your alphabet, there is no reason why its use should not spread over the world at an infinitely swifter pace than it ever could or would in its present written form. Its grammatical structure is simpler than that of any other existing tongue; its vocabulary represents an excellent blending of the two most important linguistic group in the world, the Germanic and the Latin-Romance, with copious borrowings from Greek and other sources and an infinite capacity for assimilation of words from all sources. The next time a newspaper or magazine editor speaks to me of an international tongue, I should like to mention your global alphabet and its possibilities and implications, with your permission. Of course, in any article that might be written on the subject, full credit would be given you as the creator of the alphabet, and my own role would be truthfully described as that of one who is endeavoring to apply it to a group of world languages. If for any reason you object to publicity at the present time, however, I shall, of course, refrain, although it seems to me that the sooner the idea is brought before a world-public hungry for international understanding, the sooner it will come to fruition.

If you come to New York next week, I shall be more than delighted to meet you and discuss all these matters with you. It will probably be easier for me to go wherever you will be stopping than for you to come up to Columbia to see me, and if you will let me know in advance where you will be, I shall come to you.

With kindest regards and best wishes, I am,

Very sincerely yours,

MARIO A. PEI.

P. S.—I was particularly interested in the opinions of the Government's oriental experts, which did not appear in the outline

you had originally sent to Columbia. They bear out my own conclusions as to the applicability of your alphabet. The Chinese expert's statements concerning his country's need for such a device is especially striking. Chinese illiteracy could fast be wiped out by this means.

[From the New York Times of June 11, 1943]

G. B. SHAW HAS ECONOMY PLAN

LONDON, June 10.—George Bernard Shaw explained in a letter to the Times, London, today how the Allies could save enough money to pay for the European invasion, and even the whole war, merely by simplifying spelling. Entering a controversy over the use of "fone" for "phone," he asked readers to consider how the elimination of one letter would conserve machinery, paper, and labor.

The Roll-Back and Subsidy Problem

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an unusually interesting statement made by Albert S. Goss, master of the National Grange, before the Senate Committee on Banking and Currency, on June 15, 1943, in which he discusses the roll-back and subsidy problem from the farmers' standpoint.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The pending measure relating to the Commodity Credit Corporation provides for changing the basis of taking inventories, for more operating funds, for extending the life of the corporation, and for audit by the General Accounting Office. We approve of the basis for taking inventories and the provisions for audit. We believe the Corporation has an essential purpose to serve during the war emergency; that its life should be extended for 2 years; and that it should have sufficient funds to carry out the purpose of Congress. We believe, however, that in some of its activities the Corporation has not been carrying out the purpose of Congress, and that it is the intention to use some of the funds sought in a manner which is in violation of the intent and purpose of Congress, and which will lead to serious trouble unless Congress makes it very plain what its intent and purpose is and expressly prohibits the use of any of the funds in contravention of such purpose. I refer particularly to the use of subsidies in lieu of fair prices for farmers. The Commodity Credit Corporation claims authority for such use is found in the Price Control Acts. Because of the wording of the acts and in view of the limitations later provided, we cannot agree with this claim. Since the Commodity Credit Corporation is largely relied on as a means of carrying out a subsidy program, we believe that in extending the life of the Corporation, Congress should state clearly how it is to be used, and in providing funds, Congress should leave no room for misunderstanding as to what should be done, and what should not be done with those funds.

We, therefore, wish to address our remarks to the general subject of the use to which the Commodity Credit Corporation and its funds will be put. Involved in the question are such far-reaching problems as the effect on our food supply, inflation, price ceilings, and subsidies. Much of what we shall say has been discussed before the Agricultural Committee of the Senate, but we believe the bill under consideration will largely determine whether or not a sound course is pursued, and merits some repetition.

FOOD SUPPLY

If properly used the Corporation can assist greatly in making it possible to maintain a maximum food supply. If used to bolster up any unsound price-ceiling program which would strangle production, the Corporation may prove a very real detriment in our efforts to produce food. An ample supply of food is one of our most difficult problems. If present policies are continued, food will soon be our No. 1 problem. In our judgment we have passed the peak of production and are well down on the declining side. Only by most vigorous action can the trend be changed, but almost every major policy of Government today is contributing to more serious shortages. It is time for some sound thinking and some farsighted statesmanship, instead of yielding to the excellent demand of those who are trying to make the people believe that by financial juggling they can increase the price to the producer and reduce it to the consumer. In our judgment our food situation is far more serious than any statistics yet released by the Department of Agriculture have revealed. For months all the reports we have been able to get from the field have indicated that the official crop outlook figures are much too optimistic, and we note that each month's revision tends to bear out the correctness of our observations. Much of this shortage is bureaucratically made and wholly unnecessary, but we are going right ahead with the same destructive policies unless Congress calls a halt.

In our judgment the time is past due when Congress should take a firm stand for policies which will assure a maximum food supply. These policies have to do principally with manpower, machinery and supplies, and price. Since the policies of the Commodity Credit Corporation affect price much more than manpower and machinery, we will not discuss that last two. We want to impress upon you as strongly as we can that the food problem is very serious.

INFLATION

The dangers of inflation are too well known to require discussion further than to say that because farmers are opposing the unworkable price ceiling-subsidy method of control, we have been viciously pictured as inflationists. Farmers are not inflationists. We lost our shirts following the last war and we have not forgotten. We are opposing a theoretical method which has never worked in all history over an extended period, and are insisting on a sound system even though it does involve the very practical though painful necessity of paying for what we eat.

Before we consider methods for the control of inflation, it would be well to consider the causes which bring it about. There are two chief causes of inflation. First is the pressure of surplus income upon an inadequate supply of consumer goods. Second is the loss of faith in the Government's ability to meet its obligations, or to pay its debts in dollars having the same value as the dollar it borrowed.

It is estimated that the total of individual income for 1943, after paying taxes, will be approximately $124,000,000,000. At present values the available consumers goods will amount to approximately eighty-two billions. This leaves an inflationary gap of forty-two billions. There are numerous estimates as to how much of this will go into savings varying from fifteen to twenty-five billions. This leaves an income in excess of consumer goods of from seventeen to twenty-seven billion dollars, all seeking an outlet.

There are two distinct schools of thought with reference to the control of inflation. One school favors establishing price ceilings, enforced by fines and penalties. The other advocates making use of economic forces by increasing production of goods and controlling purchasing power.

Those following the first school of thought, propose to erect a price-ceiling dam against this excess income, and thereby shut off the spending outlet. They reason that our economy was in fairly good balance on some given date, and they would freeze everything at that spot. They would thereby prevent any price rises in order to prevent inflation. This is fallacious reasoning, as all history has adequately demonstrated, for never have price ceilings prevented inflation over an extended period in the history of the world, although they have been tried hundreds of times.

The chief reason why price ceilings fail is that they ignore production costs and shut off the supply of goods. In wartime, there are many items of cost which arise from war dislocation that cannot be controlled by any price-ceiling method. On the farm we send our experienced young men to war and replace them with young boys and old men. We can control the wages by wage ceilings, but the substitutes do only half as much work and our labor cost is doubled. There are hundreds of uncontrollable war dislocation costs which force up the costs of consumer goods. When these costs bump into the ceilings, production is strangled, and the inflationary gap is increased.

Judge John D. Miller, long a student of attempts of price ceilings has put it very well when he said:

"We hold it to be self-evident that an effective ceiling on the price of any commodity will in due time restrict the production of that commodity to the quantity that can be produced at that price."

Various methods have been tried to prevent prices from rising. Of course if wages, services, and everything else are strictly controlled, the rise will be slower than where part of the economy is left uncontrolled, but such universal control leads to complete regimentation and even then it has always eventually blown up, not only because of the terrific cost and the unwieldiness of the bureaucracy which was necessary for enforcement, but finally because the production of food was strangled. The experiments in Rome about 300 A. D. and in France following the Revolution are classical examples. In the case of Rome, local autonomy disappeared and was replaced by a huge bureaucracy before the crash came. In the case of France, the historians tell us the attempt "Converted a scarcity into a famine."

We are well on our way toward making these same blunders. In fact, we have already made a lot of them. By bungling price-control methods we have already created a lot of unnecessary food shortages and driven many items into black markets, where the consumer is trimmed up right, and we are rapidly creating a bureaucracy which is constantly finding it necessary to seek more power and regiment more activities to offset the effects of blunders previously made. At first we attempted to control almost everything except labor, which was specifically omitted. Everyone knew it couldn't work, but we tried it. Later, an effort was made to include labor, but the issue has been deliberately evaded, while price ceilings have driven a steadily-increasing volume of consumer goods into black markets, and production of many lines has been strangled. It is now proposed to roll back prices, not wages, and hold the line. You are asked to approve an increased appropriation for

the Commodity Credit Corporation, an undisclosed portion of which would be used to bolster up this whole unsound program by the use of subsidies, to prevent strangling production.

WE OPPOSE SUBSIDIES

We are opposed to the use of subsidies for such purposes because they will not work, for reasons which I will discuss.

First, however, we want to point out two or three more fallacies in the price-control system as we have tried to operate it. There are 10,000 hamlets and crossroads in America, each with its own individual production and marketing characteristics. We go into the mountains of Montana, where costs are high, and we find miners and stockmen paying more for their food. The law of supply and demand has adjusted prices to costs. We go into the mountains of the Carolinas, where costs are low, and we find the people are paying low prices for their food. The law of supply and demand has again adjusted prices to costs. Both places are equally distant from the railroad. Under the Office of Price Administration, they are forced into a common mold. It is an extreme example, but to a greater or less degree, it is typical of what is attempted all over America. The production may not be large in an individual high-cost area, but in the aggregate it is enormous, and this production is largely curtailed or destroyed by rigid price ceilings. No system of subsidies can be devised to meet the tens of thousands of conditions which prevail, and the daily changes which are occurring by reason of dislocation costs.

We have pointed out the enormous inflationary gap we now face. These are not static figures. They will get progressively worse. Assuming that we could dam a $15,000,000,000 flood, we must not forget that it is accumulating; that it will be twenty billions by fall, twenty-five billions by winter, and forty or fifty billions a year from now. Holding it back by price ceilings and subsidies is a complete impossibility.

LET'S LOOK AT THE RECORD

In making use of subsidies we believe the intent and purpose of Congress is being violated. Section 2 (e) of the Emergency Price Control Act of January 30, 1942, authorizes the use of subsidies whenever the Administrator determines that the maximum necessary production of any commodity is being obtained but the subsidy payments are to be made to domestic producers of such commodity in such amounts and in such manner, and upon such terms and conditions as he determines to be necessary to obtain the maximum necessary production thereof. It will be noted that the sole purpose is to get maximum production. There is no authority whatever for paying subsidies to reduce prices to the consumers.

This section also provides for paying subsidies for the production of strategic or critical material. The arguments for subsidy payment were largely based on the need for subsidizing high cost copper producers in order to get production without upsetting the markets. It was generally supposed that subsidies, if used, would be used in this manner.

After the bill had been in operation some time it became apparent that it was the plan to use subsidies to hold prices down to the consumer, rather than to increase production. When a bill was presented for providing an undisclosed amount to be used to pay subsidies, the Senate expressed its displeasure with the proposal so vigorously that the bill was withdrawn.

Nevertheless it continued to be apparent that it was the intent of the Administrator of the Office of Price Administration to use subsidies in lieu of a fair price. We discussed this with the President, presenting our reasons why we felt it would be a mistake to use subsidies in lieu of a fair price, but found that the plans for using subsidies were apparently pretty definitely determined upon. Therefore, when the price-control bills were introduced after the President's Labor Day message, we appeared before this committee and called attention to the danger. We said:

"Subsidies are not mentioned in the President's message. Subsidies are not mentioned in the bill, but all the powers are there for their use if the President so decides. Congress should not pass by such a vital issue without an understanding on it. We believe Congress should set forth the policy of meeting the costs of war dislocations now, by assuring enough flexibility in ceilings to meet these unavoidable costs.

"We recommend that this principle be written into the measure itself by adding the following words after the word 'President' in the second sentence: 'Shall adjust prices where necessary to maintain adequate production goals and.' "

We presented a number of reasons why subsidies should be avoided. Congress adopted the principle we suggested when it included the following limiting proviso after setting up the September 15 price level as a base:

"Provided further, That modification shall be made in maximum prices established for any agricultural commodity and for commodities processed or manufactured in whole or substantial part from any agricultural commodity, under regulations to be prescribed by the President, in any case where it appears that modification is necessary to increase the production of such commodity for war purposes, etc."

This was a definite limitation of the powers granted and reaffirmed the productive purposes of the Emergency Price Control Act.

We felt this was a clear mandate to adjust price ceilings where necessary to obtain production, but various kinds of subsidies have been used in spite of this mandate. We believe Congress should now make its intent and purpose so plain in the pending bill that there can be no room for misunderstanding and that the use of the funds should be restricted to the purpose expressed.

REASON FOR OPPOSING SUBSIDIES

Now, to enumerate some of the reasons why we oppose subsidies and believe safeguards should be provided against their use:

1. They are inflationary and will defeat the purpose sought to be accomplished.

(a) Subsidies are paid from Federal funds which must be borrowed. About 80 percent is borrowed from banks and directly increases the surplus income to the extent of such borrowing, thus increasing the inflationary gap.

(b) Nothing will cause a greater loss of confidence in the financial soundness of our Government than to follow a policy of unwillingness to pay our bills as we go, as far as we can. In the days of our greatest national income, if America refuses to pay its food bill, but passes it on to future generations, it is clear that we are deliberately pursuing a policy that leads straight to bankruptcy. Every thinking person knows that such a policy long continued must result in a financial crash.

2. Subsidies in lieu of fair prices will lead to post-war chaos. The goal of the present policy is to maintain a rigid price ceiling with the use of subsidies to meet the ever-increasing dislocation costs of production. As the war progresses, dislocation costs will increase and we will find it necessary to increase the subsidies. Thus our price structure will become more unbalanced day by day. If we are to avoid bankruptcy, when the war is over, we must balance our budget. When that day comes, subsidies will be the first thing to be cut off. Then, one of two things will happen. Either farmers will have to get higher prices to meet their costs, or quit producing.

If we do not have the moral or political courage to pay the cost of our food bill during these days of billions of dollars of excess income and full employment, what chance would there be to raise food prices when men come back from the Army hunting jobs, and when income starts down?

The answer is, none whatever, and the result will be farm bankruptcy and chaos worse than that following the last war, which was, at least, not complicated by subsidies.

3. Subsidies pass on to future generations costs which this generation should bear. It is almost axiomatic that we cannot fight a world war and raise our standards of living at the same time. But that is exactly what we are trying to do. How many of us are worse off financially than before the war started? For most of us our incomes have gone up far faster than our outgo, and we know very well that somebody has got to pay for the enormous destruction going on. The President has repeatedly said we cannot expect to maintain our high living standards during the war. However, instead of facing the facts and paying the necessary increased living and operation costs—and you will note I am omitting actual war costs—we are insisting on passing these costs on to future generations, and are trying to live better today than ever. While millions of our young men are risking their lives at $600 a year, and we at home are enjoying the greatest income in history, we feel that it is thoroughly dishonorable to refuse to pay our food bill and pass some billions of it on to these young men to pay when they come home. What are they going to say about it? If there is anything which would invite repudiation, it is a subsidy program such as the administration is trying to launch.

4. Subsidies lead to the dangerous doctrine of expecting the state to support its people. There was never a time when it was more necessary for the people to support the state than today, but seldom if ever have more people been willing to dodge the responsibility and let the state support them by straining its credit to the danger point.

5. Subsidies lead to political control, and when once used, they are politically almost impossible to get rid of. They are another step toward authoritarian control. The Supreme Court recently expressed it well. An Ohio farmer refused to pay his overproduction fine, arguing that the law had been passed after his wheat crop had been planted, and he was denied the protection of the Constitution, which prohibits taking property "without due process of law." Pointing out that wheat prices were being maintained by subsidies, the Supreme Court said, "It is hardly lack of due process for the Government to regulate that which it subsidizes." No one can quarrel with the reasoning, but it should be a warning to avoid using subsidies unless we want more Government regulation.

6. Subsidy theorists try to make economic law work backwards. Normally rising prices encourage production, and discourage consumption. As the supply increases, prices come down and consumption goes up. Subsidies upset this normal process. To the extent that they are not dependable and do not get back to the producer, they fail to encourage production, but they do encourage consumption. As an example, we now have a 5-cent butter roll-back. This will encourage butter consumption, but the 5 cents does not get back to the small butter producer. He merely takes a 5-cent cut in price, and many can't stand it and are quitting. Incidentally, when we start messing with economic law this way we can never figure out all the complications which will result from it. A large part of our dairy products are sold under contracts based on butter prices. We have

rolled back the butter price 5 cents a pound thus cutting the price on a lot of other products without providing any subsidy to make up for the loss. In times like these with food so scarce it seems little short of criminal to permit the further destruction of our food supply in order to carry out the ideas of a lot of theorists or agitators who don't understand what they are doing.

Subsidies are a demagogue's paradise. Fine sounding arguments can be made for them because they will bring low costs to the consumer and high returns to the producer. Of course we cannot live on borrowed money long in any such blissful state, but pay day is conveniehtly forgotten except by some who are bold enough or frank enough to support subsidies as a means of redistributing the wealth of the people.

There are many reasons why subsidies are dangerous and should be avoided, but we will not encroach further on your time to enumerate them. If there were no better way, one might be excused for advocating subsidies, but there is a way which will work.

INFLATION CURE

The only way inflation has ever been cured is to bring supply and demand into balance. Where countries have been too weak to face the issue, and have tried a lot of expedients, to hold the support of the voters, economic law has eventually stepped in and solved the problem by reducing the purchasing power of money until there was little spending power left, and the supply then caught up with the demand. That is inflation. Inflation means making money so cheap it will not buy anything. It can be prevented by three or four constructive steps.

First, encourage the production of needed goods. There never was inflation where there was an abundant supply. As we have said we will not discuss labor or machinery at this time for in the consideration of the subject before your committee we are concerned chiefly with price. The price must be sufficient to secure as much production as can be reasonably expected. If it is too low to attain this end, a support price may be necessary. It may be pertinent to point out the difference between a support price and a subsidy.

SUPPORT PRICES

Years ago we found out that unlimited competition often destroy supply. We prohibited railroads from cutting rates to destructive levels. We set up controls for minimum premiums for insurance companies. In other words, we sets floors designed to prevent prices falling below cost in order to protect certain essential services from destruction. This was no subsidy. There was no element of gift in it. It was merely protection against a destructive practice.

When floors are placed under farm prices to prevent them going so low as to destroy production, the same principle is employed. This is a very different practice from paying out cash in order to hold prices down to the consumer. Usually a support price requires little expenditure. Its purpose is to bring prices into a reasonable economic balance or relationship. The very fact that the money is available frequently stabilizes the market at an equitable level. Even when it becomes necessary actually to buy the commodity, the market usually adjusts itself, so that when the commodity is sold no loss ensues. The purpose of a support price is to aid in bringing about a reasonable price relationship which may have been upset by unusual circumstances or some emergency. A support price does not develop an unbalanced price structure such as would lead to chaotic conditions following a subsidy program. The Commodity Credit Corporation has been used very helpfully in maintaining such support prices. To the extent that it has employed such principles, it has not cost the Government any money.

When a support price is used in connection with a ceiling which holds the normal market down, and thereby makes the support price necessary, or when a support price is used to buy a commodity and sell it for less than the cost, such a support becomes a subsidy and takes on all the dangerous characteristics of a cash subsidy. That is a practice which has been employed by the Commodity Credit Corporation and one which should be prohibited by law. If there are some commodities where such a policy is justified by reason of special or unusual circumstances, Congress should define or determine those circumstances, and not some one who might want to use the subsidy to bolster up an unsound price control experiment, or possibly for political purposes. A support price which is necessary to secure production and which is not used in connection with a ceiling or other device in lieu of a fair price is sound.

ADJUST THE DEMAND TO FIT THE SUPPLY

If, after all reasonable steps have been taken to encourage production, and the supply will still not meet the demand, then the remedy is to adjust the demand to fit the supply. This can be done in two ways.

1. By syphoning off surplus income. Some of the surplus income will inevitably be syphoned off by paying the increased dislocation costs of producing the food and other commodities people demand. This means that we will all have to tighten our belts a little, but if there are no preferred groups allowed to dodge this responsibility, the cost will not be too heavy. Any excess income should be reached through taxation and forced savings. The savings should be such that the money stays saved until the war and the inflationary aftermath are over.

2. By rationing, so that all may share equitably in the limited supply. Rationing which fails to cut the demand to fit the supply defeats its purpose. It is possible to ration so as to have a surplus and thereby largely control price. Thus economic law takes the place of an intricate system of price ceilings, margins, grades, and differentials, and about 90 percent of the regulatory work of a price-control administration could be dispensed with. Price ceilings should be used only to prevent profiteering.

PRICE CEILING SUBSIDY HAS NEVER WORKED

Our statement that the price ceiling subsidy method of control has never worked over an extended period has been challenged. It is claimed that it is working successfully in Canada and England. These claims merit investigation.

Both countries have employed other methods which have had a very real influence in holding down inflation, and the results of those methods have wrongly been attributed to price ceilings. In neither country are the returns all in and will not be until the bill is paid. In neither country has the success been what is claimed for it.

CANADA

The advices we have from Canada are that production is going down fast, and the farm organizations say it is not working satisfactorily. Any system which maintains price temporarily at the expense of supply is headed for collapse.

ENGLAND

Before pointing out the difference in conditions between this country and England which make comparisons of little value, it might be well to ask ourselves if we want to model our country after England. Many of our people came here to escape from conditions which prevail in England, and we have built this country to suit ourselves. Our experience is that most Americans who go to England are mighty glad to get back.

Sixty percent of the Englishman's income goes for food, leaving but 40 percent for all other uses.

Twenty-two percent of our incomes goes for food, believed to be the lowest percent in the world.

England has had labor and industrial conscription for 3 years which requires all "persons to place themselves, their services, and their property at the disposal of His Majesty."

England's standards of living are far below ours. For example, an Englishman is allowed 23 cents worth of meat per week including the bone. Those who eat in restaurants are allowed one penny's worth of meat per meal.

We have great respect for what the English are doing but we see no reason for adopting English methods for this country. There are many reasons why the conditions are not comparable.

1. England is an industrial nation with a food deficiency. Only 7 percent of her people are farmers. Her interests lie in holding the world levels of food prices down to the minimum. The 93 percent could well afford to subsidize the 7 percent if she could accomplish such a purpose.

2. If England did not import 40 percent of her food, mostly from us, she would starve.

3. England does not have to borrow to pay her food subsidies and thus widen the inflationary gap. As a matter of fact, we are paying those subsidies. During the 2 years ending March 1, 1943, we shipped to England under lend-lease $1,449,064,000 in food. She sells this food to her people for cash, and during these 2 years she paid food subsidies estimated at $730,000,000, so she has had enough income from lend-lease to pay the subsidies nearly twice over.

4. England has largely closed her inflationary gap, and so does not have the surplus income which is responsible for bidding up prices. England is levying enough taxes to pay more than half its war cost. To indicate how drastically she has cut surplus income, 3 years ago there were 7,000 individuals who had an income of over $25,000 a year after paying taxes. Last year, that 7,000 had been reduced to 80. In addition to this, England has sales taxes ranging from 12 to 72 percent on the retail price.

Even with all these devices, England has not held her costs as well as claimed. Her food index contains only 14 items, largely those received from us, which are under perfect ocntrol. She omits from her index many home-produced foods such as all fresh fruit, all fresh vegetables, and all canned goods. The prices on these have risen sharply, have had to maintain production, but this actual increase does not show in their stable living figures.

On top of it all, the Englishman is buying a lot of his food through black markets at high but unrecorded prices. They have proved so serious that England has raised the penalties for violation up to 14 years in prison plus $20,000 fine. In spite of these extreme penalties, prosecutions have increased 320 percent during the past 2 years, and the Ministry of Food recently warned Parliament that black markets are becoming so serious "they are a danger to our cause."

Please do not misunderstand us; we are neither criticizing England nor complaining about lend-lease. England has done a wonderful job of holding the line. That point is not under discussion. We merely want to point out that the conditions in England are very different from here and that England's experience does not warrant our following in her footsteps.

REMEDIES

It has seemed to us that the purpose of Congress in rejecting subsidies in lieu of a price necessary to secure production is clear,

nevertheless we are faced with the fact that the law has not been interpreted or administered as intended. We believe all uncertainty should be cleared up. We recommend:

1. The inclusion of a definite statement of purpose setting forth that it is the intent and purpose of Congress to avoid the use of public funds to prevent agricultural commodity prices from seeking a level necessary to secure adequate production for war purposes.

2. No subsidies should be paid directly or indirectly either to support or roll back prices or to prevent prices seeking a level necessary to secure maximum production, unless Congress specifically so provides. Exception should be made in the case of existing contracts which have passed out of governmental control.

3. No direct or indirect subsidy should be paid to any producer, processor, or distributor of any agricultural commodity upon which any maximum price is in effect, except as may be expressly authorized by Congress.

4. Except as normal market conditions justify, no maximum price should be placed on any commodity below the support price so long as the Commodity Credit Corporation holds any such commodity either under loan or through purchase.

5. We have an impossible situation where the Office of Price Administration can slap on a price ceiling which will strangle production, or can let buying power run wild with no adequate rationing system to hold it in check, and the Administrator of the War Food Administration has no authority to adjust the price or influence the distribution. The War Food Administrator should have the complete control of all governmental functions connected with the production and distribution of food, including the regulation of price ceilings and rationing. If this is not done, at least the War Food Administrator should have the right of veto of any maximum price placed on any agricultural commodity or any commodity processed in whole or substantial part therefrom.

To make these recommendations effective we propose the following amendment to take the place of section 5:

"SEC. 5. Whenever a maximum price or prices shall have been established for any agricultural commodity or any commodity processed or manufactured in whole or substantial part from any agricultural commodity, including milk and its products and livestock, under authority of the Emergency Price Control Act of 1942 as amended by Public Law No. 729, approved October 2, 1942, no subsidy or other payments other than those which have accrued prior to the effective date hereof, shall be made either directly or indirectly by the Government or any agency thereof, including any Government-owned or Government-controlled corporation, to a producer, processor, manufacturer, or any other person engaged in the production, marketing, distribution, or handling of any such commodity either (1) for any reduction or roll-back of maximum prices so established as may have been or may hereafter be ordered, or (2) as a substitute for or in lieu of increasing maximum prices already or hereafter established, from any funds heretofore or hereafter appropriated to, borrowed under congressional authorization by, or in the custody or control of any governmental agency, including any Government-owned or controlled corporation, unless the Congress shall have specifically authorized the use of such funds for such purpose, except that the foregoing prohibition shall not apply until the end of the current crop season to any such commodity, other than milk and livestock and the products thereof, with respect to which the Government or any agency thereof was committed to the payment of such subsidies or other payment on June 15, 1943. *Provided*, That nothing contained in this section shall be construed to prevent the payment of all or any part of the purchase price or adjusted purchase price heretofore or hereafter paid or to be paid for such commodities sold to any governmental agency for governmental use. The definition of the term "person" in Section 302 (h) of the Emergency Price Control Act of 1942, shall apply to the term "person" as used herein.

"SEC. 6. Notwithstanding any other provision of law the Price Administrator is hereby authorized and directed to make such modifications of a maximum price or prices established on any agricultural commodity or any commodity processed in whole or substantial part from any agricultural commodity, including milk and its products and livestock, under the authority of the Emergency Price Control Act of 1942, as amended by Public Law No. 729, approved October 2, 1942, as the War Food Administrator determines is necessary to secure adequate production of such commodity for war purposes."

The Farm Program

REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. STEWART. Mr. Speaker, the cattlemen of this country are at the crossroads; they have reached the dilemma whether they shall continue to raise cattle or place their herds on the market this summer and fall.

We are agreed that beef is the lifeblood of our armed and civilian people and if some assurance by those in authority is not given the cattleman, guaranteeing sufficient protein feed for this winter, there is nothing left for him but to put his cattle on the slaughter block. Someone who understands the cattle business from the grass roots up should be put in charge of this all-important industry; no cattleman can afford to hold his cattle off the market with the coming of the winter months when there exists such an uncertainty as exists today as to whether he can have an allowance or allotment of feed. He should be told within a very short time the situation as to the availability for feed, and the amount he will receive. He should be told whether or not he should only place a certain percent or all of his cattle upon the market with a guaranty for sufficient feed if he is permitted to keep any of them.

August 1 will be the dead line for the cattleman to make a decision. The time is ripe for governmental agencies having control to give this question immediate and serious consideration. When once the small herds of the country are sold off, soon to follow will be a food shortage that cannot be rejuvenated in a few short years. It takes years to build up a herd of cattle, but, to the contrary, it takes but a short time to go out of the cattle business.

The farmer and cattleman are not pleased with the roll-back on beef price ceilings; they are all fed up on appeasing certain organized labor leaders who, to this good date, have received everything they have asked for at the expense of the farmer, cattleman, and small businessman. The difference between the farmer and the cattleman on the one side and organized labor on the other is simple. They are told the roll-back on farm commodities is to keep down inflation and an increase in wages is to meet the cost of living for the unions, which has a greater tendency to cause inflation, but organized labor get their demands.

Ferdie Deering, acting editor of the Farmer-Stockman of Oklahoma City, has written Mr. Chester C. Davis and given him a true and graphic picture of the small cattleman in southwest Oklahoma, and I trust Mr. Davis will read this letter and take immediate steps to stabilize the cattle industry.

Prompt action must be taken or we are going to be confronted with the greatest food shortage in history, and it will take many years to put us back in the cattle business to where we are today.

The letter is as follows:

THE FARMER-STOCKMAN,
Oklahoma City, Okla., June 11, 1943.

Mr. CHESTER C. DAVIS,
War Food Administrator,
Washington, D. C.

DEAR MR. DAVIS: Yesterday at Mangum, Okla., the Farmer-Stockman conducted another one of its Farmer-Stockman forums. These meetings are of small selected groups of representative farmers who are not talked to by outside speakers but whose opinions are asked and who participate freely in a discussion. They are part of our program of going directly to the farmers for information concerning the farm program.

At this meeting we had a small group of representative farmers and ranchers from five southwestern Oklahoma counties. The gist of the meeting I consider very important and would like to pass on to you the information gained, for whatever value it may have to you.

To start the discussion I asked the hypothetical question, "In the light of present conditions and the outlook for the next 6 months as you see it, what is the best course for a man with 30 steers to follow?"

The first man to speak said, "That hits me exactly, because I have just 30 steers and the way things look now I am going to sell them." As the discussion went on, his idea and that of the other farmers and ranchers present, which included some who had more and some who had less steers, all of whom had heifers and cows, was repeated by others in the group. The discussion resolved itself into two important points upon which action must come within the next 45 days. Those two points are:

First, assurance that the roll-back on beef price ceilings will not be made effective so that farmers will be forced to suffer on prices as the hog men are. In other words, leave the price of beef alone. The ranchers consider the roll-back an appeasement policy for John L. Lewis and nobody believes that the subsidy offered will actually get back to the producers.

Second, the ranchers must know what to expect in the way of feed supplies. They do not expect to receive as much protein supplement or other feeds during the coming winter as they normally would use. They are willing to go along with a distribution plan which would distribute feed available on any fair basis, but the total absence of any definite policy by the Government regarding this feed prevents them from completing

their plans. August 1 was set as the absolute deadline for deciding what to do.

Without some definite policy on these two points, August will see a rush to market of livestock comparable to the drought marketings of 1934–35. Because of prices and other things, marketings this spring have been smaller than normal with more animals backing up on the farms and ranches.

It is true that the majority of our farms and ranches in this section, particularly the smaller units, are overstocked and some liquidation would be desirable. But unless farmers are given something definite on these points, this liquidation will go far beyond a desirable marketing and will cut deeply into our cow herds and breeding stock, which would be very harmful to our livestock production next year and in the years to come.

I note in your address to the cattle and beef industry advisory committee in Chicago on June 8 you recognized these problems. I feel that you have some appreciation of what the ranchers are up against. My purpose in writing you again is simply to convey whatever information I have, and to urge again immediate action so that the ranchers may complete their plans at the earliest possible date. Then if they are going to be forced out of the cattle business by circumstances, they can convert their operations to some other form of war production which is badly needed.

Very truly yours,

FERDIE DEERING,
Acting Editor.

America's Fighting Congress

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 15 (legislative day of Monday, May 24), 1943

Mr. BRIDGES. Mr. President, "America's Fighting Congress" is the title of an article appearing in the Washington Star of Sunday, June 13, by Dr. Will P. Kennedy.

It is gratifying that this record of the fighting Congress has been written by a man such as Dr. Kennedy, who holds a degree of doctor of literature and who, because of daily association with Congress for more than 30 years, is a dean of the press. His only son, John R. Kennedy, is now serving in the Navy.

This comprehensive article is a credit to the Congress.

Mr. President, on the last day the Senate was in session before the recess I asked unanimous consent to have printed in the Appendix an article written by Dr. Will P. Kennedy on the subject "America's Fighting Congress." The article was returned to me because it was longer than is allowed to be printed in the Appendix without obtaining special permission. I have ascertained that the approximate cost of printing the article will be $126, and I renew my request that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"AMERICA'S FIGHTING CONGRESS"

(By William P. Kennedy, Litt. D., Dean of the Capitol Press Galleries)

This is a Congress of fighting men, women—and their children—hereditary fighters for American democracy. Exactly one-third of the present Senate (32 Senators) have seen armed service in four great wars—the Boer War, the Spanish-American War, the World War and this Global War; and nearly one-third of the present House (165 Representatives)—a total of 197 out of 531 Members of Congress.

They have set a noble example for those who sent them to Congress to represent them and to be their spokesmen—through them the voice of this country has spoken—militantly. They are not only making the laws of this Nation; they have risked their lives to defend—but when they declared war against the Axis Powers, passed the Conscription Act and extension of the Selective Service Act—they were sending their own sons and daughters and grandsons into that war.

This also is the best answer to occasional charges of nepotism by captious critics. If, now and then, here and there, throughout all the ramifications of government agencies, and throughout the years, the names of a few relatives of Congressmen are found on the Federal Government pay roll as civilian employees—such names can be found today, and at any time for a century and a half—multiplied—on the muster rolls of the military services in which they volunteered to risk their own lives in defense of that same Federal Government, which they are proud to serve in peace and war.

The Congress of the United States is not—and never has been—a "rubber stamp" Congress. It has been a Congress of men of steel and explosiveness, many chosen because of their military records, ready to fight for their convictions and American principles of government, and the self-governing law they enacted, on every battlefield from Concord and Lexington to north Africa, the South Pacific, Alaska, Iceland, Wake Island, Attu, Corregidor, Bataan, and the impending invasion of continental Europe.

The Congress today is fighting toward a "global" government "of the people, by the people and for the people"—for all time.

From George Washington, a delegate from Virginia, first commander in chief of the American forces and the first President of the United States—"First in war, first in peace, and first in the hearts of his countrymen"—down through the Continental Congress and the Constitutional Convention, down to this Seventy-eighth Congress, the Congress has included a wholesome "leaven" of warriors, who have given supreme and distinguished service on all the historic battlefields.

CLOSE-UP EXPERIENCE

They have close-up experience of the wreckage of war in American homes.

More than one-half the membership of the Senate—50—and more than 26 percent of the House—133—have sons, daughters, grandsons, stepsons, and sons-in-law in the armed services to a total of 71 from Senators' families and 210 from the families of House Members; a grand total of 281. Some of these have already made the supreme sacrifice. Members of Congress have first-hand, personal, heart-wrenching knowledge of the toll of war.

Congress has also encouraged not only their own children, but congressional secretaries, committee clerks—right down the line in congressional service—stenographers, bookkeepers, doorkeepers, elevator men, guards, custodians, mechanics, messengers—to a total of more than 1,500 legislative employees, to do their bit in the war and essential industries, not only in buying bonds and subscribing for ambulances, but in enlistments.

The best information available shows that at least 400 employees of the Senate, since the beginning of war preparations, are now in the armed services. On the House side upward of 1,100 have felt the patriotic urge and been inducted. The boy pages of Congress have their own honor roll, on which are 28 who have gone into service.

From the Speaker's own office six have gone into service within 18 months: William Cantrill, captain in the marines; First Lts. Dan English and Ted Wright, in the Air Corps; and Billy Wilcox, Ray Roberts, and John Holton, ensigns in the Navy.

The sons of many veteran employees of the House have also enlisted or been inducted. As one example—the three sons of William J. Donaldson, Superintendent of the House Press Gallery, who has completed 30 years of service, are in the uniformed forces—William J. 3d, in the Coast Guard, and twins—Francis X. in the Coast Guard assigned to the Coast Guard Academy, New London, Conn., and Philip L., in the Army Air Corps, assigned to the Radio School, Scott Field, Ill.

Congress has sedulously refrained from asking any deferments from military service. Both House and Senate have set up committees to pass upon requests for deferment. These committees are cooperating. They have an agreement to pass jointly on any recommendation for deferment.

The Senate committee is composed of Senators THOMAS, Utah; MAYBANK, South Carolina—both Democrats—and LODGE, Republican, of Massachusetts. The House committee is composed of Chairman MAY, of the House Military Affairs Committee; Representative ROBERT E. THOMASON, Texas—both Democrats—and Representative WALTER G. (Ham) ANDREWS, Republican, of New York.

While no requests for deferment have been approved—and many have been rejected by both Senate and House committees—three requests have been submitted by the House committee to local draft boards without recommendation. One of these was made by the Speaker—for a 60-day deferment in the case of a reading clerk of the House—and two by the Architect of the Capitol for employees of his office—for a matter of 30 days (which time has already expired). The Speaker's request was submitted without recommendation to the Arlington (Va.) County Draft Board, merely stating the facts as cited by the official in charge.

These Senate and House committees have no intention of requesting any deferment except in cases of absolutely essential employees, and have adopted a policy that none is irreplaceable.

MEMBERS SUFFER BEREAVEMENT

Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, who was a first lieutenant in the World War, was the first Member of the Senate to be bereaved in this war. His son, Corp. Max E. McClellan, died from meningitis in North Africa February 21, 1943.

Representative H. STREETT BALDWIN, Democrat, of Towson, Md., has been notified that his son, Lt. Harry Wallace Baldwin, is missing in action on the African front. He is in the Army Air Service attached to the First Fighter Command. He was officially credited with having shot down one of the German Junker transport planes between Italy and Africa on April 14. He was reported missing in action on April 16.

Representative GEORGE J. BATES, Republican, of Massachusetts, one of the most active members of the House Naval Affairs Committee and one of the earliest to urge a two-ocean Navy, was officially notified that his son-in-law, a member of his own household, was killed in action in the Solomons area.

Representative JOHN L. MCMILLAN, Democrat of South Carolina, was notified that a nephew, 1st Lieutenant E. T. McMillan, Army Air Corps, with an extraordinary record for

blind flying, had been killed in a flight over the Rocky Mountains.

Representative JOHN TABER, Republican, of New York, ranking member of the Appropriations Committee, has been advised that his son, Charles Taber, was injured in naval service.

That's how close it has been "hitting home" to Congress.

Of the 232 offspring of Congress who have taken the oath in the fighting forces for the duration, 128 (55.4 percent) have commissions ranking up to lieutenant colonel in the Army and lieutenant commander in the Navy and Coast Guard and major in the Mamine Corps, and 103 (or 44.6 percent) are in the noncommissioned class; while one, the son of Representative DONALD H. MCLEAN, Republican, of New Jersey, Edward R. McLean, is on a special mission directly connected with the war effort. The Army has taken 145, the Navy 76, and the Marines 10.

Mothers in Congress, in both House and Senate, Democrat and Republican, as well as the fathers, have given their sons loyally to the armed services. Senator HATTIE W. CARAWAY, Democrat, of Arkansas, has contributed two sons to the Army, Paul W. and Forest, both of whom are lieutenant colonels. Representative FRANCES P. BOLTON, Republican, of Ohio, president of the Congressional War Parents' Association, has given her blessing to two sons as they joined the Army, Kenion C., now a major, and Oliver P., now a first lieutenant.

Besides Mrs. CARAWAY, there are two other Senators whose sons are lieutenant colonels, Senator THEODORE G. BILBO, Democrat, of Mississippi, whose son, Theodore G. Bilbo, Jr., holds the rank, and Senator CLYDE M. REED, Republican, of Kansas, whose son is Howard H. Reed.

There are four daughters of Members sworn into the armed services—two WAVES, Mary E. Bates, eldest daughter of Representative GEORGE J. BATES, Republican, of Massachusetts, and Rose Miller Hobbs, daughter of Representative SAM HOBBS, Democrat, of Alabama; one a WAAC, Joan Kearney, daughter of Representative BERNARD W. (PAT) KEARNEY, Republican, of New York, and one an Army nurse, Nellie Gross, daughter of Representative CHESTER H. GROSS, Republican of Pennsylvania.

There are five grandsons—two grandsons of Representative ZEBULON WEAVER, Democrat, of North Carolina; C. H. Hites, Jr., and Zebulon Weaver Hites, both Army Air Corps cadets; one grandson of Senator JOHN H. BANKHEAD, Democrat, of Alabama, Charles B. Crow, Jr., enlisted in the Army; one of Representative JAMES GALLAGHER, Republican, of Pennsylvania, William W. Fogarty, Jr., an Army private, and one of Representative ALLEN T. TREADWAY, Republican, of Massachusetts, Royal W. Treadway, Army O. C. S.

SONS IN SERVICE

This "sons in the service" roster starts right at the Senate rostrum, for Vice President HENRY A. WALLACE has a son, Henry B., in Army Ordnance overseas.

Two House Members, Representative GEORGE J. BATES, Republican, of Massachusetts, and AUGUSTINE B. KELLEY, Democrat, of Pennsylvania, have each contributed five to the armed services. Mr. BATES, for 7 years a most active member of the Naval Affairs Committee for upbuilding naval defenses and one of the earliest advocates of a two-ocean Navy, has had the gratification of seeing his entire contribution go to the Navy. This includes a son-in-law, who lived with him, Lt. James B. Ginty, fire-control officer on the U. S. S. *Vincennes*, who was killed in action in the Solomons area, and whose son, James Bartholomew, born 4 months after his father's heroic death, is now living in the Congressman's home. His eldest daughter, Mary E. Bates, is an ensign in the WAVES. His eldest son, William H., is a lieutenant in the Supply Corps; his second son, George J., Jr., is a seaman, first class, while his third son, Raymond H., is a midshipman in Annapolis.

Representative KELLEY has five sons in the service out of a family of nine children, three daughters and another son too young to be taken. The Congressman himself entered West Point in 1904 but developed an athletic heart and was honorably discharged. He is a life member of the Association of Graduates and the Athletic Association. When the House voted to extend the draft period 18 months to 2½ years by a vote of 203 to 202, Representative KELLEY cast the deciding vote, although it meant sending three more of his sons into the service.

His eldest son, Regis, 29, who attended Notre Dame University, is a first lieutenant, Three Hundred and Sixtieth Coast Artillery, antiaircraft service, in north Africa. He enlisted as a private in 1941.

The second son, Robert V., 27, is a graduate of Pennsylvania State College in engineering and is O. C. S. in the Marine Corps.

The third son, Richard B., aged 25, attended George Washington University and St. Vincent's College, and is a corporal in the Engineer Corps. J. Hillary, 23, the fourth son, is also a graduate in engineering from Pennsylvania State College and is a lieutenant in the Engineer Corps, stationed in Arizona.

The fifth son, Paul A., 21, attended George Washington University and is to enter West point July 1. Mr. KELLEY is himself helping the war effort, not only in Congress, but as president of the Old Basin By-Products Coal Co., and of the Mammoth Coal and Coke Co., both in Westmoreland County, Pa.

During debate in the House on the Connally-Smith-May bill, when attention was called to having five sons in the service, he said, "They all carry union cards, two of them in the United Mine Workers, two in the Steel Workers, and one in the American Federation of Labor."

TEN CLOSE RELATIVES IN SERVICE

Representative JOE STARNES, Democrat, of Alabama, has 10 members of his immediate family in the armed services—a son and namesake, three brothers, and six first cousins. He, himself, is a veteran of the A. E. F. in the World War. He served as Lieutenant, 53d Infantry, 6th Division of the Regular Army, in England, France, and Germany, and with the Army of Occupation. He won promotion to Captain, Major, and Lieutenant Colonel, and went on the inactive list as Lieutenant Colonel with the 167th famous Alabama Regiment in the Rainbow Division, serving for about 16 years after the war. He was eager to get into active service in the present war. His son, Joe, Jr., has had four years with the R. O. T. C., at The Citadel, and University of Alabama, graduating from both R. O. T. C. and the University before he was 21. He finished O. C. S. training at Fort Benning, Ga., on July 14, when Representative STARNES will deliver the address to the graduates. His three brothers are: Capt. Hardin Starnes, Air Interceptor Command, now taking a specialist course in the Air School at Orlando, Fla.; Capt. Gilbert Starnes, Army Signal Corps, for the past 18 months at the Signal Corps training and replacement center, Camp Crowder, Mo.; and Maj. John Starnes, Jr., assistant supply officer (S4), headquarters, 6th Air Force, Panama. His six first cousins, four with the Army and two in the Navy, are: Harold, Sergeant George, Technical Sergeant W. B., and Lieutenant Richard, who is in an overseas combat division; Harman, in charge of a gun crew on transports going into Murmansk, Russia, who has been cited for bravery in action, and S. R., barely 19, who has been for more than a year in the Aleutian Islands.

Two Democratic Senators, HARRY F. BYRD, of Virginia, and JAMES E. MURRAY, of Montana, have each given three sons to fight the Nation's enemies. Each has two in the Army and one in the Navy. Senator BYRD's sons are: Lt. H. F. Byrd, Jr., in the Navy; Corp. Richard E., and Pvt. Beverly in the Army. Senator MURRAY's sons are: Second Lt. Edward and Pvt. Howard A., in the Army, and Lt. (Jr. Gr.) W. D. Murray, in the Navy.

Senator DENNIS CHAVEZ, Democrat, of New Mexico, has his son and namesake in the Marines; a son-in-law, Stanley Miller, in the United States Air Corps; a brother also in the service, and his sister has seen all four of her sons inducted.

Two Republican Senators, HAROLD H. BURTON, Ohio, and CHAN GURNEY, South Dakota, have each two sons and a son-in-law in the armed forces. Senator BURTON was a captain in the World War with service in France and Belgium. His sons are William S., an ensign in the Navy, and Robert S., second lieutenant (pilot) in the Marine Air Corps, and his son-in-law is R. Wallace Adler, second lieutenant, Field Artillery. Senator GURNEY served as a sergeant in the Engineer Corps in the World War. His sons are Deloss B., a lieutenant in the Army Air Corps, and John B., staff sergeant in the Air Corps. His son-in-law is Morgan T. Smith, second lieutenant in the Army.

TWO SONS EACH

Seven Senators have two sons each in service: Mrs. CARAWAY (whose two sons were previously mentioned); TOM STEWART, Democrat, of Tennessee, has Tom M., an Army first lieutenant, and Lawrence F., an Army second lieutenant; JOHN A. DANAHER, Republican, of Connecticut, who was a second lieutenant of Field Artillery in the World War, whose sons are John A., Jr., second lieutenant in the Army, and Robert, a seaman in the Navy; WALTER F. GEORGE, Democrat, of Georgia, whose son, Heard F., is a lieutenant in the Army Air Force, and his son, J. Marcus, is a lieutenant in the Navy Air Force; W. LEE O'DANIEL, Democrat, of Texas, Pat, an Army corporal, and Mike, an Army private; ROBERT A. TAFT, Republican, of Ohio, whose sons are Robert A., Jr., an ensign in the Navy, and Lloyd B., a seaman in the Naval Reserve; and GEORGE A. WILSON, Republican, of Iowa, whose sons are James H., a sergeant in the Army, and his namesake, George A., Jr., an Army private. Senator GEORGE D. AIKEN, Republican, of Vermont, has two sons-in-law in service—Harry L. Cheverly, lieutenant, junior grade, and Malcolm S. Jones, private first class.

The dean of the Senate, CARTER GLASS of Virginia, "father of the Federal Reserve Act," former Secretary of the Treasury, adviser of the last 8 Presidents, and who holds the record of doctor of laws degrees from 14 great colleges and universities, has a son and namesake, Carter Glass, Jr., a major in the Army.

Senator TOM CONNALLY, Democrat of Texas, is an outstanding example of war service. He fought in both the Spanish-American and World Wars. His great-grandfather, Capt. Tom Connally, was in the Revolution. His father was a sergeant in the Confederate Army. He himself served as sergeant major in the 2d Regiment, Texas Volunteer Infantry during the Spanish-American War. He quit his seat in Congress, and gave up his pay, to go into the World War where he became a captain and adjutant of the 22d Infantry Brigade, 11th Division, U. S. Army, in 1918. Now, as Chairman of the Foreign Relations Committee, he is holding an important wartime post in the Senate, and recently called for "The Vote Heard Round the World"—giving heart to the Nation's fighting forces—when the Congress led by

Senator CONNALLY and Representative WOODRUM, of Virginia, passed the Connally-Smith-May Anti-Strike bill over the President's veto—to prevent heroes overseas being deprived of essential munitions. His son, Ben, who was a lawyer, married, and with a child, went into the Army Air Corps. He was offered a captaincy in the Judge Advocate General's Department, but took instead a first lieutenancy in the air service. He has been promoted to captain.

SON OF THE SECRETARY

The Senate's right-hand man, its secretary, Col. Edwin A. Halsey, who recently celebrated his tenth anniversary in that position by unanimous election, and who in his forty-sixth year of continuous service since he was a page, December 6, 1897, has given a high-grade son to the service. Lt. (Jr. Gr.) Edwin A. Halsey 2d is a Phi Beta Kappa man, a graduate of Dartmouth, is a disciple of the hard-boiled Navy school at Miami, Fla. Young Halsey was colonel of the Washington High School Cadets.

There is only one Senator who had service—overseas' service at that—in the present global war—Senator and Maj. HENRY CABOT LODGE, Jr., Republican, of Massachusetts, grandson of the famous Senator Henry Cabot Lodge, long chairman of the Foreign Relations Committee. He is a major in the United States Army and served with the first American tank detachment in the British Eighth Army in Libya.

Senators "HAPPY" CHANDLER, Democrat, of Kentucky, who served in the World War and holds a commission as captain in the Judge Advocate General's Department, and SCOTT LUCAS, Democrat, of Illinois, who served as private in the World War and was commissioned colonel and judge advocate general of the Illinois National Guard, attempted to return to active service, but were requested by the President and the Secretary of War to remain in the Senate.

Two House Members resigned from the House to give active war service—both from Ohio—Representative Robert T. Secrest, Democrat, who gave up the chairmanship of the Library Committee and who holds a commission as lieutenant in the Naval Intelligence, and Representative Albert D. Baumhart, Jr., Republican of Ohio, who was commissioned lieutenant, junior grade, in the Navy.

HAWAIIAN DELEGATES IN SERVICE

Samuel Wilder King, Republican, Delegate to Congress from Hawaii, in the 74th, 75th, 76th, and 77th Congresses, a graduate of the U. S. Naval Academy at Annapolis in the Class of 1910, and who served in the Navy during the World War and until December 31, 1924, was in Congress when Pearl Harbor was bombed. He resigned, after being renominated in the primary election, in order to return to active duty with the U. S. Navy, with the rank of commander. He is now stationed "somewhere in the South Pacific."

He is succeeded in the House by JOSEPH R. FARRINGTON as Hawaiian Delegate, who was formerly a member of the Capitol Press Galleries, and who has the distinction of being the only person in Congress to have been an eye-witness of the Japanese treachery at Pearl Harbor. His home is in Honolulu and he was there on December 7, 1941, and from his home could see the enemy planes over Pearl Harbor. He lived there during the tense weeks that followed, remaining there with his family until they came to Washington for the opening of the present Congress. Mr. FARRINGTON saw service in the U. S. Army in the World War. He was commissioned a second lieutenant, Field Artillery.

Four other House Members in the Seventy-seventh did not seek reelection because they proposed to enter the armed services: Representative Vincent F. Harrington, Democrat, of Iowa; Robert K. Goodwin, Republican, of Iowa, now a lieutenant in the Navy; Representative Albert Y. Vreeland, Republican, of New Jersey, a World War veteran as ambulance driver, is now a captain in Military Intelligence; and Frank C. Osmers, Jr., Republican, also of New Jersey, who enlisted and earned a lieutenancy in the officers' training school.

Three others who were defeated in the last election are now in military service—Dudley White, of Ohio, who was an unsuccessful candidate for the Senate and is now commissioned as a commander in the Navy; William T. Pheiffer, Republican, who served in the Army during World War No. 1, and was defeated by 18 votes for reelection in the sixteenth John O'Connor "purge" district, New York, is now an Army captain; and Leon Sacks, Democrat, of Pennsylvania, is also an Army captain.

At least eight present House Members served for a brief tour of duty in the present war.

Representative DAVE E. SATTERFIELD, Jr., Democrat, of Virginia, who had been a commissioned officer in the Naval Flying Corps in the World War, and who has since held the rank of lieutenant commander in the Naval Reserve Corps, was called back into active service October 16, 1941, was given an indefinite leave of absence by the House, and was sent to London as an attaché on the staff of Admiral R. L. Ghormley, Commander of the U. S. Naval forces in Europe. While on that tour of duty he visited every airdrome in Scotland, England, and Ireland. He was returned to inactive status December 16, 1941.

Representative WILL ROGERS, Jr., Democrat, of California, was in the Army when elected to Congress. Others called back to their legislative duties by the President are: Representative MELVIN J. MAAS, Republican, of Minnesota, ranking minority member of the Naval Affairs Committee, who served overseas in the aviation branch of the Marine Corps in World No. 1, and is a colonel in the Marine Corps Reserve, aviation; LYNDON B. JOHNSON, Democrat, of Texas, also a member of the Naval Affairs Committee; EUGENE WORLEY, Democrat, of Texas; WARREN G. MAGNUSON, Democrat, of Washington, member of the Naval Affairs Committee; JAMES E. VAN ZANDT, Republican, of Pennsylvania, who is credited with 2 years' overseas service in the Navy in World War No. 1, and a member of the Naval Reserve since 1919, and who holds a commission of lieutenant commander; and FRANCIS E. WALTER, Democrat, of Pennsylvania, who served in the Naval Air Force in World Wars Nos. 1 and 2, now serving his tenth year in the House.

IN OTHER WARS

Four Democratic Senators—TOM CONNALLY, Texas; GUY M. GILLETTE, Iowa; THEODORE F. GREEN, Rhode Island, and CHARLES O. ANDREWS, Florida—were in the Spanish-American War. All were also officers in the World War except Senator GREEN, who was engaged in many patriotic activities.

Six House members (five Republicans and one Democrat) also served in the Spanish-American War: Representatives FRANCIS D. CULKIN, Republican, and JAMES W. WADSWORTH, Republican, both of New York; EARL C. MICHENER, Republican, and ROY O. WOODRUFF, Republican, of Michigan; ROBERT L. RODGERS, Republican, of Pennsylvania, and COMPTON I. WHITE, Democrat, of Idaho. Representatives CULKIN and WOODRUFF returned to military service in the World War. Representative CULKIN has a son, Francis H. Culkin, a second lieutenant in the Army; WADSWORTH, who besides serving in Puerto Rico with a field artillery unit was chairman of the Senate Military Affairs Committee during the World War, has a son, Reverdy Wadsworth, a first lieutenant in the Army; MICHENER has a son-in-law, Charles E. Quick, who is an Army major; WOODRUFF has a son, Devere H., who is captain, Army Motor Transport.

Senator C. WAYLAND BROOKS, Republican, of Illinois, is the one present Senator who served with distinction with the Marines in the World War. He was wounded seven times in action and was decorated with the Distinguished Service Cross, American Navy Cross, and Croix de Guerre. He was advanced to first lieutenant in the front lines. His father and older brother also served overseas—the brother dying in the service there. A younger brother also served in the Marines. He has a son today in the Marines—Russell A., a private, who had been attending The Citadel, famous southern military training school.

Senator KENNETH WHERRY, Republican, of Nebraska, and Senator FRANCIS MALONEY, Democrat, of Connecticut, represented the present Senate in the Navy in World War No. 1. Senator WHERRY was in the naval flying forces. Later he was a licensed embalmer and funeral director for 20 years, and a leader in promoting annual agricultural fairs and stock shows.

Senator EDWARD V. ROBERTSON, Republican, of Wyoming, a native of Wales of Scottish parentage, served in a Welsh regiment in the Boer War, 1899–1902.

Senator MILLARD TYDINGS, Democrat, of Maryland, went into the World War as an enlisted man, April 6, 1917, and served until June 1, 1919. He was promoted to lieutenant colonel. He was cited by Generals Pershing, Morton, and Upton. He was awarded the Distinguished Service Medal and the Distinguished Service Cross.

Senator EUGENE D. MILLIKIN, Republican, of Colorado, enlisted in the World War as a private, was commissioned captain of infantry at the Fort Riley officers' training camp, served 16 months overseas in France and with the Army of Occupation in Germany. He graduated from the General Staff College at Langres, France, and was promoted to lieutenant colonel of engineers and colonel of infantry. He was cited by General Pershing for meritorious service. He has a stepson, Karl C. Schuyler, a sergeant in the Army.

Senator BENNETT CHAMP CLARK, Democrat, of Missouri, is a graduate of Eastern High School, Washington, the University of Missouri, and George Washington University (D. C.). He had been parliamentarian of the House while his father, Champ Clark, was Speaker. He was commissioned captain at the Officers' Training Camp, Fort Myer. He was successively lieutenant colonel, assistant chief of staff, and colonel of infantry. He was one of 17 charter members and incorporators of the American Legion and chairman of the Paris caucus which organized the Legion.

Senate Leader ALBEN W. BARKLEY has a son, David M., a major in the Army Air Corps, who has charge of operations at Randolph Field, Texas.

OTHER SERVICE RECORDS

Other Senators with service records themselves who have sons in the armed services today are: James J. Davis, Republican, of Pennsylvania, an immigrant from South Wales. As chairman of the Moose War Relief Commission, early in 1918 he visited the military camps of the United States, Great Britain, and Canada, and the American, British, Belgian, French, and Italian war fronts. Immediately after the armistice was signed he went with the troops into Germany, visited the battlefields of Belgium, Germany, and that part of France which had been in possession of the Central Powers. His son and namesake is now a lieutenant, junior grade, in the Navy.

Senator ELBERT D. THOMAS, Democrat, Utah, was a major, Inspector General's Department (National Guard, Utah, and United States Reserves). His son-in-law, Wayne C. Grover, is an Army captain. Senator RALPH O. BREWSTER, Republican, Maine, has a son,

Charles F., who is an Army captain. Senator ALLEN J. ELLENDER served in the World War, and his only son and namesake, a graduate from the famous V. M. I., from which General Marshall, Chief of Staff, also graduated, is now a second lieutenant in the Army. Senator HARLEY M. KILGORE, Democrat, West Virginia, served in the United States Army in the World War from May 15, 1917, to March 13, 1920, and was a member of the West Virginia National Guard for 20 years. His son, Robert, is a lieutenant, Reserve Officers Training Corps. Senator FRANCIS MALONEY, Democrat, Connecticut, who served in the United States Navy in the World War, has a son, Robert F., who is a lieutenant (junior grade) in the Coast Guard.

Capt. Robert F. Wagner, Jr., son of the distinguished Senator from New York, was rapidly duplicating his father's rise in State politics. He was in the New York Assembly, but is now serving as a captain overseas.

Senator HARRY S. TRUMAN, Democrat, Missouri, was a major of artillery in the World War. Others now in the Senate who saw service in the World War are: Senator LISTER HILL, Democrat, Alabama; CARL HAYDEN, Democrat, Arizona, who was a major of infantry; ERNEST W. MCFARLAND, Democrat, Arizona; JAMES G. SCRUGHAM, Democrat, Nevada, was commissioned major in the United States Army in 1917, advanced the next year to lieutenant colonel, was one of the incorporators of the American Legion and served as national vice commander; MON C. WALLGREN, Democrat, Washington, was commissioned in the Coast Artillery Corps and later was instructor in heavy field artillery and coast defenses of Puget Sound: CHAPMAN REVERCOMB, Republican, West Virginia, enlisted in the United States Army and served for the duration.

Senator BURTON K. WHEELER, Democrat, of Montana, who has served in the Senate for 20 years and was last time elected by the largest vote ever given any candidate for office in the State, has a son, Richard, an honor graduate of Dartmouth, who is a lieutenant (junior grade) in the Navy.

Senator JOHN M. OVERTON, Democrat, Louisiana, who has three beautiful daughters, has also one son, his namesake, who is a lieutenant (junior grade) in the Navy.

Senator BURNET R. MAYBANK, Democrat, South Carolina, is a member of the American Legion and Veterans of Foreign Wars. His valiant son and namesake, B. R. Maybank, Jr., who is a cadet in the Army Air Corps, is one of the youngest, promising young men in the service. He is just turned 18, and is actively training for an Army air pilot, and with the fortitude of his father, who has been Governor and Senator from the State of South Carolina, is expected to make good in a big way.

Senator JAMES MEAD, Democrat, of New York, recent candidate for Governor by the choice and with the benediction of the President, had the honor of conferring the commission as lieutenant in the Army upon his son and namesake.

Other Senators who have sons in the service are Senator GEORGE D. AIKEN, Republican of Vermont, who has two sons-in-law in service—Harry L. Cleverly, lieutent, junior grade, and Malcolm S. Jones, private first class; Senator WARREN R. AUSTIN, Republican, Vermont, whose son, Edward L., is an Army captain; CARL A. HATCH, whose son, Stewart, is a lieutenant in the Air Corps; JOSIAH W. BAILEY, Democrat, North Carolina, whose son, James H. Pou, is an Army lieutenant; HOMER T. BONE, Democrat, Washington, whose son and namesake is an Army private; STYLES BRIDGES, Republican, New Hampshire, whose son and namesake is a Navy ensign; C. DOUGLAS BUCK, Republican, Delaware, who has inherited his estate from John M. Clayton, coauthor of the Bulwer-Clayton Treaty and Secretary of State under President Taylor, has a stepson, Paul E. Wilson, a private in the Army Air Corps; HARLAN H. BUSHFIELD, Republican, South Dakota, who started life on a Territorial homestead, has a son and namesake in an officer candidate school in the Army; ALBERT W. HAWKES, Republican, New Jersey, has a son, Maj. A. Whitfield Hawkes, in the Army Medical Corps.

The veteran Senator HIRAM W. JOHNSON, Republican, California, third-ranking seniority Member of the Senate, has a son and namesake, a major, in the Army Air Corps; GERALD P. NYE, Republican, North Dakota, has a son, James P., an apprentice seaman in the Navy; ELMER THOMAS, Democrat, Oklahoma, has a son, Wilford S., an Army private; JAMES L. TUNNELL, Democrat, Delaware, has a son, Robert W., who is an Army lieutenant; ARTHUR H. VANDENBERG, Republican, Michigan, has a son and namesake, a second lieutenant, in the Army; FREDERICK VAN NUYS, Democrat, Indiana, has a son, WILLIAM L., a cadet in the Naval Air Corps.

A summary of the military service of some Senators, whose record is not given above is:

Senator CHARLES O. ANDREWS, Democrat, of Florida, was captain, Company M. First Regiment, Florida National Guard, and volunteered for the Spanish-American and World Wars.

Senator LISTER HILL, Democrat, of Alabama, served in the Army with the Seventeenth and Seventy-first United States Infantry Regiments during the World War.

Senator THEODORE F. GREEN, Democrat, of Rhode Island, was commissioned lieutenant during the Spanish-American War, and commanded a provisional company of infantry. During the World War he was prominent in many patriotic activities.

Senator ERNEST W. MCFARLAND, Democrat, of Arizona, was discharged from service in the World War in the spring of 1919.

Senator BURNET RHETT MAYBANK, Democrat, of South Carolina, graduated from Porter Military Academy. He served in the South Carolina Naval Militia and in the United States Navy in the World War. He is a member of the Society of Colonial Wars, American Legion, and Veterans of Foreign Wars.

Senator RALPH O. BREWSTER, Republican, of Maine, resigned from the Maine Legislature to enter military service. He was, successively, private, second lieutenant, captain, and regimental adjutant, Third Infantry, Maine National Guard. He was a private in Field Artillery in the Central Officers Training School, Camp Zachary Taylor.

Senator CLAUDE PEPPER, Democrat, of Florida, served in the Student Army Training Corps, University of Alabama. He is a member of the American Legion.

Senator RICHARD B. RUSSELL, Democrat, of Georgia, served in the United States Naval Reserve Force in 1918.

Senator RAYMOND E. WILLIS, Republican, of Indiana, during the World War served as chairman of the County Council of Defense for Steuben County, Ind.

Eight Members of the House have sons who are majors; Representative CHARLES A. WOLVERTON, Republican, New Jersey, whose son is Donald Knox Wolverton, Army; HOWARD W. SMITH, Democrat, of Virginia, whose son and namesake is an Army major, and whose son-in-law, Joe H. Tonnahill, is an ensign in the Navy; A. LEONARD ALLEN, Democrat, Louisiana, whose son, Harwell L., is also in the Army; EARL C. MICHENER, Republican, Michigan, whose son-in-law, Charles E. Quick, is also in the Army; TOM ROLPH, Republican, California, whose son, Henry Renton Rolph, is a Marine Corps major; Mrs. FRANCES P. BOLTON, Republican, Ohio, whose son, Kenyon C., is an Army major; R. EWING THOMASON, Democrat, Texas, whose son, William E. Thomason, is an Army major, and CLIFTON A. WOODRUM, Democrat, Virginia, whose son and namesake is a major in the Marine Corp.

There are 14 House Members whose sons have been commissioned captains: Representative PATMAN, Democrat, of Texas, whose son, Connor Wright, is an Army captain; H. STREETT BALDWIN, Democrat, of Maryland, who has two sons in the service, Capt. John Streett Baldwin and Lt. Harry Wallace Baldwin, the latter reported missing in action from his north African assignment; Mrs. BOLTON, Republican, of Ohio, whose son, Kenyon C., is an Army captain; Maj. A. L. BULWINKLE, Democrat, of North Carolina, is a World War veteran and his son and namesake is an Army captain; PATRICK H. DREWRY, Democrat, of Virginia, chairman of the Democratic congressional committee, whose son and namesake is an Army captain; GEORGE W. GILLIE, Republican, of Indiana, whose son-in-law, John Trapp Strawbridge, is an Army captain; CLARENCE E. HANCOCK, Republican, of New York, whose son is a captain in the Army Air Corps; CHRISTIAN A. HERTER, Republican, of Massachusetts, whose son and namesake is an Army captain; JOHN R. MURDOCK, Democrat, of Arizona, one of whose two sons in the fighting forces, John B., is an Army captain and the other, David N., is an Army lieutenant; JOHN M. ROBSION, Republican, of Kentucky, whose son and namesake is a captain in the Coast Artillery; JOE L. SMITH, Democrat, of West Virginia, whose son and namesake is an Army captain, and whose second son is an ensign in the Navy, and R. EWING THOMASON, Democrat, of Texas, whose son-in-law, Ben Decherd, is an Army captain, while his elder son, William E., is an Army major.

Spending Tax Versus Sales Tax

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. ROBERTSON. Mr. Speaker, last summer the Treasury Department proposed to the Senate Finance Committee as a means of raising additional revenue a spending tax, which the Senate committee was unwilling to adopt, and it also defeated by a majority of one vote a general sales tax. As a compromise between those two methods of raising additional revenue the Senate committee adopted a 5-percent pay-roll tax applicable to earnings in excess of $624 per year. In view of the fact it is generally believed the Treasury Department is still favorably inclined to a spending tax and still opposed to a sales tax, the following discussion of the relative merits of these proposals by Dr. Paul Haensel, former professor of economics, Northwestern University, Evanston, Ill., may prove to be of some value. Dr. Haensel has had a wide and varied experience in the field of taxation dating back to the period when he was the economic adviser to the last Russian Czar. After the revolution in Russia in 1917, Dr. Haensel taught in several of the leading universities in Europe and then came to the United States to accept a position with Northwestern University, where he taught for a number of years and was

retired to an emeritus status at the end of the current school session.

The statement by Dr. Haensel is as follows:

It is usually feared that with the rise in cost of living a sales tax may considerably add to the tax burden of the lower-income brackets. This is a great exaggeration as far as present actual conditions are concerned.

No figures for the whole 1942 year on the expenditures of the city population for current consumption have yet been made public, but basing our findings on the figures for the first quarter 1942 and taking them on the annual rate we see no substantial change in comparison with the figures pertaining to the whole 1941 year (as they were published in the May 1943 issue of Taxes magazine, p. 291). The table for 1942 (based on the first quarter of this year) follows:

Average money expenditures of city families and single persons for current consumption by money income classes in 1942, the annual rate being based on the first quarter of 1942 (as computed from Bulletin No. 724, Bureau of Labor Statistics, 1942, p. 14), and the amounts of a 10-percent retail sales tax, of a straight 5-percent income tax, and of a straight 5-percent spendings tax, which would have on the average burdened the various income classes in 1942 (in continuation of tables published by Prof. Paul Haensel in the May 1943 issue of Taxes magazine, p. 291, and in the January 1943 issue, p. 32)

Annual money income class	Average money income 12 months 1942	Total average money expenditure	Food	Housing, fuel, light, refrigeration	Household operation	Furnishings and equipment	Clothing	Automobile	Other transportation	Personal care	Medical care	Recreation	Tobacco	Reading	Formal education	Other items	Items generally liable to a retail sales tax (columns 4, 6, 7, 8)	1942—In 12 months of 1942			1941—In 12 months of 1941		
Money income 1942																		10-percent retail sales tax, per annum	Straight 5-percent income tax, per annum	Straight 5-percent spendings tax, per annum	10-percent retail sales tax, per annum	Straight 5-percent income tax, per annum	Straight 5-percent spendings tax, per annum
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

$1,000 and under $1,500	1,248	1,240	444	292	52	44	120	56	32	28	72	32	28	16	8	16	660	66	62	62	66	62	61
$1,500 and under $2,000	1,744	1,600	564	360	72	56	176	84	36	36	92	48	36	16	8	16	868	87	87	80	90	87	84
$2,000 and under $2,500	2,224	1,956	672	412	88	76	232	116	40	44	112	68	44	20	16	16	1,068	107	111	98	113	112	105
$2,500 and under $3,000	2,740	2,340	776	460	108	104	292	160	48	52	136	92	52	24	20	16	1,280	128	137	117	135	137	126
$3,000 and under $5,000	3,728	3,056	964	528	140	164	404	252	64	68	172	144	68	32	36	20	1,672	167	186	153	174	187	163
$5,000 and under $10,000	6,460	4,736	1,328	676	256	328	664	476	120	104	244	276	96	48	80	40	2,576	257	323	236	249	310	235

[1] In addition, this group received on the average in value of goods and services (without direct money expense) $160 per annum.
[2] In addition, this group received on the average in value of goods and services (without direct money expense) $128 per annum.

Comparing columns 19 and 22, we see that the amounts of a 10-percent retail sales tax in 1942 and in 1941 are almost identical, and so is the tax burden of a straight 5-percent income tax and of a 5-percent spending tax (compare the figures in columns 20 and 22 and columns 21 and 24 and for details see the table published in the May 1943 issue of Taxes magazine, p. 291, and in the January 1943 issue, p. 32).

This at first sight startling fact is due to the inclination of the people to adapt themselves to a definite level of expenditure commensurate to their purchasing capacity. As a matter of fact, a large number of wage earners got into the next upper income brackets, but the total amount of expenditures in the various brackets remained practically the same. The money income class of $1,000–$2,500 spent for current consumption $1,215 in 1941 and $1,240 in 1942; the $1,500–$2,000 class spent $1,671 in 1941 and only $1,600 in 1942; the $2,000–$2,500 class spent $2,103 and $1,956, respectively. It is only the number of taxpayers in each bracket that changed—with a trend up—and, in general, considerable tendency for saving prevailed.

Even if we take into consideration that the cost of all goods purchased by wage earners and lower-salaried workers in large cities from February 1943 increased 7 percent (Monthly Labor Review, April 1943, p. 743), we have to infer that for them a 10-percent retailer sales tax would have meant only from $3 to $6 per annum increase in the amount of tax paid in comparison with the figures given in the table above. This, with the well-known fact that average wages have increased also, refutes the contention that the sales tax would be particularly destructive with the rise of cost of living. Naturally, greater revenue may be collected by the Treasury with the rise of prices, but that is possible only if the population has at the same time greater incomes to pay for increased prices. This is also the most beneficial consequence of a sales tax which follows immediately the increased spendings of the population without any delay and without the absurdly complicated technique of collection of a spending tax.

The foregoing figures show conclusively that a sales tax is a normal and rational substitute for an income tax in all the lower brackets up to the $5,000 level. Instead of trying to embrace the tremendous millions of taxpayers by means of a direct income tax it is technically much more advisable to raise the exemptions in the income tax and to replace the loss of revenue by a much simpler general sales tax. There is no need of repeating the arguments in favor of a wage withholding tax eliminating all returns for wage and salary earners up to the $3,000 or even $5,000 mark, as is in detail described in my article in Taxes magazine, May 1943, page 271.

Of course, the sales tax does not exempt anybody, as an income tax or a spending tax is providing for. But still there is no justification of exempting anyone from at least a 5 percent of total income contribution to the cost of war or social security. This is exactly what a 10-percent retail sales tax achieves in a simple way. It has also the great advantage over a spendings tax which technically is a nuisance for the lower brackets, where the cost of housing adds excessively to the burdens of the poorer classes, and which results mainly in an additional "soak the rich" measure already too much abused in our present tax system. Any exemption in the spendings tax contradicts its very substance and is absurd as a means of taxing the rich, who are already burdened with a highly progressive income tax. A sales tax is a much more effective means of checking people's expenditure during the war than a spendings tax is able to do; the consumption of necessaries by the comparatively few rich persons need not be artificially curtailed since their consumption (of some 300,000 persons having a yearly income over $10,000 with their families) is a negligible item in the total Nation's food balance.

A sales tax is badly needed if we really intend to improve our tax system and to increase the revenues of the Treasury in a fair and rational way. The alleged "spiral effect" of a sales tax is the most unreasonable argument ever offered in the public finance theory. If we expect mass labor remonstrations against a modest 10-percent sales tax, actually decreasing the purchasing capacity on the average by only 5 percent, and a demand for higher wages why should a 20 percent withholding income tax not encounter a much stronger opposition? The policy of keeping prices low is not undermined by a universal tax measure which the population is expecting in times of war. On the other hand, nobody can suppose the same standard of living during the war as was possible in peace times. Widespread rationing always has the bad effect that many are buying more than they ever did before, be it butter, meat, coffee, canned goods, or other articles.

Personally, I would prefer a universal turnover tax; that is, a pyramided sales tax (see my articles in Taxes magazine, May and June 1942) and a compulsory inclusion of the sales tax into the price (without the right to charge it as a separate item), but the technique of collection is not an important issue. Any complications in the collection of the sales tax (special coupons for low-income brackets, and so forth) are absolutely undesirable and frustrating the very idea of a general tax collected from the whole population for a most important cause of our age. Nobody is likely to go hungry simply because some of his expenditures will be charged 10 percent. A sales tax is a tax which taxes the whole population according to the amount of its spending, the rich more, and the poor less. The usual exemptions in the income tax (as well as in the spendings tax) are necessarily highly artificial and grossly unequal, since an exemption of $1,200 in New York, Washington, or Chicago is very small in comparison with a similar exemption in Alabama or Mississippi. For this reason alone we must have a universal sales tax. Casual and irregular receipts, now easily concealed in the income tax, will be caught by the sales tax as soon as spent.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JAMES M. FITZPATRICK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. FITZPATRICK. Mr. Speaker, under leave to revise and extend my remarks, I include a number of communications I have received from educational institutions favoring the continuance of the National Youth Administration.

I know of no other agency connected with the Federal Government that has done and is doing so much for the youth of this country as is the National Youth Administration. I hope the Senate will appropriate the necessary funds for its continuation and the House will concur with the Senate.

The communications follow:

NAZARETH COLLEGE,
Rochester, N. Y., June 15, 1943.

Mr. JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

DEAR SIR: I am writing you, as a member of the Appropriations Committee of the Seventy-eighth Congress, to recommend to your consideration the passage of the bill now pending which involves a continuance of the National Youth Administration student-work program. We feel this to be of vital importance to a number of our students and ask that you do what you can to make it possible for them to continue their education under this program.

Yours very sincerely,

SISTER TERESA MARIE,
Dean.

BARD COLLEGE,
COLUMBIA UNIVERSITY,
Annandale-on-Hudson, N. Y., June 15, 1943.

Hon. JAMES M. FITZPATRICK,
Committee on Appropriations,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FITZPATRICK: It has come to my attention that the Committee on Appropriations of the House of Representatives is considering a bill to provide aid to needy students in the pursuit of their education. I should like to express my approval of the National Youth Administration program which has been in effect for a number of years, and which has provided much-needed aid to worthy students. The institutions have been able to allocate the funds allotted to them to students who might otherwise not have been able to complete their education and, in addition, to make certain that very necessary work was done by such students in return for the aid. It is my hope that if the student-aid program is continued, it will be conducted according to the same procedure.

I am sure that you will realize that aid to needy college students is more necessary than ever during the present period. Students are forced by the manpower situation to use the whole of the 12-month period for study. As a result they cannot earn any money during the summer to defray part of their educational expenses. At the same time, their parents, because of increased living costs and larger taxes, find it more and more difficult to provide the necessary funds for their children's education.

A student-aid program would do much to prevent unnecessary ill effects of the war upon the cultural development of the country. Because of the drafting of all men over 18 years of age, the number of students still able to continue their education in college is of course drastically reduced. We expect to have in college during the war only those who are declared unfit for military service and those whose superior abilities are prepared for college at the early age of 16 or 17. The student-aid program would prevent the loss to the trained manpower of the country of the younger students whose financial situation might not allow them to continue. I respectfully urge upon you the approval of a subsidy to these promising young people. The country cannot afford to neglect these human resources during a time when so much destruction of other resources is forced upon us.

Sincerely yours,

C. H. GRAY, *Dean.*

Victory Dinner Address of Hon. Harry S. Truman, of Missouri

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very eloquent and able address by the junior Senator from Missouri [Mr. TRUMAN], delivered at the Victory Dinner at Oklahoma City, Okla., on June 14, 1943, under the auspices of the Oklahoma Democratic State Committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, it is an honor and a pleasure for me to join with my fellow Democrats tonight in the beautiful capital of Oklahoma. In the midst of this great war we are waging against the powerful allies of evil we can all be thankful for the opportunity to be gathered here at this Victory dinner and to be able to discuss, amongst ourselves, the problems that affect each one of us. This meeting is truly American as it typifies the rights of a free people to meet together, at their own time, at their own will, in their own way, and to voice their own thoughts on any subject. This is representative of the traditional American principles of democracy and freedom.

Today the fighting men of the United States are offering their lives that those principles shall be maintained. On land, on sea, and in the air these fighting men of ours are carrying the war to our enemies wherever they may be. Americans are fighting—as they have always fought in the past—with honor and with glory.

To preserve our way of life we must today emulate the qualities of leadership shown by our forefathers so many years ago. It was men like Washington and Jefferson who brought into being our great Nation and showed to the world a cause united. We must take stock of what has been done and what still remains to be done. The Democratic Party has been entrusted by the American people with a solemn responsibility. As Americans and as Democrats we are proud of that trust. But like our forefathers who were blessed with the great leadership of Washington and Jefferson in their time of crisis, we may be thankful that our country is being led during this time of peril by our great Commander in Chief Franklin Delano Roosevelt.

The foresight of men like Jefferson prepared our colonial fathers to meet their destiny. Their perseverance surmounted all obstacles. By their vision and courage, the strength and resources of the Thirteen Colonies were brought together to present a united front to our enemies. To accomplish this, our leaders then had to unite the patriots and overcome concentrated Tory opposition. In our day our great President, with the backing of most Democrats and some Republicans, overcame vociferous opposition, to forge again a united front and bring to bear against our enemies the mighty strength of this great country.

When it became apparent that Europe was to be swept by a vast conflagration and that the Nazis had embarked on a course to crush and conquer their friendly neighbors, our great leader and the majority Members of the Democratic Congress assumed the responsibility of preparing this Nation to defend herself against the aggressor. Our President early determined that adequate defense of this Nation against our enemies compelled us to institute a program of armament greater than the world had ever seen before. Through his efforts with the aid of the Democratic majority the construction of our two-ocean fleet was well on its way when the Nazis swept through France. While the Battle of Britain raged, large plants were manufacturing planes and guns and tanks and all the supplies of war. It could be seen then that America's lines of defense were not our shores bordered by the Atlantic and the Pacific, but were in Britain and China and wherever freemen were fighting the Nazi savages and their allies.

Long previous to the dastardly attack which was made on our country at Pearl Harbor the Democratic Party under the leadership of President Roosevelt had provided for the raising of an army by selective service to be trained in modern warfare. We may be thankful that we started this training of our men before we were compelled to meet the enemy on the field of battle. We also had built the camps and cantonments in which to house this new Army. We began converting our peacetime industry to war. We constructed numerous plants and facilities for the purpose of producing the weapons with which to equip the Army and Navy for war. We changed our airplane industry from one accustomed to building a few hundred planes for peacetime use to one capable of building many thousands of fighting planes. We also created a two-ocean Navy, and engaged in the greatest merchant shipbuilding program in history. Through diplomatic action we obtained the necessary bases from which to defend our shores against any possible attack. By lend-lease aid we made it possible to furnish sinews of war and foodstuffs to the gallant warriors who were then fighting against Nazi aggression.

All of this was accomplished over the bitter protests of the opposition.

We can be proud, indeed, that through these efforts Britain was saved from the blitzkrieg and today stands undaunted

against our common foe. Our valiant allies, the Chinese, have not as yet been supplied with all the guns and ammunition and planes that we would wish. We may be thankful, however, that with the aid of the supplies we have furnished they have succeeded in holding off the treacherous Nipponese.

When Russia was overrun by the Nazi hordes, munitions of war were already flowing from our factories into the hands of that brave ally of America.

All these responsibilities were assumed by the majority members of the Democratic Party and a few Republicans up to December 6, 1941. On December 7, of that memorable year, at Pearl Harbor and Manila, American blood was shed—American property destroyed—in that sneaking attack by the Japanese. As in peace we had assumed our responsibilities for possible war, so in war we assumed the responsibilities for ultimate victory.

As a result of this great program, no one today doubts that the war will be won. Moreover, it will be won sooner than it could possibly have been won had we listened to the contentions of the opposition that we were not in danger and should continue business as usual.

Great as was the program for the defense of this country, immediately after Pearl Harbor the Nation embarked upon the greatest undertaking for war the world has ever known. This calls for the construction of planes—swarms of planes—more planes than any other country in the world has ever constructed. It calls for the construction of ships—ships that would be necessary to carry men and supplies to the battle fronts of the world—wherever they should be. This Nation has to be the arsenal of the world with tanks and guns and all the supplies of war, so that through the assembled might of this Nation, and our allies, the ravages of the peace of this world will be subdued—and subdued quickly.

The praise and prayers of our citizens go with the men of our armed forces who are fighting our battles on land and sea and in the air. However, there is another great army of Americans who are striving for total victory against the foes of freedom. This is the army of the home front—that great portion of American citizens who make up agriculture, labor, industry, and the home. It is this army on the home front that must work and toil and sacrifice so that we may produce more food, more guns, tanks, planes, and all the supplies of war for the boys out there.

War is no time for partisan politics. President Roosevelt clearly recognized this when he called in leaders of the opposition party who, along with him, saw the danger and realized the necessity of taking action. The President gave the two most important war posts to prominent Republicans. Mr. Henry Stimson, who had been Secretary of State under President Hoover and Secretary of War under President Taft, was made Secretary of War. Mr. Frank Knox, who had been the Republican candidate for Vice President in 1936, was made Secretary of the Navy. Similarly, Mr. Robert Patterson, a Republican, was named Under Secretary of War and was placed in charge of the procurement program of the Army.

These men have sincerely tried to cooperate with the President in carrying out his program. Republicans have not been excluded from the war effort. Hundreds of them have been placed in important posts in the War Production Board, the Office of the Petroleum Administration, the Office of Price Administration, and in all other important war agencies. Many of them have performed valuable services; some have not.

I think that the record establishes beyond any question that the Democratic Party has realized the necessity of uniting the Nation behind the war effort and has given the opposition party full and complete opportunity to contribute suggestions and men.

Moreover, the Democratic Party has not pretended an infallibility in undertaking this gigantic task. When a great peace-loving nation changes its way of life for war—when industry and agriculture turn from usual peacetime production to that of war—when government necessarily expands its functions, some confusion will ensue and some mistakes will be made. Indeed, some of our problems can be solved only through trial and error.

We all know that it would be absolutely impossible to spend $100,000,000, let alone several hundred billion dollars, without some mistakes and without some dishonesty. Unfortunately, there will always be some chiselers. Realizing this, senatorial leaders of the Democratic Party advocated the creation by the United States Senate of a Special Committee to Investigate the War Program, of which I had the honor of being named chairman. The purpose for which that committee was created was to search out the obstacles that were hampering the war program and to see that they were removed without fear or favor. What is more, the investigation was to be a continuing one. The committee was determined to do the job assigned to it without resorting either to a whitewash or a smear. It originally consisted of five Democrats and two Republicans, and at present consists of six Democrats and four Republicans.

It gives me great pleasure, as chairman of that committee, to report to you that the members of the committee from both parties have cooperated harmoniously. We have never had, and I hope we never will have, a minority report.

None of us started out with any preconceived ideas that we desired to prove. We have all tried to the best of our abilities to make the committee's actions purely constructive.

Each individual in our land has a grave responsibility in this war. To fulfill it, all the facts must be known.

When we ask Government officials to explain their activities, we are asking on behalf of the whole country. The information which the committee gets is for every American citizen. The recommendations which it makes are made in the interests of the whole country.

During the past year, the committee has reported on light metals and aircraft, rubber, conversion to war production, manpower, gasoline and fuel oil rationing, lumber, barges, farm machinery, and steel.

More recently the committee has made reports on renegotiation of war contracts, labor, the faking of steel tests at the Irvin plant of the Carnegie-Illinois Steel Corporation, and shipping and shipbuilding. It has investigated and studied many other subjects and specific complaints on which no public reports have been made. It has inspected numerous defense plants and military installations located in nearly every section of the country, including Alaska and the Caribbean area. Whenever possible, without in any way endangering the war program, the committee has held public hearings. In many other cases its hearings have been private. By and large, we are getting to the point where we can truthfully say that we have the basic elements of a real war program, so that our superior natural resources can and will be converted into war material that will enable our armed forces to be victorious. Much of the credit therefor must be ascribed to the loyal and able work of those participating in management in behalf of the Government. The extent to which they can continue and improve that work will be an important factor in determining when the war will be won. There has, however, frequently been unnecessary delay by the responsible Government agencies before attempting to make corrections.

For instance, though we are producing airplanes in very large quantity, far exceeding anything our enemies can produce, we are not producing to capacity because there are: First, frequent changes of Army and Navy specifications; second, difficulties in getting materials at the right times in the right amounts; third, lack of trained foremen, supervisors, and skilled workmen. In the future the Army and Navy must keep changes in specifications to a minimum or accept responsibility for smaller airplane production.

Turning to our building of merchant vessels, we have produced them at a rate that our friends and enemies thought impossible. Our shipyards should be well able to meet the goal for 1943—18,000,000 tons. But merchant ships alone are not enough. We must have escort vessels to protect them. For a long time the Navy paid too much attention to larger and more complicated naval vessels. However, progress is now being made.

Transportation is one of the biggest bottlenecks. The time when victory will be achieved is directly related to our ability to transport overseas the armed forces and the supplies which they will require. To do this we must (1) construct the greatest possible number of merchant ships; (2) protect them while en route; and (3) utilize efficiently all available shipping

The ship-construction program produced 8,090,800 dead-weight tons in 1942 and will produce in excess of 18,000,000 dead-weight tons in 1943. When it is considered that this was accomplished with yards that were newly constructed for the purpose and with workers who were trained on the job, the program must be considered a tremendous success. It is one of the best jobs that has been done in the entire war effort. The success was made possible because the design work had been completed prior to the war; because the components were simplified and standardized and obtained by central procurement; because new techniques were evolved and heavy machinery made available; and, finally, because American management and workmen evidenced great ability to learn and apply new techniques on work they had never done before.

The record which has been made compares favorably with the magnificent job accomplished by the British, who are the most experienced shipbuilders in the world.

It is also very encouraging to know that the losses sustained in shipping by the United Nations during April and May of this year have fallen off perceptibly from any other 2 months since the war began. With the new methods being devised by the Navy and with the vigor shown by them in combating this menace, we may look to the future with a great deal of confidence that this menace to the United Nations is being destroyed.

Almost from its inception, the committee stressed the need to expand facilities for the production of the basic raw materials such as steel, copper, and aluminum. There was a long delay in the expansion program, but the committee is glad to report that rapid progress toward alleviating the shortages has been made during the past year.

We still do not have enough of all the critical materials to supply all the needs under the specifications scheduled by the various claimant agencies. Consequently, if we are to obtain the number of airplanes, escort vessels, synthetic rubber plants, merchant ships, 100-octane gasoline and other products, that the high command has determined are necessary, there must be a coordinated effort not only to allocate fairly the scarce materials but to organize the production of all these competing articles.

Competing demands for productive facilities and products are tremendous. Too much of one thing at the wrong time is almost as bad as not enough at the time needed. Excess and unusable production means that vital materials have been improperly diverted either from military or essential civilian needs. In effect, what we must have above everything else is the delicate balance of production and use. We must plan to make the raw materials available as required, and then we must allocate them to the production of the items that we can use as produced.

The task of control and guidance is of utmost importance. Clear leadership in strong hands is required. The influence from above must be always toward unity. The precise balancing of these programs in point of quantity and of time is crucial. A serious error could spell disaster. The deciding agency must have the facts relating to all three programs before it. Its decisions must stick. Confusion in planning today will cut production a year hence. The persons in charge of each major program should meet together and discuss their problems together regularly and frequently. Each must be made to feel a great sense of responsibility for the entire program with no diminution of his responsibility for that part directly under his control.

Now the members of the committee and myself are very optimistic, as we believe the appointment of Mr. James Byrnes as Chairman of the War Mobilization Board is a long step in the right direction. The functions of this Board, as set out by Executive order of the President is for an over-all, strong deciding head of all of the home front's war demands. We believe that Mr. Byrnes is a strong, able man and is capable of adjusting the competing demands of the Army, the Navy, the Maritime Commission, and our essential civilian needs. And now that he has appointed Bernard M. Baruch, distinguished Chairman of the War Industries Board of the last war, as his assistant, the confidence of the country is established in the results to be accomplished by this team of able statesmen.

There are many manufactured articles used in essential civilian needs that are as important as guns or tanks. We must be so meticulous in keeping the delicate balance between production and use. The rule of first things first of course must hold, but extreme care must be taken so as to insure against unnecessary disallocation of essential needs on the home front.

At this time when the farmer is being asked to produce more and more food for our armies, our allies, and for our use on the home front, we must make sure that every implement that will help him in this stupendous task to be made available. Sufficient provision for food must be made and it must be regarded as vital to our war effort. We must produce more food of all kinds than we have ever produced in our history.

At the same time we must learn to live on less. This requires material adjustments in our usual way of living. Some persons might call these adjustments sacrifices. But we civilians are not really sacrificing—we are fighting. The adjustments are our weapons. We will make them willingly and cheerfully since they mean more food, more tanks and guns, more ships and planes and bombs for "the boys out there."

We must also be mindful not to impose unnecessary burdens on industry. Regulation merely for the sake of regulation is nonsense. The imposition of complicated rules by people who know nothing of the industry they are running cannot be tolerated. Complex regulations must give way to simple, fair, and easily understood rules.

Companies engaged in production must realize that it is absolutely essential to get the greatest production with the least possible use of manpower. Companies hoarding manpower which they do not absolutely need are just as guilty as workers who by absenteeism or otherwise desert their posts.

This Nation is fighting for its very existence and for the preservation of all our rights, including the right of labor to seek by proper means a fair and just share of the goods produced. In such a struggle, our Government has the right to expect that labor and those who represent it, and management and its representatives, shall not permit stoppage of work in essential industry.

Leaders of labor must now demonstrate that they are statesmen and patriots as well as paid advocates for worthy causes. Labor has come of age, and the country expects these leaders to recognize that labor has duties as well as rights. Labor must not repeat the mistake of arrogant capitalism, which forged the shackles that now restrict its every act.

One point I wish to make clear. The War Investigating Committee was not organized to tell the war agencies what to do or how to do it. The purpose of the committee is not to substitute its judgment for theirs. Its function is to insure that intelligent consideration is given to the important and difficult problems presented by the war program, so as to make certain that our victory is won with the least cost in human lives and property.

Our great President realized these many important and difficult problems presented by our war program, and some 2 years ago, on May 21, 1941, he declared that a state of "unlimited emergency" existed in this country. How well he foresaw the threat to America was proved 6 months later when the Japanese attacked us at Pearl Harbor and Germany with her satellites declared war on the United States.

Those nations dared to throw themselves against the United States because they could not believe that America, so long devoted to the ideals of peace, could mobilize our armies, our industry, and our spiritual resolve to meet the gigantic needs of global war. To the Axis nations, which for years had been sacrificing the welfare of their people to build up an offensive war machine, it was inconceivable that a peaceful people like the Americans could quickly leap out of peacetime habits and mobilize sufficient strength for war.

That was the great mistake made by the Axis. Today the Axis nations are paying dearly for that mistake and will continue to pay until they are vanquished. For America quickly recruited a citizens' army, an army of young men so devoted to the ideals of democracy and freedom that they fight like demons to preserve those ideals from an enemy which believes in tyranny and eternal war. The quality of our fighting men, whose zeal stems from their belief in the American tradition of democracy, showed itself gloriously on the battlefields of north Africa, where Axis troops, lacking this morale, surrendered despite Hitler's order to fight to the last man, to the last cartridge—some difference between Tunis and Stalingrad.

The quality of our fighting men showed itself against the Asiatic aggressor on Guadalcanal, in New Guinea, and on other soil where American soldiers and marines fought valiantly and successfully against the Japanese enemy.

With equal speed, America mobilized its industry. Today the United States, which has given its population the highest standard of living in the world, is now giving its armed forces the highest quality and volume of war material. This superiority in war goods was a major factor in the Allied victory in Africa and in the daily growing strength of our air arm over Europe.

The committee has never hesitated to criticize where it thought that criticism would serve some useful purpose. But when we find faults and criticize, then we have always suggested a remedy. This attitude presents a decided contrast to that of certain leaders of the Republican Party. I refer particularly to the Honorable JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, who recently made a most significant speech. Mr. MARTIN, on behalf of the Republicans, demanded that the war be fought efficiently. Democrats cannot quarrel with this. He then asserted that could be done only when we placed in key positions men and women selected on the basis of personal merit and not on the basis of partisan favoritism, wholly disregarding the fact that the Democratic Party has already done this to an extent unprecedented in our entire history and never approached by any Republican administration.

Mr. MARTIN stated that the Republicans do not intend to permit our system of "free, private enterprise to be displaced by some form of socialistic economy" or to have our "free representative government dominated by scheming, self-seeking bureaucrats." These are resounding phrases, but Mr. MARTIN did not name the bureaucrats to whom he is objecting, and I venture to say that if he did he would find that most of them are Republicans. Some of our greatest difficulties have arisen because we have attempted to operate this war program through dollar-a-year men. Many dollar-a-year men are patriotic, hard-working businessmen, but there are many others who have volunteered their services for the purpose of fostering their interests and the interests of the industries which they represent. I need not remind you that such men constitute the most dyed-in-the-wool reactionaries and are usually found in the ranks of the Republican and not the Democratic Party.

Mr. MARTIN objected to the so-called blank checks that have been given to the Government agencies without pointing out that most of them were given to the Departments of War and Navy which are headed by Republicans, and that he, like most other Republican Members of Congress, voted the blank checks.

It was the Democratic Party and not the Republican Party which first saw the necessity of investigating such expenditures. It was for the purpose of doing precisely this job that our committee was organized.

I mention these statements of Mr. MARTIN because he is well-known to us all as one of the firm of Martin, Barton and Fish, who are always ready to criticize, but who never have anything constructive to offer. His speech is important only as indicating the partisan character of the opposition.

Mr. MARTIN's speech was lengthy and he touched on many subjects—all of them in the spirit of carping criticism and without once making a specific and constructive suggestion as to how Republicans would do a better job. His speech indicates that Republicans of his type hope to capitalize on the mistakes and errors that unavoidably creep into a program as vast and complicated as the fighting of a modern war. Of course, Mr. MARTIN wants the Republicans to share the credit for the success of the war program due to the united efforts of the Democrats and those Republicans willing to render constructive assistance in the interest of their country instead of playing partisan politics. But, he also wants to impose upon the Democratic Party all of the blame for mistakes which would inevitably incur in any program so vast. Such sniping as this only indicates that the men who would head the Republican Party if it were returned to power have no constructive program. The thing for the Democratic Party to do is to go right on doing what it has done—that is, formulating and carrying out a constructive program to get the job done—

and so far as possible, obtaining the advice and assistance of those Republicans who are willing to lay aside partisan politics in the interest of their country.

The Democratic Party must continue to take the leadership in making the necessary investigations to keep the program efficient and honest just as they have in the past. We must continue as we have in the past to seek out mistakes and to force their correction. But we must at the same time take care that we do not allow the constructive criticism within the Democratic Party to be used as political thunder by a minority group in the Republican Party.

Even more important, however, is the responsibility which any majority party assumes constantly to check and recheck for the purpose of insuring that government is being carried on competently, efficiently, and honestly. The Democratic Party has willingly assumed this burden—that is the constant duty of the committee organized at the suggestion of the Democrats themselves to make investigations for such a purpose. So long as the people know that is the purpose of the Democratic Party, and that constant checks are being made by Democrats to assure competency, honesty, and efficiency, then the people are going to continue their confidence in us. If we bear in mind at all times the responsibility we have assumed, and if we keep our own house in order, the people of the country will regard for what it is worth the carping criticism of Mr. MARTIN and his violently partisan friends.

In the light of our achievements in our country's interests—accomplished through the program laid down and under way before Pearl Harbor, quickened in tempo and vastly expanded through the grim necessities of war after Pearl Harbor, let us keep faith with the American people—let us continue the good work, and let the record of the future, like the record of the past, show that the Democratic Party's one thought is the speedy winning of the war and the consummation of a lasting peace.

Subsidies

EXTENSION OF REMARKS

OF

HON. E. V. ROBERTSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from South Dakota [Mr. BUSHFIELD] over the Columbia System on Tuesday, June 15, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SUBSIDIES—THE OLD SHELL GAME

The President says that he is going to reduce the cost of living 10 percent. To accomplish this the Office of Price Administration has issued an order to roll back the retail prices on butter, meat, and coffee by 10 percent. To compensate the processors of these commodities the Office of Price Administration proposes to pay to the processors a 10 percent subsidy from the United States Treasury.

The Subcommittee on Food of the Senate Committee on Agriculture and Forestry has been studying this program since it was first announced. I am convinced, as are the other members of the committee, that these subsidies cannot be justified and should be prohibited unless specifically authorized by Congress.

Jesse Jones, Secretary of Commerce and head of the Reconstruction Finance Corporation, testified before our committee recently. He stated that this subsidy program on the three commodities named will cost the United States Government $450,000,000 a year. When asked where he would get the money to pay the subsidies, he said that he had the money in his Reconstruction Finance Corporation funds and that he proposed to pay the subsidies upon order of the President whether the Congress approved it or not, and without the necessity of an appropriation from Congress.

Nearly everyone is opposed to this program except certain Committee of Industrial Organization officials and a small inner circle in the White House. Even official Washington does not approve of the program. Secretary of Commerce Jones, while declaring that he would follow orders, stated: "If you let the law of supply and demand take its course, no subsidies are needed. The subsidy plan will reduce production instead of increasing it."

Chester Davis, War Food Administrator, also appeared before our committee. He said: "I believe that a general dependence upon a broad subsidy program as the chief instrument in holding prices in line, or in expanding production, would be dangerous and would not accomplish the things we seek."

T. G. Stitts, Chief of the Dairy and Poultry Branch of Agricultural Marketing Administration, stated: "The proposal to roll back the price of butter has had an unfortunate effect. Prices—for the producer—have gone down. There is no provision to indicate that the subsidy would be passed on to the farmer."

Meat processors, dairymen, and farmers all oppose the program. Albert Case, national president of the Grange, testified before our committee, stating his opposition to the subsidy program thus:

"We are opposed to the use of subsidies for such purpose, because they will not work. They are inflationary and will defeat the purpose sought to be accomplished. Subsidies in lieu of fair prices will lead to postwar chaos. Subsidies pass on to future generations costs which this generation should bear. Subsidies lead to the dangerous doctrine of expecting the state to support its people. Subsidies lead to political control and when once used they are almost impossible to get rid of."

Under this subsidy proposed only butter makers making 1,000 pounds or more a month will receive a subsidy. Neither the small creamery nor the hundreds of thousands of farmers' wives throughout America who make a few pounds of butter a week for sale at the local store will receive a subsidy.

But what will be the effect upon producers? The retail price of butter is reduced by the order from 46 cents a pound to 41 cents a pound. The reasoning of the bureaucrats who advocate this program is that it will have no effect upon the price to the producer. Their theories are not supported by facts. The price of butter and of milk products are already reduced 5 cents. So that the farmer and small butter maker lose millions, because the processor does not and will not pass on this subsidy.

The roll-back program inflicts huge damage upon meat processors, too, because no subsidy is to be paid upon meat now in their hands. The American Meat Institute estimates their loss at $25,000,000. It will not help the consumer. It will increase the black market, and can be used as a club to enforce political obedience to those in power. Finally, this program will cause inflation.

I oppose this roll-back and subsidy program not only because of the huge losses to the producers, but because it is wrong in principle and is of questionable legality. To retain some control over this autocratic action of the Office of Price Administration I introduced in the Senate Senate bill 1143, which will, if passed, prohibit the payment of these subsidies unless by specific appropriation and authorization by Congress.

The subsidy has no legal standing. By the terms of the Price Control Act of 1942 the President, or the Administrator under him, is authorized to pay subsidy for one purpose only, and that purpose is to make subsidy payments to domestic producers of such commodity to obtain the maximum necessary production thereof.

There is no provision whatever in the law authorizing the President to roll back prices or to pay subsidies to processors, and instead of increasing production this roll-back actually decreases production. So I say if we are going into that kind of a program it should have congressional sanction.

Every witness appearing before our committee says the program will lower production of both dairy and meat products. Both the producer and the processor will lose, but the consumer—and that includes all of us—will lose, too.

Consumers are receiving higher incomes and wages today than ever before in our history, and they can continue to pay this small additional price for butter, meat, and coffee without loss worth mentioning.

Let me explain the actual facts. Under the rationing now in effect each consumer can obtain a quarter of a pound of butter a week, or 12 pounds a year. The 5-cent additional cost to the butter consumer without a roll-back for 1 year is 65 cents, to the coffee user 24 cents, to the meat eater $2. The entire cost to the consumer without the roll-back will be less than 1 cent a day. Isn't it better for the consumer then to bear that cost instead of dipping into the Federal Treasury.

Secretary Jones says that this program will cost about $450,000,000 a year. Members of the Congress of Industrial Organizations testifying before our committee demanded that Congress appropriate a minimum of $2,000,000,000 a year for this program. But whatever the amount required we consumers will pay it in taxes.

The Government does not have the money. It will have to be borrowed. Borrowed money requires the payment of interest. Whether the sum is $450,000,000 or $2,000,000,000, we will have to pay interest upon it by more taxes.

And do not forget the new army of thousands of job holders to be employed to administer and enforce the subsidy program. We then have the original cost, whatever it may be, plus the interest charge on the borrowed money, plus the cost of administration. You and I know that with the Government handling it, the cost will be from two to three times the total amount of the subsidies. And who pays this bill? The taxpayer pays it and the taxpayer is the consumer.

Ladies and gentlemen, this whole scheme of roll-back and subsidy is a cheat and a fraud upon the American people, conceived by the Roosevelt administration to fool the people into believing that the administration is reducing the cost of living. Are we gullible enough to stand for this fraud? I do not believe we are. The policy of bureaucrats in Washington thumbing their noses at the people and Congress is going to explode in Washington's official face one of these days and a lot of people on the Government pay roll are going to receive the shock of their lives.

The Functions of the Federal Power Commission

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "The Functions of the Federal Power Commission in Relation to the Supply of Electricity and Gas for War Plants and Establishments," made by Basil Manly, Vice Chairman of the Federal Power Commission, on June 4, 1943, at a conference sponsored by the War Department in Chicago, Ill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Before taking up the topic which has been assigned to me, I want to congratulate the War Department on having initiated this conference for the discussion of the problems related to the supply of electricity and gas to those war plants and establishments for which that Department is responsible. We are thus enabled not only to review the very substantial results that have already been accomplished but also to consider what improvements are possible in the procedures and methods that will be used in the practical handling of the large number of contracts which are subject to future review.

The Federal Power Commission appreciates the opportunity to participate in this conference as a demonstration of the fine spirit of cooperation which has characterized the relations of the War Department and the Commission in all matters relating to utility services. The practical results that have been secured in rate reductions, adjustment of unreasonable facility charges and elimination of inequitable service clauses from proposed contracts are the best evidence of the value of such cooperation. It is noteworthy that these results have peen secured at relatively little expense to the Government and without the creation of additional agencies or the enactment of special legislation.

This is due in large measure to the fact that the Congress, in the enactment of the Federal Power Act of 1935, with remarkable foresight, wrote into the statute provisions conferring on the Commission exceptional emergency powers in the event of war. I would direct your attention particularly to section 202 (c) which reads, in part, as follows:

"(c) During the continuance of any war in which the United States is engaged * * * the Commission shall have authority, either upon its own motion or upon complaint, with or without notice, hearing, or report, to require by order such temporary connections of facilities and such generation, delivery, interchange, or transmission of electric energy as in its judgment will best meet the emergency and serve the public interest. If the parties affected by such order fail to agree upon the terms of any arrangement between them in carrying out such order, the Commission, after hearing held either before or after such order takes effect, may prescribe by supplemental order such terms as it finds to be just and reasonable, including the compensation or reimbursement which should be paid to or by any such party."

While the Natural Gas Act does not contain a corresponding section, its authority to require and approve extensions, determine costs, and fix reasonable rates has proved to be entirely adequate, up to the present time. These acts also gave the Commission broad authority to secure, compile, and analyze the basic information necessary for the proper determination of all questions relating to the supplying of these utility services.

The functions of the Federal Power Commission in relation to the supply of electricity and gas during the war period are thus based upon its statutory authority, supplemented by certain Presidential directives designed to insure that electricity be supplied to war plants and establishments under reasonable rates and conditions of service and from the cheapest available source consistent with war requirements.

These directives of September 26 and October 22, 1942, in addition to establishing the general principles which should control arrangements for the supply of electric power involving Government approval or the assumption of any Government obligation, provided for the designation of a power procurement officer by each Federal agency having such responsibilities, and established a procedure under which all major power contracts are submitted to the Federal Power Commission for review and approval.

As you gentlemen are familiar with these Presidential orders and the procedure which they establish, no detailed discussion is necessary. I would like to comment, however, on certain aspects of these matters which have not been completely understood.

In the first place, these directives were directly in line with the informal procedure which had been voluntarily established, even before the declaration of war, on the initiative of the War and Navy Departments, Maritime Commission, Federal Works Agency, and other agencies concerned with the procurement of electricity and gas. For example, as early as June 1941, Lieutenant Colonel McCabe, of the Army Engineer Corps, came to the Commission for assistance in determining the reasonableness of gas rates for service to Army camps and establishments, and in the negotiation or renegotiation of those contracts, which were found to be unreasonable. As a result of this conference, cooperative field surveys were conducted by the Army and Commission staffs, resulting in large initial savings in rates and facility charges, which have since been materially augmented as a result of passing on general wholesale rate reductions for natural gas in certain areas ordered by the Federal Power Commission under its regulatory authority.

Similar cooperative procedures have been carried on by the Commission and its staff in connection with both gas and electric services at the request of the Navy, Maritime Commission, Federal Works Agency, National Housing Agency, Veterans' Administration and Defense Plant Corporation. Altogether it is estimated that, prior to the President's directives, through the cooperation of the Federal Power Commission with representatives of these several agencies annual savings of $466,900 had been realized in charges for electricity and gas and, in addition, $1,074,000 had been saved in connection and facility charges. These services were performed by the regular staff of the Commission, without extra expense to the Government—a result that was made possible only by curtailing and streamlining the Commission's ordinary activities.

The adjustments in utility contracts which were effected through this cooperative procedure were worked out in conferences participated in by representatives of the utilities, representatives of the procurement agencies and the staff of the Federal Power Commission.

While the President's directives have made mandatory review by and approval of all contracts for electric service involving demands of 1,000 kilowatts or more, the Commission has continued to follow substantially the same procedures of investigation and conference which had proved so successful in the earlier voluntary adjustment of gas and electric contracts. Up to the present time it has not been necessary for the Commission to exercise the authority conferred by the President's directive of October 22, 1942, to determine by order just and reasonable rates and other conditions of service.

It may be noted, however, that the General Accounting Office has recently taken the position that contracts for electric service coming within the scope of the President's directive must have the approval of the Federal Power Commission.

Let us now briefly examine some of the results that have been achieved and briefly appraise the situation that now confronts us. As of May 22, 1943, the procurement agencies have referred to the Federal Power Commission 664 war power contracts and proposals for service. Of these 253 were, when submitted, proposed contracts for service which required Commission review and approval prior to signature. The remaining 411 are executed contracts dated prior to the President's directives which may be subject to renegotiation or to approval prior to being renewed.

The scope and size of these power contracts is amazing. Altogether they involve an estimated demand of 5,375,000 kilowatts, an annual consumption of 37,500,000,000 kilowatt-hours and annual charges of $225,000,000 for which some Federal agency is directly or indirectly responsible. This indicates the magnitude of the task and its vital importance both to the utilities and the Government.

The Commission and its staff have, of course, given first attention to the pending contracts and proposals with a view to their prompt execution after necessary revisions and readjustments have been made. Many of these involve the most intricate and technically difficult provisions for the supply of electric service that have ever been formulated and their terms are complicated by uncertainty as to the periods for which they will be effective and which depend primarily on the duration of the war. All of these 253 pending contracts and proposals have been under active study or are now in process of negotiation. Of these, 96 have been carried to a point where we may appraise the results of the process of review. These contracts have demands aggregating 852,757 kilowatts, estimated consumptions of 6,256,800,000 kilowatt-hours and involve annual charges of $35,182,000.

This review and the accompanying conferences conducted by the Commission's staff have resulted in readjustments acceptable to the utilities supplying the service which will result in annual savings in rates of $1,560,000 and savings in facility charges of $1,983,000. Readjustments in rates, facility charges or other contract terms were found to be just and reasonable in 70 of the 96 contracts and, after conference, were agreed to by the utilities. In addition to these substantial money savings, various restrictive and otherwise undesirable clauses have been eliminated.

We recognize that all these contracts for power and gas were originally negotiated under heavy pressure and it is therefore no reflection on any of the parties participating in such negotiations that rate adjustments and other modifications have been found to be either necessary or desirable.

It is our understanding that there will be few new contracts for supplying electricity and gas to war plants and establishments. Our staff is, therefore, concentrating on cleaning up the pending contracts and will dispose of them as rapidly as possible. Some delays in the performance of these complex and onerous duties have been inevitable.

Some of the agencies have been slow in submitting contracts in accordance with the President's directives and some have, in fact, importuned us for clearance on contracts which have never been submitted for the Commission's consideration. Some of the utilities have been dilatory in supplying information and data which would justify a reduction of their rates and charges. Finally, our staff has been short-handed and, although we have scoured the country, we have been able to secure only a few of the highly specialized gas and electric rate men who are competent to analyze and deal with the complex and sometimes unprecedented provisions of these service contracts.

Another source of delay is inevitable under the procedure of investigation, conference, and negotiation which the Commission has chosen to pursue in the readjustment of these contracts. Under the broad emergency provisions of our statutory authority and the President's directives, we might, after proper investigation and determination of the facts, have proceeded to fix the rates and other terms of the contracts by appropriate orders. But we have chosen instead, in these days of supposedly rampant bureaucracy, to have our staff members sit down in conference with the utility representatives and seek to convince them of the justice and reasonableness of the readjustments which they believed to be necessary.

This takes time, but it produces sound results. We are not seeking to deprive any utility of a penny to which it is justly entitled for the service it performs. But, by the same token, we cannot approve any contract which contains discriminatory or unreasonable rates or which seeks to require the Government, during the war period, to pay exorbitant charges for the facilities utilized in rendering the service.

Our experience indicates that all but a small minority of the utilities understand this and, with continuing cooperation between the representatives of the procurement agencies and the Federal Power Commission, there is no doubt but that we shall achieve results of which we may all be proud. Our pride will be based not only upon the material savings which we have been able to accomplish, but also upon the practical demonstration that Federal agencies can cooperate, without substantial duplication of effort, in achieving results that are just and wholly compatible with the public interest.

Inauguration of Strato-Clipper Service Between New Orleans and Central and South America

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. OVERTON. Mr. President, on June 12 of this year there was inaugurated a strato-clipper service between New Orleans and the Central American and South American countries. The authorization of the project was owing largely to the unceasing efforts of the entire Louisiana delegation in Congress, and they were aided by other prominent citizens of Louisiana, as well as by civic organizations. The service connects not only New Orleans, but the entire Mississippi Valley with the Central American and South American countries. On the occasion of the celebration of that event an address was delivered at New Orleans by Mr. Juan T. Trippe, president of the Pan American World Airways. I ask unanimous consent to have his address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Pan American Airways are deeply honored to have been invited to New Orleans to meet the distinguished group of forward-looking men who are gathered here tonight.

When in 1718, Jean Baptiste Le Moine laid out and named the city of New Orleans, he foresaw its future greatness as a seaport for most of the Middle West. Tonight, two and a quarter centuries later, this ancient and beautiful city stands on the threshold of a new era—which could not have been foreseen by him, or for that matter by anyone, even 25 years ago.

Tonight at 1:50 a. m., the first four-engined clipper takes off from New Orleans to head south over the Gulf of Mexico. New Orleans will have taken the first step toward becoming one of the great international airports of the Western Hemisphere.

You who are gathered here together, and the associations and civic bodies which you represent, have been working for the attainment of this goal for several years. You see it now as a reality. You sense that it holds for this city and for the whole Mississippi Valley certain suggestions of great and historic importance. Pan American Airways shares that belief.

The old proverb says, "Everything comes to those who wait." Certainly New Orleans has waited since 1937 when the direct air route from New Orleans to Latin America was first considered. I would like to tell you why.

As far back as 1937 we were convinced, first, that New Orleans is the natural aerial gateway for the vast Mississippi Valley; and, second, that on the direct route across the Gulf four-engined land planes were needed. Geography, not man, is often the deciding factor in determining what kind of flying equipment should be used on a given route.

In that year, 1937, we placed orders for the construction of such aircraft. They were four-engined land type Clippers equipped with supercharged cabins to fly in the substratosphere. They were to be the first four-engined land transports built in the United States and the world's first commercial transports designed to fly in the substratosphere. In January 1940, some months before their actual delivery, we made application to the Civil Aeronautics Board for authority to operate out of the port of New Orleans.

In addition that same year Pan American placed orders for 57 considerably larger and even faster 4-engined, long-range land transports. Many of these we also intended to use, if authorized, on trunk services out of New Orleans. Most of them were to carry 57 passengers. They could fly from New Orleans to the Canal Zone in 6 hours; all the way to Buenos Aires in 23.

Then came war in Europe—and Pearl Harbor.

Rightly, our Government decided that the materials for some of these planes should go into bombers. Others, as soon as they were finished, went to work as transports for the United States Army. Their uniform is olive drab. Their insignia is the white star in a blue circle. They have enlisted for the duration and are serving our country.

But the problem of New Orleans and its overseas civil transport still remained. Fortunately, of these 60 four-engined land clippers originally ordered, 3 were still available to initiate limited commercial service out of New Orleans.

Then it was that men of vision in New Orleans, in Louisiana, and throughout the Mississippi Valley took off their coats and went to work. They knew that this service is important to the future of New Orleans and to the whole valley. Senators OVERTON and ELLENDER and your entire Louisiana delegation in Congress labored assiduously from the beginning for the establishment of an airways service between New Orleans and the Central and South American countries and their influence contributed materially to the inauguration of such a route. Your Gov. Sam Jones appeared before our Federal Regulatory Commission, the Civil Aeronautics Board in Washington. He placed the air case for New Orleans before the Army and the Navy. Mayor Maestri of New Orleans and members of the New Orleans Association of Commerce, and New Orleans Port Commission put their shoulders to the wheel, as did also the Mississippi Valley Association. I wish that radio time would permit me to thank each of these civil-minded leaders as well as the heads of chambers of commerce throughout the Mississippi Valley, and the publishers of the Times-Picayune, the New Orleans Item, and the New Orleans States. The people of New Orleans and the Mississippi Valley will always be in debt to these leaders for their work in forging this new strategic link in a world-wide air-transport system.

Despite difficulties, and thanks to the vision and fairness of the Civil Aeronautics Board, your case won out on its merits. And what a grand case it is. This great valley which extends from mountain system to mountain system—from the Rockies on the west to the Alleghanies on the east—contains in a single river basin 1,200,000 square miles. To New Orleans, at the river's mouth, come steamship lines, railroads, highways, and three great domestic air lines.

The inauguration of the overseas air-transport route you celebrate tonight will help all of these already established transport systems. The clippers, like the communication system which speeds forward and coordinates a whole army division, will accelerate the movement of trade across the Gulf of Mexico and the Caribbean Sea—and beyond to all South America.

What were days will become hours for businessmen and for their air mail. Air mail must always precede the shipment of goods in quantity. The bill of lading can go with the freight. The negotiation or sales contract must come before.

This is as true of Government business and lend-lease arrangements as it is of private business. The conference at Rio de Janeiro in 1941 preceded the great shipments of war materials to Latin America. Most delegates to that conference went by air.

Even though trade that normally courses through the port of New Orleans is $300,000,000 a year, this new air route connecting the Americas will increase that figure still further after the war.

Dynamic changes are taking place in midwestern industry. Decentralization is creating new plants, many of which will be pouring new post-war products down the Ohio and the Missouri and down the Mississippi and out through this great port of New Orleans.

Trade that builds lasting prosperity, however, is two-way trade. Latin America is opening new mines, developing new products, and expanding her tropical plantations. This new reciprocal trade, too, from a prosperous Latin America, will benefit New Orleans and the people of the entire Mississippi Valley.

And what of the increased tourist trade New Orleans should enjoy after the war by virtue of its mild and delightful winter climate? Many of the giant Pan American Clippers which will be serving Europe over the North Atlantic in the summer should operate out of New Orleans in the winter. They would provide frequent, low-cost, high-speed air service not only to Central America and the Canal Zone, but to other attractive Latin American countries where Pan American is established and is operating completely equipped air terminals. Many of the tourists will wish to linger here in the heart of the old South with your "vieux carre," your hospitality and your traditions—which no other city has to offer. The new triweekly service which begins tonight is not the opening of just another air-line route. The Clipper which leaves New Orleans goes only to the Canal Zone, yes. But at Merida; at Guatemala City; and at Balboa this new route connects with other already established Pan American routes. From the Canal Zone by Pan American-Grace, a part of our system, you can continue down the west coast to Peru and Chile—all the way to Argentina, and if you wish, you can also continue by air along the north or east coast to Venezuela, the Guianas and Brazil.

Throughout Latin America the Pan American system serves every important city—some 200 in all. In fact, New Orleans is now linked with a world transportation system which, in normal times, reaches the five great continents and is operating to Alaska as well.

We must think of the New Orleans service tonight as a man thinks of a tiny oak tree. We are planting it in the rich soil of the Delta so it may live beyond our own lifetime to the benefit of generations yet unborn.

The war has destroyed much. But it has also forced this Nation to create much that is new—particularly in aircraft design. This advance gives the people of the United States a solid base on which to build—a service which should truly link South America and North America to the lasting benefit of each.

Out through the great natural gateway of New Orleans will pour more than the products of industries. In through this gateway will pour more than tropical fruits and raw materials. We in New Orleans—we in the United States—have a better world to build.

This means that those of us who gathered here tonight must never forget, as we fly South, that Latin America has a deep and widely rooted culture from which we have much to learn; that Latin America has universities many decades older than even the oldest in the United States. Many of them had graduated hundreds of students before even Harvard or Yale had been founded.

With our "good neighbor" across the Gulf and the blue Caribbean we have rich stores of knowledge and culture to exchange—stores that cannot be measured in dollars and cents.

We must export on a far broader scale, for example, the findings of your great school of tropical medicine at Tulane University. Other universities must emulate Louisiana State's forward-looking program exchanging students with the grea Latin American universities and in this connection Loyola University's post-war program may well serve as a pattern. We must see to it, in short, that in the mind of the common man in many lands beyond the seas, New Orleans becomes synonymous with the very best that America has to give in commerce, in intellectual and cultural development, in good will.

If, in pursuing such an idea, Pan American Airways is able to help, as I firmly believe it can and will, then air transport will be worthy of the honor New Orleans has paid us tonight.

Government Purchase of Newspaper Advertising

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2d

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received by me from Ralph W. Pinkerton, publisher of the Ferndale Record, a newspaper published at Ferndale, Wash. Mr. Pinkerton states in a concise way reasons why a bill to require the Government to buy a certain amount of newspaper advertising each year should be passed.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FERNDALE RECORD,
Ferndale, Wash.

DEAR SENATOR BANKHEAD: I want to congratulate you on introducing before Congress the bill to create an advertising fund for the Government to use in the war efforts of all kinds.

Ever since I bought this newspaper in 1924, I have learned that a newspaper is expected to support its Government while it is right. I have found that a newspaper should be patriotic and support its Government in the war effort, but why single us out to starve to death?

I commented to Senator BONE this afternoon in a letter that his profession, the law, is not being expected to work all during war days for nothing. But yet, 99 people out of 100 who walk into my front office, or 99 letters out of 100 I receive, are to talk over with me, or ask me, for some free publicity for the war effort. Now, granted that a newspaper should be patriotic, yet when the best printers have left newspapers because their salaries are not commensurate with war living costs, and when publishers and their families go out to buy and find that goods are from 60 to 100 percent higher than before the war, just where do the families of printers and publishers get off at? Can we live on patriotism alone?

Shipyards are paying big wages. Boeing reports $77,000,000 in wages paid this year, yet newspapers have lost 40 percent of their income, or more, in a period of rising and skyrocketing prices.

I say, Yes, the Government should pay for advertising. I had a very interesting conversation with a Canadian publisher a year ago, and then I talked with several when I was a guest speaker at the Canadian newspapermen's convention in Vancouver last September. Canadians couldn't believe that our Government was not spending any money for legitimate advertising. Canadians pointed out to me that the war-bond drives were a failure until the Government stepped in and started advertising. Too, I think the Canadian Government was a wee bit smarter at the start of the war than ours was, as it decided to spend money for advertising and keep all weekly and daily newspapers alive so in every community the newspapers would be financially able to publicize the war efforts. A starving, dying newspaper is not of much good to a country, but a live one in every community can do much good for our Government.

I think that war-bond drives will be a greater success when the Government itself advertises the drives, and really appeals to the people to buy. Seeing an ad from some shipyard does not have the appeal that a Government ad would.

Throughout the United States there has been a mortality of smaller newspapers since the war started. In some cases, the publishers have locked their doors as it was impossible or too hard a job to find enough money on which to live. Regardless of the alleged appeal of the radio or daily newspapers, yet in most small towns the appeal which produces the result is that published in the home-town newspaper, which has been read by families through the years.

Along that line, I wish to emphasize my point by saying that I am considering leaving my business immediately in the hands of my printer, and go out and get a war job of some kind. The tremendous loss of advertising volume makes such a move imperative. If this continues, publicity and support of needed war efforts will naturally be curtailed in this newspaper, as one man, of course, will not be able to run out the same size newspaper as two men could. The Government will be the loser.

I say it is not a subsidy, but merely buying space just as it would buy a ship, an airplane, or a tank, or for services for a doctor or lawyer. Buying advertising naturally means that the purchase of space does not buy a man's soul. I don't operate my newspaper that way. I try to call the shots as I see them.

I thank you for your cooperation in introducing the bill, and in closing wish to remind you that in England the Government there buys 17 percent of all advertising volume of newspapers.

Sincerely yours,
RALPH W. PINKERTON.

JUNE 1, 1943.

The Yardstick of Christianity

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. HOLMAN. Mr. President, I have received a letter, from Mr. Wallace C. Speers, of New York City, which expresses a thought so in harmony with the principles of Christianity, and with what I believe to be sound public policy, that I ask unanimous consent that it may be printed in the Appendix of the RECORD for the benefit of all Members of Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JAMES MCCUTCHEON & CO.,
New York, June 9, 1943.

Hon. RUFUS C. HOLMAN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR HOLMAN: Close examination will show a very disturbing similarity between the present situation in our country and the one in France, which caused the downfall of that one time strong democracy—the same avidity of groups to gain for themselves at the expense of others, the same desire to soak another class, the same panic

attempts to patch the surface when basic matters are at fault, the same lack of complete faith in leadership and authority caused by more than a suspicion concerning the direction of their plans for our way of life, and so on.

No, I am not a reactionary, neither am I talking politics. I traveled in France on business trips for more than 20 years and saw it disintegrate. I do not want to see the same process follow on to its logical conclusion here. This is not entirely for selfish reasons, though I cannot forget the future of my 18-year-old son now in the Army Air Corps, my three little girls, and the host of other dear ones, friends and potential friends. It is primarily because I love this country of ours with a zeal that comes to those of us who have fought for it.

There is only one way that I know of to stop this spiral of disintegration and turn it into real constructive progress. That is by the use of practical Christianity. I do not mean the usual emotional or sentimental religionism, but a dynamic, real force of stupendous power. I am not naturally a religious man, but I do know from experience that practical Christianity is a conditioning force which makes our own specialized abilities more adequate in the service of mankind. You are in one of the key positions in the world to be of service to mankind.

It is very simple to apply this extra skill producing factor—just as simple as the application of a formula to a problem. Think of Christianity as a yardstick. Before taking any action, large or small, merely apply that yardstick to it. Say to yourself, "What is the Christian method of solving this situation?" Naturally, just as in the use of any other technique, this requires study and research. You would do this as a matter of course with problems of law, science, politics, or whatever, so there is nothing unusual in that.

But the results, they will be different and extraordinary. Why if labor and management, Democrat and Republican, rich and poor, colored and white, will sit down together as Christian individuals and apply this yardstick to their differences, every problem can be solved to the advantage of both sides as well as of the public at large, and consequently of the world and its future peace.

You as an outstanding leader in the affairs of a country which we are proud to call fundamentally Christian, can help enormously by taking that pride out of the hesitancy of embarrassed generalities and expressing it in the clear cut terms of your own belief in the actual real power of practical Christianity to make our Government the most adequate in the world in the service of all its people. "Christianity has not failed, it just has never been tried." Let's try it. May we hear from you on it?

Very respectfully submitted,

WALLACE C. SPEERS.

The Gasoline Problem

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, recently there has been much discussion regarding the distribution and utilization of the limited amount of gasoline which the citizens of this country have available to them at the present time. One of the most plausible articles I have read insofar as suggestions relative to the utilization of gasoline are concerned, is an article by Mr. Igor Cassini, published recently in the Washington Times-Herald. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

THESE CHARMING PEOPLE

(By Igor Cassini)

In the opinion of all—except the Office of Price Administration officials, perhaps—one of the greatest national tragicomedies is the pleasure-driving ban. It is partly tragic because it touches such an important issue, and it is comic because it cannot work.

The Government has rationed gas because it was needed for vast military operations. The original allotments to civilians have been repeatedly cut down. In many areas, Washington especially, gas was not even available at times. Yet the public hasn't grumbled. The Army needs must come first, and I haven't heard anyone who ever complained or discussed that. All the gas and even automobiles could be taken away from the public if it were absolutely necessary for victory, and they would accept it.

But you cannot make Americans use the little gas they are given in the way dictated by a few Office of Price Administration officials. No more than you can coerce them into eating pork chops rather than lamb chops with the coupons they have. And no more than you can tell a good Irishman that he cannot touch his bottle of whisky until Sunday. You may sell him less whiskey, but you certainly cannot force him to drink it when you want.

The same goes for gas. Take the case of a businessman who works terribly hard all week long. He manages to get to his office by bus or by taxi, because he wants to save enough gas to drive to his golf club on Sunday. The golf club is quite far away, and there's no bus or trolley car that can drive him there. He cannot possibly find a taxi that'll drive him back to town from there. So he drives there in his car to enjoy his day of relaxation. But he's just at the third hole of his golf game when a cop, who has driven all the way there, comes and takes his number. The poor man tries to protest, but he's told that golf is pleasure, and that the Office of Price Administration and Mr. Ickes don't want him to get any pleasure out of life. Therefore he's guilty.

The consequence is that our man has had his Sunday completely ruined. He almost had a stroke of apoplexy and he had to drive to his doctor (which he was allowed to do, since it was not pleasure, but displeasure), who told him that he should take it easy for a while and it might be a good idea if he took some afternoons off and went to his country club instead of slaving in his office. So our poor man went back to his office grouchy and grumbling.

That's just one case. But it's rather typical.

What happens then is that people become annoyed with this bureaucratic display of power. And since they think that the law is stupid in this case, they find a way to get around it. It's like prohibition. It was the stupidest law that this country ever had, because it made America drink more than any other country in the world. There were plenty of ways to cheat the law.

If the pleasure driving ban was well regulated and made sense, people would adhere to it. Americans are patriotic people, and they are all eager to help in this war. But people won't stay terrorized by something they don't believe to be just. So the whole thing becomes a mess.

For instance I noticed myself that three cars were parked in front of the Rock Creek Club where the District tennis championships were being played. One of the cars belonged to the trainer, who works there. Another car belonged to a tournament official, and the third one to a newspaperman. All three were there for legitimate reasons. Yet the cops came and took their numbers.

The same afternoon I went to the Army and Navy Country Club. There were so many cars there you would have thought it was back in the good old days. And no cop in sight. Later I went by the house of a famous Washington hostess, who was entertaining at dinner, and there were at least 35 limousines parked in front. But no chance that anyone took the numbers of these cars. Mr. Harold Ickes' and Mr. Prentiss Brown's cars might have been among those.

Chevy Chase Club was the same way. There were more cars there than in the field days. And hundreds of vehicles were parked in front of the Water Gate concert.

It just shows that the people won't behave with the Office of Price Administration methods. If the gas situation is precarious, sell less of it, or cut down the coupons' value, if need be. Pass any rigid law you wish. But let the poor people enjoy the little gas they have in the way they best see fit. More gas is being used by police and Office of Price Administration to check who is driving for pleasure than the pleasure drivers could possibly use.

The American public is just as willing to cooperate to win this war as any of the Ickes or the Office of Price Administration "apostles of gloom."

Address by His Holiness Pope Pius XII to the Workers of Italy

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. MURRAY. Mr. President, on June 13, 1943, His Holiness Pope Pius XII addressed the workers of Italy. The purport of the address is applicable to conditions in all countries. His warnings about the need for greater social justice for the masses "and fitting sharing by all in the goods of the country" come at a most appropriate moment in the history of the world, and it is to be hoped that they will be heeded by men everywhere.

The days and months immediately following the conclusion of the war will be fraught with danger, and it seems to me that no nation can afford to ignore the wise counsel of His Holiness to avert social disturbances and upheavals in the future by recognizing now, as Pope Pius said, that "The whole complex structure of society is in need of adjustment and improvement, thoroughly shaken as it is in its foundations." To institute the necessary adjustments and improvements, His Holiness urges in terms what should appeal to every man and woman of America:

These conditions of social security should be realized if we want society not to be

shaken at every season by turbulent ferments and dangerous uprising, but to become tranquil and go forward in harmony, peace, and mutual love.

This sound Christian philosophy expressed in the Pope's address is relevant to a measure pending before the Senate, Senate bill 1161, designed to amend and extend the provisions of the Social Security Act. I ask unanimous consent to have the address of His Holiness Pope Pius XII inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your welcome presence, beloved sons and daughters, who spend your hours and days in toil to gain a livelihood for yourselves and for your families, brings before us a great thought and a great mystery: The thought that work was imposed by God on the first man, after sin, that he might seek his bread from the earth by the sweat of his brow, and the mystery that the Son of God, having come down from heaven to save the world, and having become man, submitted to this law of work and passed His youth laboring in Nazareth in the company of His foster father, so that he was considered and called "the carpenter's son." (Matthew, xiii: 55.)

SUBLIME MYSTERY

Sublime mystery that He should begin to work before He began to teach; a humble workman before being the teacher of all nations. (Cf. Acts 1: 1.)

You have come to us as to a father who has a greater delight in dealing with his children in proportion as their daily toil is harder and more continuous and the want and worries of their lives are more arduous and considerable.

You have come to us as to the Vicar of Christ who feels in himself, perpetuated by a sharing of God's power, that sense of tenderness and sympathy for the people by which our Redeemer was moved to cry out one day: "I have compassion on the crowd." (Mark, viii: 2.)

You have come to us as to the shepherd who fixes his gaze on you and extends it beyond you to that vastly greater section of his flock which the love of God has trusted to him; and in your love and devotion he sees faithfully represented the sentiments, the wishes, and the affection of so many of his absent children.

With all our heart we thank you for the great joy occasioned us by the opportunity of speaking a word of sincere benevolence and encouragement, a word which may serve to guide, sustain, and comfort you in these days disturbed by trouble and mourning.

WISE SOCIAL REFORMS

The weight of the present difficulties is felt by the mass of workers who are burdened and afflicted more than the others. But it is not felt by them alone. Every class has to carry its own burden, more or less painful and difficult to bear as it may be, and it is not only the social status of the workers, men and women, which calls for reconditioning and reform. The whole complex structure of society is in need of adjustment and improvement, thoroughly shaken as it is in its foundations.

But who is there who does not see that the labor question, because of the complexity and variety of the problems which it entails and the vast number of people it involves, is of such a kind and of such urgent importance as to merit closer, more watchful and more far-seeing attention?

It is a question of peculiar delicacy, the nerve center, one might call it, of the social body; but it is also at times a shifting and treacherous ground open to easy illusions and unwarranted, chimerical hopes for one who does not keep before the eye of his intelligence and the impulse of his heart the doctrine of justice, equity, charity, mutual understanding and adjustment inculcated by the law of God and the voice of the church.

THE CHURCH AS THE GUARDIAN OF THE JUST CLAIMS OF THE WORKING CLASS

You are certainly not unaware, beloved sons and daughters, of the fact that the church loves you intensely, and that it is not merely now that she has with material interest and love and a clear sense of the reality of things paid particular attention to the questions which regard you especially.

Our predecessors and we ourselves have not lost any opportunity of making all men understand by our repeated instructions your personal and family needs proclaiming as fundamental prerequisites of social concord those claims which you have so much at heart: A salary which will cover the living expenses of a family and such as to make it possible for the parents to fulfill their natural duty to rear healthily nourished and clothed children; a dwelling worthy of human persons; the possibility of securing for the children sufficient instruction and a becoming education; of foreseeing and forestalling times of stress, sickness, and old age.

These conditions of social security should be realized if we want society not to be shaken at every season by turbulent ferments and dangerous uprising but to become tranquil and go forward in harmony, peace, and mutual love.

Now, however laudable may be various provisions and concessions made by public authorities and the humane and generous sense that inspires many employers, who could affirm and maintain with truth that such ideals have been everywhere realized?

In any case, working men and women conscious of their great responsibility for the common good feel and appreciate their duty not to aggravate the burden of extraordinary difficulties under which peoples are groaning by representing their claims in this hour of universal and imperious needs in a noisy manner and through inconsiderate action. They continue their work and persevere in it with discipline and calm, thus contributing invalable support to the tranquillity and support of all in the social family.

To that peaceful concord we pay our tribute of praise and we beseech and exhort you paternally to continue in it with firmness and dignity. That, however, should not lead any one to think, as we insisted in our message of last Christmas, that all these questions are to be considered as solved.

THE FALSE PROPHETS

The church, guardian and teacher of truth, in asserting and defending courageously the rights of the working class on various occasions and combating error, has had to issue a warning against letting oneself be illuded by the mirage of specious and fatuous theories and visions of future well-being and against the deceptive enticements and seductions of false prophets of social prosperity who call evil good and good evil and who, boasting that they are the friends of the people, do not agree with those mutual agreements between capital and labor, employers and employed, which maintain and promote social concord for their common progress and advantage.

Such friends of the people you have already heard in the public streets, in clubs, in congresses. You recognize their promises on handbills. You hear them in their songs and anthems. But when have the facts answered to their words or reality to their hopes?

Deception and delusion have been and are the lot of private individuals and peoples who have trusted them and followed them along ways which so far from improving have worsened and aggravated the conditions of life and of material and moral progress. Such false prophets would have us believe that salvation must come from a revolution which shall overturn social order and assume a national character.

NOT SOCIAL REVOLUTION

The social revolution claims to raise the working class to power. An empty word and a mere show incapable of realization in fact, you see that the working class remains bound, yoked, and tied to the force of state capitalism, which restrains and subjects all, not only the family, but even the conscience, and transforms the workers into a gigantic labor machine.

Like the other social systems and orders which it claims to fight, it classifies, regulates, and presses all into a fearful war instrument which demands not only blood and health, but also the goods and prosperity of the people. And if the guiding spirits are proud of this or that advantage or improvement secured in the field of labor, making use of it for noisy, boastful propaganda, such material advantage is never a fair recompense for the renunciations imposed on each one which injure the rights of the human person, freedom in the ruling of the family, in the exercise of one's profession, in the conditions of citizenship, and especially in the practice of religion and even in the realm of conscience.

No, your salvation, beloved sons and daughters, does not lie in revolution. And it is against the genuine and sincere profession of Christianity to drift, thinking only of one's own exclusive and material advantage, which, however, always appears uncertain, toward a revolution which proceeds from injustice and civil insubordination and to make oneself unfortunately responsible for the blood of fellow citizens and the destruction of common property.

Woe to him who forgets that a true national society incorporates social justice and demands a just and fitting sharing by all in the goods of the country. Otherwise you understand that the Nation would end in a sentimental makeshift in a nonsensical pretense which would be an excuse for certain groups to withdraw themselves from the sacrifices needed to secure public equilibrium and peace.

And you would then realize how, when national society had lost the nobility given to it by God, internal strife and struggle would become a threat which all might fear.

BUT AN EVOLUTION THROUGH AGREEMENT AND GENEROSITY

Salvation and justice are not to be found in revolution but in an evolution through concord. Violence has ever achieved only destruction, not construction; the kindling of passions, not their pacification; the accumulation of hate and destruction, not the reconciliation of the contending parties. And it has reduced men and parties to the difficult task of building slowly after sad experience on the ruins of discord.

It is only a progressive and prudent evolution, full of courage and in conformity with nature, enlightened and guided by the Christian laws of justice and equity, that can lead to the fulfillment of the honorable desires and needs of the worker. Not to destroy them, but to build and consolidate; not to abolish private property, the foundation of family stability, but to work for its extension as the reward of the conscientious toil of every working man and woman, so that little by little may be diminished that mass of uneasy and rash people who, sometimes from taciturn despair, at others through broad instinct, allow themselves to be carried off by false doctrines or by the clever tricks of agitators who are bereft of all moral sense; not to dissipate private capital, but to promote its regulation under careful control as a means and help toward securing and increasing the genuine welfare of

the whole people; not to restrain nor to give preference exclusively to industry, but to procure its harmonious marriage to handicraft and agriculture, which exploits the multifarious and necessary production of the Nation's soil; not to aim in the use of technical progress solely at the maximum profit but also to avail one's self of the advantages which come from it, in order to better the personal conditions of the worker, to make his work less arduous and difficult, and to consolidate the bonds which hold his family together in the place where he dwells, in the work by which he lives; not to aim at making the lives of individuals depend entirely on the whims of the state, but to procure rather that the state, whose duty it is to promote the common good, may, through social institutions such as insurance and social security societies, supply support and complete all that helps to strengthen workers' associations, and especially the fathers and mothers of families who are earning a livelihood for themselves and their dependents through work.

FAITH IN CHRIST AND FIDELITY TO THE CHURCH THE DEEP ROOTS OF TRUE BROTHERHOOD

You will say perhaps that this is a beautiful vision of the true state of things. But how can it be realized and effected in daily life? We need above all a great righteousness of will and perfect loyalty of purpose and action in the course and regulation of public life as well on the part of the citizens as of the governing authorities.

We need a spirit of true concord and brotherhood animating all: Superiors and subjects, employers and workers, great and small—in a word, in all classes of the people.

Your gathering around us, beloved sons and daughters, with the added fact that there are assembled from your various spheres of activity here in the house of the common Father representatives of all the groups, is for us a test and a proof that you know, feel, and understand where are to be found the deep roots of the divinely genuine social sense of "brothers bound by a pact."

"All made to the semblance of One only, all sons of One only redemption." That is the holy religion which you hold in common; the same profession of faith in the redeemer of all, Jesus Christ; in the same fidelity to His holy church and to His vicar.

And we raise to God our fervent prayer that all the vast, measureless class of working men and women may share our faith so that Our Lord may open, in justice and charity, the road to the generous and peaceful progress so ardently desired by us which may make Italy prosperous and strong in an unshaken Christian framework.

A MONSTROUS CALUMNY

We are not unaware—and you yourselves will have been able to make proof of it—how, in these times so burdensome and difficult for family and civil life, human passions take occasion to lift their heads again and to foment suspicions and to garble words and facts. Hence it is that propaganda of antireligious inspiration is circulating among the people, and especially among the working classes, that the Pope wished the war, that the Pope supports the war and supplies money for its continuance, that the Pope does nothing for peace.

Never, perhaps, was there launched a calumny more monstrous or absurd than this.

Who does not know, who does not see, who is there that cannot ascertain for himself that no one insistently opposed the outbreak, the advance, and the spread of the war more insistently than we have in every manner allowed us; that no one has pleaded and exhorted more continuously than we have: Peace, peace, peace; that no one has sought to lessen its horrors more than we have?

The sums of money which the charity of the faithful puts at our disposal are not set apart for, nor do they go to sustain the war, but to dry the tears of the widows and orphans, to console families anxious and sorrowing for their dear ones far away or missing, to succor the suffering, the poor, and the needy.

Our heart and our lips, which do not contradict one another, are witnesses to all this, for we do now deny by deed that we affirm by word, and we are conscious of the falsity of what the enemies of God are insidiously circulating in order to disturb the workers and the people, and from the hardships of the life they endure draw an argument against faith and religion, which indeed is the sole comfort and hope which upholds man upon earth in the hour of sorrow and misfortune.

No one can blot out or pervert the purpose and content of our discourses and messages in their purpose and content. All have been able to hear them as a word of truth and of peace, as promptings of our soul to bring peace to the world and to enlighten those in power. They are undeniable proofs of the immense desires that spring from our heart that on this earth, given to man as a dwelling place on his journey to a better and imperishable life, there may prevail the perfect harmony of the whole human race.

The church does not fear the light of truth, neither for the past nor for the present nor for the future. When the circumstances of the times and human passions will permit or call for the publication of documents not yet published concerning the constant activity pursued during this terrible war in favor of peace by the Holy See, which feared neither rebuffs nor opposition, there will appear in more than midday light the stupidity of such accusations, which spring not so much from ignorance as from that irreligious spirit and that contempt of the church which takes root only in some human hearts more inclined and ready, alas, to pervert the right and kindly intentions with which the spouse of Christ is animated than to benefit the people, to smooth and ease the difficulties of life, to uphold souls in the midst of the serious conditions of the present hour.

Tell the church's detractors that the truth will shine forth as it shines forth today in your hearts for all those who pay reasonable homage to the good they perceive and who do not believe in lies and calumnies. When the truth of the facts and our work will have been revealed they will be confounded who maliciously try to throw on the Papacy the responsibility for all the blood that has flowed in the battle or land, in the air and in the sea, and in the ruins of cities.

STRENGTH FROM PRAYER

Let your thoughts and the feelings of your hearts quicken your faith, Christian working men and women, renew your life of faith and strengthen it by daily prayer. Let prayer begin to sanctify and close your working day. Let the thoughts and feelings of your hearts enlighten and inflame your souls, especially during the repose of Sundays and feast days, and let them accompany and guide you in assisting at the holy mass.

Our Saviour, worker like you in His earthly life, was obedient to the Father even unto death; and now, on the altar, the unbloody Calvary renews unendingly the sacrifice of Himself for the good of the world, completes His work of redemption, and becomes the almoner of grace and of the bread of life for those souls who love Him and in their weakness turn to Him to be restored.

Before the altar in the church let every Christian worker renew his resolution to labor in obedience to the divine command of work, whatsoever it may be, intellectual or manual, to gain by his toil and sacrifices the bread for his dear ones, to keep in mind the moral purpose of life here below and the happiness of eternal life, conforming his intentions to those of the Saviour and making his work a hymn of praise to God.

THE OBSERVANCE OF THE LAW OF GOD IN FACTORIES

In every circumstance and on every occasion, dear sons and daughters, uphold and defend your personal dignity. The material with which you work, created by God from the beginning of the world and in the laboratory of ages molded by Him on the earth and deep beneath the surface of the earth by cataclysms, natural evolution, eruptions, and transformations so as to prepare the best abode for man and for his work, let that material be for you a continual reminder of the creative hand of God and let it lift your soul to Him, the Supreme Lawgiver, whose precepts must be observed even in factory life.

Perhaps boys and girls join your company and work together with you. Remember that a great reverence is owed to children and the innocent and that Christ affirms that for the one who scandalizes them it were better that a millstone should be put about his neck and that he be cast into the depths of the sea.

Oh, fathers and mothers, how your hearts must beat with anxious fear as your sons and daughters go to the factories. Do you workers take their place in vigilant guard over the innocence and purity of those young workers constrained by employment and family needs to withdraw themselves from their parents' affectionate care.

On the older people and on their example, on the energetic and decisive will of the factory management, in insisting on decent discipline, depends the preservation of physical and spiritual health in the young workers. On the contrary, immorality, greed of pleasure and extravagance endanger as well the future generations. Let no word, no joke, no story that could offend your youthful listeners pass your lips.

Even in the daily life of the factory may the young workers enjoy the help of persons drawn from the ranks of the clergy, of the religious sisterhoods, and of Catholic Action, who in agreement with the management, will devote themselves with all their physical and moral energy to their interests. Let there never fail, however, between the workers themselves mutual affection and respect, good example, the word of warning and encouragement and even whatever little material help they can afford.

PETITION FOR DIVINE ASSISTANCE

And now let us return to the scene we presented at the beginning of our discourse and point out to you once more the divine model of the Christian worker. Christ the carpenter (Mark, vi: 3) in the workshop of Nazareth, Son of God and restorer of the lost grace of Adam. He pours out on you that power, that patience, that virtue which makes you great before Him, the most exalted image of the worker whom you can admire and adore.

In your workshops and factories, under the sun in the fields, in the darkness of the mines, amid the heat of the furnace and the cold of the ice factories, wherever the word of Him who commands may call, may there descend upon you the abundance of His favors, which may afford you help, safety, and solace, and make meritorious of another world happiness the hard work in which here below you spend and sacrifice your life.

Have no doubt: Christ is always with you. Imagine you see Him in the places of your work, passing among you, noting your toil, listening to your conversations, consoling your hearts, composing your disagreements, and you shall see the workshop changed into the sanctuary of Nazareth; and there will reign among you, too, that trust, that order, that concord which are a reflection of the blessing of heaven which increases here below

and conserves justice and goodwill among men who are steadfast in faith, in hope, in the love of God.

While, then, we invoke divine protection upon our beloved working men and women, upon your families, upon those who direct and guide you in your work, upon your workshops, that the Lord may preserve them from every danger and harm, with all our heart we bestow on you as a token of the choicest graces our paternal apostolic benediction.

Zoot-Suiter Termites

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 15, 1943

Mr. RANKIN. Mr. Speaker, instead of critizing and abusing our servicemen for tearing "zoot suits" off a bunch of marauding criminals throughout the country, we may find that we owe them a lasting debt of gratitude; and if they just keep it up until they obliterate this bunch of termites, we might be justified in giving to each one who renders such services a badge of distinction, an increase in pay, or an extra furlough home.

From an article appearing in last Sunday's Washington Post, one would think that a degenerate society and a lawless element in our armed forces are responsible for this whole trouble. That article ought to be encouraging, not only to the zoot-suit rapists our brave men in uniforms have been taking care of, but it should be doubly encouraging to our crackpot promoters of "social gains," whose inflammatory activities, speeches, and writings have encouraged these Negro rapists and their cohorts in the Black Dragon Society, to carry on their criminal activities.

This article tells us that—

Everywhere the zoot-suiters are composed of underprivileged youngsters, or those who feel themselves to be such—a fact that must always be remembered in any attempt to deal with them.

This article also tells us that:

The uniform of this (zoot-suit) movement is fascinating—

Now hold yourselves down, do not get excited; but listen to this: It goes on to say:

The baggy trousers that narrow around the ankles give freedom of movement for jitterbugging—

Probably that is what is so fascinating.

And—

The writer continues—

the tail of the long coat swirls like the girls' skirts during a pirouette. The outfit is very expensive, costing $100 or more.

Chief features—

Says the writer—

are the broad felt hat, the long key chain, the pocketknife of a certain size and shape.

While the writer did not describe the knife fully, it is described in another publication as having "a long blade on one end, a hook on the other."

Now when a red-blooded American soldier, sailor, or marine sees one of these "underprivileged" objects of "social gains," or a group of them—they usually go in groups—he no doubt feels justified in yielding to his natural, patriotic impulse to exterminate such termites, or, to use the words of his oath, to defend this country against all enemies "foreign and domestic."

But the truth is that these servicemen were being attacked by gangs of these "underprivileged" zoot-suiters, dressed in these $100 outfits, and armed with stilletoes, or knives, with "a very long blade on one end, a hook on the other." One of these gangs, composed largely of Negroes, would slip up on a serviceman out strolling with his girl, beat up the young man and then rape the girl; and probably murder both of them.

Of course, those service men resisted those savage brutes, and retaliated in no uncertain terms; and when the facts are known they will receive the plaudits of all decent patriotic Americans.

But this article in the Washington Post says:

Let it be said at once that the gangsterism of our sailors in the Los Angeles area is no less alarming than the violent reactions of the zoot-suiters.

Is it "gangsterism" for our brave, patriotic soldiers, sailors, and marines to defend themselves and to defend innocent white girls from attacks at the hands of these brutal blacks and half-breeds?

It may seem so to one who is "fascinated" by a zoot suit, but red-blooded Americans who experience no such thrill of fascination will applaud our servicemen and thank them for the manhood and the courage they have displayed in stripping the masks, as well as the zoot suits, from these loathsome criminals and protecting innocent American girls from their beastly attacks.

Reduction of Federal Employment

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. BROOKS. Mr. Speaker, within the last few weeks, a great deal has been said about reducing Federal employment. I have personally received letters from constituents protesting top-heavy and overstaffed Federal agencies. One of these letters, I forwarded to the Honorable Paul McNutt, Chairman of the War Manpower Commission, for his study and his answer. To this letter, he has replied in detail, giving new facts and a new angle for further thought to this highly important subject, and especially to the employment rolls of the War Manpower Commission over which he presides as chairman. I ask that his letter be reproduced in full at this point:

OFFICE FOR EMERGENCY MANAGEMENT,
WAR MANPOWER COMMISSION,
Washington, D. C., June 15, 1943.

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BROOKS: This is in reply to your letter of May 31, referring to the letter which you received from Mr. E. C. Burris with respect to employment expansion in the Federal service, a copy of which he forwarded direct to me.

I note Mr. Burris says the statistics in question referred to employment by war agencies. The term "war agencies" is a pretty all-inclusive one, as you know. I assume Mr. Burris really refers to the War and Navy Departments, however, and not to what we in Washington think of as war agencies. The official employment figures for the War and Navy Departments, while not agreeing exactly with Mr. Burris' figures, are close enough.

I note Mr. Burris says "one would gain the impression from these figures that we were fighting the war with civilians." His implication is that this use of civilians is a reprehensible thing. If that is his implication, I must emphatically take issue with him. In a total war such as this the civilian stands in support of the troops; he is fighting this war just as surely as the man in uniform. The maintenance of a great uniformed army demands a tremendous army of civilian workers. The concept of sending soldiers to fight without guns, tanks, planes, equipment, food, and other necessaries is a most ridiculous one.

Possibly Mr. Burris fails to recognize that the vast majority of the civilian employees of the War and Navy Departments are engaged in the manufacture of guns (rifles, machine guns, naval guns, antiaircraft guns, etc.), and ammunition; repair and fitting of ships; repair and maintenance of airplanes; manufacture of various essential items of clothing and equipment for troops; the development, design, and production of new devices of war—radar for example. Does Mr. Burris realize that, included in this civilian personnel of which he is so critical, are the transport crews of Army transports, carrying troops and supplies to our bases abroad? Does he realize that it is civilian employees of these two Departments who maintain the Panama Canal, which is vital to our war plans? Does he know that it is civilian employees of these two Departments who did the repair and rehabilitation work in Hawaii following Pearl Harbor, and who continue to man the maintenance and repair yards there? Without these civilian employees the solders' families would have difficulty getting their just allotments to help meet expense.

Mr. Burris makes a point of the civilian employees of these two departments expanding at a faster percentage rate than the armed forces. This, it seems to me, is natural and to be expected. Certainly I suspect Mr. Burris would have been the first to complain if, due to scarcity of civilian personnel, young men had been inducted and left without uniforms, equipment, food, etc., for long periods of time. I do not claim there has been no wastage of men or money in our war effort. In any great and rapid conversion from peace to war there will inevitably be certain wastages of manpower. I do not, however, believe they have been as great or as blameworthy as Mr. Burris would have the country feel.

Few people consider the civilian worker in a private plant manufacturing guns or other munitions of war to be a slacker or unpatriotic; if he is employed by the Federal Government, however, in similar manufacturing activities he seems to become, in the

minds of many, a draft evader. It is a type of thinking that, frankly, puzzles and disturbs me.

Among the so-called nonwar agencies which Mr. Burris mentions is my own agency—the Federal Security Agency. Here Mr. Burris has figures which seem to show an increase of 68.5 percent. This apparent increase is not a real one, as the following figures will show:

Federal Security Agency

	June 1940	August 1942	October 1942	
			Agency	C.S.C.
Office of the Administrator	36	1,471	1,419	1,419
Social Security Board	12,164	14,056	13,525	13,525
Public Health Service	8,164	14,319	13,770	13,362
National Youth Administration	2,127	1,207	------	13,511
Office of Education	275	694	658	658
Civilian Conservation Corps	677	60	43	43
Freedmen's Hospital	345	(1)	(1)	408
St. Elizabeths	1,832	1,892	1,866	1,866
Food and Drug Administration	951	823	825	825
Employment Service	------	------	20,832	20,832
Total	26,571	34,522	52,938	66,449

[1] Included in Public Health Service figures.

Note that in the Civil Service figures for October 1942—which are the figures used by Mr. Burris—the National Youth Administration is shown as having 13,511 employees. The agency's own report shows none. The National Youth Administration was transferred out of the Federal Security Agency by Executive order of September 17, 1942, and consequently was not reported by the agency. The Civil Service Commission, however, did not receive detailed figures covering the transfer in time to correct its October figures. One other factor here should be emphasized, too, for clarification. The National Youth Administration is shown in 1940 and in August 1942 as having a relatively small number of employees. In October 1942 the Civil Service Commisison shows for National Youth Administration, 13,511, an apparent increase of about 12,000. This increase results from including as employees persons who had previously been technically called "project workers" and not considered as employees. There was no actual increase as these persons had been on the project pay rolls but, by an earlier ruling from the Comptroller General were not looked upon as "employees." Thus, the figures are really as follows:

June 30, 1940	Aug. 31, 1942	Oct. 31, 1942	
		Agency	C. S. C.
26,571	34,522	52,938	66,449
Subtract Employment Service		20,832	20,832
		32,106	45,617
Subtract National Youth Administration		----------	13,511
		----------	32,106

Thus the increase between June 30, 1940, and October 31, 1942, is really only 5,535 or 20.8 percent. All of this increase practically is in the United States Public Health Service, whose work has been greatly expanded by the war as you know.

I feel as strongly as anybody that we must make every effort to keep the size of the civilian branch of the Federal Government to the minimum consistent with the requirements of getting our job done. It is not possible, however, to stop dead on all so-called nonwar activities. There are many peacetime activities of the Government which must be continued in wartime; in fact, quite often the war lays an increased burden upon them. The work of the Department of Agriculture or the Civil Aeronautics Administration might be taken as illustrative of peacetime, non-war agencies whose work, under pressure of war's demands, takes on added importance and requires added staff.

I deplore any wastage of manpower of which the Government agencies may have been guilty; I wonder, however, if it is humanly possible to move from peace to war as rapidly as we have had to do without wastage.

I believe all responsible public officials are trying to do a sincere job. Effectiveness is not enhanced, however, by destructive attacks on the good faith of public servants. It is dangerous to draw conclusions from cold statistics unless the factors included in the statistics are thoroughly known.

Sincerely yours,

PAUL V. MCNUTT,
Chairman.

Mr. Speaker, I am glad to see a returning interest in the matter of reducing Federal employment. I am glad to have the recent report of the Bureau of the Budget recommending a reduction of several agencies and departments of government by some 41,000 persons. Our colleague the gentleman from Georgia, Hon. ROBERT RAMSPECK, is to be highly commended for his recent report showing prospective employment is being reduced by some 300,000 persons; and now I am glad to report that sentiment is crystallizing in the Appropriations Committee of the House of Representatives for a reduction of the War Department by 100,000 persons.

It is true that Congress should not reduce Government employment to the point that the normal functions of government are crippled, and we should most assuredly not make reductions which will hurt the war effort. On the other hand, reductions in employment which will promote efficiency and economy in government should be encouraged and should be the goal toward which we in this Congress should drive. In such a time as this, it is most enlightening to have statements like the one set forth above from Chairman McNutt as a guide so that in our efforts to reduce, we will not hopelessly injure or retard the proper operation of any Federal agency.

Wings for the Future

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, June 18 (legislative day of Monday, May 24), 1943

Mr. MCNARY. Mr. President, for a number of years one of the great leaders in the crusade for adequate air power has been the distinguished Senator from Nevada [Mr. MCCARRAN]. A copy of Shipmate recently came to my office, and I read with very great interest an article by the able Senator entitled "Wings for the Future." It is an impressive, thoughtful article, and should be generally read. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WINGS FOR THE FUTURE

(By Senator PAT MCCARRAN, of Nevada)

Development of aviation in the post-war world will involve changes more revolutionary than the change from the early horseless carriage to the modern high powered and streamlined motor car.

These changes probably will take place within a span of not more than 5 years, as compared with the more than 40 years required for the development of the automobile to its present high state of efficiency.

Immediately following the war, giant transport planes will come into general use; but these planes, with a probable ceiling of 35,000 feet, will be only the forerunner of the true stratosphere planes which will follow them. The speed and range of these stratosphere planes—primarily passenger carriers—will be such as to make a policy of economic isolation impossible for any country on the globe.

Huge cargo planes without bodies—true flying wings—will become the commonplace vehicle of international transportation for virtually all articles and commodities as to which the time factor between production and delivery has any considerable importance. Engineers already have prepared designs for such a flying wing, to have a loaded weight of 175,000 pounds, of which more than half will be useful load.

To feed main routes of transcontinental and transoceanic air transport, both helicopters and cargo gliders will come into major use. The Navy has been experimenting with helicopters in its antisubmarine campaign, and helicopters soon will be in large-scale production for lend-lease. The use of glider pick-up technique has been highly developed by the Army for troop-carrying purposes and this same technique will be adopted for commercial loads in the post-war era.

Domestic air lines in the United States will fly more than 6,000,000,000 passenger-miles in 1946, more than four times the distance flown in 1941, according to a prediction by William A. M. Burden, Special Aviation Assistant to Secretary of Commerce Jesse Jones.

Transoceanic and intercontinental flying by American passenger planes will show a six-fold increase in 1946 over 1941, Mr. Burden predicts. Fulfillment of this prediction hangs on conditions likely to be largely affected by the outcome of the present world war.

Nationalistic interests will foster the major problem in expansion of global aviation during the post-war period.

United States air transport companies today are flying more than 60,000 route-miles through and between bases all over the world. However, these bases, mainly developed by American money, are precluded from use in post-war commercial aviation. They are for wartime purposes only, and not for civil aviation, so far as their use is now defined; and the routes now being flown probably are not in all cases the logical routes for post-war air commerce. Further, many of the bases now in use are on foreign soil, and many of the routes now being flown traverse, of necessity, the skies above foreign lands.

The need for some international understanding regarding post-war air travel and air commerce is very clear. As the basis for such an international understanding, we must have an integrated, coordinated, consistent plan and program for development of our own commercial aviation in the post-war world.

However, nothing should be done by this country that would for a moment release American sovereignty and absolute control of the air over and about American owned or controlled territory.

However Utopian may be our view of international relationships, post-war, the present world conflict has demonstrated, beyond the shadow of a doubt, that nationalist views and thoughts are prevailing in the minds of men, and will continue to prevail for a long time to come. In our thoughts and calculations for world harmony, we must not lose sight of our national welfare, and our patriotic concepts.

Commercial air transport officials are reported to be thinking along the lines of setting up an air transport czar with virtually unlimited powers over the destinies of commercial aviation, both domestic and international. While it must be apparent that unification of purpose, development, and direction is essential to our post-war air supremacy, serious consideration must be given to whether such unification is to be achieved through delegations of powers to a czar selected or agreed upon by aviation interests, or through a proper exercise of regulatory and other powers by an appropriate Government agency. Our form of government does not lend itself to the promotion of a czar of any kind, and no agency can be tolerated under our constitutional democracy that would for a moment transcend the power of control of the people through their Congress.

The British are in one respect better off than we are with regard to ability to plan for conversion of wartime flying to peacetime air transport. While virtually all flying in Great Britain today still is under the Royal Air Force, the British government is planning to extricate it from military domination solely; and the Royal Air Force Transport Command, while it completely subordinates civil aviation to military necessity, is being operated with a clear view to the need for civilian air transportation after the war, and to the desirability, from the British viewpoint, of assuring British dominance in post-war world aviation.

Capt. H. H. Balfour, British Parliamentary Under Secretary for Air, has warned that after the war "all bets will be off" on routes now being flown by American transports, for war purposes, in or over the British Empire.

Canadian policy on air transport has been officially summed up as follows:

"The Government sees no good reason for changing its policy that trans-Canada airlines is the sole Canadian agency which may operate international air services.

"Within Canada trans-Canada airlines will continue to operate on transcontinental systems, and such other services of a main line character as may from time to time be designated by the Government.

"Competition between air services over the same route will not be permitted, whether between a publicly owned service and a privately owned service or between two privately owned services."

In Mexico, according to Gen. Alberto Salinas Carranza, Chief of the Mexican Department of Civil Aeronautics, American aviation companies intending to own ground facilities must incorporate subsidiary Mexican companies. Mexico "looks with favor" on the growth of Mexican air lines doing domestic business and expanding into foreign fields, according to General Carranza.

Other countries which concern themselves with the post-war aviation problem approach it from similar nationalistic viewpoints.

When the First World War ended, the United States had within reach its greatest opportunity for sea power. It did not grasp that opportunity. American shipping interests saw the opportunity, but no one else did; the great American public was sick of all phases of internationalism.

After the present war we shall have a similar opportunity for establishing our power over the great ocean of the air. Whether or not we grasp that opportunity will depend in large part on public interest in or public indifference to the opportunity, and the problems which it involves.

Post-war air policy and post-war maritime policy must and will be closely tied together. Foreign trade has been our greatest industry for more than a generation. The dominant position in our national economy which has heretofore been held by our merchant marine will be held, after this war, not by our merchant marine alone, but hand-in-hand by our merchant marine and our merchant air force.

Just how far post-war naval policy and post-war air policy are to be integrated is a matter which should be, and undoubtedly is, receiving most serious consideration by our naval planners. This is a point on which I do not hold myself out as an expert; but I feel very strongly that, in resolving the issues involved, every effort must be made to avoid certain mistakes which have in the past been made with respect to naval policy.

The Navy today is spending lives to redeem the mistakes of its prewar critics.

The Navy is too busy fighting a war to take time out for recriminations—too busy to point out that it is fighting that war against odds foisted upon it by legislative errors during the past 20 years. But it is important that someone should point out this fact, for it must be clear that we shall face immediately after this war naval decisions equally as grave as those recently made clear by hindsight. These decisions, of course, will by no means be confined to matters affecting aviation. None of these decisions should be deferred through public or legislative apathy, nor allowed to suffer by quick disposal at a post-war conference without a long background of public analysis.

Each year the Navy submits to Congress its estimates of our naval needs—estimates representing the best thought on foreign naval developments, changes and trends in world political strategy, and technical advances. The Navy's recommendations, submitted in connection with these estimates, both grow out of and sum up analyses, made by the most highly trained specialists in the Department, respecting our position among the world powers, and respecting the type and size of Navy which we must maintain for minimum safety.

But until the outbreak of the present war each naval appropriation bill in its turn became a subject of varied onslaughts, ranging from sniping to mass attack. A parade of witnesses appeared at the congressional hearings to dispute item after item of the Navy's estimates and recommendations. These witnesses challenged what they inferred to be the Navy's foreign policy. They hacked at the size of the fleet. They quibbled over the proportions of its components. They even took issue with the caliber of guns.

Each annual inning in this contest of professional naval opinion versus civilian opinion exhumed an old problem for Congress: Whether to be guided by a multitude of laymen with a constitutional right to be heard or whether to accept the findings of professional naval authorities who have devoted lifetimes to the understanding of their specialties. The successive Congresses have shown no agreement on this basic problem, with the result that many a man who listened to wrong counsel in the year before the war is having troubled sleep after reading about the Herculean odds which his vote bequeathed the Navy.

The thread of this dilemma has run through every naval appropriation bill between the end of the last war and the outbreak of the present war. It colored our decision at the Disarmament Congress when Congress acceded to the mood of the times and concurred on the scrapping of tonnage in a fateful bet on world peace. It has slashed nearly every naval estimate submitted in the years between the Disarmament Conference and Pearl Harbor. And the conflicting opinions of laymen and experts flowered during the era when the issue took the illogical label of "airplane against battleship." Thus over the years was erected the structure which was in existence in December 1941.

Whatever the shape of the post-war world, and whatever the agreements of the United Nations, we shall insist that the defeated enemy be disarmed—completely, beyond possibility of circumvention, and for many years to come. When this has come to pass, we can expect the universal hunger for peace to overflow into the argument that, with the disappearance of an armed enemy, and conditional upon his remaining disarmed, there is no longer any need for a fleet. Bolstered by the post-war economy wave, this contention will have many adherents.

By the same token, we can expect many shadings of opinion on the question of whether our country shall participate in projects for Allied policing of the world; and, contingent on our decision to participate, the degree of naval participation and participation of the naval air arm, within such a military establishment. It may be that extremists will attempt to read an elegy to naval power, and to short-circuit naval evolution by advocating world policing by aviation alone.

Probably we may expect pressure not only for this doctrine but also for its corollary that if the police role should be shouldered by aviation, it should be performed by commercial air liners rather than by the armed services. This issue, of course, is a straw man because the record shows a highly commendable degree of harmony between the Navy and private transport auxiliaries. But while the naval air arm properly has shown no aspiration for the functions performed by private enterprise, there are indications that the role may be urged upon it.

Equally bound up in the skein of naval policy is the question of the number of overseas bases we should have, the nature of our sovereignty over them, and whether they should be conceived as joint bases or for the use of aircraft alone.

Ultimately, most of the argument probably will settle into two main lines of opinion: The nature and degree of our participation in a world concert, and whether our military role therein shall sacrifice naval power to air power. My own position, though based on many years of advocacy of air power, does not include the usual condemnation of ships which is common to air enthusiasts. To take such a dogmatic stand is to slur the Navy's brilliant role in every engagement between Midway and the present instant.

Ahead of us lie the normal and lusty disagreements inherent to a people whose national decisions are made by democratic processes. The issues will try the souls of whatever men in Congress must cast the portentious votes. But though we may see much contention between the partisans of aviation and the technicians who will design the new patterns of naval power, it is doubtful there will be any basic conflict. A safe guide to future thinking has been furnished by Admiral King, who recently said:

"I know of no sea-going naval officer who does not understand thoroughly that aviation is the sine qua non of almost every phase of modern warfare. Likewise, I know of no such officer who holds that aviation by itself will win the war. I think we all realize that it is coordination that counts, and that we must make the maximum use of whatever weapon will be most effective under a given set of conditions."

Aid for Resort Owners

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. O'KONSKI. Mr. Speaker, I would like to draw your attention today to a very serious war casualty. This serious casualty exists not only in my district but in other districts in northern Minnesota and northern Michigan. In northern Wisconsin, in the past 20 years, hard-working and honest people have taken over lands near the lakes and have turned them into high-grade resorts. If it were not for the courage and initiative of these people, northern Wisconsin would be barren and cut-over wasteland. These resorts have fulfilled a very useful purpose in our national life. Vacationists from every part of America have flooded to these resorts during the summer months. Hundreds and thousands of hay-fever victims have used this area as their haven.

In the past 10 years these resort owners in northern Wisconsin have expanded and invested heavily in improvements in order to accommodate vacationists and convalescents. Many of these properties are heavily mortgaged. In northern Wisconsin alone the combined value of these A–1 resorts exceeds $20,000,000. This is a heavy investment and the largest single business in northern Wisconsin. The bread and butter of northern Wisconsin depends upon the welfare of these resorts. If they continue to exist, northern Wisconsin has a future. If they are driven into bankruptcy and lose their resorts, the future of northern Wisconsin is not very bright.

These resort owners, everyone of them, are great Americans. They have worked hard and they have gambled all their savings in that enterprise. We have a situation which has arisen now which has made this business a war casualty. A lack of gasoline and rubber has shut the doors to vacationists and convalescents. The desire of every American is to remain on the job for the duration and this has likewise made this enterprise a war casualty. For the duration the investments in the resort business are in a very critical state. It behooves the Government to come to the aid of this great American business as it has come to the aid of other classes.

In spite of the fact that these resorts, as a result of the war, will have little if any business, the taxes must be paid, the interest on the mortgage must be paid and the payments on the mortgage must be paid. These enterprising people have every right to expect that they be given aid to hold on to their business so that their sons who are fighting on every battle front in the world will have something to come back to. All these resort owners want for the duration is an honest opportunity to hang on to what they have. Our Government has come to the aid of other groups in such a crisis and I feel it should come to the aid of these people.

For that reason I have introduced a bill calling for an appropriation of $25,000,000 to be divided as follows: Five million dollars of this sum to be allotted to the Smaller War Plants Corporation enabling them to make loans at 3 percent interest to any resort owner who needs the money to pay his taxes, his interest, and his principal on the mortgage. This loan to be paid back within 5 years after the cessation of gasoline and tire rationing. This appropriation provides also that these loans be available until 6 months after the cessation of gasoline and tire rationing.

This bill which I have introduced appropriates $20,000,000 to the Veterans' Administration to be used in sending convalescent soldiers, sailors, marines, and coast guardsmen to these resorts at rates to be agreed upon by the Veterans' Bureau and the resort owners. This $20,000,000 will also be available to the Veterans' Bureau for the leasing and purchase of any resort for convalescing purposes.

We already need, and we are going to need very soon, many more facilities for the adequate care of the convalescent veterans. Northern Wisconsin alone has facilities available to take care of more than 20,000 convalescing veterans. It would be unwise for our Government to turn its back at these facilities in northern Wisconsin already available. All that needs to be done is to provide the funds for that purpose. There is no need for the useless expenditure of huge sums of money for the building of huge hospitals especially when materials are as critical as they are now. We in northern Wisconsin already have the facilities available. They are already built. They are and will be idle for the duration. It is only good sound business judgment to make use of them.

And in our making use of them for convalescing purposes, our Government is not only meeting its obligation to the veteran but will also go down in history as saving the most important business in northern Wisconsin. I hope that the deliberations of this great body in this great hour of peril will find the time to give this bill honest consideration and wholehearted support.

War and Peace Regulations

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, it recently came to my attention that certain large interests, inspired by selfish motives, have launched a campaign to hammer regulation W into permanent law. Regulation W, a Government order requiring heavy down payments on most purchases, is a worthwhile wartime measure designed to curb inflation. When, however, these interests start talking about it as a peacetime measure, I am going to oppose them. Its enactment into permanent law would cripple industry and would deny to the salaried working class the right to purchase when and how they please. It would deprive these people of both necessities and desired luxuries.

In this connection it is interesting to learn of the position taken by Mr. William J. Cheyney, executive director, Retail Credit Institute of America, Washington, D. C. Mr. Cheyney is an expert in the field of credit and his organization, while still young, shows signs of that progressive spirit and cooperation with the public that has made this country the greatest nation on earth. Mr. Cheyney's attitude toward regulation W as a peacetime measure warrants the attention of every sound-thinking American. His remarks should be studied by every Member of this House. A recent paper he prepared for a conference of retail credit managers is as clear, concise, and scholarly an exposition of regulation W as could be found anywhere. Following are some excerpts of the paper:

Here for the first time in 20 years, perhaps for the first time in all time, you, representing great retail establishments, are proposing a regulation by law which definitely and permanently restricts my right as a citizen to make a contract. Gentlemen—I cannot say it too emphatically—keep your hands off my right of contract.

May I put it another way? You may regulate yourselves as much as you please and until doomsday if you wish, but do not plan to regulate me after this war is over.

You may be my purchasing agent, but the contract between you and me—and I speak for millions of Americans, I am sure—gives you not one iota of authority to tell me by law what terms I may make with my retailer down on the corner. He and I, as long as this country lasts, will make our own deals, thank you.

The right of free contract is one of the natural rights of personal liberty and is also a property right, and is fully protected by the Federal and State constitutions. It is "one of the inalienable rights of the citizen, embracing the right * * * to acquire and dispose of property."

It is hardly likely that the Congress of the United States would touch this right in the absence of war or calamity. Certainly not to make profit come more easily. Even in the war emergency it is noteworthy that the administration did not see fit to ask Congress for authority for regulation W, but took rather the path more fraught with problems of legality and speculated upon the chances of passing time.

This plan is un-American. It deliberately and definitely leaves out of America's great markets the least fortunate of our people, economically speaking. It would make permanent the theory that those more affluent financially have first choice of all America's goods.

Gentlemen, if this plan had not been proposed for legislation or regulation; if to the contrary it had been suggested as a voluntary arrangement, you are aware that it would assume the proportions of the most gigantic monopoly to restrain trade ever seen in this country.

As you know, the authority for Regulation W does not rest upon legislation applicable to a peace era. Its continuation in peace without further legislation is obviously un-

constitutional. Legislation itself would be of doubtful validity.

Obviously the control of credit as you have outlined it will serve your ends. It will help to permanently rechannel business, not at all as it was channeled in the pre-war era, but this isn't so important to the Nation, is it. It will save you money. If the stores of America seek Federal regulation and legislation to cut down expense of operation, to say nothing of its headaches, then you will obviously agree that credit limitation is not the only one that fits into your program.

If you get the Government to help you refuse credit to certain people as it is proposed in this plan, then get the Government to regulate your advertising, prohibit your layaway, stop the return goods, streamline your delivery service, simplify and cheapen your gift wrapping and limit the amount you can charge the public for the decoration and embellishment of your stores and all the rest of these costly ingredients.

Be careful, I say, because there are broad ramifications of the problem you are tackling. Be careful because credit limitation by law or regulation can conceivably boomerang to the expense of the retail fraternity. Be careful, because if you once permit the public to feel that you are not truly its purchasing agent, years of advertising will not undo the harm that follows.

This right to contract: Do not underestimate it. I believe the public values it. Do not put retailing in the position of having to explain why it should have dabbled in a national limitation of one of the fundamental prerogatives of citizenship. It is these prerogatives that we insist upon here and that have become so cheap in Nazi and Fascist Europe.

Over there maybe a plan such as you are discussing would work fairly well. But even over there I have an idea that the post-war era will see unmistakable developments which would make it dangerous to its advocates despite these 20 years of training in the discipline of self-effacement.

We had better serve the people, gentlemen, if we want their dollars. We had better not try to make them over, reform them, tell them how to save, tell them under what circumstances they have a right to share in using the great developments of science in this age.

Bird Sanctuary for the Dove of Peace

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. HORAN. Mr. Speaker, after the war we can be certain of debt, death, and taxes. In addition, it is probable that there will still be a world full of people tired of strife. Once again we will talk of the millennium of peace as we have done so many, many times before. But in the past we have attempted to locate the wellsprings of world peace in the midst of the hotbed of war. It is time we thought of a real sanctuary for the dove of peace.

The following article from the Spokane Spokesman Review should be of interest:

(By Ashley E. Holden)

Spokane ought to be the capital of the United Nations, or whatever form of world federation is set up after the war. The seat of government for the secretariat of the United Nations, with its parliament and court, should be established here in this friendly atmosphere, far removed from Old World intrigues and isolated from the political and economic pressures of large industrial centers.

It readily will be agreed that the capital must be in the United States, for the success of future world security will depend upon the leadership of this Nation. On this point, Lin Mousheng, speaking at the Institute for Post-War Planning, at Temple University, Philadelphia, recently declared:

"The seat of the United Nations government, I think, should be somewhere in the United States. There are several reasons. First, and foremost, if the United Nations government is to be established, the United States is going to play the most essential and vital role. The United States must lead the way.

"The people in the Old World—especially we in China—look to American leadership in post-war world planning and reconstruction. In the second place, the United States is so happily located that she can look across both the Atlantic and the Pacific in proper perspective. Neither the Europeans nor the Asiatics are so happily located mentally or geographically."

Spokane is preeminently qualified, mentally and geographically, to be the future capital of the world. There are no deep-set racial or national animosities here; no color prejudice or labor antipathies to obstruct the course of justice. Spokane has been free from strife and would thus have the proper mental attitude necessary for the growth of a new world order.

Geographically, Spokane is ideally situated. Air transportation will be one of the cornerstones of the United Nations. Its capital must be readily accessible to the powers entrusted with the maintenance of peace. At the same time Spokane is far enough removed from Washington, D. C., to preclude any domination of the United Nations government by that of the United States.

Unquestionably the problems of tomorrow are going to center in the Pacific, and the commerce and political activities of the nations in the Pacific area are going to predominate in whatever form of cooperative government the nations of the world devise.

By air, Spokane is the hub of the world. Russia, China, Great Britain, and the United States are going to be the main spokes in the international wheel. From Moscow to Spokane by air is less than 4 days. London is no farther away. Chunking, or wherever the future capital of China may be, is closer to Spokane than to any city on the Atlantic seaboard. Australia is 40 hours by air from Spokane.

The landing fields and facilities for handling the air traffic of the world are here in Spokane. Spokane is centrally situated. Spokane has the right mental environment. Spokane is destined to be the light metals capital of the world and the capital of the greatest hydroelectric power empire on earth. Spokane ought also to be the cultural and political capital of the world.

Geneva, that picturesque city in Switzerland, the seat of the League of Nations, has a population of 124,121. Spokane is slightly larger. But Geneva is much harder to reach. Besides, Geneva belongs to the old order and never will serve again as an international capital. The Hague, where the World Court once sat, is a city of 436,568, but never again will it be the scene of international jurisprudence, for Europe may be prostrate after the war for years to come.

Spokane is young and fresh and vigorous. Its people look to the future, particularly to the west, across the Pacific. In man's groping for a better world order, with justice and amity ruling in the affairs of nations, Spokane would be an ideal location for the capital of the world!

Control of Organized Sports

EXTENSION OF REMARKS

OF

HON. FRANK L. SUNDSTROM

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. SUNDSTROM. Mr. Speaker, from an article which appeared in last night's Washington Evening Star it was reported that the President had decided on appointing a committee to attempt a solution of the war-born problems confronting organized sports. If the Government is suddenly aware of the health and morale of our people, why does it not take immediate affirmative action with the food situation? Surely nutrition is a factor of the first order in maintaining health and developing morale. The food supply is the responsibility of the United States Government, whereas, as I have stated before, sports should be left in the hands of sportsmen and under local control.

Even though the members of the contemplated committee may be of the highest caliber and serve without pay, there is bound to be an expense for the taxpayers, for surely this committee, in order to function, will have administrative, traveling, and organizational expenses.

I stand for freedom of American sports. Who knows but that Federal control will destroy this freedom. Let us direct the efforts toward the proper distribution of food, the basis of health, but do not create an agency for the regimentation of youth. I fear that under Government control records will be made by bureaucrats and not by athletes.

Shortage of Animal and Poultry Feeds

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

KANSAS CITY, MO., *June 18, 1943.*

Hon. WILLIAM C. COLE,
House Office Building,
Washington, D. C.:

Supplies of corn are vital to production of beef, pork, poultry, and dairy products. Unsound regulations of Office of Price Administration have handicapped feed manufacturers, farmers, and feeders now for many months. Feeders and feed manufacturers in this area are now virtually out of corn. Our firm has 205 bushels to get us through today, whereas our daily requirement is about 12,000 bushels. This means a loss in production for today alone of approximately 400 tons animal and poultry feeds, and 60 tons corn meal for human consumption. Office of Price Administration rules and regulations during the past 6 or 8 months have

prevented my firm from manufacturing for feeders and consumers in need several trainloads of feed and food. Results of Office of Price Administration have gone from bad to worse. One bad situation corrected by Office of Price Administration usually has created two or three worse ones. Relief has continuously been promised during the past months, but matters have gone from bad to worse further. The roll-backs proposed by the President, plus subsidies for which the next generation of voters will pay, appears to be merely a political stunt to get votes and to beat John L. Lewis. I have heard much unfavorable comment toward the President for his fight against Lewis. Many are disgusted with the President, and most everyone with Lewis. The roll-back will not retard inflation but rather will leave money in the hands of the people to buy more nonessentials. The roll-back subsidy plan appears as an obvious step toward inflation. How can well-paid workers better spend their wages than for butter, meat, and coffee? Must we continue to ask the next generation to pay for the undeserved ease of our generation? Shouldn't we pay as we go? May I respectfully urge that Congress again accept its responsibilities? Your powers have been delegated too much and too far to the administrative branch of our Government. If you don't get in and pitch some straight balls yourselves this country is going to face famine, bankruptcy, and general demoralization. Just leave it to the immature bureaucrats, instead of exercising vigorously your own authority, and we shall have as a Nation more grief than we have ever known to date. Why should the legislature of the best nation in the world permit a bureaucracy to wreck us. I have faith in our Legislature and its ability, but unused it is of no value. This Nation needs your services now as never before. I hope you will give your best attention to correct the many dangers that confront us here at home.

THOMAS W. STALEY.

Our Way of Life

EXTENSION OF REMARKS

OF

HON. LOUIS E. MILLER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. MILLER of Missouri. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following letter which was received by me from the Gardner Advertising Co. of St. Louis, Mo. This letter also appeared as an advertisement in the St. Louis Post-Dispatch under date of June 15:

ST. LOUIS, MO., *June 1943.*

DEAR SIR: Out of this wartime crucible, our way of life will emerge uplifted, united, and inspired—or be transformed in an aftermath of post-war confusion.

What can you do now to protect your stake in post-war freedom?

Let's look at the thing—instead of the name. What are the materials of this edifice we call our way of life? Who were the architects and builders? Who did the job? Who paid the bills? Who holds the mortgage now?

This title search takes you back centuries. Eager Europeans brought their families to this land of Indians and incredible hardships. Avidly they sought freedom, opportunity, a better way of life. They were the first to sanctify this land of ours with their blood and sweat and tears. America was founded by builders.

Our forefathers brought the wheel to this soil, though it was a bronze-age invention and a vital industrial tool 4,000 years ago. In the wheel you see the embryo of our way of life.

This Nation was cut, turned, and hammered out of a wilderness. The frail perished. The strong survived. They knew only necessitous invention, daring initiative, fanatical faith, and, by all current standards, insufferable work.

A few worked harder, thought longer, scrimped and saved with greater zeal. In time they built bigger log cabins, ate better food, enjoyed leisure. They reaped the ripened fruits of toil, the profits of a free, competitive community—the essence of so-called capitalistic economy.

Thanks to their efforts, and their opportunities to enlarge those hard-won profits, expansion came fast in America. They annihilated distance and gave their methods to the world. They took the pain out of work and paid higher wages. They outstripped the world in development of creature comforts and made available a standard of living no other nation can match. For all who would heed them, they lit the twin lamps of human liberty and human dignity. They gave the world progress.

The builders of this Nation knew no labor czars, no pressure groups, no paternal government as we know them. Their tools were few but true.

They built history's most imposing structure with burning desire, flaming courage—and productive money. Yes, our Nation is wealthy today—but not because it started that way.

America owes its industrial and financial prowess to the genius of ordinary men. Men of vision. Men who hammered ideas into useful goods. Men who risked life-savings on materials and machines—to put their goods in the market places. Men who faced competition—and thrived on it. Men who knew the evils of scarcity—and the blessings of abundance. Men who reinvested "profit" to build better products—sold them at lower prices—and made the cornucopia a symbol of American life.

Those are the materials, the bricks and mortar, of "our way of life." Today, as always, producers, men who get things done, are the men who give us our tempo, our direction, our destiny. Theirs is the responsibility—in common with millions of loyal workers—to create profits from production and keep this Nation in vigorous financial health.

Theirs is the shadow which stalks Hitler in his hideout. Conversely, theirs is the inspiration, the hope, the salvation of this embattled world. And come peace, theirs is the economic doctrine which must prevail—if we are to be strong—if we are to be free.

Freedom knows no distinctions. If America is to recapture her traditional freedom she must do so—across the board. Partial freedom for one group and full freedom for another won't work—socially, economically, or geographically. Every American must be free to earn, free to expand, free to match his talents against all men. That is the spirit of America.

There's the gist of "capitalism"—the time-tested foundation of "our way of life." It's the story to tell all America. It's the true story, the thrilling story, the crucial story which must be told—if you are to protect your stake in post-war freedom.

Tell it in these words or your own words. But tell it. That's one way to do your share in winning the peace—it seems to us.

Very truly yours,

GARDNER ADVERTISING CO.

Records of the Federal Government

EXTENSION OF REMARKS

OF

HON. ALFRED J. ELLIOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. ELLIOTT. Mr. Speaker, the problem presented by the rapid accumulation of records of the Federal Government, a serious one even prior to Pearl Harbor, is becoming more and more acute as the months go by. The quantity of records in the possession of Federal agencies in the District of Columbia alone increased from about 3,000,000 cubic feet in 1935 to about 7,000,000 cubic feet in 1941. The creation of the various war agencies and the increased activities of most agencies of the Government because of the war have accelerated immensely the rate of production of Federal records. The Navy Department estimates that it now has an accumulation of more than 1,300,000 cubic feet of records and the General Accounting Office is accumulating records at the rate of about 92 tons per month. A comparable increase in the accumulation of records has been and is occurring in most other Government agencies.

Most people, including Members of Congress, take records for granted, assuming that in some magical way they plan their own fates. The administration of records, like most other problems, however, requires effective planning and a great deal of time and effort. The solution of this problem is often as difficult as it is important.

One essential phase of records administration is the elimination of ephemeral materials such as forms, routine correspondence, and the like, the continued retention of which would be of no administrative, legal, research, or other value to the Government. I am sure that most Members of Congress regard an accumulation of useless records as of minor importance, even though it may be stored in expensive and, at present, critical and almost unobtainable equipment and occupying valuable space. The fact that this type of materials constitutes a considerable majority of the total volume of Federal records should not be overlooked. The Navy Department, for instance, has stated that more than 90 percent of the records of the fleet and shore establishments eventually fall within this classification and that less than 10 percent of them have to be permanently preserved.

In the light of this situation, which emphasizes the importance of this phase of records administration, provision for the prompt elimination of materials that lack sufficient value to warrant further preservation is essential.

Even more important, however, is the safeguarding of those records that should be preserved either permanently or for a period of time because of their prospective value to the Government or to citizens for administrative, legal, research, or other purposes.

With a view to facilitating the solution of the acute and perplexing records problem now facing the Federal Government, particularly with respect to that phase of the problem relating to the disposal of records, I have introduced and the Committee on the Disposition of Executive Papers has favorably reported H. R. 2943. The bill is now on the Union Calendar and will, I hope, come before the House for consideration at an early date.

The need for this proposed legislation is aparent to everyone familiar with the existing records problem. I have reviewed briefly the existing situation in order that Members of Congress may obtain some realization of the seriousness of the Government's records problem and the importance of undertaking its solution by every proper means available. In order that Members of Congress may understand how essential the passage of H. R. 2943 is to efforts that are being made to improve this situation, I desire to make a brief statement concerning the general purposes of the bill, its effect on existing law, its benefits, and the estimated economies that might be effected thereby.

GENERAL PURPOSE

The primary purpose of this bill is to prevent the disposal of records of the Government of the United States having administrative, legal, research, or other value sufficient to warrant their continued preservation by the Government and to conserve space and filing equipment by facilitating the disposal of records lacking such value. The bill is also designed to reduce the clerical work involved in and the time required for obtaining disposal authorizations.

EFFECT ON EXISTING LAW

The pending bill would take the place of the general disposal act approved August 5, 1939 (53 Stat. 1219–1221), and the act with reference to the disposal of photographed records approved September 24, 1940 (54 Stat. 958).

BENEFITS

In order to prevent the disposal of any records of value, provision is made that no records of the Federal Government shall be alienated or destroyed except in accordance with the provisions of this act. Under the provisions of the act agencies are not permitted to propose for disposal any records in their submissions to the Archivist of the United States that are needed in the transaction of current business and that appear to have, or that after the lapse of specified periods of time apparently will have, sufficient administrative, legal, research, or other value to warrant their further preservation by the Government. The Archivist of the United States, after appraising records covered by submissions made to him by agencies, is permitted to list in his submissions to Congress only records that do not appear to him to have such value. The joint committee of Congress, likewise, may report to Congress only such records covered in submissions referred to it as do not, or will not after the lapse of the period specified, have such value. Thus, no records of the Federal Government may be disposed of except records that by the unanimous opinion of the head of the agency, the Archivist of the United States, and the Joint Committee of Congress are deemed to lack sufficient value to warrant their further preservation by the Government.

The substitution in H. R. 2943 of the phrase "administrative, legal, research, or other value" in lieu of the phrase "permanent value or historical interest" used in existing law prevents records that obviously lack "permanent value or historical interest" but that do have temporary value to the Government from being proposed for disposal in lists or schedules. It is an additional safeguard to prevent the disposal of records that are of value to the Government.

Perhaps the most important provision of the bill is that for the submission of schedules proposing the disposal, after the lapse of specified periods of time, of records of specified form or character that may accumulate in the future. Present procedures permit approval for disposal only of records that are already in existence; the proposed procedure would give to the agencies authority to dispose of specified types of records as soon as they had been in existence for specified periods of time without obtaining any further approval.

These schedules are comon-sense plans for the regular clearance of noncurrent, valueless records without the need of repeated listing year after year of the same routine items. Several agencies, notably the Navy and Agriculture Departments, are preparing such schedules, based on surveys of existing records and procedures. Officials of the agencies know that certain forms, certain types of correspondence, certain copies of other records, will only be used during specified periods of time, and their usefulness for clearance of accounts, reopening of cases, protection against claims, and other administrative purposes will likely be restricted to a few years. Once lists are made, indicating the periods of probable usefulness, they constitute schedules which can be followed by those responsible for keeping the records. The general practice is to list all records of given operating units, showing in relation to each other the materials of permanent value that should eventually be transferred to The National Archives, those of value for a few years that should be stored temporarily by the agency, and those that can be eliminated regularly as soon as their current use is ended. The bill provides that the Archivist and Congress give their approval to these schedules insofar as they provide for actual disposal of records, and that the agencies proceed to carry them into effect continuously until changes in forms or procedures make them out of date. Disposal is therefore based on Congressional approval as under existing legislation, but great savings can be effected by reducing the time required for repetitious reporting and by the prompt release of equipment and space.

In the preparation of schedules, explanations of the types or forms of records are usually set down, indicating the use made of each item, what happens to various copies, and in what other records the information may be available. The use of schedules will often result in more intelligent planning than does the preparation of disposal lists long after the records have become noncurrent and information about them has been forgotten. Schedules are particularly adaptable to routine recurring forms, such as accounting papers, but can be used in connection with other kinds of records that are produced under continuing organized procedures. A sample schedule covering certain records of the Packers and Stockyards Division, Agricultural Marketing Service, Department of Agriculture, appears at the close of my remarks.

Other provisions of the bill will clarify or simplify existing procedures or otherwise facilitate operations. The first section contains a definition of the word "records," which would aid the agencies in the preparation of lists and schedules and tend to eliminate therefrom the listing of nonrecord materials. Another section extends the present provision relating to records that are a continuing menace to human life or health or to property from records that have been listed for disposal to all records of the United States Government, but provides that the head of the agency that has custody of the records must join with the Archivist in determining that the records constitute such a menace. The proposed act also contains a new feature designed to provide some authority for the emergency disposal of records outside the United States in wartime.

ESTIMATED ECONOMIES THAT MIGHT BE EFFECTED

Potential annual savings of several million dollars in filing equipment and space costs, and of several hundred thousands in man-hours, are indicated in letters received by the Archivist of the United States from 34 Federal agencies commenting upon this proposed legislation. All executive agencies of the Government were given an opportunity to comment, and no one of them opposed passage of the bill. Their estimates of possible economies are impressive.

Savings can be estimated in several ways. The total actually estimated in the letters received was approximately two and a half million dollars, but actual figures were received from only a part of the agencies. Analysis of the formula used shows that if applied to the Government as a whole the total might, as a conservative estimate, exceed $10,000,000. Among the agencies having the most precise cost figures available are the Federal Housing Administration, the Navy Department, and the Veterans' Administration. They represent widely varied kinds and sizes of organizations, and thus their estimates are of particular interest. As in other agencies, their analyses indicate that the vast majority of paper accumulations are retained much longer than they need to be because of existing cumbersome procedures and lack of streamlined records administration planning.

The Federal Housing Administration, calculating that its annual cost of

additional filing equipment and space would be reduced by two-thirds, and having at hand its present expenditure figures, estimates savings of $19,186 a year. This agency has approximately 4,000 employees, compared with a total for the Government of over 2,900,000 civilians. Assuming that costs of records administration are roughly proportionate to numbers of employees, the figure reported by the Federal Housing Administration, if prorated to the Government as a whole, would amount to some $14,000,000.

The Navy Department has undertaken the most extensive program of records administration in the Federal Government, with notable results in economy and in efficiency of operation. This agency also has data on costs readily available, and has calculated the potential benefits of the proposed legislation on a different basis from that used by the Federal Housing Administration. The Navy Department reports that it has records accumulated occupying the equivalent of $6,200,000 worth of filing equipment. Had the expeditious disposal that would be made possible under this bill been in effect in past years 40 percent of that equipment, valued at $2,600,000, would not have been required. The Navy Department letter stated that as much as 90 percent of its accumulated records are of such temporary value that they are not kept on an average of more than 5 years, and doubtless that percentage would be approached in most other agencies. Procedures that cause materials of such temporary value to be retained longer than necessary are costly indeed. Calculations based on the personnel of the military services are likely to be misleading because of the large proportion not doing paper work, but there is reason to believe that the figures reported by the Navy Department would be multiplied several times if the same analysis could be applied througout the Government. One can speculate upon the same difference, 40 percent, in filing equipment required for the approximately 7,000,000 cubic feet of records indicated in the District of Columbia by a survey late in 1941, before the war agencies had reached peak production in paper work. The Navy formula applied in that way would show a potential saving of $14,000,000.

The Veterans' Administration, employing approximately 45,000 persons, estimated its annual savings in salaries alone through the streamlining of procedures that would be allowed by this bill at $4,000. If the ratio indicated, about 9 cents for each employee, is applied to all the Federal service excluding military and naval personnel, the annual savings would be more than a quarter million dollars. Economies in man-hours reported by various other agencies indicate that such an assumption would be a reasonable one.

These financial estimates are obviously rough approximations but they indicate that this bill would effect surprisingly great economies.

Perhaps the following portions from a resolution adopted by the Federal Fire Council, an official advisory agency in matters relating to the protection of Federal employees and property from the hazards of fire, urging the passage of the proposed legislation emphasize better than anything I might say the need for and the desirability of the proposed legislation:

The present procedure for the disposal of Federal records that are no longer useful is unnecessarily cumbersome, requiring as it does each agency to list all the records it proposes to dispose of each time a disposal list is submitted, regardless of the fact that records of identical character may have been listed and approved for disposal again and again on previous disposal lists. In the present emergency the agencies of the Government cannot spare or obtain personnel to undertake this repetitious listing, and, as a result, large masses of useless papers without permanent value or historical interest have accumulated in federally owned and leased buildings both in Washington and in the field. These accumulations are growing with a daily increasing rapidity due to the great expansion of governmental activity during the war.

This vast and increasing mass of useless papers not only occupies large areas of critically needed office space and tens of thousands of file drawers that could be put to effective use, but constitutes as well a serious and growing fire hazard to Federal buildings, employees, and property. The need for file cabinets to house the millions of current records of the Government is particularly acute at this time. The danger created by the storage in buildings often far from fireproof of tons of useless and inflammable papers is made more grave by the present hazards of bombing and sabotage.

The proposed legislation would simplify in several ways the procedures for the disposal of useless papers and in particular would authorize the approval of disposal schedules, under which specified types of records now in existence or that may accumulate in the future could be disposed of after a specified lapse of time without further listing or authorization.

The Federal Fire Council believes that the proposed legislation, if enacted, will do much to relieve the serious situation that now exists, and in view of its responsibility for the reduction of fire hazards in Federal buildings heartily endorses it in principle and strongly urges the passage of this or equivalent legislation.

Mr. Speaker, I am convinced that the enactment of this bill into law will help to prevent the disposal of valuable records of the Government that should be preserved; will reduce the clerical work involved in and the time required for obtaining disposal authorizations; and will make possible the saving of hundreds of thousands of man-hours and millions of dollars annually. I trust, therefore, that Members of the House will realize the urgent need for this proposed legislation and will assist in effecting its prompt passage by giving it their support.

AGRICULTURAL MARKETING SERVICE—PACKERS AND STOCKYARDS DIVISION

Form PS-2. Application for registration under Packers and Stockyards Act, 1921: All market agencies and livestock dealers operating at public stockyards are required by law to be registered by the Secretary of Agriculture. The application for registration submitted on Form SP-2 contains considerable information regarding the character and organization of the business firm submitting the application. The record is retained permanently in the Washington office. (Retain, Washington office.)

Form PS-3. Annual report (market agencies).

Form PS-12. Annual report (dealers and order buyers).

Form SP-13. Annual report (public stockyards).

Form SP-17. Annual report (packers).

Form SP-18. Annual report (brokers or clearing agencies).

Form SP-34. Annual report (live-poultry dealers).

These confidential annual reports made to the Washington office contain detailed statistical information as to the volume and character of the business done by the reporting firms. Data is also included on the salaries and wages paid and the profits and losses of the company.

In the Washington office a consolidated summary made of these statistics is retained permanently. In this summary the identity of the individual firms is lost. However, since the income-tax returns made to the Bureau of Internal Revenue duplicate the information in these annual reports and are retained permanently, the latter can safely be disposed of. (Dispose, after 5 years, Washington office.)

Form PS-5. Valuation form: These forms are used by valuation engineers to gather information in advance of hearings held to determine the reasonableness of rates at the various stockyards. These papers are filed permanently in the valuation office at Kansas City. (Retain, Kansas City office.)

Form PS-10. Scale test record form: These forms are used by weight supervisors to report on the testing of scales used at the stockyards. The record is of routine administrative value only. (Dispose, after 3 years, Washington office.)

Form PS-14. Scale-inspection record form: This is a form used by the weight inspector carrying detailed information as to the condition of scales tested. The record is of routine administrative value only. (Dispose, after 3 years, Washington office.)

Trust fund agreement: The Packers and Stockyards Act of 1921 requires the posting of surety bonds or their equivalent by all market agencies or dealers doing business on a public stockyard. These trust fund agreements accepted in lieu of surety bonds are retained permanently by the Washington office. Form PS-24 is a sample form of trust fund agreement. (Retain, Washington office.)

Form PS-27. Untitled: This form is used to report information regarding the business of packers believed to be subject to the Packers and Stockyards Act. It is retained permanently by the Washington Office. (Retain, Washington office.)

Form PS-30. Sales sheet: These forms are used by the valuation engineers to obtain sales and price information preliminary to the establishment of reasonable rates. The records are retained permanently by the Kansas City office. (Retain, Kansas City office.)

Form PS-31. Application for license: As amended in August 1935 the Packers and Stockyards Act covers the marketing of live poultry in designated markets. Form PS-31 is the application submitted by poultry dealers for license to operate under the act. The form which carries detailed information as to the character and organization of the firm making application is retained permanently by the Washington office. (Retain, Washington office.)

Routine auditors' work papers: These are work papers accumulated by the accountants of the Packers and Stockyards Division during the routine auditing and analysis of the books and records of livestock market agencies. Final reports submitted by the auditors are retained as are the work papers

for rate cases or those involving hearings. (Dispose, after 5 years, Washington office.)

Annual report tabulation work sheets: These are work papers used by the Washington office to compile the information appearing on the annual reports submitted by livestock market agencies (see above under Form PS–3). The consolidated report resulting from these tabulations is retained permanently. (Dispose, after 5 years, Washington office.)

Stockyard and exchange tariffs: Stockyard owners and market agencies at stockyards are required to file with the Secretary of Agriculture and keep open for public inspection schedules showing all rates and charges for stockyard services. Changes in tariffs must also be filed with the Secretary of Agriculture. Copies of such tariffs accumulated by the field offices of the Packers and Stockyards Division have only a temporary administrative value. (Dispose, after 5 years, all field offices.)

P. and S. docket (formerly monthly record): This is a monthly report of action taken on cases arising under the Packers and Stockyards Act, reproduced for the benefit of livestock market agencies and other interested parties. Copies are supplied to all field offices and a permanent file is retained by the Washington office. (Retain, Washington office. Dispose, record copy, after 3 years, all field offices.)

Docket file: These docket files result from formal inquiries instituted on charges of unfair trade practices or as a result of the violation of regulations. The files include such papers as transcript of testimony, correspondence, exhibits, etc. The records are retained permanently by the Washington office. (Retain, Washington office.)

Our Peace Aims

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. LUDLOW. Mr. Speaker, I have sought this time because I want to read to the House page 858 of the hearings dealing with the Office of War Information, as follows:

BROADCASTING THE PEACE AIMS OF THE UNITED STATES

Mr. LUDLOW. I would like to call your attention to the general language of your justification on page 130, under the heading of the Outpost Service Bureau. I should like to read this into the record:

"The objectives are to weld the Allied Nations more firmly to America, to bring the neutrals closer to understanding of and agreement with the American purpose, to encourage resistance in the occupied areas, and to dishearten the enemy.

"In general, the objectives are met by disseminating factual information concerning the United States, its war and peace aims, its ideals and institutions."

And so forth. I am one of those who believe that the end of this war might be hastened by judicious dissemination of the peace aims of the United States throughout the Axis countries. I note that that seems to be a part of your purpose.

Mr. ELMER DAVIS. Yes.

Mr. LUDLOW. I wonder if you could tell us just what has been done along that line, because I think that everything that is done along that line is all to the good.

Mr. ELMER DAVIS. We can make no promises for the future until our war aims and peace aims are more clearly defined. In the meantime, we do all that we can to try to break down the confidence of enemy peoples, to convince them that they are sure to be licked, that they can have no hope in any of their governments or any successor governments that they might get from the same people. We shall be more definite when we get a more definite statement of the policies of the United States for the future.

Mr. LUDLOW. Would not that be a very fine thing to do, showing the altruistic peace aims of the United Nations and their friendliness toward humanity, and our desire to make a better world; and to express that in concrete terms and to get it out all over the Axis countries? I think it would be doing a wonderful thing.

Mr. HAMBLET. There is nothing we would be more glad to have than an official statement of that kind that we could use.

Mr. LUDLOW. I think that would be worth more than battalions and battleships toward ending the war, because I think it would create a revulsion of feeling in these Axis countries against their tyrannical rulers and would hasten the day of revolution and overthrow.

On March 8, 1943, I introduced a resolution to create a committee on peace aims, the function of which would be to draw up and broadcast to the world a forthright statement of the beneficent peace aims of ourselves and our allies; to reveal to all nations authoritatively and officially a vision of the better world that we confidently hope may be expected when the United Nations win.

We are coming to see that the only possible foundation upon which a peace that will last can be built is that of Christian brotherhood, and I believe it would be of tremendous advantage to the cause of the United Nations if we would let the world know that that is the kind of peace for which we stand.

I refer now to the resolution I have introduced to point out how admirably it fits in with the plans of the Office of War Information. Mr. Davis would be glad to have such a statement that he could use for propaganda, but up to date there is none such.

A great number of archbishops, bishops, ministers, and other men of thought and purpose have endorsed my resolution as being timely, and in their opinion vastly important. The cause of liberty is demanding a statement on peace aims. Mr. Davis needs such a statement to make his propaganda effective. Let us see that this statement is forthcoming and we will indeed be implementing the Office of War Information with something to throw at the enemy that will be worth more than battalions and battleships toward winning the war and bringing to the world the peace of justice for which all right-thinking persons hope and pray.

The text of the resolution I have introduced is as follows:

Joint resolution to create a committee on peace aims

Be it resolved, etc., That a committee on peace aims is hereby created, to be composed as follows: Three Members of the Senate to be chosen by the Vice President; three Members of the House to be chosen by the Speaker, and six Members at large to be chosen by the President. Of the six members to be chosen by the President, one shall be a woman, one shall be a representative of labor, one shall be a representative of the Federal Council of Churches of Christ in America, one shall be a representative of the Catholic Churches of America, one shall be a representative of the Jewish religion, and the other shall be a representative of the State Department, trained in the field of foreign service.

SEC. 2. This committee shall prepare a clear, definite statement of what the United Nations are fighting for and the peace aims which they will faithfully execute when victory comes to Allied arms.

SEC. 3. When this statement is completed the Secretary of State shall transmit the text thereof to the Governments of Great Britain and British Dominions; Russia, and China. If those governments consent to become signatories no further negotiations will be required and the statement will be regarded as a finished document expressing the views and purposes of all of the United Nations. The statement shall also be submitted to friendly governments under Axis subjugation, whose adherence may be desired.

SEC. 4. If any one of the United Nations dissents to the statement or any of its provisions, the President shall invite the governments of the United Nations to send delegates to a conference to be held in the city of Washington to compose existing differences and agree on a modified statement which all can sign.

SEC. 5. When the statement is completed and approved it shall be promulgated as an official declaration stating the United Nations' peace aims and copies of it shall be widely distributed throughout the world.

Federal Unemployment Taxes and Real-Estate Salesmen

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. HINSHAW. Mr. Speaker, one of the fundamental intentions of the Congress in enacting the Federal program for protection against unemployment was that those persons who pay in contributions, or for whom contributions are made, receive the benefits provided under the act. No thought was further from congressional intention than that anyone should make contributions without obtaining corresponding benefits.

It has developed, however, that exactly that situation has occurred with certain groups, particularly real-estate salesmen. There appears to be no definite formula to determine when a real-estate salesman is unemployed and without this determination, it is impossible for the salesman to obtain the benefits of this tax. The determination of unemployment and of benefits to be paid is left to the States and the Federal Security Agency to establish a uniform policy on this question. The result is a difference of opinion among the various State unemployment commissions as to how

these benefits will be applied. As far as I know, there have been no cases of benefits paid by any State unemployment commission to real-estate salesmen.

The only alternative, other than having real-estate salesmen excluded from the Federal Unemployment Tax Act, would be to have the various State acts amended to provide for a uniform determination of unemployment and benefits to be paid. Assuming that a practical formula could be evolved, this would entail a long and tedious job requiring many years to get the States to adopt a uniform amendment. This, of course, would not solve the problem in the six States and the District of Columbia which now exempt real-estate salesmen from the State unemployment tax. In these States they are subject to the Federal tax but are denied any benefits due to their State exemption.

It is true that the burden of this tax is not heavy. Due to merit rating, many real-estate firms have reduced their State tax to as low as one-half of 1 percent. There is little objection among the real-estate profession to payment of this unemployment tax if they could be assured that the benefits would be forthcoming. However, it is the general concensus that no practical solution of how and when these real-estate salesmen could receive benefits can be found, and therefore it is only just that they be exempt from the payment of this tax.

Real-estate salesmen's work is of a character which makes them more of an independent contractor than insurance salesmen, who are exempt from the Federal tax. Most insurance salesmen continue to collect commissions on renewals and policy premiums for as long as 5 years after the policies are written. At the consummation of a deal a real-estate salesman collects his commission and has no further financial interest in the transaction. If insurance salesmen are exempt from the act because they are independent contractors, it only stands to reason that real-estate salesmen should be afforded the same exemption.

As far as I can determine, the officials of the Federal Security Agency believe that the only practical recourse for relief of real-estate salesmen is to amend the Federal Unemployment Tax Act to grant them exemption from the making of payments. Accordingly, I have introduced H. R. 2974, granting this exemption by amending the act. The amendment will not, of course, affect the Federal Insurance Contributions Act, and salesmen would continue to receive social-security benefits.

Real-estate salesmen perform a useful function. They have a peculiar stake in the stability of our economic structure. Upon their activities depends the steady and sound development of our cities, towns, and rural areas. They are as patriotic and hard-working a group as any in the Nation. Through their offices and through their State and national organizations, they have rendered unselfish and useful service to their Nation at a time when Federal agencies have entered into widespread real-estate operations.

The existing provisions of the Federal Unemployment Tax Act work particular injustice upon the members of this group. It is their lot that while payments are made on their behalf, they are denied the corresponding benefits. This improper situation has been relieved for insurance salesmen, but not for the members of the real-estate profession. Since they are excluded from benefits, it is hardly fair for the Government to continue to make collections, and I therefore urge that H. R. 2974 be enacted to correct this condition.

The House Proposal on Peace

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of June 17, 1943:

THE HOUSE PROPOSAL ON PEACE

While the august Senate Foreign Relations Committee, with one eye on the future world and the other on petty politics, has been dawdling with the Ball and similar resolutions, the House Foreign Affairs Committee has suddenly outflanked it with an incisive and effectively statesmanlike move. It has approved, by a unanimous vote of both Republican and Democratic Members a simple concurrent resolution:

"That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace, and as favoring participation by the United States therein."

This states the essentials. It represents a kind of least common donominator of the views of those who are convinced that the United States cannot again retreat into a perilous and parochial iisolationism after this war, that it must play its part in the organization of international security, and that it is importat, as a mater of practical present policy, to associate Congress now with this view.

The House resolution abandons some of the more advanced ground taken up by other proposals. It leaves open such specific issues as an international court, an international police force, and so on; as a concurrent rather than a joint resolution, it softens somewhat the extent of the moral commitment involved. This may be taken as an admission that American opinion is not yet as fully formed on these matters as some had hoped; but, at the same time, it rescues the essential issue from the confusions in which it threatens to be involved by debate on details, and so makes it possible to record the real strength of American opinion on the basic point—that this country is prepared to contribute to a just and lasting peace.

It is difficult to see what excuse could be found for burying such a declaration in committee, or how any intelligent legislator could vote against it. Certainly, those who accept in good faith Mr. Spangler's statement, made in announcing the formation of the Republican policy council, that "the problem of a lasting world peace must be met courageously and realistically * * * in a spirit of friendly cooperation with the other nations of the world," must be prepared to endorse at least this much. Here is a test of fundamental purpose which cannot easily be evaded.

Some Senators seem inclined to stand on their dignity, on the ground that the House has no business meddling in such lofty matters. The public is unlikely to be much impressed by that. What it wants from its legislators is the ability to act with sense, clarity, and decision; and it will respect either House which can do so.

Forest-Fire Protection

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. MANSFIELD of Montana. Mr. Speaker, because the House will soon have a chance to reconsider the agricultural appropriation bill, I want to once again bring to your attention the real and necessary needs of the Forest Service during the coming year. To people in the forested sections of the West—and this is doubtlessly true also as to people in the South, in the Northeast, in the Lake States, and in other forested parts of the country—any reduction in funds for forest fire protection during these emergency times is incomprehensible.

These people who live in forested country realize that C. C. C. boys were formerly available for fire prevention and suppression purposes. The C. C. C. is gone so the local people who realize what that means question, as I most decidedly do, this proposed cut in funds. Manpower will not be available for quick action when fires start. And without quick and hard action on fires whenever and wherever they start we are flirting with catastrophe.

Consequently crews of students and others must be recruited and trained in advance of the fire season, and then located just like small fire departments in central spots in fire danger areas where they will be immediately available to fight fires when they start. This was the method used last year. Results were excellent. By no means should it be discontinued. We cannot afford to let fires run.

I am not going to burden you with a detailed statement of the need for adequate forest-fire protection, especially during this wartime period. You are well aware of the damage that would result from uncontrolled fires in valuable stands of timber which are so badly needed in our war program; how logging operations could be disrupted for extended periods; how transmission lines, communication lines, railroads and other life lines could be put out of commission; and how other industrial and military

establishments and facilities are seriously endangered.

The danger to aviation resulting from heavy smoke blankets is well known to you. My friends from the coast have reported on the Jap bombings of last year. They did so then and could do so again, scattering fires for hundreds of miles through our western mountains. Military officials have expressed deep concern about forest fires which silhouette passing ships and make them vulnerable to submarine attack. Overlooked too often is the serious diversion of manpower from logging operations and other war industries when called upon to furnish men for fire-fighting crews. In the Northwest, for example, each time 200 loggers fight fire for three days, one less full trainload of lumber goes to war.

The drain on manpower at work on farming operations is equally critical. That is one of the main reasons why small stand-by crews should be employed in advance for fire-fighting purposes. The C. C. C. boys could have done this job, but since they are gone, they certainly should be replaced, in part, at least, for the relatively short season they will be needed. The full amount requested by the Department should be appropriated; by no means a less amount than was appropriated last year.

FOREST RESEARCH

I should like also to comment on the appropriation for forest and range research activities of the Forest Service. The House cut them some $625,100 below the Budget figure. The funds involved are used to support the work of the Forest Service in forest and range investigations, in studies of forest products, the forest survey, and investigations in forest and range economics and forest influences. I urge approval of the amounts proposed by the Senate. In Montana, lumber, livestock, and wool production rank among the most important industries of the State, and work under these appropriations is of inestimable value in the conservation of our forest, range, and water resources and making the best use of them.

The research work of the Forest Service bears directly on the war in many ways. For example, their range studies are aimed directly at stepping up the production of meat and wool from range lands. This work has been invaluable to livestock owners.

Forest-protection investigations, which apply especially to Montana, are extremely important to timber owners and to responsible State and Federal officials in meeting an increasingly critical forest-protection problem in Idaho and adjacent States. Wood is now as scarce as steel. The work in forest research is essential to proper and wise handling of the forest resources and related range and watershed lands both during the war and the critical period which will follow.

It would seem to me that reductions in these appropriations are not true economies but would result in curtailment which we can ill afford. It is this appropriation which is the chief support of work for one-third of the total area of the Nation. I urge retention, therefore, of the Senate figures in the forest research items.

Stove Rationing

EXTENSION OF REMARKS

OF

HON. WILLIAM P. ELMER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. ELMER. Mr. Speaker, some time ago I received a letter from the O. P. A. asking my advice about rationing stoves. I did not get in on the rationing of fuel oil. I wrote the Director as follows:

MAY 31, 1943.

Mr. JOEL DEAN, Re: 751:JD
Director, Fuel Rationing Division,
Office of Price Administration,
Washington, D. C.

DEAR MR. DEAN: Your letter of May 29, 1943, received. The first paragraph, as follows, struck me: "The suggestions of Members of Congress proved so helpful in developing next year's fuel-oil-rationing plan that I should like to have your help on another rationing program."

After I arrived here January 3, 1943, the first speech I heard was some Member dismembering the OPA, and Leon Henderson. From then on it has been one continuous round of roasts (without meat). I rather resented these speeches, not because I gave a damn for the OPA, or Leon Henderson, but I hated to see the rubber boat, that anchored me from private to public life, deflated. I want it pumped tighter as I may run again in 1944, if I don't starve or realize better than present prospects on my Victory garden. The poor land, frosts, freezes, snows, rain, bugs, worms, dogs, etc., are as great a menace to it as FDR is to the country. Both look sickly. I much rather take my chances on being re-elected on the past record of the OPA, and the new one proposed, than to share the ride to oblivion by helping to parcel out stoves. However, I suggest this wonderful thought to you.

First, put the wood stoves in wooded areas. Second, put the coal stoves in coal areas. Third, put oil stoves in oil areas. Isn't it astonishing that no one but a new Member of Congress had thought up that formula? Heretofore it has been "in reverse."

You say: "The suggestions of Members of Congress proved so helpful, etc." The double-crossing outfit, I thought they meant it. It must have been constructive criticism I heard all winter long when I was shivering in Berwyn, from lack of fuel oil and was trying to burn Maryland wateroak wood, cut 2 hours before, in a fireplace. Now you write, "I want your help on another rationing plan." Stoves? Yes, stoves, and nothing to burn in them. Either you are just plain dumb, dealing in sarcasm, or the meekest Christian of all ages. I can't say you are a Christian because that presupposes doing unto others as you would be done by. I know damn well if I was OPA, and you me, you would have gloried when some Congressman turned on the heat, twisted my tail until I squawked, and run me to Florida. I can't think you are dumb because the apparatus you headed "Confidential—Draft B," is such only one man could get up and no man could understand, so I conclude you are just dealing in a bit of satisfying sarcasm to see how many damn fools there are in Congress who were politicians last November, but are statesmen now. I haven't had time to read the 18 pages and don't intend to read them; would not understand them if I did.

I live in the Ozarks of Missouri, and own hundreds of acres of timber for firewood and won't freeze. Just keep 'er going Joel, until November 1944, when and where Americans will speak a language even new dealers can understand. It will be a damn site plainer than the enclosure with that 751:JD.

Sincerely yours,

WILLIAM P. ELMER,
Member of Congress.

The Little Steel Formula

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. BURDICK. Mr. Speaker, before we condemn labor in general for demanding an increase in wages we should be sure of the facts. The Grand Forks Trades and Labor Assembly, by a resolution, very properly sums up the reasons for labor's demands for increased wages. The resolution reads:

Whereas a daily newspaper published an article Friday, April 9, that originated in the office of the President of the United States, stating that a strict adherence to the Little Steel formula would be followed by the War Labor Board in establishing wages and ceiling prices on all commodities affecting the cost of living; and

Whereas on the same date in the same newspaper a news item from O. P. A. headquarters in Washington disclosed that prices on white potatoes for May and June had been increased 20 cents per hundred pounds and dry onions had been increased 20 cents per 50 pounds; and

Whereas a 15 percent wage increase limit as of January 1, 1941, is grossly unfair and inadequate to meet increased living costs since January 1, 1941, as figures can be obtained from reliable sources that living-cost increases vary from 21 to 35 percent; and

Whereas Congress has turned thumbs down on the proposition limiting salaries to $25,000 per year and freezing wages and not salaries based upon profit is discriminatory; and

Whereas, including the Victory tax, income tax, purchasing of War bonds, Red Cross donations, or other war agencies the workers' pay checks compare to depression years; and

Whereas to count additional hours worked per week as an increase in wages is a subterfuge and should be discontinued by all fair-minded citizens because additional hours worked means extra profit per manhour; and

Whereas wage increases should be figured on increased production as well as increased living costs: Now, therefore, be it

Resolved, That the Grand Forks Trades and Labor Assembly petition the Congress of the United States and the President to order the War Labor Board to abolish the Little Steel formula for adjusting wage issues: And be it further

Resolved, That the above instruct the War Labor Board in settling wage disputes that such settlements be based upon increased production and living costs statistics as provided by the United States Department of

Labor covering the area nearest the town or city in which the increase in wages is sought.

C. P. O'NEILL,
Chairman of Legislative Committee.

Adopted by the Grand Forks Trades and Labor Assembly in regular session June 9, 1943.

B. M. RYAN,
Secretary-Treasurer, Grand Forks Trades and Labor Assembly.

Concurred in by the following affiliated local unions: Motion Picture Operators, No. 231; Typographical Union, No. 238; Switchmen Union, No. 288; Musicians' Union, No. 485; Steam and Operating Engineers, No. 722; Building Service Employees, No. 104; Beet Sugar Refinery Employees, No. 21446; Meat Cutters Union, No. 377; Railway Carmen, No. 814; City and County Employees, No. 148; Machinists' Union, No. 810; Occident Mill Workers, No. 22569; Postal Clerks, No. 139; Pressmen's Union, No. 192; Fire Fighters' Union, No. 405; Carpenters' Union, No. 2023; Barbers' Union, No. 601; Bakery Workers, No. 400 Bartenders' Union, No. 598; Bricklayers' Union, No. 3; Electrical Workers' Union, No. B 949; General Drivers, No. 581; Mill Workers, No. 19177; Plumbers and Steam Fitters, No. 424; Railway Clerks, No. 488.

Four Soldiers Write to John L. Lewis

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Washington Post of June 18, 1943:

JOHN L. LEWIS:

American unions have come a long way since the day of the Chicago massacre, yet when the union appears to have gained stature as a reputable organization, you toss it away without a thought as to the consequence either to your Government, its people or yourself. We who are out here have little in the way of comforts because of supplies and conditions. Our material strength is absolutely necessary for immediate victory. However, for the mighty dollar you wish to toss our chances away. We get no raise, but those dependent on us have to live through the same standard of living as you. Yet for a strike you throw out the whole future of labor and all freedoms.

We realize how hard it is to have income taxes and long days of work. Without hesitating there is beer when you want it, cigarettes at the corner and good entertainment now and then. We realize and feel sorry for the deep struggle that you have to endure. It is easy to be bombed, and hear of your buddies strafed with machine-gun fire. This is all well and good. We here can take it; can you at home bear up with us?

You have given your answer. Shall we accept it as final? Shall all our cause be thrown away because of the petty bickering between labor and capital? You are striking and we are fighting. Our enemies are drinking to it tonight and calling it a major victory of the war. All of us here believe in labor and are looking forward to it on our return. Yet you want to betray us. The right to strike may be all well and good. But is it greater than immediate victory over our enemy. The soldier has to compromise, can you?

So for the price of our Nation with freedom and democracy in the balance there must be an easier way to settle your differences, at least until after we can assure you of complete victory and that can't be done without your help.

JOHN J. SLATTERY,
DAVID M. HENDERSON,
Sergeants.
JAMES W. SMITH,
LEONARD M. ANKER,
Corporals.

SOMEWHERE IN AFRICA, *June 4.*

The McKellar Bill

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Richard T. Frankensteen, vice-president and director of legislative department, United Automobile Workers of America, C. I. O., to the editor of the Washington Post, relative to the McKellar bill:

JUNE 15, 1943.

To the EDITOR, Washington Post,
Washington, D. C.

DEAR SIR: There is one aspect of the McKellar bill which has not been discussed in Congress or in the newspapers. I refer to the effect such a bill will have on labor's relations with the Government.

During recent years, and particularly since the war, labor has had to deal more and more with the Federal Government. To a great extent, wages and conditions of work, as well as the cost of living, are determined in Washington. Probably a majority of the Government employees with whom labor deals earn from $4,600 to $7,000 per annum, and would therefore be subject to Senate approval under the McKellar bill.

Many of these people seem to feel a responsibility only to business lobbyists who might buy them expensive dinners and offer them the promise, directly or indirectly, of more lucrative employment in private industry. A large number of Government officials, however, recognize their duty to administer their jobs impartially for all elements of the population. They do not bow at the sight of a trade association executive, and they do not snub labor representatives. They try to do an honest job. It is these people whom Congress has been attacking through various investigating committees, who have been called Red, professors, theorists, impractical, in an effort to drive them out of the Government, or make them practical. The McKellar bill was evidently drawn up to keep such honest officials from ever getting into the Government.

Thus the bill becomes more than a patronage grab. It is another of the many steps which Congress has taken in recent months against the interests of the people as a whole and for the protection of small groups of vested interests. At a time when we are fighting for democracy such a development constitutes a mockery to our men and women in the armed forces. It strikes at the very root of democracy.

Sincerely yours,
RICHARD T. FRANKENSTEEN,
Vice President and Director of Legislative Department.

Anniversary of Enactment of Reclamation Law of 1902

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. ANDERSON of New Mexico. Mr. Speaker, under leave to extend my remarks I include a news release which notes an important event in the domestic history of the Nation, an event which has enabled the West to make greater contributions to the prosecution of the war than otherwise would have been possible. I refer, of course, to the forty-first anniversary of the enactment of the reclamation law of 1902, which was approved by President Theodore Roosevelt on June 17, 1902.

This law led to the establishment of the Bureau of Reclamation in the Department of the Interior. The news release embodies a report by Acting Commissioner Harry W. Bashore to Secretary of the Interior Harold L. Ickes. It tells the story of the transformation of western water resources into useful channels for the production of food and power.

From the foundation that has been laid since 1902, the Bureau is making highly significant contributions to the prosecution of the war through electric energy to turn the wheels of industry and in food supplies that are vital to the armed forces and to the home front. Given the green light by the War Production Board and with additional funds for irrigation construction, the Bureau of Reclamation can do even more in supplying food which General Marshall, Army Chief of Staff, has emphasized as most essential of war materials.

To those of us in the West who have observed the evolution of the Bureau of Reclamation from a trail-blazing agency into an effective Federal activity of Nation-wide import, it is a pleasure to extend congratulations to Secretary Ickes, Commissioner John C. Page, and Acting Commissioner Bashore.

The news release is as follows:

The most productive year in the history of the Bureau of Reclamation, featured by tremendous increases in two war essentials—power and food crops—came to an end today as the Bureau celebrated its forty-first anniversary, Acting Commissioner Harry W. Bashore reported to Secretary of the Interior Harold L. Ickes.

Mr. Bashore said that reclamation power plants served many of the major war industries of the West with increased quantities of electrical energy. The 4,000,000 acres irrigated by Bureau systems provided huge stores of potatoes, beans, beef and dairy products, sugar beets, and many other vital foods for civilian and military needs.

The reclamation law, which established the national policy of conserving western water resources for irrigation, was approved by President Theodore Roosevelt on June 17, 1902.

"Today, on its forty-first anniversary, the Bureau of Reclamation can look back on a most satisfactory year," Secretary Ickes said. "That it was able to keep pace with the sky-

rocketing demands for power resulting from the sudden burst of war-plant expansion in the West was no accident, nor was it purely a happy circumstance that food production on Bureau projects could be increased to record highs. For years the Bureau of Reclamation has been laying the groundwork for turning western water resources into the service of the Nation.

"When a shortage of power threatened to retard increased war production early in the international conflict, the Bureau was able quickly to enlarge its capacity to meet the emergency. Now that increased food production is the Nation's major home-front objective, Federal reclamation projects again have stepped into the breach. Large volumes of essential foods came from Bureau developments last year and even greater contributions are possible in the next 2 years. When permitted to proceed with proposed irrigation construction, halted by the diversion of materials to other war activities, the Bureau of 1945 can increase its service to nearly 1,500,000 acres."

The more significant achievements of the Bureau during the year ended today, as summarized by Mr. Bashore, are:

1. Produced on 3,972,000 acres of irrigated lands, formerly desert wastes, a record crop of critical war foods, valued at $268,000,000. This is a 46-percent increase over the 1941 valuation. From this land came 3,000,000 100-pound sacks of beans, 29,000,000 bushels of potatoes, and 2,500,000 tons of alfalfa. The latter, fed to beef and dairy herds, provided a potential 144,000,000 pounds of beef and 1,700,000,000 pounds of milk.

2. Generated more than 9,000,000,000 kilowatt-hours of power—four times the entire output of all plants in the United States in 1902—to keep war plants producing at maximum capacity.

3. Installed 500,000 kilowatts of new war power capacity—equivalent to the 1941 total installation of the State of Florida—and advanced installation of an additional 500,000 kilowatts. At the conclusion of this work the capacity of the 30 Bureau power plants in 11 States will be 2,500,000 kilowatts.

4. Provided supplemental domestic and industrial water for Los Angeles and other California cities where vital war factories are located. Three million people benefit from this service.

5. Planned construction programs to increase food production through resumption of construction on irrigation developments where work had been halted because of war conditions. As a result of these plans restrictions were lifted permitting installation of control works in Friant Dam and completion of the Madera Canal, both features of the Central Valley project in California. The War Food Administration has recommended that work be resumed on seven other projects.

6. Through provision of domestic and industrial water and power the Bureau made possible the establishment in isolated areas of air bases and other military centers and industries linked with the war.

Through its irrigation, power, and municipal water service, the Bureau is serving more than four and one-half million persons in the West, about one-fourth of its entire population.

As its contribution to a post-war public works program for providing employment for discharged servicemen and war workers and later settlement opportunities for these men, the Bureau is accumulating a large shelf of new or uncompleted projects on which construction can be launched promptly after the war. These developments would bring either a full or supplemental supply of water to 7,800,000 acres of land and make possible the installation of 3,300,000 kilowatts of power.

The Bureau of Reclamation had a humble beginning. During 1906—the first year it made water available—only 22,300 acres were irrigated. Crops raised that year were valued at $22,900. In 1942 nearly 4,000,000 acres on 41 projects in 15 Western States are being served, and crops were valued at more than a quarter of a billion dollars.

The steady growth of Federal reclamation in the West is evident from the following table showing yearly increases in acreage:

	Acres
1906	22,300
1910	471,423
1915	810,649
1920	2,205,420
1925	2,339,470
1930	2,790,856
1935	2,935,616
1940	3,391,070
1942	3,972,000

Lands irrigated through Bureau facilities have produced crops valued at more than $3,250,000,000, four times the cost of constructing the project works. The developments have created actual values in farm lands and improvements of $500,000,000.

Production of power by Bureau plants also began on a small scale. In 1906 the Bureau built a small powerhouse on the Salt River project in Arizona to generate electric energy to drive the machinery used in constructing the dam. Today the Bureau is the Nation's largest Federal power producer. Its plants have an installed capacity of more than 1,600,000 kilowatts. When fully equipped two of its powerhouses, Grand Coulee and Boulder, will be first and second largest in the world. Boulder, with about three-fourths of its installations in place, now holds that distinction.

The following table, listing the year-by-year power output of Bureau plants since 1937, graphically illustrates how production has increased to keep pace with the demands of the expanding West.

	Kilowatt-hours
1937	1,056,757,865
1938	2,457,644,625
1939	2,212,568,189
1940	3,501,820,077
1941	4,343,697,483
1942	7,193,495,233
1943 (estimated)	12,299,000,000

The ultimate capacity of Bureau plants in operation, under construction, or authorized is 4,793,262 kilowatts, and their potential output, 25,000,000,000 kilowatt-hours annually, twice the production forecast for 1943.

U. S. Q. M. C.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a splendid and deserving editorial appearing in the Boston Globe of June 16, 1943, entitled "U. S. Q. M. C.," giving proper recognition to the important, but oftentimes forgotten Quartermaster Corps of the United States Army:

UNITED STATES QUARTERMASTER CORPS

On June 16, 1775, the Quartermaster Corps of the United States Army was created by the Continental Congress. Soon thereafter Maj. Gen. Thomas Miffin was appointed the first Quartermaster General and, with one assistant, was expected to supply food and clothing for General Washington's Army.

Since then the Army has had a Quartermaster Corps of some sort continuously, but usually in years of peace, and sometimes in times of war, the corps has been cast in the role of orphan stepchild. The American Government and the American people, in spite of the frequency of our wars and of the vital necessity for supply, have been slow to recognize the essential function that the Quartermaster performs in the prosecution of a war.

Today, the Quartermaster Corps, under the command of Maj. Gen. E. B. Gregory, as a part of the Army Service Forces, has come into its own. Incredible as it may seem, until this war began we had never trained officers and men specifically for quartermaster duties. Hitherto, at the outbreak of war, we have hurriedly thrown a Quartermaster Corps together by using the skeletonized peacetime force as a nucleus around which to improvize a hodge-podge organization.

This system never worked very well, though it functioned better than anyone had any right to expect. We were slow to appreciate truths about supply that were long since accepted by history's greatest soldiers. The Germans, who are probably the world's most astute militarists, have for years kept the quartermaster corps as the most elite branch of their military service. Napoleon considered an efficient quartermaster as the first requisite for military success. But we have thought of our supply system as an appendage attached to our Army whenever we happened to remember it at all.

The present global conflict has changed our ideas. Fortunately, the importance of supply was realized even before we were attacked. We had begun to bring our quartermaster corps up to the size and efficiency needed for the maintenance of armies in all climates and sections of the world before we were engaged in war. Because we did we have been able to move rapidly and effectively.

Today the Quartermaster Corps has its own officer candidate school at Camp Lee; its own training camps for its own soldiers; its own schools for noncommissioned officers and specialists of many kinds. The corps is proud to assert—without fear of contradiction—that this is a quartermaster's war, and, further, that the quartermaster is a combat soldier as he has never been in other wars.

Charged with the duty of feeding and clothing the troops, with much of the responsibility for sheltering them and transporting them, the corps has a job of immense size and variety. Merely to state that the corps buys, stores, and distributes more than 70,000 items of food, clothing, general supplies, and equipment gives an idea of the variety of the material handled. To state that the corps must buy 20,000,000 pounds of food per day for Army consumption in this country alone, or to mention that since Pearl Harbor the depot here in Boston has purchased 40,000,000 pairs of shoes of 240 different sizes, indicates the dimensions of the task.

The stuff needed must be sent as surely to the smallest fox hole on Attu as to the great warehouses at Fort Devens or Camp Edwards.

The quartermaster not only buys and distributes food, he also teaches the Army cooks and bakers how to prepare it. To clothe one soldier for 1 year requires the wool from some 26 sheep. Salvage of material; maintenance of supply; transportation by sea, air or land for both men and supplies; design of the clothing and shoes, all these are quartermaster functions, and there are others too numerous to mention.

The quartermaster feeds and clothes the troops, bathes them, does the laundry, takes care of motor transport, runs public utilities, conducts experiments. Without the quartermaster the Army could not move, eat, or fight.

UNCLE DUDLEY.

O. W. I. Portrays Economic Dictatorship in Germany—What About America?

EXTENSION OF REMARKS

OF

HON. HOWARD BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I wish to include sections of an O. W. I. release of March 30, 1943, which is taken word for word from the actual release of that agency:

OFFICE OF WAR INFORMATION.

The following release by the Office of War Information tells the story of the elimination by decree and compulsory "rationalization," of the small German businessman by the Nazi regime and a coterie of economic dictators.

"The Nazi swastika has become the symbol of a 'double cross' for scores of thousands of German businessmen, retailers, and middle class enterprises, the Office of War Information reported today on the basis of information from authoritative sources in neutral countries.

"The German total-mobilization program launched January 29, 1943, has grown from what appeared to be simply an emergency wartime measure to a social and economic landslide in which the small businessman and the German middle class are the conspicuous victims.

"Disguising their action as a total mobilization program, the Nazi Party finally has betrayed middle-class German businessmen and has delivered them into the hands of the Nazi-controlled trusts, monopolies, and giant combines, Office of War Information information indicates.

"Since 1942, when the Nazis introduced a compulsory price system based on the costs of the lowest-cost producers, the smaller enterprises in Germany have been progressively forced to operate on the very margin of loss, or have been forced to close down, or have become outright subsidiaries of giant corporations and monopolies.

"One institution after another in the economy of Germany has been crushed by Nazi decrees and regulations designated to turn competition into monopolistic collusion. The Nazis have openly favored and promoted enterprises with the most highly 'rationalized' equipment at the direct expense of the small and medium-sized businessman, shopkeeper, and employer. Large German industry has been organized into compulsory or semicompulsory cartels under the supervision of the State and the Nazi Party. These cartels were entrusted with the task of 'rationalizing' German industry.

"The process of 'rationalization,' executed by a coterie of Nazi-approved economic overlords in the armament industry led by Albert Speer, Minister for Armaments and Munition, has resulted in the closing of thousands of small enterprises. Commodity markets have been regimented by arbitrary laws. The entire industrial apparatus of Germany has been converted to ruthless centralization which ignores the interests of both middle-sized and small business as well as consumers.

"This process has sealed the Nazi Party plan to tranform the entire German economy into a regimented and centralized apparatus working full-time under Nazi political leadership."

Mr. Speaker, I request Elmer Davis' agency to find any substantial difference between the economic dictatorship that they condemn in Germany and the current operating policy of the O. P. A. and associated agencies in this country. This request is made in good faith and with an earnest desire for enlightenment. This House should have reasonable assurance that our economic policies are not leading us toward the betrayal Elmer Davis has portrayed in Germany. The natural laws are the same here as anywhere else on the globe. The effects of the law of gravity are the same everywhere. Policies which seek to evade or avoid the effects of breaking the law of supply and demand have always resulted in disaster elsewhere.

Unfair O. P. A. Enforcement

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include two editorials which graphically express local sentiment on O. P. A. enforcement. The first, entitled "This is Democracy" is from the Stoneham (Mass.) Independent of June 11, 1943, and the second, entitled "Salute to Stoneham" is from the Wakefield (Mass.) Daily Item of June 10, 1943. I can assure the Congress that the people of Stoneham constitute a community which is marked for its civic enterprise and which would never yield to any other in any patriotic movement. Confidence, however, is always an essential for cooperation, and I call upon the Congress to witness that there is set out here ample justification for failure to have such confidence.

This Stoneham incident bears out the view I have been expressing for some time, that the sooner gasoline rationing is taken away from O. P. A. the sooner will we have a better contented people to face the troublesome problems of sacrifice and privation that lie ahead.

The editorial follow:

THIS IS DEMOCRACY

Stoneham was treated to the sight of a fine bit of bureaucracy and despotism this week. It so closely resembled Hitlerism that we are fearful for the welfare of our liberty-loving country if it continues.

This is the story.

On Sunday, Office of Price Administration inspectors came to Stoneham, at the request of a local citizen, to catch people driving to the monthly organ recital and concert at the town hall. Even though there were 500 people in the hall, a much smaller audience than usual, there were only 13 flagrant violators recorded by the inspectors. The statement was made that they would be made examples of.

On Tuesday night, members of rationing boards from 16 cities and towns in this area came to this same town hall where the inspectors had operated on Sunday. Also, there came the State director of Office of Price Administration and some of his staff. There were 64 cars parked around the town hall area, most of them transporting people to this meeting.

The Office of Price Administration director spoke, and the audience listened to the organ—the same organ which gave the concert on Sunday.

There was just as much other transportation available for those rationing board members and State directors as there was for the residents of Stoneham. The people of Stoneham took full cognizance of that fact. But the Office of Price Administration didn't attempt to live up to the laws that the rest of us must live by.

It was not democracy or fair play.

The selectmen, in meeting that same night took note of the situation and issued a written order to Captain of Police Nelson to refrain from cooperating with the Office of Price Administration in enforcement of the gasoline driving ban. At the same time they ordered the police to take the registration numbers of every car parked in the area of the town hall.

In addition, this reporter took time to check every one of the 64 cars in the area to see what type of stickers they showed. In evidence were 25 C stickers, 19 B stickers, 10 A stickers, one truck, one T sticker on a sedan, and 1 car with no sticker at all.

That record speaks for itself.

In Monday's metropolitan newspapers, the Stoneham Town Hall Organ Concert (mistakenly termed opera by the papers) was classed along with the two local golf clubs, and still later with the Wonderland dog track, Revere Beach, Norumbega Park, and movie theaters.

Fair play?

Several months ago this newspaper accused State Director Lawrence J. Bresnahan of not playing fair in removing the chairman of the local board because he was running for political office while permitting two Belmont citizens to remain on their board. Mr. Bresnahan had neither the courage nor the right answer to reply.

Stoneham citizens by the score have asked for action on this matter—direct violation by the State and local boards of this area on Tuesday of the very thing they operated against on Sunday. There is no excuse for the Tuesday night affair.

Until we American people take the bull by the horns and tell these political appointees what we think of their actions—and that they are not privileged characters, we will be approaching a totalitarianism and regimentation that will shock every one of us some day.

Stoneham and New England will give every bit of cooperation it can give to the war effort—it is not sacrifice to give up things which will aid our 1,000 men and women in service. But we refuse to submit to such unfair tactis as this in future. And the town officers and townspeople feel 100 percent the same way.

SALUTE TO STONEHAM

The action of the Stoneham selectmen in advising the Stoneham police to refrain from aiding the Office of Price Administration gasoline snoopers brings the issue out into the open but is not out of line with sentiment and virtual "action by nonaction" which has taken place elsewhere.

Hardly had the no-pleasure-driving order been issued, with accompanying intimation that the Office of Price Administration inspectors would accompany police, than the doughty chief of police of Clinton expressed himself in no uncertain terms, while Boston's then acting police commissioner virtually said his men had other fish to fry.

It is not because the people want to deprive the armed forces of a single drop of gasoline that the resentment against the Office of Price Administration snooping has risen. It is because the people have been deceived so long that they no longer believe, and in the Stoneham case, because, no doubt,

they rightfully resent having 12 of their citizens tagged at a concert and then see 100 or 200 rationing officials arrive in the same town for a meeting which according to their own preaching (to others) they could have reached by other means.

It seems sometimes as if this administration and its supernumeraries went out of their way to be dumb. There is not much point in telling people that driving even to a Sunday night concert is "taking the life of somebody's son" and then seeing those entrusted with enforcement of that theory blithely drive around on the same kind of gasoline to listen to platitudes from administration henchmen. Neither does it help public morale to know that many of these henchmen are ex-WPA'ers politically provided for.

Hats off to Stoneham! Her "Home Front Movement" now really means something.

Lumber Division of War Production Board Should Have Additional Funds

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. KEFAUVER. Mr. Speaker, the War Production Board section of the National War Agencies Appropriation bill, as presented to the committee, had an item of $1,000,000 for the stimulation of the production of logs and lumber needed to satisfy military and essential civilian requirements. I hope this item may be included by the Senate.

As a member of Representative PATMAN'S Small Business Committee, I was honored, in company with Representatives JACKSON, of Washington, and STEVENSON, of Wisconsin, in being appointed on a subcommittee to investigate our national defense program in its relation to small business as affecting the lumber industry. In response to a large number of complaints this subcommittee last month held a hearing to investigate why thousands of small sawmill operators, contributing material essential to our war effort were being forced out of operation. At this hearing representatives of various Government agencies concerned with our production effort relative to lumber, as well as a spokesman for the industry, were heard. My colleagues and I had the time and opportunity therefore, to make a more detailed analysis of our lumber-production problem, and its place in our war effort, than may have been possible for the members of the committee who studied this bill.

There is little, if any, question as to the very serious condition of our log and lumber production. Lumber stocks are the lowest on record. Present production, especially in the East, is not only low but is still dropping. As the Under Secretary of War stated last November, and I quote:

> We are not getting enough lumber to fill all the needs of the armed forces. Our requirements are going up; our production is going down.

And he added—

> Lumber comes close to the heart of our whole war problem. There are 1,200 items of military and naval equipment that can use lumber.

Lumber today is considered by W. P. B. along with steel, aluminum, and copper as a critical war material.

The bulk of the lumber produced in the East, where it is most needed for boxing and crating of materials for our overseas forces, is produced by a multitude of small woods and mill operations which form the backbone of the economic life of many forest communities and regions. Today I understand over 9,000 of these mills are shut down and more are closing daily, just when their production is most needed. This is out of an approximate total of 30,000 mills throughout the Nation.

Why are these small mills so essential to our production job closing down? Our fundamental problem is a shortage of logs, bolts, and pulpwood caused by a shortage of manpower in the woods and mills and of locally available timber. They are closing because operators and timber owners do not understand the multitude of Government regulations relative to the procurement of labor, equipment, and food, or those relative to the marketing of their output. The operators are confused and discouraged. The larger operators have their association and advisers to furnish information, legal opinion, and assistance, while the smaller operators struggle on unassisted until they give up. They will continue to drop out unless we aid them—aid them to provide essential material for our Nation's war effort; material for our farmers to pack and ship their produce, for the construction of our ships, for the boxing of munitions, and for boxing or crating of almost any article of war you care to mention.

Unless we secure this additional production almost immediately, our committee has been advised by the military procurement offices that essential war equipment destined for transoceanic shipment will have to remain in factory warehouses for an indefinite period, this at a time when these supplies are vitally needed.

The $1,000,000 appropriation requested was to supply these small sawmill and stumpage owners and operators with the information and assistance which would aid them to understand and to comply most readily with those regulations necessitated by the war; to aid them in locating and obtaining needed stumpage, labor, and equipment; to furnish that touch of Federal guidance in their hour of need which will keep them producing those materials the Nation now urgently demands.

It is the responsibility of W. P. B. to maintain log and lumber production. To meet this present situation two procedures may be followed either to build up its existing skeleton force of lumber expediters, a time-consuming and costly operation, or to utilize available facilities of other Federal and State agencies experienced in lumber-production problems. It chose the latter. It will utilize not only the experienced field personnel of the United States Forest Service, but also available services of foresters in the Extension Service, State services, and those members of the industry able and willing to participate. Throughout the effort the W. P. B. will retain its sole and legal responsibility for maintaing production.

The requested appropriation, which might be considered a drop in the bucket, is a drop which would repay tenfold the investment through reviving and maintaining the life of thousands of our small lumber and log producers in their job of producing the sinews of war.

What this $1,000,000 item would provide in technical services and assistance was explained to our subcommittee and our committee as a whole and has been approved unanimously by it and by the Hardwood and Softwood Advisory Committees of the War Production Board. I have not even heard one criticism of the proposed project from members of the lumber industry. I wish to emphasize this, as the project is not to be confused with the so-called Forest Products Service program which the industry did oppose, and which I fear some Members of this House may still confuse with the present proposed project.

The requested appropriation to stimulate the production of lumber and logs for our war effort by furnishing information, advice, and assistance to those owners and operators needing this help is not only essential to the welfare and continued operation of thousands of small sawmills and to the welfare of many of our forest communities in the East but it is a valuable—and a vital—spoke in the wheel of our Nation's war effort.

Farmers Are Faring Better in Many Ways on Prices Than During World War No. 1

REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. PATMAN. Mr. Speaker, on Thursday last when I was addressing the House on the question of inflation, the gentleman from Mississippi, the Honorable JOHN E. RANKIN, interrupted me to say that he was in favor of repealing the price- and rent-control law and that he believed we should go back to the program followed in the First World War when we had no price controls. He also suggested in an extension of remarks, which was filed the same day, that farmers should be getting 40 cents a pound for cotton and $2.50 a bushel for wheat, as they did during World War No. 1, and that this would be in the interest of the farmers and the country.

I will not take issue with the gentleman on the statement that the farmers' plight is not a happy one. In fact, farmers are working very hard for the money they receive. Having been a farmer myself, a tenant farmer at that, and having worked with my hands on the farm, and knowing the type of labor that must be performed and the small amount received for this labor, I know that farmers are not getting as much as they are entitled to in comparison with wages, prices, of goods, supplies, and costs of services generally. However, as bad as one may feel the farmer price situation is today, it has improved over the farm situation that existed during World War No. 1.

FARM PRICE SITUATION THIS AND LAST WAR

Congressman RANKIN correctly pointed out that during the last war the farmer was getting 40 cents for cotton and $2.50 per bushel for wheat, whereas under price control today he is getting 20 cents for cotton and $1.23 for wheat. During the last war, between 1915 and 1918, wheat rose from 96 cents to over $2, cotton from 11 to 29 cents, fat steers on the Chicago market from $8.40 to $14.65. In the period from July 1914 to March 1918, farm prices rose by 93 percent.

IS THE FARMER BEING BADLY TREATED?

You would think that the farmer was being very badly treated at this time. As a matter of fact, farm prices have risen 110 percent since the outbreak of the war in August 1939, a substantially larger percentage rise than that which occurred during a comparable period in the last war. The farm price of 58 foods has increased 121 percent since the war began, compared to an increase of 72 percent in the corresponding period of the last war:

	Aug. 15, 1939, price	May 15, 1943, price	Percentage increase
Cotton, per pound ..cents..	8.7	20.1	131
Eggs, per dozen.....do....	17.5	34.2	95
Butterfat, per pound cents..	22.4	50.6	126
Wheat, per bushel ..do....	54.5	122.8	125
Beans, per 100 pounds dollars..	2.63	5.6	112
Corn, per bushel...cents..	45.7	103.4	126

WITH 40-CENT COTTON WE HAD 30-CENT SUGAR AND 60-CENT COFFEE

What is even more important, while the prices that farmers received in the past war went up, the prices that he paid went up just as fast and even faster. The farmer was getting 40 cents for cotton for a brief period, but during that period he was paying 30 cents for sugar and 60 cents for coffee. This time he is paying 7 cents for sugar and 29 cents for coffee. In the last war the price of steel product increased from 200 to 800 percent. This reflected itself in the prices that farmers paid for machinery and equipment. Farmers will remember that nitrate of soda to fertilize their land rose from $48 to $94 a ton, that a cultivator which in 1915 could be got for $5 in 1918 set them back just twice that amount. And the farmer's wife will remember, I may say, that overalls which in 1915 cost 75 cents cost $1.57 in 1918; that a pair of shoes jumped in price from $2.10 to $4, and they were not the same shoes by a long shot. During the last war all the prices that farmers paid rose an average of 105 percent. This time the increase has been held to 30 percent.

SOME COMPARATIVE PRICES

Commodity	1910–14 price	Peak price	Year
Commercial fertilizer	$23.32	$43.40	1920
Corn planter	42.80	76.50	1919
Grain drill	85.96	149.27	1919
Nails	3.45	7.39	1920
Rubber boots	4.15	5.33	1918

Commodity	September 1939 price	Approximate present price	Percentage increase
Harrow, spike tooth	$11.45	$12.75	11.4
Rake, hay	53.10	58.20	9.6
Cream separator	88.20	95.70	8.5
Corn planter	87.00	94.00	8.0
Disk harrow	68.60	73.70	7.4
Manure spreader	176.00	187.00	6.3
Plow, walking	21.90	23.15	5.7
Grain drill	171.00	180.00	5.3
Ensilage cutter	330.00	334.60	1.2
Cultivator	9.20	9.24	.4
Incubator 250 eggs	26.98	26.98	0

In the case of equipment and supplies these figures tell the same story:

Commodity and unit	September 1939 price	Approximate present price	Percentage increase
Barbed wire, galvanized	$3.40	$4.20	23.5
Horse collars	4.90	5.97	21.8
Milk cans, 10-gallon	5.07	5.85	15.4
Manila rope, per pound	.24	.27	12.7
Lead arsenate, per pound	.187	.210	12.3
Poultry netting	4.99	5.45	9.2
Brick, per 1,000	21.42	23.15	8.1
Hoe	.89	.96	7.5
Gasoline, per gallon	.184	.197	7.1
Outside paint, per gallon	3.00	3.20	6.7
Pitchfork	1.22	1.27	4.1
Cement, portland, 94 pounds	.739	.756	2.3
Kerosene, per gallon	.134	.133	−1.0

The price of fertilizers has also been kept within bounds. Witness:

Commodity and unit	September 1939 price	Approximate present price	Percentage increase
Commercial fertilizer:			
3-8-3, per ton	$24.00	$25.48	6.2
4-8-7, per ton	30.35	35.79	17.9
2-12-2, per ton	28.85	29.69	14.9
Acid phosphate, per ton	17.69	20.74	17.2
Nitrate of soda, per ton	36.15	41.34	14.4
Nitrate of potash, per ton	41.00	45.92	12.0
Ground limestone	6.70	7.15	6.7

SOME PRICES OUT OF LINE—OTHERS HELD DOWN SUCCESSFULLY

The prices I have listed represent costs of production in farming. Here, I am sure you will agree, the record is clear. The record is equally clear in the case of prices which represent cost of living to the farm family. Farm wives are paying—on the basis of the latest comprehensive cost-of-living data for farmers that we have—26 percent more for food, 21 percent more for furniture and house furnishings, and 38 percent more for clothing than they were paying before the war broke out 3 years ago. Some items have risen sharply; muslin is up from 9½ cents to 16 cents per yard, an increase of 67.5 percent; overalls are up from $1.14 to $1.75, an increase of 53.5 percent; women's house dresses from $1.01 to $1.50, an increase of 48.5 percent. On the other hand, most prices have been held down successfully.

Commodity and unit	September 1939 price	Approximate present price	Percentage increase
Rubber boots	$2.73	$3.71	36
Kitchen cabinets	27.00	36.30	34
House brooms	.477	.66	38
Women's shoes	2.48	3.19	29
Dressers	18.00	22.70	26
Blankets, cotton, double	1.55	2.11	36
Wash boiler	2.81	3.39	21
Union suits, heavy winter	1.06	1.39	31
Laundry soap, per bar	.0472	.05	11
Fruit jars, per dozen	.790	.83	5
Laundry starch, per box	.101	.10	3

PRICE CONTROL HAS SAVED FARMERS $4,000,000,000

Would the farmer be better off if he were getting 40 cents for his cotton and $2.50 for his wheat if at the same time he were paying the same prices for the things he buys as he did in the last war? The answer is "No." Let me put it to you this way: If the commodities that farmers buy had risen in the first 3 years of this war as much as they did during the same period in the last war, it would have cost the farmers $4,000,000,000 more than they have actually spent. Price control of the items that the farmers buy has saved the farmers $4,000,000,000 to date, according to Government records. By the end of this year, this saving will amount to $7,800,000,000.

FARMERS' PRICES AFTER LAST WAR TOOK NOSE DIVE

What is perhaps more important, every farmer remembers what happened to his prices after the last war. Between 1920 and 1922, farm prices dropped by 41 percent. On the other hand, the prices of machinery and all of the basic items farmers buy dropped only 19 percent.

SUPPORT PRICES UNDER FARM COMMODITIES DURING WAR AND FOR 2 YEARS AFTER WAR

This time we have done things more wisely. We have placed a support price under hogs, long-staple cotton, beans, vegetables, peanuts, and many other commodities. This guarantees to the farmer that no matter what the crop conditions may be, the bottom cannot drop out from under his market during this war. We have gone far beyond that, however. We have placed a floor under farm prices not only for the duration of the war, but for 2 years thereafter, so that the farmer may expand his investment and increase his acreage with the assurance that for 2 years after the war he is guaranteed a favorable price. I might say, that so long as a democratic administration remains in power, the Government will never draw that support out from under farm prices.

NET INCOME OF FARM OPERATORS

Let us look at the position in terms of net income of farm operators. This is

the most significant figure of the war, because it represents what is left for the farmer after all his expenses. During the last war net income of farm operators rose from an average of $3,800,000,000 in 1910–14 to $8,600,000,000 in 1919, the peak of the inflation. Did the farmers retain that, however? The answer is "No." By 1921 net income of farm operators had dropped to $3,000,000,000, that is, below the pre-war level. In this war, on the other hand, net income of farm operators rose from $4,500,000,000 in 1939 to $10,200,000,000 in 1942, an increase of 128 percent. This is the highest level of net income of farm operators in our history. It stands a billion and a half above the peak level reached in 1919. What is most important of all, the buying power of this net income is vastly greater than it was in the last war. The index of prices that farmers pay stands today 20 percent below the peak of the last war, and that means that every dollar of farm income will buy 20 percent more of the things farmers need than it did in 1920.

To put it all into a nutshell, we have in this war not only brought the net income of farm operators to the highest level in all history but by providing a guaranty of a fair support price, not only during the war but after the war, have provided the farmer with assurance that this high level of net income will continue.

In this reply I am not making an effort to cover all farm problems, and there are many, such as manpower shortage and machinery shortage, or the very high wages paid in war plants in comparison to farm prices.

Vast Range of Subsidy Program

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. HOPE. Mr. Speaker, within the next few days it is expected that the House will consider legislation which will deal specifically with the subject of subsidies on food products and other necessities. I doubt very much if the average well-informed person in this country has any idea of the extent to which subsidies have already been employed. Most of them are on food or on products entering into the production of food, directly or indirectly, but included also are some of the metals and fuels.

Most of the subsidies applicable to food are in connection with the loan and price support programs on agricultural products. These programs will not in all cases necessarily involve the payment of money out of the Treasury. In some cases the support prices announced by the Department of Agriculture are lower than the existing market price or price ceiling as fixed by the O. P. A. While that condition prevails as to any particular commodity no subsidy payments are necessary. In every such case, however, there is a potential subsidy involved because the O. P. A. may fix price ceilings below the support price, as has happened in numerous cases, or the market price may go below the support price.

The various types of subsidy programs now in existence might be described under six headings:

First. The loan and price support program on basic commodities—cotton, corn, wheat, rice, tobacco, and peanuts. These loans are to be made at 90 percent of parity (or at the discretion of the President at 85 percent of parity on corn and wheat) to farmers who cooperate in the programs of the Department of Agriculture and at lower percentages of parity for those who do not cooperate.

Second. The price support program on nonbasic commodities whenever the Secretary of Agriculture finds it necessary to encourage the expansion of production. This can be done through C. C. C. commodity loans, purchases, or other operations in order to support prices to producers which are not less than 90 percent of parity. Under the terms of many such price support programs on nonbasic commodities, farmers are eligible for loans only if they plant at least 90 percent of their individual war goal acreages, and usually such price support is not available on the output of acreage in excess of 110 percent of the goals. Such price support programs have been announced so far—on either the 1942 or 1943 crop—for the following nonbasic agricultural commodities: Rye, barley, grain sorghums, dried beans, dried smooth peas, dried wrinkled peas, hogs, Irish potatoes, sweetpotatoes, vegetables for canning, cabbage for kraut, soybeans for oil, flaxseed, castor beans, olives for oil, shell eggs, whole dried eggs, dairy products—butter, skim milk, cheddar cheese, evaporated milk, fluid milk; truck crops for fresh markets, chickens and turkeys, pecans, dried fruits, sugar beets, hay and pasture seeds, seed and hemp fiber, strawberries.

Third. Subsidies paid to the processors on processed foods. These programs have been set up for the reason that O. P. A. ceilings have been established on processed foods at a price lower than the support prices established by the Secretary of Agriculture, plus the cost of processing. The procedure used in such cases is for the Commodity Credit Corporation to purchase farm commodities from the processors at the price which the processor pays the farmer and then reselling the same commodity to the processors at a price enough lower to permit him to sell the finished product at the O. P. A. ceiling. These arrangements involve true subsidies for the purpose of securing increased production of raw material on the one hand and at the same time preventing an increase in the price of the finished product to the consumer. Such subsidy plans have been carried out in the past or have been announced for the future on the following: Feed wheat and corn, grain alcohol, dry wrinkled peas, vegetables for canning, cabbage for kraut, various edible oils—cottonseed, peanut and soybean; olives for oil, cheddar cheese, fluid milk, sugar beets.

Fourth. Other subsidy programs in effect on food products. These include coffee, sugar, tea, and cocoa.

Fifth. Non-food-subsidy programs. These include copper, lead and zinc, petroleum, bituminous coal.

Sixth. The new program recently announced designed to roll back prices on certain food products to the level prevailing on September 15, 1942. Up to date this includes butter and meats. There is practically no limit, however, to how far this program might be extended. The President recently estimated that such a program would cost from a billion and a half to two billion dollars but there are many who believe that its eventual cost might run to four or five billion dollars annually. Already labor organizations are demanding that it be extended to all food products and that the roll-back be extended to the May 1942 price level. It is obvious that there are scarcely any limits to what might be demanded under such a program. The method used in carrying out this subsidy is to pay processors in cash the amount represented by the reduction of ceiling prices. In consideration of this processors are expected to maintain existing prices to producers.

LIST OF VARIOUS PRICE SUPPORT AND SUBSIDY PROGRAMS

The following is believed to be a complete list of subsidy and price support programs in operation on June 18, except possibly it does not cover some of the activities of the Board of Economic Warfare:

Copper, lead, and zinc: The Metals Reserve Company has agreed to pay special premium prices for copper, lead, and zinc produced in excess of designated quotas—in cents per pound:

	Premium price	Ceiling price	Subsidy
Copper	17	12	5
Lead	11	8¼	2¾
Zinc	9¼	6½	2¾

To aid small mines the quotas were set at zero so that their entire production would command the premium price. The basic quotas are established by mines or groups of mines rather than by companies.

Petroleum: The Defense Supplies Corporation is subsidizing the higher distribution costs attending the shift to tank cars to bring gasoline and other petroleum to the eastern seaboard. Prior to the adoption of this subsidy, the price of gasoline had been increased 2½ cents per gallon. This increase was canceled when the subsidy program was adopted.

Bituminous coal: The Defense Supplies Corporation has been authorized to spend up to $40,000,000:

First. To pay transportation costs in excess of normal rates of transportation prevailing prior to January 1, 1942, on coal received on and after May 18, 1942,

in and around New York Harbor area and in New England.

Second. To pay transportation costs in excess of normal as indicated above on inventories accumulated by coal dealers in the above area between January 1 and May 17, 1942, and not disposed of by May 17, 1942.

Coffee: C. C. C. absorbs increase in shipping cost over December 6, 1942, and also 75 percent of excess rail shipping charges caused by need for diversion of ocean steamers. Also expects to build up a $75,000,000 stock pile with probable losses when liquidated.

Sugar: Since the first of the year C. C. C. has imported about 1,070,000 tons of sugar and has also arranged for direct shipment of about 250,000 tons to the British. C. C. C. has also negotiated for the purchase of the entire 1943 Cuban sugar crop with few exceptions. Sugar imported by C. C. C. is sold to the trade approximately at cost, but in the interest of price stabilization post-Pearl Harbor increases in ocean freight and transportation differences due to the necessity of diverting shipments to various ports have been absorbed.

Tea: C. C. C.'s 1943 tea program involves the purchase of about 65,000,000 pounds from the British from India and Ceylon. Tea is sold to the trade for distribution at a price within the limits of O. P. A. ceilings which insures a reasonable profit to the trade and no loss to C. C. C. By means of the tea program the market has been stabilized.

Cocoa: C. C. C. extended economic aid to Brazil by guaranteeing to the Brazilian Government the sale of 1,300,000 bags if it developed that shipping should be unavailable. Fortunately, the entire quantity guaranteed was sold by Brazil to the United States trade and it has all been shipped to the satisfaction of the Brazilian dealers, producers, and American importers and manufacturers without the necessity of C. C. C. being forced into the market.

Corn: C. C. C. loans, on 1942 crops, to farmers who comply with agricultural conservation program, plus 6 cents per bushel on corn stored until August 1, 1944, and delivered to C. C. C. in payment of loan. Average amount advanced—as of April 30, 1943—was 77 cents. Nineteen hundred and forty-three program yet to be announced, but law says support prices must not be less than 90 percent of parity at beginning of marketing year.

Wheat: Commodity Credit Corporation loans on 1942 crop to growers complying with allotments. Full loans on regular crop and one-half loan on volunteer wheat. Noncooperators eligible for 60 percent loans on wheat which would be subject to penalty if marketed, with no loans on quota wheat. Nineteen hundred and forty-three program still to be announced, but subject to law that prices must be supported at 90 percent of parity at beginning of marketing year. Average amount advanced, with loans outstanding on 299,705,708 bushels on April 30, 1943, was $1.13.

Rice: On 1942 crop, average farm price to be supported by C. C. C. loans and repurchases. Some prices now above parity, no program contemplated for 1943, but law requires support at not less than 90 percent of parity at beginning of marketing year.

Peanuts: C. C. C. to support market for 1943 crop at prices which will average $140 per ton on Virginia and Spanish types and $130 per ton on Runners, or 90 percent of parity.

Rye: C. C. C. loans on 1942 crop to producers complying with soil conservation program. Nineteen hundred and forty-three program not yet announced.

Barley: C. C. C. loans on 1942 and 1943 crops at specified rates, 1943 being 15 to 20 cents higher than in 1942. To be eligible farmers must plant 90 percent of goals.

Grain sorghums: C. C. C. loans on 1943 crop at rates—which must be at least 90 percent of parity—not less than 85 cents a bushel against 50 cents last year. To be eligible farmers must plant 90 percent of goals.

Feed-wheat program: C. C. C. has sold about 181,000,000 bushels at substantial losses. Result has been to support mill feed price at $1.50 per ton below O. P. A. ceilings.

Grain-alcohol program: C. C. C. has sold about 59,000,000 bushels since July 1942, with some losses.

Dry beans: C. C. C. support prices, on 1943 crop, for 13 varieties, also loans on thresher run; $6.50 per bushel on pea, Great Northern, and similar varieties; $7.50 on lima and kidney beans.

Dry smooth peas: By F. D. A. purchases, 1942 crop at $5.50 per hundredweight for United States No. 1; 1943 crop at $5.65; also loans on thresher run at $4.50 per hundredweight.

Dry wrinkled peas: By F. D. A. purchases. Nineteen hundred and forty-two crop at $5.25 per hundredweight for U. S. No. 1. Nineteen hundred and forty-three crop at $4.25, but only for peas grown under contract for canning purposes but not used.

Hogs: By Government purchase and other means, through September 30, 1944, so as to insure $13.75 average, Chicago basis, for good and choice butcher hogs weighing 240 to 270 pounds.

Dairy cattle conservation program: To prevent dairy cattle from being sold for beef, C. C. C. purchased 21,329 head and resold at dairy cattle prices at a loss of $270,000. Since then prices of dairy cattle have advanced.

Irish potatoes: By direct purchases, loans and diversions on 1943 crop. Grower must have planted 90 percent of his goal. Support prices average about 92 percent of February 15, 1943, parity prices or about $1.76 per hundredweight. In addition, producer will be paid 50 cents per bushel on normal yield of acreage in excess of 90 percent of goal, but not over 110 percent.

Sweet potatoes: By F. D. A. purchases of 1943 crop in States having established goals, at $1.15 per bushel from August to November, $1.30 in December and January, and $1.45 in February, March, and April, for U. S. No. 1. Average 1942 price, 90 cents.

Vegetables for canning: Price-support programs will assure growers 20 to 50 percent higher than last year. For example: Snap beans, $80 to $110 per ton, compared with an average price in 1942 of $75; tomatoes, $22 to $27 per ton, or $3 to $8 above last year. Processors participating in the program will pay growers not less than the 1943 support prices. On vegetables processed for civilian consumption the Commodity Credit Corporation will buy the raw material from processors at the support prices and will resell the raw product to the processor at prices equal to the raw material costs allowed by the O. P. A. in establishing price ceilings for the finished product. This program will enable canners to process the pack at fair margins between cost and ceiling prices. For quantities processed under Government reservation orders, the O. P. A. will provide separate prices reflecting the increased costs of vegetables used in canning, as well as other known increased costs. This program has recently been extended to include increased labor costs.

Cabbage for kraut: On 1942 pack F. D. A. pays packers $1 for each 45 gallons sold in commercial channels, provided farmers are paid $7.50 per ton for cabbage. Will also purchase supplies in packers' hands after March 1, 1943, at 14 cents per gallon.

Soybeans for oil: C. C. C. support price at $1.80 per bushel for 1943 crop plus 7 cents for farm storage under a C. C. C. loan to growers planting 90 percent of goal.

Flaxseed: On 1943 crop, C. C. C. support price on loan at $2.85 per bushel for U. S. No. 1 to any producer planting 90 percent of goal, plus 7 cents storage under a C. C. C. loan. Will be adjusted upward if necessary to reflect 90 percent of parity as of June 1, 1943. These rates now higher than 90 percent of parity.

Castor beans: C. C. C. will purchase at 6 cents per pound for purpose of making increased seed supply available for 1944.

Olives for oil: C. C. C. on 1942 crop to pay—or loan—$3.75 per gallon to crushers if they pay growers' prices which would average about $123 per ton.

Oil refining subsidies: Oil refiners agree to purchase crude oil at ceiling prices, sell to C. C. C. at same prices, but buy it back at one-half cent per pound lower price. Total losses from 1942 crops of cottonseed, peanuts, and soybeans expected to be about $15,000,000. Similar program of purchase and resale between soybean farmers and processors covers 100,000,000 bushels at average loss of 12 cents, or total of $12,000,000. Freight absorption program on flaxseed will cost about $200,000.

Fats and oils: World-wide purchases of fats and oils are being made by C. C. C. for allocation to the trade by F. D. A. Ceylon copra, Brazilian babassu and cashew nut shell oil, all of them of strategic necessity, are being distributed through trade channels under allocation for use in the war effort. C. C. C. absorbing part of the unusual expenses due to the war.

Shell eggs: Through June 30, 1944, F. D. A. will support egg prices at not less than 30 cents in spring and early summer and 34 cents annual average. Actual purchases not likely to be heavy because of heavy buying for lend-lease.

Southern shell eggs: In 12 Southern States, during heavy producing season, buyers under contract with F. D. A. will pay producers specified prices, around 33½ cents in most of these States for large grade A.

Whole dried eggs: Prices specified through January 31, 1944, by grades and delivery dates.

Dairy products: F. D. A. will purchase through Dairy Products Marketing Association, through June 30, 1944, at following prices, which are based on 90-percent parity equivalent. Butter, at ceiling levels but not less than 46 cents for 92 score at Chicago; dry skim, roller process, 12½ cents; dry skim, spray process, 14½ cents. Cheddar cheese, C. C. C. payment of 3¾ cents per pound to make up difference between O. P. A. ceiling of 23¼ cents and 27 cents, Wisconsin Cheese Exchange. This has cost about $6,000,000 since December 1942. Evaporated milk, $4.10 per case.

Milk subsidies: To maintain milk production in New York, Chicago, Duluth, Baltimore, Washington, and Philadelphia areas has cost C. C. C. about $2,500,000. Contracts are on purchase and resale basis.

Truck crops for fresh market: Payments of $50 per acre in excess of 90 percent of goal, but not over 110 percent, of carrots, snap beans, lima beans, beets, tomatoes, cabbage, onions, green peas.

Chickens and turkeys: By F. D. A. purchases through June 30, 1944, at prices averaging nationally not less than 90 percent of parity. Currently prices are above 90 percent of parity, so no purchases being made.

Pecans: Growers to get nonrecourse loans to provide not less than 75 percent of parity for 1942 orchard run.

Dried fruits: Packed and processed, through June 30, 1944, will be supported by F. D. A. purchases at O. P. A. ceiling prices for Government purchases.

Sugar beets: Increase of $1.50 per ton over 1942, or about $11 in 1943. Will resell to refiners at a loss, as well as absorbing part of excess freight.

Seeds, hay and pasture: Basic loan values specified for various seeds, at principal markets.

Seeds and hemp fiber: Support prices, Kentucky growers, based on 264 pounds for grade A-line fiber. Hemp seed will be purchased at $10 per bushel, against $8 in 1942. Hemp straw in other States will be bought at $30 to $50 per ton.

Strawberries: Purchase program in Southern and Southwestern States of sulfur-dioxide packed strawberries from packers; contract to specify prices packers must pay farmers.

Butter: A subsidy of 5 cents per pound on butter. This is to compensate for a reduction of the same amount in the retail price.

Meat: A subsidy of 2 cents per pound on the wholesale carcass of beef, lamb, and mutton, and 1.85 cents per pound on the wholesale carcass of hogs. This is accounted as being substantially a 10-percent price reduction and is paid to the processor.

War-risk insurance: Administered by War Shipping Administration for the purpose of maintaining, with some exceptions, ocean shipping rates in effect on January 1, 1942.

Henequen and sisal: This program is administered by the Defense Supplies Corporation for the purpose of increasing importation of these commodities.

Copper scrap: This subsidy is administered by the Copper Recovery Corporation to cover a loss of about 1 cent per pound in the recovery of copper.

Chilean nitrate: This is administered by the Defense Supplies Corporation to cover increased cost of freight, war-risk insurance, and increased Chilean price.

Puerto Rican food: This is administered through the Department of the Interior and the Agricultural Marketing Administration to compensate for increased shipping and other costs.

Jute: Administered by the Defense Supplies Corporation for the purpose of encouraging importation.

Bleached sulfite wood pulp: Administered by the Defense Supplies Corporation to increase production and avoid disruption of price ceilings.

Secret Weapon

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. DIRKSEN. Mr. Speaker, recently the class of 1918 of the University of Minnesota held its twenty-fifth anniversary reunion. It was essentially a war class in the First World War and most of its male members saw service in the conflict to make the world safe for democracy. Today, members of that class are witnessing the Second World War. Some members of that same class are in the armed forces. Many have sons who now serve in the cause of freedom.

It was an interesting experience to foregather with those who were on the campus of the University of Minnesota 25 years ago, to observe the impact of time and fortune upon their various personalities, and to relive the gracious and sweet experiences of long ago.

Two things happened in the course of that reunion which are worthy of comment. The first was the establishment of a memorial fund in the name of the class of 1918 to aid worthy needy students who require assistance. The other was the popularizing of a sentiment which is eminently worthy of publication in the CONGRESSIONAL RECORD. It is an objective contribution to the problems and responsibilities on the home front and constitutes a great apostrophe to that one essential spiritual quality which Congress cannot vote, and which dollars cannot buy—the quality of morale. This timely message from the University of Minnesota war class of 1918 to the Nation in this time of global conflict is as follows:

THE SECRET WEAPON THAT WILL WIN THE WAR AND SECURE THE PEACE

Congress can't vote it. Dollars won't buy it. It's your job to build it—morale.

Put unity into your community. Unity starts with U. To win the war, stop private wars at home, on the job, with the neighbors. Honest apology ends friction—starts teamwork. If we all pull together, we'll all pull through.

Be a rumor-stopper. Rumors help the enemy. Trace the facts. Face the facts. Don't exaggerate. Make your community gossip-proof, smear-proof, panic-proof, fear-proof. Every patriot shoots a rumor dead on sight!

Meet shortage by sharing. Use all of everything. Don't hoard. If everybody cares enough, and everybody shares enough, everybody will have enough. No waste in your icebox, cash box, brain box!

Keep the moral standards of the Nation high. Don't weaken the home front by wangling something for yourself on the side. Dishonesty and indulgence in you saps the Nation's fighting strength. A decent world tomorrow depends on how you live today!

The secret of steadiness and inner strength is on every penny: "In God we trust."

Telephone wires may be cut, radio stations off the air, but no bombardment can stop us from being directed by God. To listen to God and obey wherever you are is your highest national service!

Class of 1918; twenty-fifth anniversary; University of Minnesota, Minneapolis.

Resolution of Nebraska Stock Growers Association

REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. MILLER of Nebraska. Mr. Speaker, the annual meeting of the Nebraska Stock Growers Association in Gordon, Nebr., the week of June 7, 1943, passed some excellent resolutions, copies of which are being forwarded to the administrative heads of the several bureaus to which the resolutions pertain. I ask unanimous consent to insert these resolutions in the Appendix of the RECORD.

These resolutions reflect the considered judgment of the Midwest producers of livestock. These men are on the firing line and know the needs and how to produce the livestock needed for meat. They are far enough away from the turmoil and confusion in Washington to see clearly and think through sanely some of the problems that confront this Congress and the several bureaus of Government.

I trust the Members of Congress and the bureaus concerned will read carefully these resolutions. The Members of Congress and the bureaus concerned should stop, look, and listen to these resolutions because they reflect the thinking of the folks back home.

The resolutions follow:

We believe that Midwest producers should be enabled to ship their livestock, either processed or on the hoof, without discrimination,

to the west coast, as well as to the east coast. We believe further that livestock should be processed as near the source of supply as possible in order to encourage the industrial development of the Midwest.

We therefore urge a reduction in the freight rates of fresh meats and packing-house products from midwestern points to the Pacific coast, and we ask the Nebraska Railway Commission, on behalf of the people of Nebraska, to join in the complaint filed before the Interstate Commerce Commission.

TRADE TREATIES

We commend our Senators and our Representatives in Congress for their opposition to granting to the executive department of our Government the right to make treaties and trade agreements with foreign countries without the consent of the United States Senate. By their opposition they have shown their determination to maintain the rights of the people and to preserve the American form of government.

We also most heartily commend Senator JOSEPH C. O'MAHONEY, of Wyoming, for his splendid efforts in this direction.

RUEBER PROGRAM

We commend Hon. William Jeffers, of Nebraska, for the efficient and patriotic service which he has rendered in the conservation of rubber and we endorse his program for the establishment of synthetic rubber plants so that America will not again be dependent upon any country for its total needs of so vital a commodity.

BEEF CEILING

We believe that the ceiling on fresh beef creates in practice a ceiling on the live animal, and we believe further that any attempt to establish definite ceilings on the prices that may be paid for live animals will be most harmful to our country. No enforceable order can be written to fix ceilings on the various grades of cattle. Such an attempt would seriously retard livestock production and thereby diminish the supply of meat in this very critical time. The administration of such an act would be clearly impossible and would only add to the present confusion. Black-market activities would be increased by such action.

PROTEIN FEEDS

We believe that an efficient and prompt allocation of protein concentrates is essential to an adequate beef supply, and we therefore urge the United States Department of Agriculture to advise the livestock growers promptly as to the probable available supplies and to strive for a better distribution than was accomplished last year.

SUBSIDY

We believe the proposed program to roll back the price of meat by the use of a Government subsidy to the processors of livestock is an effort to regiment all of the people in American agriculture. We believe the program had its birth in the bureaucratic ambition to control the lives of the people rather than in sound economic procedure, and we believe that such a program will have a tendency to destroy production at its very source at a time when our country at war is so vitally in need of beef.

Regardless of the fact that everywhere around us we see the products of cost-plus industry, prodigious wages, governmental waste, and some of the most fantastic prices ever paid for ordinary building, we still don't want a subsidy or time and a half for overtime. And the members of this association pledge themselves to a greater production of beef.

MUNICIPAL MARKETS

A definite allotment of meat for each member of the civilian population has been made by the Office of Price Administration. Due to a faulty and inefficient distribution system, the people of our large cities are unable to secure their just and proper share, and we urge the proper authorities of our great cities to give thoughtful consideration to a program for the establishment of a system of municipal slaughtering and marketing so that the workers in our large cities shall have their allotted share of America's production.

RANCH MACHINERY

The ordinary need for hay tools, ranch machinery, and windmills must be supplied.

The demand is highly seasonable, and there is little time to follow bureaucratic procedure and appeals. We urge the War Production Board to take immediate action in order to meet a very critical situation.

TAXATION

The income-tax laws should more evenly distribute the cost of the war. Corporations cannot pay increased rates without reflecting the tax back to their customers in higher prices for their products, nor will the production of cattle be increased by the levying of higher taxes.

Therefore, we feel that every means should be found to distribute the burden of income taxes more equitably, and we feel the cooperatives should pay income taxes on their income the same as individuals and corporations.

DRAFT AND RATION BOARDS

We are appreciative of the unselfish service of the members of the various selective-service and ration boards who are performing a necessary and a difficult task well and without compensation. We further believe that an adequate supply of experienced ranch labor is essential to the maintenance of an adequate beef supply. We therefore urge the various selective-service boards to take serious recognition of the claims of agricultural workers who have been erroneously inducted into the service at the expense of food production, and we urge the release of these men when the facts disclose the necessity for the maintenance of agricultural production.

INFLATION

Inflation during this war has not come from the price of farm commodities, nor did it come in the First World War from the prices paid to farmers. The farmer does not set his price but has always been forced to accept what others give him for his products at the market place. While this price may inflate the farmer's income it deflates the income of others, who are much more numerous.

The present inflation has come in part from the very high labor costs and the governmental waste that can be seen everywhere around us. Another cause of the present inflation has been the devaluation of gold which took place during the early days of this administration. Prices and wages were slowly rising because of this devaluation before the present war and since the declaration of war this process has been accelerated.

Pay-as-you-go taxes or any other device will not have any great effect upon the present inflationary trend so long as wages continue to mount or even remain at the present levels.

We believe in good wages, but realize that wages through industry and agriculture must tend to balance with each other. Whoever sells his labor must give a fair performance for a fair day's pay. As wages in industry and transportation mount, so must the price of things that labor produces also mount and in the exact proportion to the increase in the cost of their production.

PRODUCTION

Production of beef is the business of the members of this association. Our desire is to produce plenty not only for our armed forces and our allies, but also for our civilian population. We believe that this can be done and would have more nearly been done at fair prices if we had not had the withering influence and stupid interference of the Office of Price Administration.

Increasing the speed of meat production is not like doubling production in the factories. There an increase in volume brings a reduction in the unit cost of the article produced. Production of beef is exactly the opposite. If we increase the tempo of growth we do it by better "wintering" and greater care of our animals. Our feeders and ranchmen could furnish this Nation and its armed forces all the beef they could consume if they were given the opportunity. But this is not being done, nor will it be done until there is less governmental interference with our business.

Beef production is one activity which the Office of Price Administration should have encouraged, because it more than any other meat utilizes the grass and thus requires less grain feeding than other types of meat.

The Office of Price Administration and the other governmental agencies involved should use every effort to increase the production of beef and every regulation that they propose should pass this one test first, Will this produce more beef?

State and Federal Prisons—Some Suggested Reforms

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. KEFAUVER. Mr. Speaker, the people of the Nation are proud of the good facilities and excellent administration of our Federal penal institutions. Also a number of valuable reforms in prison administration has been made during the last few years. Mr. J. Pope Dyer, who is connected with the Central High School of Chattanooga, Tenn., is one of our foremost students and authorities on criminology and penal institutions. Recently he delivered an address which gives some valuable information on the way our prisons are conducted. Under leave to extend my remarks, I am pleased to include this address:

It is a genuine pleasure to speak briefly to the students of this great institution on the subject of our prisons. It has been my good fortune to read extensively on the prisons of this Nation—both State and Federal—and to travel thousands of miles throughout the various sections of the country to inspect intimately the organization, workings, and activities of many of the various prisons of our Nation.

The crime problem in our Nation is a big one. Over 1,500,000 crimes are committed in our Nation annually. Over 10,000 murders, 700,000 larcenies, 300,000 robberies, and 200,000 burglaries are perpetrated each year. Crime costs each person in the United States yearly about $120 and our crime bill reaches the astounding figure of $15,000,000,000 every 12 months.

Obviously, with such a tremendous number of crimes each year, there will be a great number of persons convicted and sent to prisons. Our State and Federal prisons receive yearly approximately 70,000 persons. It is a matter of common interest to know that Alcatraz, which is located in the bay

at San Francisco, is the most famous of all American prisons because it is isolated and the most dangerous "big shot" criminals are imprisoned there. Alvin Karpis, "Machine Gun" Kelley, and others, are some of the famous inhabitants of that institution. It is, contrary to popular belief, a comparatively small prison in numbers. There were only 284 prisoners there in 1940. The small number of prisoners makes the per capita maintenance exceedingly high, which was in 1940 approximately $1,144 per person per year. It might shed some light on the issue when it is expressed that the per capita cost of the United States penitentiary at Atlanta, Ga., in 1940 was $350; at Leavenworth, Kans., $341; at Lewisburg, Pa., $481 and at McNeil Island, Wash., $555. The largest of the Federal prisons is the one at Atlanta with a population of over 3,000. No nonpartisan person can inspect these prisons without feeling that they are being scientifically and firmly operated. Nothing is spared or overlooked to provide progressive opportunities for personal rehabilitation of the prisoners. The people of our country may well be proud of the excellent facilities and the progressive administration of our Federal penal institutions under the direction of Hon. James V. Bennett. On the whole, the efficiency of our Federal prisons far surpasses that of the State prisons.

The largest State prisons in the United States in 1940 were those of San Quentin in California with 5,283 prisoners; Huntsville in Texas with 6,687 (which includes some farms). The Michigan State Prison at Jackson with 5,675 persons, and the Illinois State Penitentiary at Joliet with about 5,940 inhabitants. In the summer of 1942, the Michigan State Prison claimed that they had the largest prison in the world.

The smallest State prisons from the standpoint of population are those of New Hampshire at Concord with 262; Nevada at Carson City with 270; Wyoming at Rawlins with 307; and North Dakota at Bismarck with 308.

The per capita cost of maintenance of prisoners in Maine was the highest of any State in 1940 with $657 per prisoner annually. It was lowest in Mississippi with $113, followed closely by Arkansas with a $132 expenditure per person per year.

There are a great many things of interest (most of which I have seen), as one surveys the various State prisons, he cannot forget the great program of industries at the Michigan State Prison. The gymnasium at Sing Sing is one of the best to be found anywhere. The whipping post at the New Castle County workhouse at Wilmington, Del., is the only one in the United States. The rodeo at the Huntsville, (Tex.) Prison is an annual event of great interest to Texans. The annual field meet at the San Quentin Prison is very unusual.

The program of the Wallkill Prison in New York probably comes nearer approximating a rehabilitation program than any other State institution. It is certainly different to stroll over the prison farms in Arkansas conscious that the guards and lookouts are armed trusties. The Catholic chapel at the Ohio Prison at Columbus, built by prisoners, is one of the most beautiful to be found in our country. These are but a few of the high lights that cannot be forgotten after visiting a number of our State prisons.

The average citizen sometimes asks questions about the inhabitants of the prisons. The prisoners are about the same physically as the persons on the outside. They are about three grades lower educationally and they have had, generally, little or no moral training. Very frequently they are victims of broken homes.

When I visited Sing Sing Prison a short time ago, I was told that the only person to ever eat his last meal there out of some 400 persons executed, was "Two Gun" Crowley. He was a ruthless young killer of New York City. The story goes that he said when asked what he wanted for his last meal: "I want turkey with all the trimmings, ice cream, and so forth." He went on to say, "When I was a child we were too poor to afford turkey; when I had the money, I was too busy dodging the officers and now that I can eat a decent meal I'm going to do it."

Recently, while visiting the Tennessee State prison at Nashville, I was allowed to interview an intelligent but frequently recalcitrant prisoner, Lonnie Taylor. The records show that he has considerably more than 200 years of time to serve. I asked him to write me his beliefs on why men commit crimes. Here is his letter in part:

"DEAR SIR: Yes; you are quite right in what I call this common-sense theory of yours. It is ignorance—and ignorance alone that causes a person to commit a crime. Therefore, if society is really interested in solving her No. 1 problem, crime (this war, however tragic and costly it may be, is forced to take a No. 2 place), then let her substitute 'education' for her present methods of antiquity, which, incidentally, and despite all the claims and the counterclaims to the contrary, are based exclusively on the thorns of retribution rather than a constructive system of rehabilitation. (I allude of course to the oft-denounced system of American penology). The proper place to start using this 'weapon' however, is in those areas and districts where poverty proves almost an insurmountable barrier to education: For it is in these poverty-stricken places that the seeds of crime are allowed to grow. Here one gets the impression that one is born into a cold, heartless, hostile world, where laws are instituted merely for the protection of the favored few, where jails and reformatories and prisons are nothing but instruments of torture and persecution used only against the poor whose poverty is their biggest crime, one that keeps them in a state of perpetual 'darkness' and causes them, by virtue of adverse circumstances to which it (poverty) gives birth, to commit all sorts of antisocial acts.

"Incidentally, I only have a fifth-grade education; the only chance I ever had to learn anything has always been behind the 'white line'—where, by no other light than the light of learning I have seen (and for the first time in my life) the futility of crime, notwithstanding the fact that I have virtually nothing to look forward to. If, however, I can encourage you to take a progressive initiative and thereby become the means of being able to help prevent other souls from falling into pitfalls of crime, then my efforts will not have been in vain.

"Sincerely yours,

"LONNIE TAYLOR."

The question is often asked what lies ahead in prison administration?

Firstly, I am convinced that brief periods of vacation may inspire improvement in the conduct of prisoners. A Governor of Alabama gave brief Christmas vacations or furloughs to worthy prisoners a few years ago. The results were successful. Naturally a few convicts did not return from these leaves. This is true today of some soldiers. It would be true of any group. These leaves, for meritorious cases, are a step in the right direction. I feel that they can be given too often and must be carefully recommended.

Secondly, married men must be permitted to visit their wives privately at intervals in prison.

There should be places in prisons where the wives of men can be with their husbands. This privilege can be abused, but prison authorities may well experiment with this idea.

Thirdly, the reformatory must be improved so that it will cease to be a recruiting school for the prison. A high percentage of adult prisoners got their early training in State reformatories. If we hope to permanently improve prison conditions we must improve conditions in the reformatory. Our State reformatories, in general, are a national disgrace. There are a few good State reformatories, but, as a rule, they are rotten. Reformatories should not be places of brutality, nor places where the mentally weak with vicious habits should be placed.

Fourthly, every State should experiment with a prison much like the Wallkill Prison of New York, where there are no walls to the prison, where a limited number of persons inclined toward reformation are fitted to reenter society.

Numerous other suggestions could be offered. Many progressive persons are now at work on prison improvement in our Nation. Some of them are: Father Flanagan, of Boys Town, Director James V. Bennett, Warden Johnson, of Alcatraz, Warden Chapman, of Florida, Warden Jackson of Michigan, and Warden Duffy of California. Others could be appropriately mentioned.

Our prisons have decidedly better facilities today than a few years ago. Our prison population is on the increase. Prisons can never be eliminated. The task of reducing the incoming population is a challenge. This task is big enough to tax the brains of our best thinkers and is a situation that every citizen must help improve, and this includes you, the boys and girls of our public schools.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the clerk of the Senate of the State of Wisconsin, and a resolution adopted by the State legislature:

WISCONSIN LEGISLATURE,
SENATE CHAMBER,
Madison, June 14, 1943.

The Honorable THADDEUS F. B. WASIELEWSKI,
Member of Congress, Wisconsin,
House Office Building,
Washington, D. C.

DEAR MR. WASIELEWSKI: I am transmitting herewith an enrolled copy of a joint resolution adopted by the 1943 Wisconsin Legislature entitled "Memorializing the Congress of the United States to enact proper legislation for the procurement and construction of the Great Lakes-St. Lawrence waterway upon termination of the war."

Very truly yours,
LAWRENCE R. LARSEN,
Chief Clerk, Senate.

Senate Joint Resolution 13

Joint resolution memorializing the Congress of the United States to enact proper legislation for the procurement and construction of the Great Lakes-St. Lawrence waterway upon termination of the war

Whereas the tortuous and hazardous shipment of submarines from Wisconsin to the Gulf coast recently symbolized both the stupidity of the selfish interests that have opposed the Great Lakes-St. Lawrence waterway and the tremendous potentialities of the Midwest as an oceangoing seaport; and

Whereas the President has indicated that such program of power and navigation development must be abandoned during the present emergency because of the critical and

urgent war needs of raw materials and manpower which necessarily must be utilized in such project; and

Whereas one of the very first projects that should be undertaken upon the termination of the war is the building of the Great Lakes-St. Lawrence waterway in order to ease the burden of readjustment from emergency conditions of the country to a peacetime economy, with a full measure of opportunity to the returning soldiers for employment; and

Whereas the complete utilization and development of all inland transportation facilities will reduce shipping costs so as to permit the entire country to cooperate and to participate in the international competition for commerce in the post-war period on more than even terms; and

Whereas the exigencies of the war have imperatively illustrated that such seaway would grant the hydroelectric power necessary to an effective and expansive defensive effort and grant savings to consumers with lower rates and better living standards through a greater use of electricity; and

Whereas this waterway project will add value to the products of industry and agriculture, create new markets and business, and thereby stimulate employment and materially aid economic recovery: Now, therefore, be it

Resolved by the senate (the assembly concurring), That the Legislature of Wisconsin memorializes the Congress of the United States and the President of the United States, and especially the Wisconsin Senators and Members of Congress, to promulgate and initiate the adoption of such treaties or other necessary legislation for the construction of the Great Lakes-St. Lawrence waterway project upon termination of the war; be it further

Resolved, That properly attested copies of this resolution be transmitted to the President of the United States, to both Houses of the Congress of the United States, and to each Wisconsin Member thereof.

CONRAD SHEARER,
President pro tempore of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
VERNON W. THOMSON,
Speaker of the Assembly.
ARTHUR L. MAY,
Chief Clerk of the Assembly.

Our Greatest Post-War Problem—A Direct Question and a Simple Answer

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. WHITE. Mr. Speaker, there is inserted herewith a letter from a New York paper and my answer thereto:

NEW YORK HERALD TRIBUNE,
New York, June 18, 1943.

The Honorable COMPTON I. WHITE,
House of Representatives,
Washington, D. C.

DEAR SIR: Is punishment of the Axis leadership—Hitler, Mussolini, Goebbels, Himmler, etc.—more important than the reeducation of the peoples now dominated by Axis philosophy? What do you consider the most important and significant of the post-war problems, international and domestic, which so many of us are now studying and working to solve?

As a guide for its new weekly department, The World Ahead, which is devoted exclusively to studies of post-war problems, the New York Herald Tribune is asking all Members of Congress to assist in the survey covered by the attached questionnaire. You can help greatly by checking through the list of subjects and indicating those which you consider most important. It will take only a couple of minutes and we will appreciate it.

Sincerely,

EMMET CROZIER,
Editor, The World Ahead.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 18, 1943.

Mr. EMMET CROZIER,
Herald Tribune, New York City, N. Y.

DEAR MR. CROZIER: The answer to the inquiry made in your letter of June 18 is simple.

The most important post-war problem is money. International exchange has shaped the destiny of the nations of the past—and it will shape the destiny of the nations of the future—Carthage, Rome, Venice, Spain, the British Empire, were built on the control of money and international exchange, and the greatest democracy of them all—the United States—has been built upon the broad, liberal policy supported by a sound and stable monetary system.

The greatest contribution to the service of mankind will be the establishment of a sound, adequate, interest-free international monetary system.

Sincerely,

COMPTON I. WHITE,
Member of Congress.

The Southern Policy Group

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. BRYSON. Mr. Speaker, some years ago the then Congressman LISTER HILL from Alabama, now Senator, with other southern Congressmen, Senators, and Government employees formed a voluntary organization styled the Southern Policy Group. This group has met each Thursday night through the years at which time some prominent speaker has addressed the meeting followed by questions relating to the problems of the day.

It has been my privilege to serve as chairman of the Southern Policy Group this year and, needless to say, I am much indebted to my colleagues for the splendid cooperation they have given in making the meetings so outstandingly interesting and profitable. At our meeting next Thursday night the Honorable Paul V. McNutt, Chairman of the War Manpower Commission, will address us and on the following Thursday night, July 1, the Honorable Fred M. Vinson, Director and Chairman, Economic Stabilization Board, will deliver the last address of the current season.

Last Thursday night it was our privilege to have one of my own constituents with us—Dr. William P. Jacobs, of Clinton, S. C.—who spoke to us, in part, as follows:

I speak for no group or organization inside or outside of the Government. My words are only my own personal expressions, are not necessarily the words of an expert or authority on the subject. They are presented as a last-minute spontaneous substitute for the distinguished guest who could not be with you this evening. This speech is intended merely to be thought provocative as a somewhat different approach to subjects which we are all daily pondering.

Have you not many times wondered what this great world conflict is all about? What are we really fighting for? What is America's chief objective? Is there some common purpose behind this world effort in which we unite? And as we unite in our wondering do we not all reach the conclusion that it is the American way which we seek to preserve? And what is this American way?

What are its chief recognizable characteristics? Is there a single essential element which can be identified as typically American? If we have about as many definitions of Americanism as there are Americans, where do we find a common characteristic?

I submit that one essential and typical characteristic of the American way is found in the element of competition.
